BRANCHES: NEW YORK CHICAGO

Pere Marquette Rd.—Wm Griffith has been appointed acting general foreman St. Thomas, Ont., shops, succeeding F. C. Pickard, resigned.

Quebec, Montreal and Southern Ry.—J. Leslie, heretofore roadmaster G.T.R., Ottawa, has been appointed General Roadmaster Q., M. and S. Ry., Headquarters, Sorel, Que.

T. Brennan will continue to act as roadmaster, reporting to the General Roadmaster.

Rutland Rd.—F. E. Barbour, heretofore general agent at Montreal, has been appointed General Passenger Agent, succeeding C. A. Nimmo, resigned. Office, Rutland, Vt.

C. Hartigan has been appointed General Agent Passenger Department, Montreal, succeeding F. E. Barbour, promoted.

L. E. Vosburg has been appointed General Eastern Passenger Agent at New York.

J. H Jagoe, having been transferred to the New York Central and Hudson River Ry., the office of General Southern Passenger Agent at New York has been abolished.

Toronto and York Radial Railway Cars.

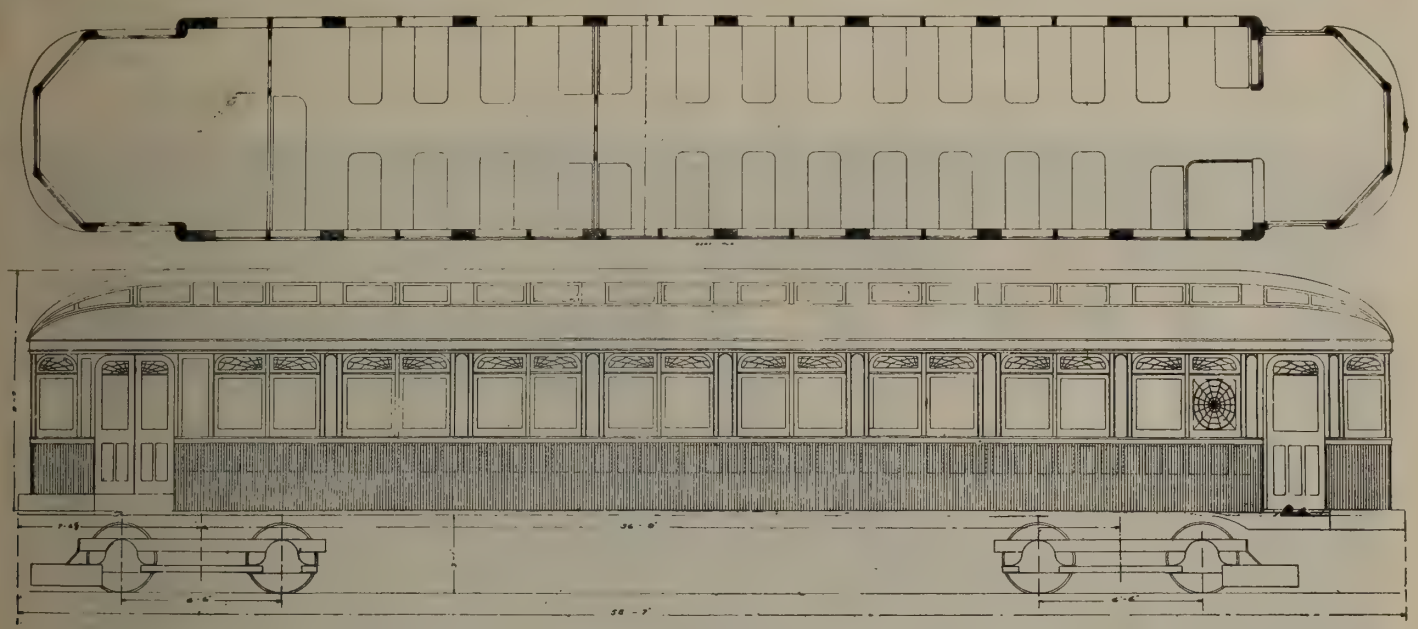
By A. M. Grantham, Superintendent of Construction and Purchasing Agent.

This company is building for the long through run between Toronto and Jackson's Point, the Lake Simcoe terminus of the Metropolitan Division, a distance of about 55 miles, a number of essentially up-to-date cars, constructed especially for speed, comfort, and safety. The sill construction is principally steel, and double floors with several thicknesses of felt between deaden the sound from beneath and add warmth to the car. The seats are high roll-back, rattan-covered "walk overs," and the heating is by hot water pipes from a small furnace in the baggage vestibule. A glance at the plan will show the sub-dividing. The front vestibule, in which the motorman stands, is large enough to carry the heating apparatus, and allows plenty of space for baggage, etc. The smoking room comes next to this, seating 24 persons, and lastly, the main passenger compartment, which seats comfortably about 38 people, and contains lavatory, drinking-fountain, hat-racks, coat-hooks, etc. The interior finish is in antique quarter-cut oak, and all color work, such as the leaded glass transoms, deck lights, etc., are in subdued tones of brown and green, giving to the cars a very restful sensation—in fact they possess all the comforts and conveniences of the modern up-to-date railway coach, and are probably the finest cars of their kind that have yet been put in commission in Canada.

The motor equipment is composed of four of the new G.E. no. 73 machines, of 75 h.p. each, especially designed for this class of work by the Canadian General Electric Co, and giving 300 h.p. per car. The motors are of the box-frame type, and have large bored openings in each end into which the frame heads which carry the armature shaft bearings are bolted. Oily wool waste is packed into the frame head castings, giving lubrication to the shaft through openings cut in the bearing linings, and the motor frame being unsplit, effectively prevents oil or water getting into the motor. The same method of lubrication is employed for the axle bearings. The excellence of this method of lubrication is attested by the fact that the armature shaft bearings have run as much as 137,000 miles before it was necessary to renew the linings. The commutator is of hard drawn copper segments, insulated with the very best quality of mica, and has been proved to have long life and keep its shape well under hard service. In general, the various parts of this motor are of an improved type, and especially designed to withstand the excessive vibration of heavy interurban service, and they successfully meet the demand for rapid acceleration, at the same time enabling the cars to be run at a speed of from 40 to 50 miles an hour on the level, as well as handling the loads with ease on heavy grades.

Perhaps the most interesting feature of these cars is the type M. master control system, which is said to be supplied now for the first time in Canada, by the Canadian General Electric Co. The advantages claimed are simplicity, ease of handling, and flexibility, requiring little effort on the part of the motorman, and a minimum of space in the vestibule of the car. It is also possible with this system, for one motorman to handle a train of motor cars from one controller. Briefly, the type M. consists of a master controller and a motor controller, the latter being located under the car, and not under the direct control of the motorman. It consists of a number of switches electrically operated, called contactors, and their object is to directly handle the power circuits for the motors, that is, to change the electrical connections so as to give the necessary motor connections for starting, running and reversing. The contactors each consist of a switch which cuts in and out the various resistances, powerful and magnetic blow out coils which instantaneously blow out any arc which may form, and an operating coil which opens or closes the switch. The master controller is a small affair, weighing only about 130 lbs., and is placed in the motorman's vestibule. A special feature of this master control is that should the motorman take his hand off the operating handle for any reason, the current is immediately cut off, which is accomplished by means of auxiliary contacts which are operated by a spring when the button in the handle is released. As this master controller can be connected to any number of main motor controllers, a number of cars can be made into a train and operated by one motorman simply by means of cables and couplers.

The accompanying illustrations of these new cars show their general appearance. The total weight of the car equipped with trucks and motors is about 28 tons. Car length over all 55 ft. 7 ins., and width, 9 ft. 3 ins.



ELEVATION AND FLOOR PLAN, TORONTO & YORK RADIAL RAILWAY CARS.

Wabash Rd.—A. Arnum has been temporarily appointed road foreman of engines in place of J. Bell, who is in ill-health. Headquarters, St. Thomas Ont.

The office of J. Hodgson, jr., Foreign Freight Agent, has been removed from Chicago, Ill., to St. Louis, Mo.

West Shore Rd.—P. E. Crowley, Assistant General Manager New York Central and Hudson River Rd., has also been appointed Assistant General Manager, W.S. Rd.

J. H. Heustis, General Superintendent N.Y.C. and H.R. Rd., has also been appointed General Superintendent W.S. Rd. Office, Syracuse, N.Y.

The headquarters of F. W. Everett, Division Superintendent, have been transferred to Syracuse from Buffalo, N.Y.

The authority of J. F. Fairlamb, General Passenger Agent N.Y.C. and H.R. Rd., has been extended over the W.S. Rd., C. E. Lambert having retired on a pension.

L. E. Vosburg, General Eastern Passenger Agent N.Y.C. and H R. Rd., has also been appointed General Eastern Passenger Agent, W.S Rd., succeeding H. B. Jagoe, resigned.

W. S. Randolph, General Agent Passenger Department N.Y.C. and H.R. Rd., Albany, N.Y., has also been appointed General Agent Passenger Department W.S. Rd. there, succeeding A. E. Brainerd.

Tower Wagon for Overhead Work.

By A. M. Grantham, Superintendent of Construction and Purchasing Agent, Toronto Railway Co.

The Toronto Railway Co. has recently built a gasolene-driven automobile type of tower wagon for overhead construction and repair work. The features of special advantage claimed for a motor truck of this description are speed, steadiness in starting up, ease of motion, despatch in retrograde movement, ability to keep to a straight line in forward or reverse direction, etc., besides the desirability of being independent of horseflesh, and the ability to keep the wagon in service continuously. In point of economy a comparison between a horse-driven vehicle and a gasoline motor would be somewhat as follows:

HORSE DRIVEN VEHICLE

Original cost of 3 horses, team and 1 spare say		$ 750.00
Original cost of 1 wagon and tower		500.00
Total first cost		$ 1,250.00
Annual depreciation on horses, say	$100.00	
Annual depreciation and repairs to wagon	200.00	
Annual keep of horses	500.00	
Harness, etc	50.00	
	$850.00	
Capitalized at 5%		$17,000.00
		$18,250.00

GASOLENE WAGON

Total first cost		$ 3,600.00
Annual repairs to outfit including tires, etc	$300.00	
Depreciation allowing for new outfit in 7 yrs	500.00	
Gasolene and oil consumption	150.00	
	$950.00	
Capitalized at 5%		$19,000.00
		$22,600.00

And, as two gasolene wagons should easily do the work of three horse wagons, there is probably an actual saving financially to be shown in favor of the power outfit, not to mention the convenience in operating and handling, and space saved in stabling horses.

The body and tower of the motor were built by the Toronto Ry. Co. to its own designs which have been found best adapted to conditions. A sketch plan of the arrangement is given, and also an illustration of the motor. The details of the motor chassis imported by the Dominion Automobile Co. of Canada, from Switzerland, are as follows:

TYPE H. 20 H.P. TRUCK

MOTOR (foreign rating)—Two separately cast cylinders, 120 by 140 mm., 16 h.p. when running at 900 revolutions, valves interchangeable and mechanically operated. Patented device for operating admission and exhaust. Minimum revolutions 200, maximum 1,400 revolutions per minute. All working machinery protected from dust. The crank shaft made from the very best chrome nickel steel.

CARBURETTOR—Mechanically operated, and hot water jacketed.

TRANSMISSION—Selective type. Four speeds ahead and one reverse. Direct drive on high speed. All gears made of very best chrome nickel steel.

BRAKES—Three, working independently. One hand lever brake working directly on the hubs of the hind wheels. The second, a ratchet brake, working by pedal on differential. There is a third brake which works very regularly on the motor by means of closing the inlet valves.

DRIVE Bevel gear with spur gears and interior teeth on brake drums.

RADIATOR—Honeycomb, Mercedes type.

AXLES—Both front and rear forged from solid steel.

IGNITION (double)—By high tension magneto and commutator.

PUMP—Gear driven.

WHEELS—Artillery type with solid rubber tires.

CHASSIS—Channel steel.

WHEEL BASE—3 1-5 metre.

STEERING—By irreversible worm and sector.

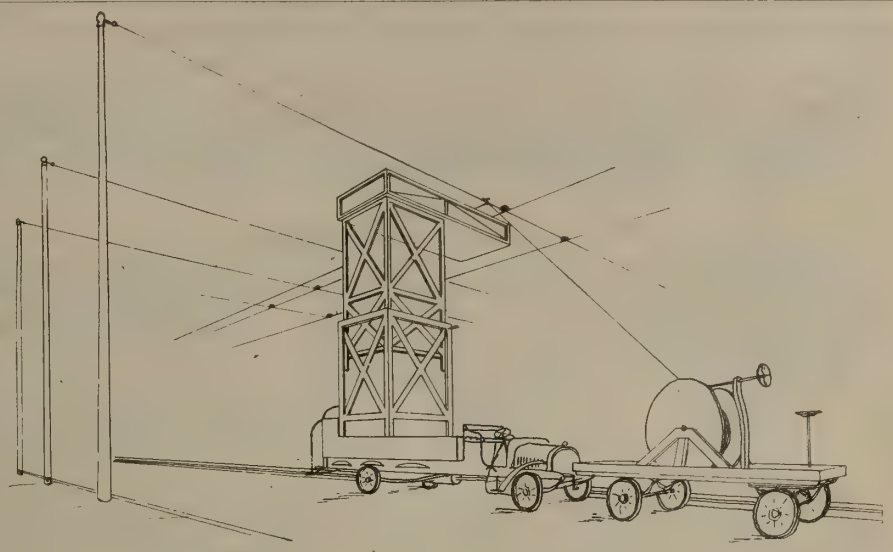
TANK—20 gallons capacity Red copper, riveted and brazed.

WEIGHT—3,200 lbs.

LOAD—2½ tons.

SPEED—3, 6, 10 and 18 miles per hour.

For use in stringing trolley wire, the Toronto Ry. Co. has devised a reel truck with steering handle, that may be either pushed ahead or behind by the motor, and the wire leads from the reel thereon, up over the tower, where it is fastened to the span. While there are expected to be some difficulties to overcome in the operation of this truck, it is believed that it will work out ultimately to be a most expeditious and economical manner of doing the work.



TOWER WAGON AND REEL TRUCK, TORONTO RAILWAY CO.

Electric Ry. Finance Meetings, Etc.

Berlin and Waterloo Street Ry.—By a vote of 863 to 114 the ratepayers of Berlin, Ont., passed a by-law April 5 in favor of the purchase of the Berlin and Waterloo Street Ry. The price fixed by the arbitrators is $75,200, but the company has appealed to the courts against the amount of the award.

British Electric Ry.—Application has been made to the London, Eng., Stock Exchange to grant a quotation for £300,000 of 4½% perpetual consolidated debenture stock, recently sold.

Halifax Electric Tramway.—Railway earnings for Mar. $12,843.83, against $11,651.54 for Mar., 1906.

London Street Ry.—At the conference between the President of the L.S.R. and the finance committee of the London City Council, the former declined to set a price at which the line, its franchises and property could be acquired by the city. There was no objection to the city examining the company's books, and having an expert to value the property, if there was a serious desire to purchase the line.

There were about 50 stockholders who would have to be dealt with. It was agreed that the company was willing to negotiate on the basis of so much for the stock, so much for the intrinsic value of the system and so much for the franchise. In an interview subsequently, Mr. Everett said that the city could not purchase the line at par value. The franchise will not expire until 1925.

Montreal Street Ry.—Passenger earnings for Mar., $267,403.41; total earnings, $271,588.07, against $232,358.70 passenger and $235,396.62 gross for Mar., 1906. Operating expenses, $183,461.32; rent leased lines, $339.96; city percentage on earnings, $16,476.73; interest on bonds and loans, $13,024.79; contingent for renewals, $13,370.17; against no rent leased lines; $12,324.16 city percentage on earnings, $15,573.41 interest on bonds and loans, and $11,765.33 contingent for renewals for Mar., 1906. Surplus for Mar. $42,913.14, against $39,185.31 for Mar., 1906. Gross earnings for six months

ended Mar. 31, $1,592,048.45; net earnings, $525,391.49; surplus, $286,513.42, against $1,406,322.39 gross earnings, $477,699.83 net earnings, and $299,065.92 surplus for same period 1905-06.

Quebec Ry. Light and Power Co.—The option which the C.P.R. held on the stock of the Q. Ry. L. & P. Co., expired April 16, and not being taken advantage of was cancelled.

St. John Ry.—A French financial syndicate is reported to have made an offer of 135 per share for the stock of the St. John Ry. The company owns the street railway line, and the electric lighting system of St. John, N.B.

Toronto Ry.—Car earnings for Mar., $264,304.42, against $233,813.77 for Mar., 1906.

Electric Railway Notes.

The Port Arthur, Ont., Street Railway Commission has decided to operate its cars on Sundays, until stopped by legal action.

C. Johns was presented with a gold locket by the employes of the St. Thomas, Ont., municipal street railway, on resigning from the position of manager recently.

The Ontario Railway and Municipal Board has decided that in future tests for fenders must be made at the cost of the persons offering the fenders for approval.

The Mayor of Toronto stated to the Board of Control April 10, that W. Mackenzie, President Toronto Street Ry., had informed him that many of the 100 new cars ordered would be put on in the fall.

J. A. Killingsworth, heretofore engaged in newspaper work, has been appointed Manager of the corporation street railway at St. Thomas, Ont., succeeding C. Johns, resigned. Salary $70 a month.

The Winnipeg Street Ry. has refused to put in force the schedule ordered by the City Board of Control, and the Board is considering the question of taking steps to have the penalty clause of the agreement enforced.

Jas. J. Callaghan, who left the Montreal Street Ry. about six months ago to become Superintendent of the St. John, N.B., Street Ry., has resigned and returned to Montreal, where he has been appointed roadmaster of the Montreal St. Ry.

A new schedule of pay goes into force on the Ottawa Street Ry. May 1. One-year men will receive 17½c. an hour for week-days, and 19½c. for Sundays; two-year men, 18½c. and 20½c.; three-year men, 19½c. for week-days and 21½c. for Sundays.

The municipalities of Kildonan, St. Paul, St. Andrew's and Selkirk, Man., met April 4 to discuss the alleged unsatisfactory operation of the Winnipeg, Selkirk and Lake Winnipeg Ry., and a committee was appointed to wait on the directors and endeavor to come to some definite understanding.

The Egerton Tramway Co. has discontinued the running of cars on Sundays a-Stellarton, N.S. owing to another action being taken against one of its employes under the Lord's Day Act. If the people of the municipality desire the cars to be runon Sundays, the company will operate them.

Judgment has been given for the plaintiffs in the action of Nelles and Newman against the Windsor, Essex and Lake Shore Rapid Ry. The plaintiffs were among the original promoters of the company, and when they sold the charter to the Keystone Construction Co., they were to receive $43,000 in first mortgage bonds, and $72,000 in preferred stock. The action was brought to compel the company to carry out the agreement.

The Ottawa, Ont., City Council has given a first reading to a by-law providing among other things that no conductor of any car shall demand or collect a fare from any passenger unless such passenger is provided with a seat in the car. Further, strap holding or standing in aisles or onfoot boards is to be prohibited, and when a car is full a notice to that effect shall be placed in a conspicuous place and passengers not allowed to enter.

A bill to amend the Railway Act was laid before the House of Commons during the recent session seeking to make railway companies liable for damages to shippers when the delivery of goods is unduly detained through the fault of the railway companies.

The Mayor of Port Arthur, Ont., interviewed D. D. Mann, of Mackenzie, Mann & Co., Limited, recently, respecting the report that they intended to erect a large steel plant at Hamilton, Ont. He reports that he was informed by Mr. Mann that if the furnace now being erected at Port Arthur proved a success, steel works would be established in connection with it.

MARINE DEPARTMENT

Coast, Lake and River Officers for 1907.

The following appointments have been made by the principal navigation companies engaged in the coasting, lake and river routes for their various steam and sailing vessels, tugs and barges for the current year. In the first column is given the name of the vessel, in the second that of the captain, and in the third that of the chief engineer:

THE ANDERSON AUTOMATIC VALVES AND WATER COLUMNS FOR RAILROADS

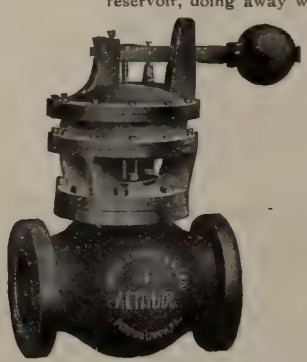
Anderson Patent Altitude Valve

Connected to Tank Service

No Waste of Water
No Freezing of Floats

This valve maintains a uniform stage of water in tank or reservoir, doing away with the annoyance of floats or fixtures in the tanks.

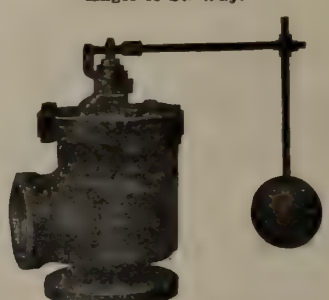
Accessible and protected from frost. Adapted for Buildings regardless of height.



Anderson Patent Float Valve "Simply Has No Equal."

Cushioned in opening and closing. Float swivels to any angle desired.

"Angle or St. Way."



The Valves with an Absolute Guarantee.

For high and low pressure. Absolutely controls the water level in tanks or reservoirs. Instantly adjusted to operate quick or slow, as desired. "No waste of water." The upper portion of body being lined with bronze, also the valve or piston being solid bronze, makes the valve indestructible. Railroad men that use them say, "Their equal is not made."

"Angle or St. Way"

The Anderson Cushioned Non-Return Valves

"Life and Property Insurance Valves"

Why! endanger your power plant by using the regular angle, globe or gate valves at the boilers when you can get the Anderson Cushioned Non-Return Valve, which is an AUTOMATIC STOP VALVE, also a HAND-STOP VALVE, all in one?

The Heaviest Line OF AUTOMATIC VALVES AND TRAPS

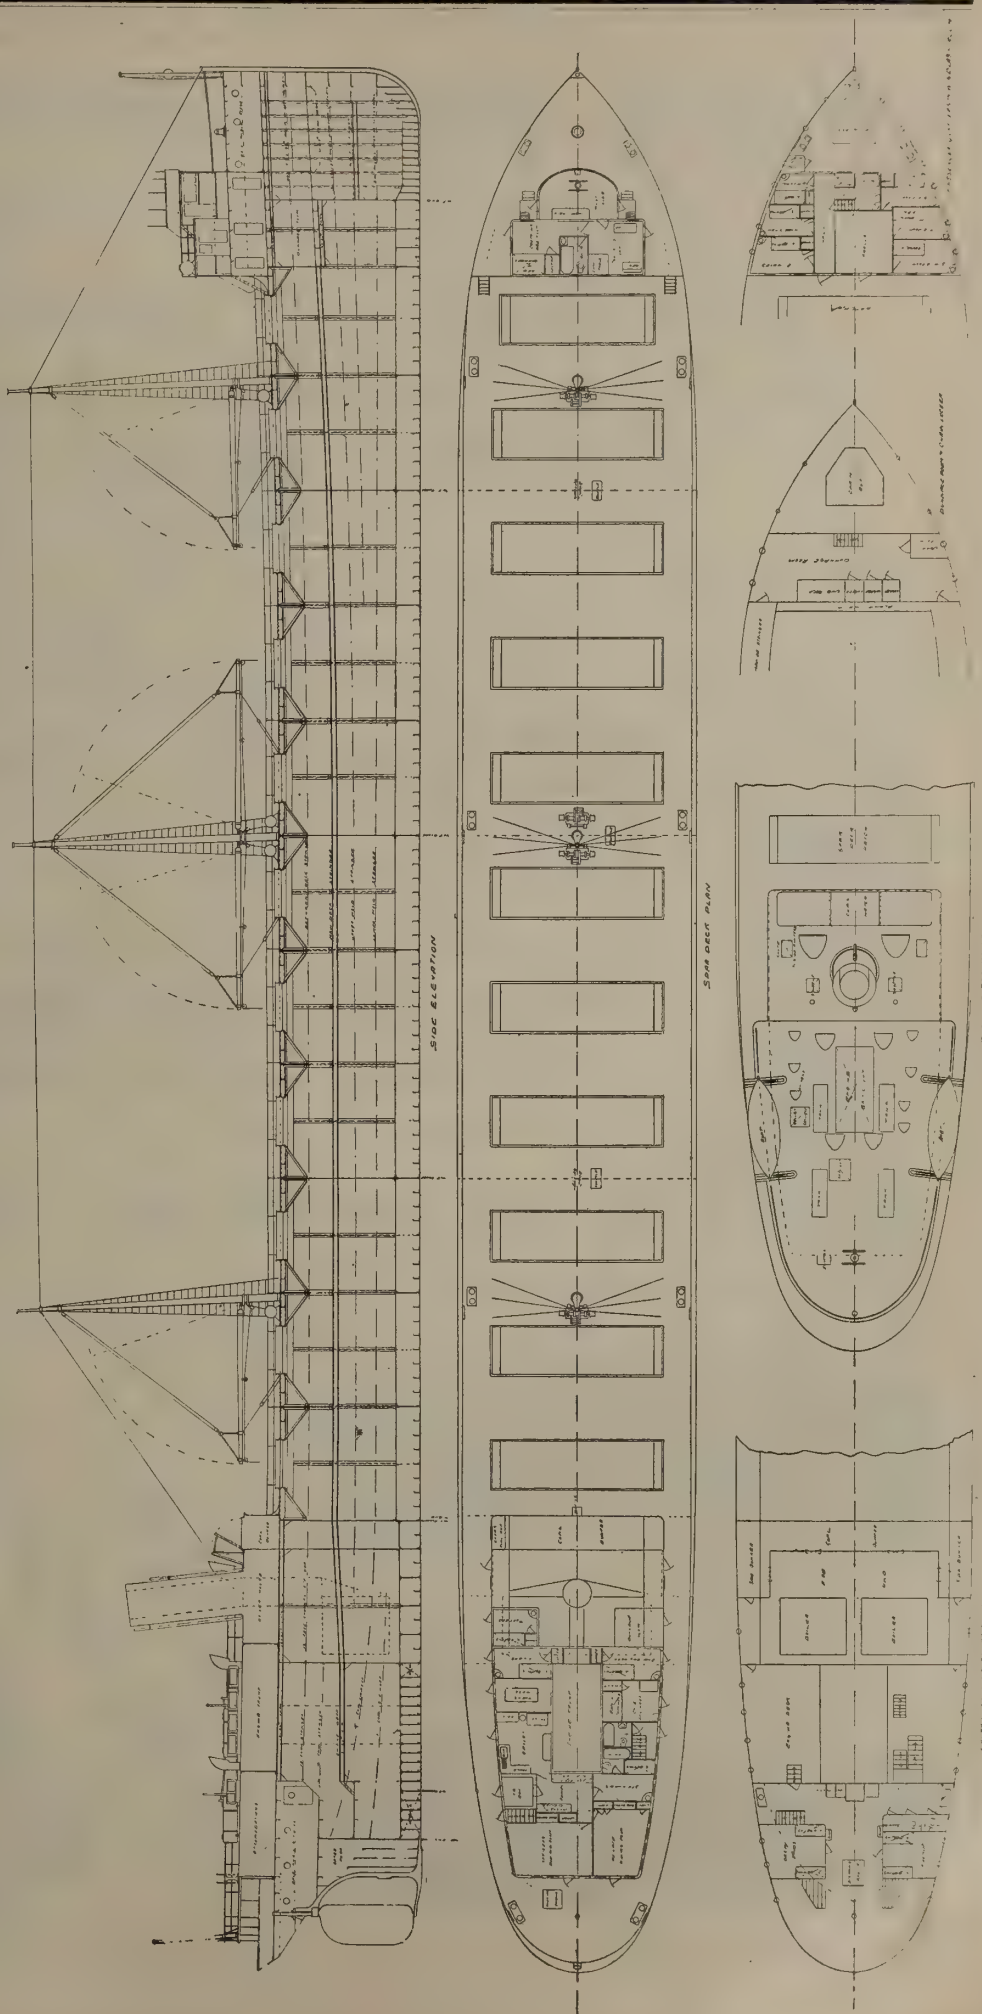
For High-Pressure Steam and Water Service ever Presented to Users.

GOLDEN-ANDERSON VALVE SPECIALTY CO.

Offices: 1001 Fulton Bldg., Pittsburg, Pa.

The Farrar Transportation Co.

This company is having built a steel single deck bulk freight steamer which it is proposed to name the Collingwood. She is to be built on the arch and webb frame system, without hold beams or stanchions. The spar deck is continuous all fore and aft, with raised top-gallant forecastle, with pilot house and texas on same, and deck-house aft, containing coal bunkers, boiler house, galley, two dining-rooms and crew's quarters. Those members of the crew who cannot be accommodated in the after deck house will be provided for in the forecastle, in the upper boiler house and on the fantail aft. There will be 11 cargo hatches 10 ft. long, fore and aft, spaced 24 ft. centres, between the fore and after deck houses. The hatch coverings will be of 3½ in. white pine. Three steel masts will be provided, each fitted with booms and rigging for handling cargo. Accommodation, consisting of a parlor and three staterooms, will be provided under the forecastle for passengers, and a dining-room will be provided aft. The hull will be fitted with a double bottom, 5 ft. deep, for water ballast, extending from collision bulkhead to after peak bulkhead, divided into nine watertight compartments with manifold and pumping system located in engine room. The steamer will be fitted with a triple expansion engine, cylinders 21, 33½ and 57 in. diameter by 42 in. stroke, to which steam will be supplied at 180 lbs. pressure by two Scotch boilers 14 ft. diameter by 12 ft long over heads. Each boiler will have three furnaces, and will be fitted with patent bridge walls and flue blowers. The vessel is being built in every respect to the highest requirements of the Great Lakes Register.



THE FARRAR TRANSPORTATION CO.'S STEAMSHIP COLLINGWOOD—PROFILE AND DECK PLAN.

G. Gibbons, K.C., chairman Canadian Section of the International Waterways Commission, delivered an address on International Waterways before the London Ont., Board of Trade, April 5.

Design of a railway bridge pier is the title of a 50 cent pamphlet by C. Derleth, Jr., C.E., Associate Professor Structural Engineering at the University of California, which is published by the Engineering News Publishing Co., New York.

The act respecting cold storage on steamships from Canada to the United Kingdom and in certain cities in Canada, passed in 1897, has been repealed by sec. 10 of an act to encourage the establishment of cold storage warehouses for the preservation of perishable food products, passed at the recent session of the Dominion Parliament.

Reference is being made to the fact that Canada was not invited to send a representative to the Imperial Navigation Conference now sitting in London, Eng. A British paper says that the Dominion has a remedy in her own hands by making navigation laws for her own coasts and inland waters, leaving the Board of Trade no alternative but to sanction the enforcement of her regulations upon British ships engaged in the coasting trade of the Dominion. The reason why Canada was not invited to be represented at the conference is that she has practically no interest in the questions to be discussed there. It is true that Canada is, as one paper puts it, "the first maritime nation in the Empire next to the United Kingdom," but almost without exception Canadian vessels are engaged in trading in territorial waters, or coastwise on the American continent. All vesssels engaged in the "over sea" trade from Canadian ports are either British owned, or where they are Canadian owned, they are British registered. Under these circumstances it is difficult to see where Canada's interest in the conference comes in.

THE DERRY-COLLARD COMPANY

BOOK NEWS SERVICE

A New Kind of a Book on Railroad Matters

Built on a new plan; is self-indexing, cross referenced and practically a cyclopedia of railroad matters boiled down into pocket form.

It is chuck full of information such as appears below and covers every phase of railroading from A to Z.

Coal—Bituminous—Average bituminous coal contains about 80 per cent. of carbon, 5 per cent. of hydrogen, 15 per cent. of other substance generally considered as foreign matter or impurities; ignites at about 1,800 degrees and weighs about 52 pounds per cubic foot. One ton of 2,000 pounds occupies 39 to 40 cubic feet. A bushel of 2,500 cubic inches weighs 75 pounds. Specific gravity 1.40.

Coal	B.T.U. per lb. combustible	Ash per cent.	Moisture per cent.
Anthracite	14,700	10 to 20	1 to 5
Semi-anthracite	14,900	10 to 20	1 to 5
Semi-bituminous	15,800	5 to 10	1 to 6
Bituminous—Eastern	15,000	5 to 20	2 to 6
" Western	14,200	8 to 25	6 to 15
Lignitæ	12,200	5 to 20	10 to 30

Coal—Consumption—Varies greatly with different conditions of trains, roads, locomotives, etc. Exact comparisons are impossible unless we know all conditions, which is seldom the case. Tests on several roads running into New York in 1897 give these results: Hard Coal: Average per train mile, 17.3 freight cars, 122 lbs.; average per train mile, 7 passenger cars, 112 lbs.; average per freight car mile, 7.05 lbs.; average per passenger car mile, 16 lbs. Soft Coal—Average per train mile, 18.15 freight cars, 120 lbs.; average per train mile, 7 passenger cars, 110 lbs.; average per freight car mile, 6.06 lbs.; average per passenger car mile, 15.07 lbs.

This is a book for the President, Manager, S. M. P., M.M., Traveling Engineer, Air Brakeman, Foreman of Shop or Roundhouse, Engineer, Fireman or Machinist: And the Price

THE DERRY-COLLARD CO.

ROOMS 2201-28

109 LIBERTY ST., NEW YORK

Atlantic and Pacific Ocean Marine.

Dr. J. E. March, Quarantine officer at St. John, N.B., died there suddenly, April 3.

What is to be done with the S.S. Bavarian? She has been lying on the beach at St. Joseph de Levis, Que., all winter, and there is not a dock on the St. Lawrence large enough to allow her to enter

The Donaldson Line, according to a Glasgow, Scotland cable, has placed an order for another steamer, similar to the Cassandra, for its Glasgow-Canada trade. An illustration and description of the Cassandra appeared in our Oct., 1906 issue.

The Elder-Dempster str. Bornu arrived in Halifax, N.S., Mar. 25, and has taken up the run of the Dahomey, in the Halifax-Mexico service. The Bornu is 345 ft. long, 42 ft. beam, 2,000 tons register, and has accommodation for first and second-class passengers.

Following are officers and directors of the Quebec Steamship Co. for the current year: President, W. Price; Vice-President, J. T. Ross; other directors: G. T. Davie, A. F. Hunt, W. Simons, Hon. J. Sharples, J. C. Thomson, Quebec; E. H. Botterell, M. N. de Lisle, Montreal.

The C.P.R. has completed arrangements with the Mersey Dock and Harbor Board, by which it will be enabled to concentrate the whole of its trans-Atlantic business at the Sandon dock. The company will build a large cold storage warehouse and other buildings at the dock.

The Imperial House of Commons, Mar. 27, ratified the contract with the C.P.R. for the conveyance of mails between Liverpool and Hong Kong. The company receives $17,305 for each trip. The contract was entered into during the summer of 1906 and runs for two years.

Jas. Thom, Montreal Manager of the Dominion Steamship Line, returned to that city April 2, after a lengthened trip to Europe. He says it is likely that the company will place an order for another large steamship for the Canadian trade, similar to the Alberta, which was recently ordered.

The Allan Steamship Line has ordered another 10,000 tons, twin screw steamship, for the Glasgow-Montreal service. She will be 485 ft. long, 60 ft. wide and 41 ft. deep Speed 15 knots. The company has already under construction a vessel of similar size for the same route, which is expected to be ready in Sept.

R. Reford, Montreal, who was chairman of the Transportation Commission, which reported to the Canadian Government Dec., 1905, prepared an address on the subject of transportation which was read before the Mining Society of Nova Scotia recently. It dealt exhaustively with the establishment of an ocean express steamship service between Halifax and Ireland.

A deputation waited on the Minister of Trade and Commerce, April 4, and urged that assistance be given towards establishing trade communication between Canada and Australia, by means of a line of steamers from a port in eastern Canada. It was understood that the matter would be discussed between the Premier and the Australian Premiers at the Colonial Conference in London.

The Union Steamship Co. is rearranging its contracts for carrying the mails between Australia, New Zealand and Vancouver, B.C. From July 1 the steamships will leave Sydney, N.S.W., for Wellington, N.Z., and thence will call at Fiji, on the way to Vancouver, instead of sailing from Sydney to Brisbane, and on to Vancouver, calling at Suva. The Queensland mails will be brought overland by train to Sydney.

Furness, Withy & Co., and the Manchester Liners are suing the Great Northern Ry. of Canada, for damages for a breach of agreement to supply cargoes of grain to their steamers. The contract was entered into in 1903, and in May of that year the steamers Austriana and Manchester Engineer, after waiting for several days at Quebec, could not get cargoes from the railway company. Among the reasons put forward by the G.N. Ry. for inability to provide the cargoes was the burning of a bridge which tied up traffic on the line for some days.

Notwithstanding the persistent denials of the President of the C.P.R., and the manager of the company's steamships, the reports continue to crop up that the company has ordered new Empress steamers for its Atlantic or Pacific Ocean lines. One of the latest reports comes from Vancouver, B.C., where D. E. Brown, the superintendent of the C.P.R. Trans-Pacific steamers, is credited with saying that construction on the two new Empress steamers for the Pacific service will be commenced immediately, and that they will be afloat within 18 months.

The question of the adoption of Father Point, Que., as the landing place for mails, instead of Rimouski, has been again discussed by the Pilots Association, and is being taken up by the Shipping Federation of Canada and the Chambre de Commerce at Montreal. It is claimed that with the deeper water at Father Point, the mails could be handled much more expeditiously than is the case at Rimouski. All that is necessary to make Father Point available is the construction of two miles of railway to connect the landing place with the Intercolonial Ry.

The first steamers to sail from Great Britain to Quebec during the current season of navigation were the Allan Line S.S. Sardinian from London, April 13; Allan Line S.S. Ionian from Liverpool, April 18; Dominion Line S.S. Ottawa, April 18; Allan Line S.S. Corinthian, from Glasgow, April 20; Donaldson Line S.S. Athenia, from Glasgow, April 20; C.P.R. S.S. Lake Manitoba, from Liverpool, April 24; Allan Line S.S. Virginian, April 26. The earliest sailings from Montreal will be the Allan Line S.S. Ionian, the Dominion Line S.S. Ottawa, and the Allan Line S.S. Sardinian, on May 4.

Maritime Provinces and Newfoundland.

Capt. E. Davison, who died at Hantsport, N.S., April 11, aged 95, was one of the first mariners sailing out of Hantsport.

A proposition is under consideration for establishing a steamship line between Windsor, N.S., Cobequid Bay and Minas Basin ports.

The schooner Patriot has been sold by Capt. Hardy to Capt. Cook, of Isaac's Harbor, N.S., and has been transferred to the coal trade.

A steamer named the Enterprise has been purchased in New York, and will be run as a ferry between Portugal Cove and Bell Island, Nfld.

John McMillan, formerly chief engineer of the str. Stanley, from which he retired in 1902, died in Charlottetown, P.E.I., recently, aged 80.

Capt. Courtney, Grand Bank, Nfld., has purchased the schooner Sea Fox, 111 tons, built at Essex, Mass., 1889, and will transfer her to the British flag.

The new shipping pier at Glace Bay, N.S., for the Dominion Coal Co., has been completed, and will be utilized for shipping coal during the coming season of navigation

A large area of land at Kelley's Beach, Sydney, N.S., has been bonded for three months, it is reported, to those interested in the laying out of a steel shipbuilding yard.

The sealing str. Greenland became disabled on the sealing grounds, and is reported sunk. All the crew, 183 in number, were rescued by the strs. Newfoundland and Grik after they had abandoned the Green land.

A company has been formed at Albert, N.B., for the purpose of engaging in the towing trade on Shepody Bay and river, and a tug has been purchased in Maine. Capt. J. Lunn will have command of the tug.

The Red Cross Line str. Rosalind arrived in New York April 5 from Newcastle-on-Tyne, Eng., where she had been under repair, and left April 10 on her regular run to St. John's, Nfld., and Maritime Province ports.

The str. John Irwin, which the Port Hood Richmond Ry. Coal Co. recently purchased in England, sailed from Liverpool for Halifax, N.S., April 10. She is a steel steamer, built at Paisley, Scotland, 1897, her capacity being 303 tons gross.

Two large steel scows for the Dominion Government dredging plant will be launched at New Glasgow, N.S., in the near future. A steel schooner, 140 ft. long, and to have a capacity of about 500 tons, is also to be built at New Glasgow.

The sealing str. Southern Cross, with a crew of 172 men, which left St. John's, Nfld., Mar. 11, had not been heard of April 9, and it was feared she had met with an accident. All the other vessels of the sealing fleet have been accounted for.

The port of St. Marys, N.S., has been declared by proclamation to be a port to which the provisions of part 12 of the Canada Shipping Act, chap. 113, revised statutes of 1906, shall apply, and T. Mills has been appointed harbormaster.

During his visit to Great Britain the Minister of Marine proposes to make an investigation into icebreaking steamers with a view of deciding as to the construction of one for service between Prince Edward Island and the mainland.

The str. Amherst, owned by the Magdalen Islands Development Co., is being given an extensive overhaul at North Sydney, N.S. A new boiler has been put in, and the whole of the interior has been re-arranged. It is expected that the repairs will be completed early in May.

The following appointments have been made by the Dominion Government: J. T. Bourque, wharfinger at Port Cocagne, N.B. F. McInnes, wharfinger at Port Hawkesbury, N.S.: L. Belliveau, wharfinger at Church Point, N.S.; J. E. Gaskell, harbormaster for Northern Grand Manan, N.B.

The Port Hood Richmond Ry. Coal Co. has chartered the str. Garibaldi, and has purchased two steamers in Great Britain, the John Irwin and the Donegal Castle, for its coal trade on the St. Lawrence. It is expected to charter another steamer of about 2,000 tons capacity during May, for the same route.

In the House of Commons April 8, T. Crockett, M.P., urged the necessity of the provision of a continuous channel between Fredericton and Woodstock, N.B. There were, he said, seven or eight points between

SUBMARINE SIGNAL CO.

BOSTON, MASS.

these towns where there were gravel cars that were obstructions to navigation. These could be removed at a comparatively small cost

The Dominion Government has awarded gold medals to Capt. J. Champion and Capt. D. Fraser, and silver watches to J. Cahill, W. Leavitt, G. McBeath, C. McNeill, F. Skerry, C. Perry, J. McCabe and W. Smith, for bravery in connection with the rescue of three of the crew of the schooner A. J. McKeen, wrecked at Alberton, P.E.I., Nov. 16, 1906.

The Dominion Iron and Steel Co. will have in its fleet during the coming season in its trade between Sydney, N.S., and Wabana, Nfld, Felix, for the limestone trade exclusively; the Hircindo on time charter for either the ore or limestone trade as required; and two new cantilever steamers, Ellen and Siggu, now being completed at Middlesbrough-on-Tees, England.

The Robie M. is the name of the steamer built to replace the Florence C., lost in June, 1906. The hull of the new steamer was built at Liverpool, and the engines installed at Halifax, N.S. She has a capacity for 66 tons of cargo, is fitted for towing and fishing, but has no passenger accommodation. She will trade between Halifax and Isaac's Harbor, calling at a number of intermediate points.

There is under construction at Mahone Bay, N.S., the hull of a new steamer to replace the Strathcona, which was burned in Dec., 1906. The new steamer will have a length of 150 ft., about 15 ft. longer than the Strathcona. She will have a speed of about 11 knots an hour, and a capacity of 300 tons. The passenger cabins will be forward, accommodation being provided for about 50 persons. It is expected that the hull will be launched in June. The boiler and engines are being constructed at Halifax, where they will be installed.

The fleet of steamers to be employed by the Dominion Coal Co. during the coming season of navigation between Sydney, N.S., and St. Lawrence River ports, includes the following chartered steamers: Bergenhus, 2,344 tons; Borgestad, 2,537 tons; Catalone, 2,416 tons; Chr. Knudsen, 2,489 tons; Dominion, 2,584 tons; Forensbo, 2,499 tons; Frutzoe, 2,537 tons; Hekbor, 2,516 tons; Kron Prinz Plaf, 2,511 tons; Mystic, 2,432 tons; O. A. Knudsen, 2,270 tons; Ran, 1,946 tons; Symra, 1,960 tons; Tanke, 361 tons; Tricolor, 2,597 tons. The company's own steamers, Bona Vista, Cacouna, Cape Breton, and Louisburg, will also be engaged in the trade.

Province of Quebec Marine.

T. Bourdages has been appointed Government wharfinger at St. Charles de Caplan, Que.

The Dominion Parliament has authorized the loan of a further sum of $800,000 for harbor development. The interest on the loan is to be met out of the revenues of the port.

The Quebec Board of Trade has passed a resolution asking the Dominion Government to construct a graving dock at that port capable of admitting the largest steamers afloat.

During the 1906 season of navigation there were accommodated in Louise docks, the breakwater and Pointe-a-Carcey wharves, Quebec, 460 vessels. This is exclusive of the ocean-going vessels which were berthed at the breakwater extension.

The name of the schooner Tyree, official number 97,096, registered at Quebec, has been changed by order-in-council to that of G.T.D., and that of the Anglesea, official number 59,954, registered at Quebec, has been changed to that of Bird.

J. Vaughan, heretofore Superintendent district 3, Eastern Division, C.P.R., has been appointed Superintendent of Terminals by the Montreal Harbor Commission. This is a new office, and the superintendent will have charge of the whole system of railway tracks along the harbor front.

The action for damages arising out of the collision in Montreal harbor early in the 1906 season of navigation, between the steamer Gaspesian and a floating elevator belonging to the Montreal Elevating Co., has been advanced another stage in the Quebec Admiralty court, evidence in rebuttal having been taken Mar. 26.

The St. Lawrence and Quebec Railway Ferry Co. is the amended title of the company which applied to the Dominion Parliament for a charter of incorporation as the St. Lawrence Railway Ferry Co. It is given power to operate a railway car ferry across the St. Lawrence River from any point within the limits of the parish of Montreal to any point in the parish of Chambly.

The Dominion ice-breaking str. Montcalm was engaged for several days in breaking up the ice bridge at Cap Rouge. It was intended to cut a channel 700 ft. wide from the bridge as far as Pointe-a-Basile, in order to allow the ice on the river between Montreal and that point to pass down the river without jamming. In 1906 the first vessel reached Montreal April 29, but it was not expected that navigation will be opened so early this season. The str. King Edward started out from Quebec April 6 for Seven Islands, but returned the same day, having encountered a solid field of ice. Two schooners managed to escape the icefield, and arrived in Quebec April 6.

The Richelieu and Ontario Navigation Co. will operate its fleet on the following routes during the current season of navigation: Toronto, Kingston, Rapids King and Brockville, on the Toronto-Montreal line; Hamilton, Belleville and Picton on the Hamilton-Montreal line; Montreal and Quebec on the Montreal-Quebec line; St. Irenee, Murray Bay and Tadousac, on the Saguenay line; Longueuil, Laprairie and Boucherville, on the ferry line; Beaupre and Three Rivers, as pilgrimage steamers; Berthier and Chambly, on the Berthier-Chambly line. The Cornwall and Prescott will be run on excursions and the Chicoutimi will be held as a spare boat on the eastern division.

The House of Commons has passed a resolution authorizing the advance, from time to time, by the Government to the Montreal Harbor Commissioners, in addition to the amounts now specified by the statutes, of sums not exceeding in the aggregate $3,000,000 in order to enable the commissioners to complete the terminal facilities now under construction, and such further facilities as are necessary to properly equip the port. The resolution sets forth that all plans for the proposed works must first be approved by the Government, and that the Board shall deposit with the Government debentures equal in par value to the advances of money made. The debentures are to bear interest at the rate of 3%, and to be repayable within 25 years of the date of issue, the principal and interest being repaid out of revenue as provided by statute. The loan now made will allow of the completion of the new wharf sheds, the taking over of the railway service on the water front, the construction of a new pier for the Dominion Coal Co., and for the transfer of the smaller boats now using the Victoria pier to another point in the central part of the harbor.

Ontario and the Great Lakes.

A 30 h.p. tug is being built at Peterboro, Ont., for use on the Trent Valley canal.

The Trent Valley Navigation Co.'s tug Ajax has been sold to J. E. Fitzgerald, Peterboro, Ont.

The passenger str. Winona, operated in 1906 from Midland, Ont., has been sold by Capt. W. White.

One hundred feet has been added to the length and 20 ft. to the width of the wharf at Muskoka Wharf, Ont.

D. Giles, at one time well known in the steamboat business in Toronto, died there April 5. He retired about 15 years ago.

Capt. S. B. Richmond, for many years keeper of the lighthouse at Thunder Cape, Lake Superior, died at Port Arthur, Ont., Mar. 26.

Capt. C. W. Stone, formerly in the G.T.R. car ferry service between Windsor, Ont., and Detroit, Mich., died in the latter city, Mar. 29, aged 73.

The steel tug under construction at Collingwood, Ont., for the Department of Public Works, was launched April 11, and was named Alberta.

Capt. R. Cootes, who died in Toronto, April 5, aged 74, was at different times master of the schooners Speedwell, Van Straubenzie and North Star.

John Tinning, of Tinning's Wharf, Toronto, died there April 9. Mrs. Tinning, who was ill of pneumonia at the time of her husband's death, died April 13, aged 66.

The str. Winona, recently sold by the underwriters, will be taken from Collingwood, Ont., where she has been wintering, to Detroit, Mich., where she will be repaired.

R. O. and A. B. Mackay, Hamilton, Ont., are in treaty for the building of three package freight steamers. They recently concluded arrangements for the building of a 550 ft. bulk freighter on Lake Erie.

Capt. W. Hall, for 12 years past Deputy Harbormaster of Toronto, died there April 12, aged 78. At one time he owned a number of vessels including the Marquis, W. T. Robb, Bentley, and W. R. Hall.

The Minister of Marine has directed the holding of a further and more searching investigation into the circumstances attending the loss of the Hamilton str. Golspie near Michipicoten, Ont., in Dec., 1906.

The Minister of Marine promised in the House of Commons, April 4, that full consideration would be given to the suggestion that the life-saving appliances at Toronto be made adequate to the requirements of the port.

A British despatch, dated April 5, states that a steamer named Glencourt was launched at Dumbarton, Scotland, that day for the Canadian lakes trade. This is one of the two vessels ordered by the Montreal Transportation Co.

The name of the str. Tadousac, official number 116,263, registered at Toronto, and which was recently bought by the Northern Navigation Co., of Ontario, from Waldie and Wright, has been changed by order-in-council to that of Doric.

Reports from the U.S. revenue cutter officers on the Great Lakes state that the system of marking the International boundary line by means of buoys, which was in force in 1906, resulted satisfactorily, and will be tried again this season.

The Great Lakes Dredging Co. has succeeded in recovering 3,700 rails, 7,100 angle bars, and 2,300 spikes, from the bottom of the Kaministikwia River, Fort William, Ont., where they were deposited in Dec., 1906, owing to the collapse of a wharf.

The Hamilton, Ont., steamers Neepawah and Strathcona have been docked at Detroit,

EXECUTIVE OFFICES

NOS. 346 and 348 BROADWAY, N.Y. CITY, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

CORRESPONDENCE INVITED

OFFICES IN CANADA:

Halifax, N.S.	Hamilton, Ont.	London, Ont.
Montreal, Que.	Ottawa, Ont.	Quebec, Que.
St. John, N.B.	Toronto, Ont.	Vancouver, B.C.
Calgary, Alta.		Winnipeg, Man.

THOS. C. IRVING,
Gen. Man. Western Canada, Toronto.

Mich., for repairs. The first-named requires 25 plates on the sides and bottom of the hull to be renewed; the extent of the repairs to the Strathcona are not so extensive.

Surveys are being made at Barnhart's Island, at the foot of the Long Sault Rapids of the St. Lawrence, near Cornwall, Ont., by a number of U.S. engineers. Local reports state that their object is for the construction of a dam and the development of water power.

The steamers Glenellah and Dundee, managed by R. O. and A. B. Mackay, Hamilton, Ont., will be run between Owen Sound and Fort William, Ont., during the current season, an arrangement having been made by which they will be at the C.P.R.'s disposal during the season, to handle its surplus freight.

The Canadian Passenger Car and Passenger Transfer Co. is having a steel car ferry built by the Polson Iron Works, Ltd., Toronto, for its trade between Prescott, Ont., and Ogdensburg, N.Y. The ferry is being built sufficiently strong to cross the river during the winter.

The steel framework and machinery for the new steamer, to be named the Iroquois, for the Huntsville, Lake of Bays and Lake Simcoe Navigation Co., has been delivered at Huntsville, Ont., and is being transferred to the Lake of Bays, where it is being erected.

The Dominion Government has authorized the carrying out of various works at Cobourg, Ont., in order to provide the necessary accommodation for the car ferry service about to be inaugurated by the G.T.R., and Buffalo, Rochester and Pittsburg Ry. The works include dredging and the extension of the present piers.

The Department of Public Works has under consideration tenders for dredging at the mouth of Rainy River, Ont., the work to be done during the current year. Owing to the shoaling of the river in recent years, the navigation at the mouth of the river has been considerably interfered with, and the str. Kenora had to be taken off the route in 1906.

ONTARIO NO. 1, OWNED BY ONTARIO CAR FERRY CO.

The str. Rosedale has been sold by the St. Lawrence and Chicago Steam Navigation Co to R. O. and A. B Mackay, Hamilton, Ont., the price paid, it is reported, being about $80,000. The Rosedale is a steel screw steamer, built at Sunderland, Eng., 1888, and equipped with engines of 106 n.h.p., her dimensions being: Length, 246.1 ft.; breadth, 35 ft.; depth, 21.1 ft.; tonnage—gross, 1,507; register, 977 tons.

The Niagara Iron and Steel Co., which has been incorporated under the Dominion Companies' Act with offices at Toronto and a capital of $1,000,000, is authorized to own and operate steamers, and to construct tramways in connection with its mines, smelting works and other plants. The provisional directors are: Hon. J. K. Kerr, J. A. Paterson, W. Davidson, W. F. McFarland, and A. M. McKenzie, Toronto.

The Lemcke Tug Co. has been incorporated under the Dominion Companies' Act, with a capital of $20,000 and offices at Lion's Head, Ont., to carry on a general navigation business; the business of towing, wrecking and salvage with various allied businesses, and particularly to acquire the tug W. E. Gladstone. The provisional directors are: C. Pedwell, C. Lemcke, J. Waugh, Mrs. M. J. Pedwell and Mrs. S. L. Lemcke, of Lion Head, Ont.

The Ontario Dock Co. proposes to erect a dock on the bay front at the foot of York St., Toronto. The site has a frontage of 190 ft., and it is proposed to run out a pier 65 ft. wide and dredge slips on either side. Mackenzie, Mann & Co. have the contract, and it is expected that the dock will be ready for the 1908 trade. The dock will be used by the Niagara, St. Catharines and Toronto Navigation Co., the Hamilton Steamboat Co., and the Canadian Lake and Ocean Navigation Co.'s steamboats.

ARMAND LALONDE
Can. P. & F.A.
Montreal, P.Q.

The Lakes Transportation Co. has been incorporated under the Ontario Companies' Act, with a capital of $100,000 and offices at Toronto, to carry on the business of carriers by water, and of water transportation, both on inland and tidal waters; to build, construct, equip and operate ships, vessels, boats and barges, and to hold the stock and securities of any other companies incorporated for any of the said purposes. The provisional directors are: G. A. Farini, A. C. Thompson, W. H. Williams, A. M. Dymond, W. A. Douglas, of Toronto.

Following are the dates of the opening of navigation on the Great Lakes: Str. Pierrepont, Kingston to Garden Island, Ont., Mar. 27; str. Macassa, Hamilton to Port Dalhousie, Ont., Mar. 28; str. Macassa, Hamilton to Toronto, and str. Lakeside, Port Dalhousie to Toronto, April 4; str. Neepawah, from Collingwood, Ont., for Detroit, Mich., April 8; str. Strathcona, from Port Colborne to Fort William, Ont., April 9; Northern Navigation Co.'s service from Sarnia to Fort William, April 20, and from Collingwood, April 23. The Welland canal was opened for navigation April 14.

Stadacona Limited, Donnacona Limited, Strathcona Limited, and the Hamilton and Fort William Navigation Co., Limited, are the titles of four companies incorporated under the Ontario Companies' Act, with W. Southam, A. E. Carpenter, J. Milne, C. E. Doolittle, G. L. Staunton, K.C.; A. B. Mackay, and G. Hope, of Hamilton, Ont., as provisional directors. The offices of the companies are at Hamilton, Ont.; the capital of the Stadacona, Donnacona and Strathcona companies being $40,000 each, and of the H. and F. W. N. Co. being $1,000,000. The object of each company is the same, viz.: to construct, acquire and navigate steam and other vessels for the conveyance of passengers, goods and merchandise, and to act as a common carrier of passengers and goods, and as a forwarder, wharfinger and warehouseman, and for the purposes of the company to deal in goods, wares and merchandise, with incidental and subsidiary powers.

The three steamships purchased in Great Britain for C. H. F. Plummer, and which will be operated under the name of the Canadian Lake Transportation Co., Ltd., as part of the Canadian Lake Line, were formerly engaged in the Leith, Hull and Hamburg Steam Packet Co.'s line (J. Currie & Co., Leith, Scotland). The Corunna and Nevada were built by Ramage and Ferguson, Leith, in 1891, and are steel screw steamers, 1,256 tons gross and 775 tons net, and are fitted with triple expansion engines, 17, 27 and 44 in. diameter, by 30 in. stroke. The third str., Morena, was built in 1890, by L. and H. Morton & Co., Leith, and is similarly engined. The Canadian Lake Transportation Co. has been incorporated under the Dominion Companies' Acts with offices at Toronto, and a capital of $100,000 to carry on a shipbuilding, engineering, navigation, transportation and terminals business in Canada or elsewhere. The provisional directors named are merely for organization purposes. It is understood that J. H. Plummer will be President and C. H. F. Plummer, Secretary-Treasurer and General Manager.

The Ontario Car Ferry Co.'s steel car ferry Ontario No. 1 was launched at Toronto, April 6, the christening being performed by Miss May Fitzhugh, daughter of the Third Vice-President G.T.R. The steamer is 320 ft. long, 56 ft. wide, and when loaded will have a draught of 15 ft. She has a capacity for 28 loaded cars, and is provided with 100 staterooms for passengers. She is of the closed-in type, the cars being taken on and off at the stern, and is of extra heavy construction, as it is intended to make a daily trip across the lake between Cobourg or Port Hope, Ont., and Charlotte, N.Y., winter and summer alike. Power will be supplied to the twin screws by engines of the triple expansion type, steam being generated by Scotch boilers. A speed of 15 miles an hour will be maintained. The steamer is expected to be ready for service early in June. The Ontario Car Ferry Co. is a combination of the G.T.R. and the Buffalo, Rochester and Pittsburg Ry., and it is intended to divert a portion of the coal traffic which now goes round by Suspension Bridge, thus saving a considerable mileage.

The Mutual Steamship Co. has been incorporated under the Dominion Companies' Act, with a capital of $99,000 and offices at Port Colborne, Ont., to carry on a general navigation business on the Great Lakes, rivers and canals of Canada, and waters adjacent thereto, and in connection therewith to own an operate elevators, wharves, docks, shipyards and machine shops. The provisional directors are: J. W. Norcross, D. McGillivray, F. K. Brown, L. Kinnear, J. W. Young, D. E. Evans, R. J. Blackhall, H. J. Mahaffey, W. J. Saurin, DeWitt Carter, T. F. White, O. W. Fares, T. E. Reeb, H W. Boneberg, J. Lannan, J. H. Woods, E. D'A. Woods, J. D. Kinnaird, A. Fehrman, R. Augustine, O L. Steele, of Port Colborne, Ont.; C. A. White, J. O. Wismer, R. H. Appleyard, of Humberstone, Ont. Capt. Norcross informs us that an order has been placed with Wm. Dobson & Son, Newcastle-on-Tyne, Eng., for the construction of a double-deck steamer, with side gangways, and in every respect the latest model of a packet freighter, to pass the canals. Her dimensions are: Length, 256 ft.; breadth, 43 ft.; depth, 26 ft., and she is to be fitted with triple expansion engines; cylinders, 19. 31 and 56 in. diameter, by 36 in. stroke. The steamer will have a double deck, with six hatches on the upper deck and seven hatches between decks, with three gangways doors on each side. She is estimated to cost $250,000 and is to be delivered by Sept. 1. It is stated that the company has an option on the berth for a second vessel of the same size and design, and that it is probably the order will be placed shortly.

The freight and passenger steamers Persia and Cuba, which for a number of years have been operated between Montreal, Toronto and other lake ports, have been sold, and will be transferred to other routes on the opening of navigation. The Persia, which was owned by the Toronto and Montreal Steamboat Co., G. Somerville, Toronto, Manager, has been sold to the Quebec Navigation Co., Quebec, and will in future run between. that city and Montreal. The Cuba was owned by the Montreal and Chicago Merchants Shipping Co., C. A. Jaques, Montreal, Manager, has been sold to the Battle Island Pulp Co., and will be engaged in carrying pulpwood from Quebec to U.S. ports. The Persia, official number 97,013, registered at St. Catharines Ont., built there 1873, and rebuilt 1906, is a wood hull screw steamer with engines of 58 n.h.p., her dimensions being: length, 144 ft.; breadth, 26 2 ft.; depth, 12.2 ft.; tonnage—gross, 757; register, 500. The Cuba, official number 71,153, registered at Kingston, Ont., built at Hamilton, Ont., 1875, and rebuilt 1906, is a wood hull screw steamer, with engines of 200 h.p., her dimensions being: length, 177 ft.; breadth, 26 ft.; depth, 11.5 ft.; tonnage—gross, 931, register, 599. The Merchants Line, in which the Persia and Cuba have hitherto been operated, will have on its route between Montreal and Detroit, calling at Toronto and other intermediate points, the steamers City of Montreal, and the City of Ottawa, owned by the Montreal and Lake Erie Steamboat Co. The first named was the old Anchor Line str. China, and the latter was the old Anchor Line str. India.

Manitoba, Saskatchewan, Alberta, Etc.

The contractors have started operations at the locks which it is proposed to construct on the Red River to overcome the St. Andrew's rapids.

The old ferry which has been operated for several years on the Saskatchewan river at Saskatoon, Sask., is being run again this season. It was expected that the traffic bridge would have been completed, and so have obviated the necessity of the continued operation of the ferry.

The Craven and other Saskatchewan Boards of Trade have passed resolutions asking the Dominion Government to provide for the dredging of Lost Mountain Lake, so as to open it for navigation. It is proposed to place some freight steamers and barges on the lake if the improvements are carried out.

The Winnipeg City Council is applying for authority to construct a bridge across the Red River in the parish of St. John. The Board of Trade, at the request of vessel owners trading on the river, is urging that the interests of navigation be fully safeguarded, especially in view of the improved navigability of the river when the St. Andrew's locks are completed. The Minister of Marine has informed the Winnipeg City Council that the plans cannot be approved, and the council has appointed an engineer to report as to the cost of the alterations necessary to comply with the government requirements for the protection of navigation.

Z. Malhoit, of the Department of Public Works engineering staff, has completed an inspection of the upper part of the Athabasca River to the Lesser Slave Lake. A sum has been authorized to be expended in cleaning out the bed of the river by removing boulders, snags, etc.; and also by building wing dams for the purpose of confining the water to one channel, thus greatly improving the navigation. The intention of the department is to render it possible for steamers to navigate the river from Athabasca Landing to its confluence with the Lesser Slave River, thence up to the extreme western end of Lesser Slave Lake.

The application of the International Canal and Power Co. for an act of incorporation, was referred by the Senate to a Special Committee for consideration, at the recent session. The company asked for power to construct a waterway from Thunder Bay on Lake Superior to Edmonton, Alta., via Rainy River, Lake of the Woods, Winnipeg River, Lake Winnipeg, Cross Lake, Grand Rapids, Cedar Lake and Saskatchewan River. It also provided for the deepening and widening of the Assiniboine River to Brandon, and all other works necessary for the construction and maintenance of a navigable waterway between the points named, and to Lake Winnipegosis and Manitoba. The company also desired to have authority to utilize for various purposes the water powers developed along the line of the canal.

The Imperial Privy Council has dismissed the appeal of the owners of the steamer Longford, against the Canadian Forwarding and Export Co. The action arose out of the chartering of the steamer in 1902, at £760 per calendar month. The payment due Sept. 11 was not paid until Oct. 2, in Montreal, and it was stated that Maclean, Kennedy & Co., as agents, waived the withdrawal of the steamer from charter owing to the money not having been paid when due. The captain withdrew the steamer Oct. 4, and the Quebec courts awarded the Canadian Forwarding and Export Co. $3,597.22 as damages. The C. F. and E. Co. went into liquidation in Dec., 1902, and in Feb., 1903, an order was obtained authorizing the liquidator to go on with the action for damages. The judgment of the Quebec Court has been upheld by the decision of the Privy Council.

"PAGE FENCES WEAR BEST"

PAGE WIRE FENCES stretch tighter—posts can be set farther apart. That saves money—fewer posts, less labor digging post-holes, quicker erecting. PAGE FENCES last longer—made of No. 9 wire. PAGE FENCES are heavily galvanized, and for a small extra charge are supplied coated WITH PERMANENT PAINT. PAGE FENCES stand wear better, give longer service, keep your maintenance account down. The PAGE KNOT LOCK cannot slip and positively does not injure the wire. PAGE FENCES do not sag.

50 THOUSAND MILES OF RAILWAYS USE PAGE FENCES

There must be a dollars-and-cents reason for the standing PAGE FENCES have with railway men the world over. It will pay your road to hear that reason before you spend another cent on fences.

B.C. and Pacific Coast Marine.

The British tug Tartar has been purchased for the B.C. coast towing service, and is expected in Vancouver by the end of May.

The name of the str. Unican, official number 111,986, registered at Vancouver, B.C., has been changed by order-in-council to that of Belcarra.

The tug Isaac has been purchased by Robt. Curnew and J. S. Hutton, New Westminster, and will be operated in the river and sound towing business.

The wreck of the Norwegian str. Themis, lying on the rocks off Scarlet Point, Balaclava Sound, B.C., has been bought for about $500 by the B.C. Salvage Co., Esquimalt.

The Barque Antiope Co., Victoria, B.C., has sold the vessel of that name to Capt. P. J. L. Mathieson, Sydney, New South Wales. The barque is 1,380 tons register, and was built at Port Glasgow, Scotland, 1866.

It is reported at Vancouver that the company being organized to build a floating dry dock there has let a contract for the construction of the dock to Swan and Hunter and Wigham-Richardson Co., Newcastle-on-Tyne, Eng.

The str. Leelanaw will be put on the Nome and St. Michael service at the opening of the current season of navigation. The vessel will tow one of the three barges, John C. Potter, Two Brothers and Oregon, on each voyage north.

The Sutton Lumber and Trading Co. has filed with the Minister of Public Works at Ottawa, as required by the Navigable Waters' Protection Act, plans of the works which it proposes to carry out for the improvement of Kennedy River, Vancouver Island.

The estimates submitted to the British Columbia Legislature for the year ending June 30, 1908, provide for $20,760 for ferry services at 16 points, and for steamboat services on the Columbia River above Revelstoke and above Golden, and on the North Thompson River.

The F. Graham Lumber Co. is applying for a grant or lease of foreshore and submerged lands in Esquimalt harbor, B.C., for the purpose of erecting a saw mill, bridge and wharf. The plans for the latter show a structure 100 ft. wide, extending 522 ft. southerly, and 300 ft. easterly, forming an L.

By the merging of the Alaskan Steamship Co. and the Northwestern Steamship Co., over 20 steamers have been brought under one management. The first named serves south-eastern Alaska with Skagway at the northern terminus, while the latter covers the Valdez-Seward and Nome routes.

The material has been delivered at Vancouver for the construction of the new steamer for the Canadian Hydrographic survey. The steamer was fully described in our issue of Oct., 1906, pg. 607, and Nov., 1906, pp. 687 and 689. The contract for the construction of the steamer has been partially sub-let by the B. C. Marine Ry., Esquimalt. The frame work will be done by H. House, but his men will not do any riveting of the plates.

The boiler of the str. Beaver, built on the Thames, Eng., 1835, for the Hudson's Bay Co., and the pioneer steamer on the Pacific coast, has been raised, and it is proposed to have it preserved as a relic at Vancouver, B.C. The Beaver was wrecked at the mouth of Burrard Inlet July, 1888, and nothing was done until 1906 to recover the boiler. The boiler has a value aside from its historic associations. It has a height of 22 ft. 9 in., while its steam pressure is only 15 lbs. to the square inch; an upright superheater permitting the heat from the furnace to pass through the centre to superheat and dry the steam; double safety valves, one for the escape of over steam pressure, the other as an intake or collapsible valve, it being generally understood that as steam went down and out of the boiler, it was necessary to provide for the atmosphere pressure and thus prevent a collapse.

The President of the United States has appointed an Inland Waterways Commission, and the Lakes-to-the-Gulf Deep Waterways Association, at a meeting in Chicago, Ill., April 4, spent some time discussing the importance of the projected canal from Chicago by the Mississippi Valley, to the Gulf of Mexico, in connection with the work of the Commission. A special advisory committee, consisting of the Governors of the States through which the projected waterway would pass, was appointed. The next meeting of the Association will be held at Memphis, Tenn., Nov. 21.

An amendment to the Canadian Shipping Act has been passed by the House of Commons providing that if a seaman or an apprentice lawfully engaged or bound to any ship registered in any of the provinces at the time of the offence, commits any of the prescribed offences, he shall be liable to the customary penalties on summary conviction. The present law contains the words "provided he has entered into articles with the ship when she was a registered Canadian ship." The necessity for an amendment became apparent owing to a recent case in British Columbia in which the seamen were discharged by the court upon its being proved that they signed articles in Christiania, Norway, before the vessel came to Vancouver, B.C., to engage in whaling

Notices to Mariners.

The Department of Marine has issued the following notices:

No. 18.—Mar. 18.—British Columbia—52. Queen Charlotte Islands, Hectali Strait, Skincuttle inlet, uncharted rock, wharf.

No. 13. Mar. 4.—Quebec—36. River St. Lawrence, ship channel between Quebec and Montreal, Ile du Pads, range lights established.

No. 19.—Mar. 20.—British Columbia—53. Vancouver Island west coast, Barkley Sound, Seehart channel, eastern entrance, small rock, light re-established.

No. 17. Mar. 14.—Nova Scotia—48. Bay of Fundy, north entrance to Digby Gut, whistling buoy established. 49. South coast, Port Bickerton, wrecks removed.

No. 12. Mar. 1.—Ontario Lighthouse Division—33. Quebec—River St. Lawrence, Lake St. Louis, Lachine lightship replaced by gas buoy. 34. Quebec, River St. Lawrence, Lake St. Louis, off St. Nicholas Island, gas buoy established. 35. Quebec, Ottawa river, St. Anne lock, lights.

No. 15. Mar. 7.—New Brunswick—40. South coast, Bay of Fundy, St. John harbor, Intercolonial Ry. wharf, light established. 41. South coast, Bay of Fundy, Chignecto channel, Anderson hollow, light to be established on breakwater. Labrador.—42. East coast, St. Lewis sound, Great Island, flagstaff disappeared.

No. 16. Mar. 13.—Ontario Lighthouse Division—44. Quebec, River St. Lawrence, Lake St. Francis, Knight Point and Grosse Point lights, correction of sailing directions. 45. Quebec, River St. Lawrence, Lake St. Francis, off Grosse Point, gas buoy established. Ontario—46. River St. Lawrence, Howe Island, cold bath shoal, gas buoy established.

No. 20. Mar. 22.—New Brunswick—54. Bay of Fundy, Gannet rock, bombs to be fired more frequently. Nova Scotia.—55. South coast, Jordan River, Jordan Bay, east side, light established on breakwater. Newfoundland.—56. South coast, Placentia Bay, Burin harbor approach, Iron Island, fog bell discontinued. 57. South coast, Rose Blanche harbor entrance, Caines Island, change in duration of blasts and intervals between blasts of fog alarm, light to be established. 58. South coast, Port Aux Basques harbor, west Baldwin rock, change in color of buoy.

Replying to a question in the Senate, April 9, Senator Scott said the Government had no intimation that the U.S. Government wished to take the international boundary waters questions from the Waterways Commission to which the problems of the St. Lawrence system was referred in 1905, and all other international waterways questions more recently.

Upper Ottawa Steamboat Company.

This company has its offices at New Liskeard, Ont., its officers and directors for the current year being: President, W. J. Blair; Vice-President, F. W. Hendry; other directors: F. S. Brickenden, M. R. Jennings, New Liskeard; M. P Wright, Haileybury, Ont.; J. D. Kingston, Latchford, Ont.; J. J. Foran, Murray City, Ont.; Secretary-Treasurer and Manager, F. H. Norris. The company acquired the property and business of the White River Mail Line, owned by Brickenden and Hendry, for $20,000, payable $10,000 in cash and the balance in fully paid-up shares. The property included the steamers Geisha, Gipsy and Blanche, with a number of scows, lifeboats, and pointers, together with docks, warehouses, storehouses, tools, etc. F. S. Brickenden and F. W. Hendry remain with the company under contract for at least three years. During the coming season it is proposed to make two round trips daily, instead of one as in 1906, between New Liskeard, Haileybury, and Tomstown, a boat leaving both New Liskeard and Tomstown each morning at seven o'clock, returning the same day. The Geisha will run on Larder Lake in connection with the company's stage line from Tomstown and Boston. We were advised April 11 that the company has got its steamers transferred to Larder Lake and Long Lake ready for the opening of navigation; it has also got three steamers ready for launching on the Montreal River, and it is expected also to have one or two steamers on Lake Temiskaming for a general towing trade, and also a fast steam yacht for private charter.

Marine Notes from the Twin Ports.

Our Port Arthur correspondent wrote April 10: The recent cold weather has dissipated all hopes of an early opening of navigation. The ice field extends in an unbroken expanse out to Isle Royale. It is 24 to 30 inches thick at Thunder Cape, 32 to 36 inches at Welcome Islands, and averages 20 inches in the Kaministikwia River at Fort William, with no signs of weakening. Unless exceptionally favorable weather sets in, it will be May 1 before a boat can reach here from the outside, notwithstanding all the ice-breaker can do

The ice-breaker James Whalen has been engaged for the past three days in breaking a passage to Fort William, for the purpose of transferring vessels from their winter berths to the elevators to load grain. The pressure on the capacity of the elevators is so great that they are anxious to load vessels at the earliest possible date.

Port Arthur and Fort William elevators are practically full, 11,000,000 bushels of wheat, oats and barley being in store. This, together with what is in store in inland elevators, in farmers' hands and on the track will bring the balance of the crop of 1906, to go forward by the lake route, well up to 40,000,000 bush., and ought to insure a prosperous season for vessel owners.

The Shipping Federation of Canada has made an official request to the Dominion Government to establish submarine signal stations at 23 points on the St. Lawrence River, the Bay of Fundy and the Nova Scotian coast.

A question was asked in the House of Commons, April 10, in connection with the placing of the U.S. cruiser Detroit on the Great Lakes, but the acting Premier treated the matter as one requiring special notice. The question involved is an international one, and involves the interpretation of a convention between Great Britain and the U.S., under which neither power will maintain war vessels on the lakes.

Great Lakes Insurance Losses in 1906.

A list of losses and accidents to vessels on the Great Lakes during the season of navigation of 1906 shows that 47 vessels, with a carrying capacity of 58,165 gross tons and valued at $976,000, were total losses, of which 11 were Canadian vessels of 6,607 register tonnage and valued at $248,500. The monetary loss was low in comparison with former years owing to the fact that the wrecked vessels were nearly all small. The list of wrecks as published by the Marine Review gives the following details:

April 20.—Str. Donnacona, owned by R. O. and A. B. McKay, Hamilton, Ont., stranded, but released without injury April 22.

April 25.—Str. Iroquois, owned by St. Lawrence and Chicago Steam Navigation Co., Toronto; broke steering gear; steel plates badly damaged and rudder and shoe lost; put into dry dock at Collingwood, Ont.

April 25.—Str. Robert Wallace, owned by Great Lakes and St. Lawrence Transportation Co., Chicago, Ill.; stranded; leaked slightly, but cargo was uninjured; released April 26.

April 28.—Schooner Anne Marie, owned by D. Gillies, Carleton Place, Ont.; stranded.

May 2.—Str. Midland Queen, owned by Midland Navigation Co., Midland, Ont.; collision with str. Wm. G. Mather; about 14 plates were damaged and taken off; not docked, damage being above water line; repaired at Wyandotte, Mich.

May 14.—Str. Huronic, owned by Northern Navigation Co., Collingwood, Ont.; struck just before entering Canadian canal, Sault Ste. Marie; several plates on starboard side damaged; released May 15 and placed in dry dock at Detroit, Mich., May 18.

May 19.—Schooner J. J. Barlum, operated by Algoma Central Steamship Line, Sault Ste. Marie, Ont.; taken to Sault Ste. Marie May 21, after making temporary repairs.

May 22.—Str. H. M. Pellatt, owned by Canadian Lake and Ocean Navigation Co., Toronto; grounded; cargo lightened.

May 27.—Str. Midland Queen, owned by Midland Navigation Co.; ran ashore in storm but was released later in day; uninjured.

May 31.—Str. Erin, owned by J. and T. Conlon, Thorold, Ont.; sunk in collision with str. John B. Cowle; total loss.

June 18.—Schooner Oliver Mitchell, owned by J. Reid, Sarnia, Ont.; collision with str. Prince.

July 9.—Str. Midland King, owned by Midland Navigation Co.; collision with str. Northern Wave; not injured.

Aug. 8.—Str. Alexandria, owned by Ontario and Quebec Navigation Co., Picton, Ont.; broke engine shaft while passing Ogdensburg, N.Y.; towed to Prescott, Ont., for repairs.

Aug. 10.—Str. Erindale, burned while at dock at Bowmanville, Ont.; valued at $14,000; insured for half; total loss.

Aug. 29.—Str. J. G. Sharples, owned by Great Lakes and St. Lawrence Transportation Co.; struck a rock in Wauhegan harbor; stove hole in bow of steamer, causing it to sink; floated Aug. 31; docked for repairs.

Aug. 29.—Schooner Fleetwing, owned by J. Marks, Windsor, Ont.; was found leaking and abandoned near Centre Island, Toronto.

Sept. 11.—Str. Rosemount, owned by Montreal Transportation Co., Montreal; ran on rocks near Detour lighthouse; released Sept. 14 and went on to Sault Ste. Marie; docked Sept. 26 for repairs; 17 plates damaged and repairs quite expensive.

Sept. 18.—Str. Melrose, owned by Montreal Transportation Co.; stranded at Sault Ste. Marie, Ont.; released after lightening 5,000 bush. of grain; temporarily repaired and proceeded on her journey.

Sept. 20.—Str. Turret Cape, owned by Canadian Lake and Ocean Navigation Co.; went into dry dock at Lorain for repair to bottom plates, which were damaged by steamer striking in the Welland canal; left dry dock Sept. 26.

Sept. 26.—Passenger str. City of Windsor, owned by D. L. McKinnon, Sudbury, Ont.; badly damaged by fire while lying at the dock, Owen Sound, Ont.

Oct. 5.—Str. Winona, owned by R. O. and A. B. McKay; ran on rocks at Giant's Tomb shoal, off Christian Island.

Oct. 5.—Str. John Crerar, owned by Great Lakes and St. Lawrence Transportation Co.; broke her rudder while entering Niagara river and was towed to Tonawanda, N.Y.

Oct. 8.—Str. Benton, owned by Capt. W. J. Willoughby, Goderich, Ont.; ran aground near North Bass Island, Lake Erie, while out in storm; released herself Oct. 10.

Oct. 8.—Barge May Richards, owned by Capt. W. J. Willoughby; grounded near North Bass Island, Lake Erie, in storm; filled with water, total loss.

Oct. 10.—Str. Athabasca, owned by C.P.R. Co.; lost signal lights and had rigging badly damaged in storm on Lake Superior.

Oct. 10.—Str. Neepawah, owned by R.O. and A. B. McKay; her cargo of machinery damaged to the extent of $4,000 while she struggled through a severe storm on Lake Huron, but vessel not damaged.

Oct. 23.—Schooner Corisande, owned by J. B. Miller, Parry Sound, Ont.; collided with str. Mariska abreast of Sarnia; towed to Wolverine dry dock, Port Huron, Oct. 25.

Oct. 29.—Schooner Vienna, owned by F. H. and T. E. Laird, Dresden, Ont.; sprang a leak in Lake Michigan and sank; total loss.

Nov. 4.—Str. Bickerdike, operated by Merchants' Line, Montreal; ran on rocks three miles below Alexandria Bay, St. Lawrence River.

Nov. 12.—Barge Quebec, owned by Montreal Transportation Co.; went ashore near Charlotte, Lake Huron.

Nov. 14.—Str. Strathmore, owned by G. Plunkett, Cobourg, Ont.; wrecked at Michipicoten, Lake Superior; total loss.

Nov. 14.—Str. Seguin, owned by J. B. Miller, Parry Sound; collided with barge Bell in St. Clair River, and sank at Sarnia; big hole torn in her side.

Nov. 17.—Str. Winona, owned by R. O. and A. B. McKay; ashore at Graham shoal beach, Manitoulin Island; released Nov. 19 and taken to Collingwood for repairs; arrived there Nov. 30 and put in dry dock; abandoned to underwriters and sold.

Nov. 17.—Str. Theano, operated by Algoma Central Steamship Line; struck a rock near Thunder Cape, Lake Superior; total loss.

Nov. 19.—Str. Fairmount, owned by Montreal Transportation Co.; two plates loosened while out in storm on Lake Superior; stopped at Fort William, Ont., for repairs, which took one day to make.

Nov. 22.—Str. Resolute, operated by Deseronto Navigation Co., Deseronto, Ont.; foundered in Lake Ontario during a storm; sprang a leak; six lives lost; vessel total loss.

Nov. 26.—Barge Agawa, operated by Algoma Central Steamship Line; broke away from str. Leafield, near Eagle Harbor, Lake Superior, in storm; picked up Nov. 28 and taken to Sault Ste. Marie; not damaged.

Nov. 28.—Str. Turret Crown, owned by Canadian Lake and Ocean Navigation Co.; went ashore near Grand Marias, Lake Superior; released Nov. 30; docked at Cleveland, Ohio, Dec. 5, for repairs.

Nov. 30.—Schooner Queen of the Lakes, owned by Richardson & Sons, Kingston, Ont.; sprang a leak while navigating in storm on Lake Ontario; sank; total loss.

Dec. 1.—Car ferry Ashtabula, owned by Pennsylvania and Ontario Steamship Co., Ashtabula, Ohio; coal cars became loose

and crashed into bumping post at Ashtabula; vessel was slightly raised for repairs to her propeller wheels.

Dec. 6.—Barge Wawanosh, owned by Sarnia Transportation Co., Sarnia, Ont.; broke away from tug Spencer and ran aground near Oscoda, Lake Huron; total loss.

Dec. 7.—Str. Golspie, operated by R. O. and A. B. McKay, Hamilton, Ont.; stranded in Brule Bay, Michipicoten, Lake Superior; total wreck.

Dec. 9.—Str. Monarch, owned by Northern Navigation Co.; went ashore on Isle Royale, Lake Superior, one man drowned; total loss.

Dec. 10.—Str. Caribou, owned by United States and Dominion Transportation Co. (A. Booth & Co.), Chicago, Ill.; disabled near Killarney, Georgian Bay, and towed to Owen Sound, Ont.

Dec. 28.—Car ferry Ashtabula, owned by Pennsylvania and Ontario Steamship Co., Ashtabula, Ohio; ran ashore near Port Burwell, Ont., Lake Erie; released Dec. 30, not damaged.

Following are some particulars of the vessels which are given as total losses, taken from official and other sources:

ERIN.—Official number, 83,142; registered at St. Catharines, Ont.; T. Conlon, Thorold, registered owner. Built at St. Catharines, 1881; screw steamer with engines of 75 n.h.p. Dimensions: length, 174 ft.; breadth, 26 ft.; depth, 12.6 ft.; tonnage—gross, 651; register, 411. Value, $16.000.

ERINDALE (ex-City of Owen Sound).—Official number, 107,598; registered at Owen Sound, Ont.; Trusts and Guarantee Co., Toronto, being the registered owners. Built at Montreal, Que., 1867; rebuilt at Owen Sound, 1900; paddle wheel steamer with engines of 43 n.h.p. Dimensions: length, 129.3 ft.; breadth, 24.3 ft.; depth, 10.6 ft; tonnage—gross, 754; register, 444. Value, $12,000.

FLEETWING.—Official number, 90,776; registered at Windsor, Ont.; J. Cochrane, Colborne, Ont., registered owner. Built at Wilson, N.Y., 1863; schooner. Dimensions: length, 108 ft.; breadth, 24.6 ft.; depth, 7.9 ft.; registered tonnage, 162. Value, not given.

GOLSPIE (ex-Osceola).—Official number, 112,204; registered at Hamilton, Ont.; W. Magee, Hamilton, registered owner. Built at Bay City, Mich., 1882; screw steamer; engines, 69 n.h.p. Dimensions: length, 183.5 ft.; breadth, 33.9 ft.; depth, 13.5 ft.; tonnage—gross, 1,122; register, 709. Value, $20,000.

MONARCH.—Official number, 96,843; registered at Sarnia, Ont.; Northern Navigation Co. of Ontario, Collingwood, registered owners. Built at Sarnia, Ont., 1890, screw steamer. Dimensions: length, 240 ft.; breadth, 32.2 ft.; depth, 5.4 ft.; tonnage—gross, 2,017; register, 1,372. Value, $85,000.

QUEEN OF THE LAKES.—Official number, 77,626; registered at Kingston, Ont.; G. A. Richardson, Kingston, Ont, registered owner. Built at Portsmouth, Ont., 1853; schooner. Dimensions—length, 128 ft., breadth, 23.3 ft.; depth, 10.3 ft.; register tonnage—190. Value, $5,000.

RESOLUTE.—Official number, 88,241; registered at Deseronto, Ont.; the Rathbun Co., Deseronto, registered owners. Built at Deseronto, 1883; screw steamer, with engines of 230 n.h.p. Dimensions: length, 136.6 ft.; breadth, 27.8 ft.; depth, 10.3 ft.; tonnage—gross, 372; register, 262. Value, $12,000.

STRATHMORE (ex-Gordon Campbell).—Built at Detroit, Mich., 1871; was lying idle for years; 1,600 tons, register. Value, $17,500.

THEANO.—Not on the Canadian register. Built in Great Britain 1889, and carried on the British register; Algoma Central Steamship Line. Length, 255 ft.; breadth, 36 ft. Tonnage—952 tons register. Value, $80,000.

VIENNA.—Official number, 90,558; registered at Bowmanville, Ont.; F. H. and T. E. Laird, Dresden, Ont., registered as joint owners. Built at Port Burwell, Ont., 1871; schooner. Dimensions: length, 102 ft; breadth, 23.5 ft.; depth, 8.5 ft.; register tonnage, 135. Value, $1,000.

WAWANOSH.—Official number not given; registered at Sarnia, Ont.; J. King, Sarnia, Ont., registered owner. Built at Sarnia, 1873; schooner. Dimensions: length, 138 ft.; breadth, 26.2 ft.; depth, 12 ft.; register tonnage, 370. Value not given.

The heavy losses incurred in respect of lake business within the past two years, according to Shipping Illustrated, has prompted English underwriters to advance the rates on lake vessels. Under a new agreement just reached, owners will have to pay an increase of 10% owing to the increase in valuation. The policy used in 1905 is substituted for that of 1906. which was more liberal, and policies will thus run until Dec. 5, instead of Dec. 12. Besides, vessels must sustain losses amounting to $500 before there is any claim against the underwriters. Thus owners will be cut off from collecting for small losses, will lose a week of profitable business in Dec. under their policies, and then must pay a much higher rate. In addition the change in the form of policy is much to their disadvantage in many ways. The rates on first-class steamers have been advanced to 4½% and valuations increased from $42 per gross ton to $48.50.

Among the Express Companies.

The Dominion Ex. Co. has been registered at Regina, Sask., under the ordinance of the North-West Territories respecting foreign corporations.

All tariffs, except joint tariffs of tolls between Canada and points outside of Canada, had to be filed by express companies by May 1 with the Board of Railway Commissioners for Canada. All other tariffs must be filed with the Railway Commission and approved by July 1.

The Dominion Ex. Co., having ceased to operate over the Qu'Appelle, Long Lake and Saskatchewan Ry., is not now reaching the following points direct: Adamson, Aylesbury, Bethune, Bladworth, Chamberlain, Clark's Crossing, Clouston, Condie, Craik, Craven Jct., Davidson, Disley, Duck Lake, Dundurn, Findlater, Girvin, Hague, Hanley, Hamilton, Lumsden, Osler, MacDowell, Kenaston, Prince Albert, Nutana, Rodderick, Rosthern, Timms, Valley, Verdi, Warman, Saskatoon and West Prince Albert, Sask.

Telegraph and Cable Matters.

C.P.R. telegraph operators have been granted an all-round increase of $5 a month.

The U.S. Government has arranged to establish six wireless telegraph stations in Alaska.

W. Clausen-Thue, who was the author of the A.B.C. and the A1 telegraphic codes, died recently.

W. Bamfield, General Manager North American Telegraph Co., died at Kingston, Ont., April 13, aged 57.

The French cable repair steamer Coutre Amiral Canbert, which had been repairing the St. Pierre-Miquelon cable, was in St. John, Nfld., recently for repairs.

The G.N.W. Telegraph Co. has been granting increases to its employes in Toronto, each case being treated individually. The operators asked for an increase of 15% and for shorter hours.

A new cable is being laid across the Big Bras d'Or, N.S., by the str. Merrimac, to replace the broken cable. The cable is part of the Dominion Government Telegraph system in Nova Scotia.

I. McMichael, Vice-President and General-Manager, G. N. W. Telegraph Co., Toronto, was unable to be present at the annual reunion of the U.S. Military Telegraphers, held at New York, Mar. 28.

S. Edwards was presented with an oak desk and cabinet by the employes of the C.P.R. Telegraph Department, Calgary, Alta., April 1, on leaving the service to take charge of the Alberta Government telephone lines.

J. McMillan was presented with an address and a gold watch by the C.P.R. telegraph staff at Winnipeg, Mar. 30, on leaving to take up his new duties as Superintendent Western Division C.P.R. Telegraphs, Calgary, Alta.

The Anglo-American Telegraph Co. is suing the Reid Newfoundland Co. to recover $293,650 for alleged improper use of the company's telegraph line in carrying on the business of the Reid Newfoundland Co.'s railway and steamers.

W. H. Jenkins, formerly chairman of the Educational Council of Ont., and Registrar in the Education Department, Toronto, who died at Madoc, Ont., Mar. 23, was a brother of B. S. Jenkins, General Superintendent C.P.R. Telegraphs, Winnipeg.

W. H. Baker, Vice-President and General Manager, Postal Telegraph Cable Co., New York, has resigned, but will continue to be associated with the company in an advisory capacity. He is succeeded as Vice-President and General Manager by E. J. Nally.

The C.P.R. Telegraph Department put in force April 1, a reduction of rates to and from Sturgeon Falls, Cache Bay, Verner, Warren, Markstay, Wahnapitae, Romford, Sudbury and Copper Cliff, Ont., from 50c. to 25c. for 10 words, and 1c. for each additional word.

J. McMillan, heretofore Assistant Superintendent Central Division C.P.R. Telegraphs, Winnipeg, has been appointed Superintendent of the Western Division, Calgary, Alta., succeeding S. Edwards resigned. He is succeeded at Winnipeg by R. N. Young.

The new Marconi Wireless Telegraph station at Cape Race, Nfld., has been completed. The building is two stories, 30 by 30 ft., containing two instrument rooms, battery and storerooms. The two poles are 500 ft. apart, and are each 180 ft. high. They hold 16 aerial wires. A nine horse power gasoline engine has been installed for charging the batteries. The equipment has a range of communication of 1,000 miles. There will be four operators at the station.

The total length of telegraph lines in operation in the Dominion is given in the report of the Department of Public Works for the year ended June 30, 1906, as follows:

	Length of Lines miles	Length of Conductors miles	Offices
C.P.R. Telegraphs	10,294	50,952	1,150
Government Telegraphs	6,829	6,829	343
Great Northwest Telegraph Co.	11,775	44,573	1,360
Western Union Telegraph Co.	2,638	9,805	219
Total	31,536	112,159	3,072

The C.P.R. has 57 miles and the Western Union 44 miles of underground conductors. The mileage of the Canadian Northern Telegraph Co., which is operating a commercial telegraph business over the Canadian Northern Ry., and of the Temiskaming and Northern Ontario Ry., which is doing a commercial business from North Bay into the New Liskeard district, have been overlooked by the department in making out its figures

STEAM SHOVELS

The New Model Vulcan Heavy Duty Steam Shovels are substantially built throughout, with every part of sufficient strength to withstand the heaviest strains. All gears, pinions and racking have cut teeth. Built in sizes from 22 to 110 tons and 5/8 to 5 cubic yards dipper. Ask for catalog.

The Dominion Telegraph Lines.

The Dominion Government operates 6,829¼ miles of land telegraph lines, and 345¾ knots of cable through the telegraph department of the Department of Public Works. In this total there have not been included lines that have been subsidized or constructed and transferred by the Government for operation by private companies. The lines are distributed as follows:

	Land lines miles	Cables knots	No. of Offices
Newfoundland	14	.....	2
Nova Scotia	586½	24½	45
New Brunswick	457¼	11	44
Quebec	1,507¾	291	97
Ontario	25½	17	9
Northwest	957½	.....	32
British Columbia	1,028¼	2¼	48
Yukon	2,252½	.....	66
Total	6,829¼	345¾	343

The line in Newfoundland extends from Cape Ray lighthouse to Port au Basque, where it connects with the Anglo-American Telegraph Co.'s land lines, and is operated in connection with the signal service. A cable 20 knots long connects Meat Cove, N.S., with St. Paul's Island, and is operated by telephones. North Sydney, N.S., is a transfer office connecting with the Western Union Telegraph Co.'s system. In connection with the signal service a land line 208 miles long was erected in 1881, between Canso and Halifax, N.S., for a bonus of $16,000 and is maintained and operated by the Western Union Telegraph Co., without further cost to the Government. The line in Ontario is operated by telephone, and affords communication between Pelee Island and the mainland at Leamington. Of the lines in the Northwest, a seven mile branch from Andrew to Whitford is operated by telephone, and some 62 miles of branch lines in the vicinity of Edmonton, Alta., are operated by the Edmonton District Telephone Co. The local system in the National Park at Banff, Alta., is operated as a telephone system, and is looked after by the Superintendent. The Kamloops-Lower Nicola line, 235 miles, is operated as a telephone line, and the Vernon-Kilowna line, 35 miles, is operated both as a telephone and telegraph line. Telephone connections are given for a number of firms at various points on the Victoria-Cape Beal line, and other lines on Vancouver Island, while the Vancouver and Salt Spring line, 24¾ miles, is being worked by telephone for the present merely for general convenience. There was no important addition to the length of the telegraph lines during the year ended June 30, 1906, the expenditure on new construction being only $57,000.

The revenue received from the operation of these lines during the year ended June 30, 1906, was $103,300.38 and the expenditures were $409,173.60. The messages of the signal service, meteorological services, messages and reports and fisheries bulletins, are handled over the lines free of tolls. The expenditure includes the maintenance of the cable repair str. Tyrian for the Maritime Provinces and Lower St. Lawrence lines. The revenue shows a considerable decrease, the income from the Yukon lines showing a falling off of over $38,000. This is ascribed to the active competition of the cables and land lines constructed by the U.S. Government, and the reduced volume of Canadian business from and to Dawson.

Following is a list of the staff having charge of the operation of the lines: General Superintendent, D. H. Keely, Ottawa; Technical Assistant, M. W. Crean, Ottawa; Accountant, J. P. Demartigny, Ottawa; General Inspectors: A. B. McDonald, Meat Cove, N.S.; J. S. Macdonald, Qu'Appelle, Sask.; J. E. Gobeil, Yukon Division. District Superintendents: E. Pope, Quebec; J. C. Tache, Chicoutimi to Bersemis; E. H. Tetu, Pentecost, Que.; P. Pouliot, Quarantine line, etc., to Grosse Isle, Que.; A. Malouin, West Point, Anticosti Island, Que.; A. L. Bourdais, Grindstone, Magdalen Islands; D. C. Dawson, St. John, N.B.; Mrs. C. C. Seeley, Grand Manan, N.B.; J. McR. Selkirk, Leamington, Ont.; R. C. Macdonald, Qu'Appelle, Sask.; W. Henderson, Victoria, B.C.; C. S. Stevens (Supt.), Kamloops, B.C.; J. Y. Rochester (acting), Vancouver, B.C.; J. T. Phalen, Ashcroft, B.C.; H. Gilchen (acting), Whitehorse, Yukon Territory.

General Telephone Matters.

The Bell Telephone Co is preparing plans for the erection of an addition to its exchange building at Quebec.

N. Belleau, Quebec, has been elected a director of the Bellechasse Telephone Co., succeeding the late N. Rioux.

The Moose Jaw, Sask., Telephone Co. has arranged with residents of Craik to extend its lines to that town.

P. E. Hart has been appointed electrical engineer in charge of the corporation lighting, power and telephone system, Kenora, Ont.

The Falkirk Telephone Co. has been granted permission to erect poles and string wires along highways in the township of London, Ont.

Dr. L. A. Brown and J. A. Saxton have been elected to fill vacancies on the directorate of the South Malahide Telephone Association, Aylmer, Ont.

W. G. Slack, heretofore chief accountant Bell Telephone Co., Montreal, has been appointed Secretary-Treasurer, in place of the late C. P. Sclater.

W. H. Van Doyle, of the Eastern Telephone Co., Sydney, N.S., has been transferred to Halifax in connection with the Nova Scotia Telephone Co.'s system.

The Saskatchewan Telephone and Electric Supply Co. is seeking power to change its name to the Northwest Telephone Co. and to increase its capital stock.

The Harrietsville Telephone Association is making application under the Ontario Companies' Act for a charter of incorporation with a capital of $25,000.

The Kamouraska Telephone Co.'s capital has been increased by supplementary letters patent to $250,000, and it has been given powers to further extend its lines in Rimouski and Matane Counties.

Count Arco, of Berlin, Germany, has succeeded in obtaining distinct exchanges of words in a tolerably natural voice at a distance of two miles, by using poles 30 ft. in height, without connecting wires.

The Bell Telephone Co. is applying to the Toronto City Council for permission to erect poles on a number of streets, and to lay underground wires in John St., from the water front northwards for 200 ft.

A rural telephone line to connect with the Bell Telephone Co.'s system is under construction between Lestrum and Billings Bridge, Ont. It is expected that the line will be extended to Bowesville later on.

The Brandon, Man., City Council decided by five to four, April 10, to request the Manitoba Government to construct and maintain a local telephone system in that city in connection with the provincial long distance lines.

The Telephone Co. of Prince Edward Island, at its annual meeting Mar. 21, re-elected its directors and authorized an increase in the capital stock, under the terms of the act passed by the Provincial Legislature in 1906.

The Ottawa City Council has deferred the third reading of the by-law granting a five-year exclusive franchise to the Bell Telephone Co. There is an agitation on foot in the city with a view of obtaining a $20 rate for house 'phones.

The Montreal City Surveyor reported to the City Council, April 9, that there were 34 miles of conduits in the city, 17¾ miles belonging to the Bell Telephone Co., 5¾ miles belonging to the Light, Heat and Power Co., and ½ mile belonging to the C.P.R. Telegraph Department.

The Bell Telephone Co. and the Barrie, Ont., Town Council have reached an agreement for a five years' exclusive franchise from April 15. The company pays $300 a year, provides six free instruments for the council, and gives a uniform scale of prices throughout the town.

C. P. Sclater, who had been Secretary-Treasurer of the Bell Telephone Co. since its formation, died in Montreal, Mar. 24, aged 57. He was also a director of the Northern Electric and Manufacturing Co., Montreal. In 1879 he was Acting Secretary of the Dominion Telegraph Co.

A company is being organized for the construction of a telephone line along the shore of Northumberland Strait from New Glasgow to Pictou, and on to Barney's River, N.S. The proposal is at present only on paper, and nothing of a definite character has been done in connection with the project.

No decision has been reached by the London, Ont., City Council, respecting the proposal to grant an exclusive franchise to the Bell Telephone Co. for a further period of five years. The estimates submitted by the finance committee contain an item of $4,000 to be received from the company on account of a franchise.

The Grand Manan Telephone Co. is asking the Dominion Government to lay a cable from Grand Manan to the mainland, which can be utilized for telephone as well as telegraphic messages. W. A. Fraser, Manager of the company, has been in St. John, N.B., discussing the matter with the Board of Trade.

An endeavor is being made by a number of Nova Scotia and Prince Edward Island business men to organize a company for the purpose of laying a telephone cable between the island and the mainland. The P.E.I. Legislature passed a resolution Mar. 28 recommending that Federal aid be given to the undertaking.

The Manitoba Government and the Winnipeg City Council are discussing the construction of a telephone system in Winnipeg, in connection with the long distance lines which the Government is preparing to build. As the result of the conference the City Council passed a resolution requesting the Provincial Government to construct and operate a telephone system in the city, first submitting its plans for approval.

The Hamilton Rural Telephone Co. has been incorporated under the Ontario Companies' Act, with a capital of $10,000 and offices at Coldsprings, Ont., to construct telephone lines and carry on a general telephone business in the county of Northumberland. The provisional directors are: F. A. T. Nixon, W. E. Lacey, J. Thompson, T. W. Moore, D. McIntosh, of Hamilton tp., Northumberland county.

The municipality of Miniota, Man., has decided to establish a municipal telephone service at once. It is estimated that about 275 miles of pole line will be required, and that about 400 subscribers at $15 a year each will be obtained. The municipalities of Wallace and South Norfolk, Man., have also taken the initial steps toward installing a local system of telephone lines, to connect with the provincial long distance lines.

The Alberta Government telephone line between Calgary and Banff is reported to

be practically completed. A local exchange is being established at Banff. The Provincial Government purchased the local exchange at Fort Saskatchewan from the Edmonton City Council, assuming control April 1. S. Edwards, heretofore Superintendent Western Division C.P.R. Telegraphs, Calgary, has been appointed Manager of the provincial telephone lines.

The New Brunswick Telephone Co.'s directors have elected Hon. E. P. Thompson, Managing Director, as President, succeeding the late Dr. Stockton, M.P., and F. B. Carvell, M.P., Woodstock, to the vacancy on the directorate. The newly elected president will continue to act as Managing Director until the amalgamation with the Central Telephone Co. has been completed. A. Seeley, St. John, has been appointed Secretary-Treasurer in place of W. E. Smith.

The Stirling Telephone Co. has been incorporated under the Ontario Companies' Act with a capital of $10,000 and offices at Stirling, Ont., to carry on a general telephone business in the county of Hastings, and the townships of Seymore and Murray in the county of Northumberland. The provisional directors are: C. Thompson, of Rawdon tp., Ont.; H. H. Alger, W. S. Martin, G. G. Thrasher, L. Meiklejohn, Stirling, Ont.; and S. G. Scott, Sidney tp., Ont.

The Charlevoix and Saguenay Telephone Co. has been incorporated under the Quebec Companies' Act, with a capital of $40,000 and offices at Saint Etienne de la Malbaie, Que., for the purpose of constructing telephone lines and carrying on a general telephone business in the counties of Charlevoix, Saguenay, Montmorency and Chicoutimi, Que. The provisional directors are: J., J. E. and C. Warren, Pointe-a-Pic, Que.; A. Larouche, J. E. Duggan, A. E. Coult, N. A. Dassylva, H. Lemieux, J. A. Lapointe, J. E. Maltais, Malbaie, Que.; L. A. Boulaine, P. d'Auteuil, P. Rouchette, Saint Etienne de la Malbaie, Que.

Referring to the construction of telephone lines by the Alberta Government, the provincial Minister of Public Works said, April 4, a crew had commenced work on a line at the western boundary of the Province through the Crow's Nest Pass to MacLeod. This line probably would be extended to Lethbridge in 1908. Work will be commenced immediately on a line from Wetaskiwin to Daysland, and on another from Lacombe to Stettler. As soon as possible work will be started on a line from Edmonton easterly to Lloydminster, and southerly to Calgary. It is expected to have at least 500 miles completed and in operation by the end of the year.

The New Brunswick Government is asking for power at the current session of the Legislature to control the telephone lines in the province. The act provides that the Government may purchase or expropriate telephone lines at their true value plus 10% as compensation to those selling. All telephone companies, one month after filing their annual report, must submit a financial statement of the year's business. If the books show profit of more than 8%, the Government can cause a reduction of tolls The Lieut.-Governor-in-Council is given permission to compel companies to give long distance connections with other lines and to compel them to do business with communities placing three telephones a mile

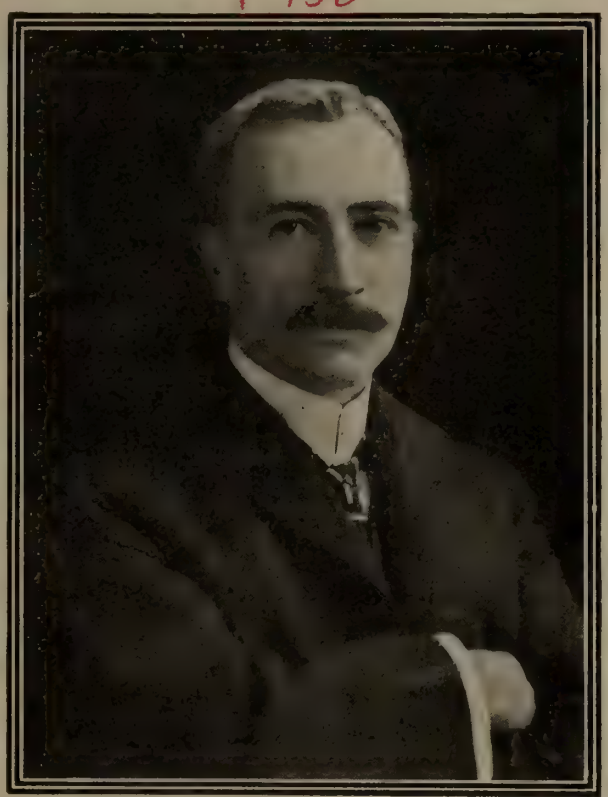
Nova Scotia's Railway Report.

The report of R. McColl, Provincial Engineer of Nova Scotia, for the year ended Sept. 30, 1906, refers at length to the railways of the province. With the Intercolonial Ry., 467 miles, and the Dominion Atlantic Ry., 231 miles, the report does not deal, but it covers the following lines which come under the jurisdiction of the Government of Nova Scotia: Cumberland Ry. and Coal Co., 32 miles; Cape Breton Ry., 31 miles; Canada Coal and Ry. Co., 12 miles; Inverness Ry. and Coal Co., 61 miles; Midland Ry., 58 miles; Sydney and Louisburg Ry., 39 miles; Nova Scotia Steel and Coal Co.'s Ry., 12 miles; Halifax and South-Western Ry —Halifax to Yarmouth, 247 miles; Bridgewater to Middleton, 55 miles; Mahone to Lunenburg, 7 miles; Caledonia branch, 22 miles; Victoria Beach, 40 miles—371 miles. These eight railways have a total mileage of 616 miles, whereas ten years ago the five railways under the jurisdiction of the province had a total of 163 miles. The increase gives an average of 45 miles of railway constructed in the province under the subsidy act per year for the last ten years. While the railway construction throughout Canada has not kept pace with the growth of the population during the last ten years, railway construction in Nova Scotia had advanced much more rapidly than the population. In 1896 the railway mileage in Nova Scotia was 840 miles, or one mile to every 540 inhabitants, while at the present time there were 1,314 miles of line, or one mile to every 350 inhabitants. Now that the Halifax and South-Western Ry. has been completed, the only large portion of the province without railway accommodation is Guysboro and the eastern part of Halifax county, and during the year just closed a complete survey of a proposed road has been made jointly by the Government and a company for this section of the country. The returns for the year, with the exception of the Halifax and South-Western Ry., show no increase over those of the previous year, but as most of these are coal roads, and by far the most important of the coal roads is the Sydney and Louisburg Ry., and as no figures are given for the coal hauled for the Dominion Coal Co., this fact of a slight decrease is of no great significance. On the other hand, while the Halifax and South-Western Ry. returns cannot very well be compared with 1904-05 on account of the much greater portion of the line being in operation, the returns are most gratifying, and the traffic so far is turning out equal to what its most sanguine advocates expected. The returns show on an average no increase in the receipts per train mile, and as a rule a perceptible decrease in the expenditure per train mile. On the Halifax and South-Western Ry. the expenditure has been reduced from $1.37 to $1.13, and on the Sydney and Louisburg Ry. from $1.88 to $1.75 per train mile. Until recently the question of oversight of the operation of railways was a very unimportant part of the Department's work, owing to the fact that the railway mileage was small, and the few subsidized railways being mostly short lines for the carrying of coal, the carrying of passengers being of secondary importance. With the rapid growth of mileage, and with large systems like the Halifax and South-Western Ry., where the principal traffic is passengers, and trains will be more frequent and much faster, the importance of the subject increases. It will be necessary to make some changes in the Railway Act to make it more practicable to deal with the question of returns and investigations of accidents, freight rates, etc. While the present act was being carried out as far as possible, it was difficult in some cases to get returns, due to carelessness and a tendency to resent any interference by the Government in such matters.

During the year eight passengers were killed, and 19 persons were injured on lines in the province. While, therefore, the freedom from accidents to passengers is a matter for congratulation, it must be remembered that most of the lines in Nova Scotia carry but few passengers. The returns show one person killed to every 77 miles of railway, and one person injured to every 32 miles of railway. While this compared very favorably with the rest of Canada, an improvement was hoped for. One-half of the accidents were caused by collisions, and one collision alone was responsible for a large proportion of the injuries.

P 158



M. H. McLEOD,
Chief Engineer Canadian Northern Railway.

Dominion Atlantic Railway Meeting.

The annual meeting of shareholders was held in London, Eng., recently, C. F. Kemp, President, in the chair. The report of the directors for the year 1906 showed that the receipts were £250,798, as against £220,250 for 1905, while the expenses were £192,720, against £178,168, so that the net revenue was £58,077, against £42,082. Including £345 brought down, the available balance was £58,422, against which £44,313 is chargeable for interest. Of the balance of £14,109 it is proposed to place £9,000 to the suspense account, and £2,000 is set aside in respect of the Boston service extraordinary expenditure, closing that account, leaving £3,109 to the credit of net revenue, which is to be carried forward. The temporary loans have been reduced from £167,718 to £117,560.

The President in moving the adoption of the report pointed out that while the receipts had increased during the year by no less than £30,548, that included a full year's working of the company's new Midland Division, which was taken over in Oct., 1905. Expenditure had increased by £14,552 in comparison with 1905. The expenditure of 1905 was itself heavier than usual, owing to the tremendous snow blockades of that year. The profit for 1906 showed an increase of £15,995, but, in view of the exceptional experiences of 1905, the directors had decided to place to depreciation account £9,000, and, further, they proposed to close the Boston service extraordinary expenditure account, which had been opened on instituting that service, by the setting aside of an additional £2,000. The balance of £3,109, remaining at the credit of net revenue, would be carried forward. He had to remind the proprietors that the labor question of their territory, as elsewhere in Canada, was a difficult one, and wages were all "on the rise." The development of the Midland Division of

Galena-Signal Oil Company,

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY.

GALENA RAILWAY SAFETY OIL

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT.

their property, a new line through a new country, offers very fine expectations for the future. As regards freight, the directors are doing all they can to assist in the country's mineral development, and, to that end, for the prosecution of mining in the South Mountain, the company has constructed an extension of 1½ miles of the Torbrook branch. This mining industry is more or less in its infancy. At Truro, their new terminus, they had a valuable connection with the Intercolonial Ry. While their own line ran from Halifax to Yarmouth, via Windsor and Annapolis, on the northern shore of the Province, the Halifax and South-Western Ry. had been opened along the south shore, and they trusted that this new line, developing more or less a country hitherto difficult of access, would contribute to Dominion Atlantic Ry. business. The financial position of the company was very strong, and during the year they reduced their indebtedness by £50,000. In addition, they had sold to advantage one of their ships, which was of comparatively little value to them. The resolution was seconded by T. R. Ronald, Vice-President, and adopted.

P. Gifkins, General Manager, stated that the development of traffic in 1906 was encouraging, the prospects for the future were good, and he thought they might look for an increase of business on the Midland Division. The railway had been maintained in thoroughly good conditions.

Recent Dominion Legislation.

The following acts respecting transportation interests were passed at the recent session of the Dominion Parliament in addition to those enumerated in our May issue:

Abitibi and Hudson Bay Ry.—Act of incorporation.

Alberta Central Ry.—Respecting the powers of the company.

Algoma Central and Hudson Bay Ry.—Respecting the powers of the company.

Atlantic, Quebec and Western Ry.—Extending the time for construction.

Bonaventure and Gaspe Telephone Co.—Act of incorporation.

Burrard, Westminster Boundary Ry. and Navigation Co.—Act of incorporation.

Canada Shipping Act.—Amending the act respecting the shipping of seamen.

Canada Shipping Act.—Amending the provision with regard to the punishment of certain offences.

Canadian Northern Ontario Ry.—Extending the time for construction, and authorizing the construction of additional lines.

Canadian Northern Quebec Ry.—Respecting the powers of the company.

Canadian Northern Ry.—Amending the acts relating to the company's bonding powers, etc.

Collingwood Southern Ry.—Act of incorporation.

Crawford Bay and St. Marys Ry.—Amending the act of incorporation.

Grand Trunk Ry.—Granting power to provide a pension fund for employes.

Grand Valley Ry.—Amending the act of incorporation and subsequent acts.

Klondike Mines Ry.—Respecting the powers of the company.

Manitoba Radial Ry.—Act of incorporation.

Manitoulin and North Shore Ry.—Extending the time for construction.

Midway and Vernon Ry.—Amending the company's acts.

Montreal Harbor Commissioners.—Providing for further advances for harbor improvement works.

Nipissing Central Ry.—Act of incorporation.

Ontario, Hudson's Bay and Western Ry.—Extending the time for construction.

Ottawa Terminals Ry.—Act of incorporation.

Quebec Bridge and Ry. Co.—Authorizing a loan to the company.

Quebec Harbor Commissioners.—Increasing the borrowing powers of the Commission.

Quebec Oriental Ry.—Amending the acts relating to the company.

Railway Act.—Two acts to amend the Railway Act, 1903.

Railway subsidies.—Authorizing the granting of subsidies in aid of the construction of certain railways.

St. Lawrence and Quebec Ry. Ferry Co.—Act of incorporation.

St. Leon Ry.—Act of incorporation.

St. Mary River Bridge Co.—Extending the company's powers.

St. Maurice Valley Ry.—Amending the company's acts.

Winnipeg and North-Western Ry.—Act of incorporation.

Winnipeg Terminals.—Confirming an agreement respecting the Winnipeg terminals of the Canadian Northern Ry. and the G.T. Pacific Ry.

Train Lighting and Heating.

The Secretary of the Board of Railway Commissioners has issued the following circular to all railway companies under the Board's jurisdiction:

"In accordance with the direction of the Board, I give below copy of report of J. Ogilvie, Inspector of Railway Equipment and Safety Appliances to the Board, dated April 15, in connection with recent accidents in Canada where a number of lives were lost through wrecks being set on fire from cooking lamps or stoves in the coaches which were derailed.

"Recommendation of Inspector of Railway Equipment and Safety Appliances:

"'1. That, say within two months from date, all passenger coaches be equipped with two fire extinguishers, each similar to those manufactured by the Stempfel Co., or others of equal efficiency. All such fire extinguishers to be tested and recharged every three months.

"'2. That an order be issued to railway companies prohibiting the use of fires in all passenger coaches, other than fires which it may be necessary to have in the cars for heating purposes, such fires to be lit only in cases of emergency which may occur from breakdown of the motive power or the bursting of any of the small pipe connections between the engine and the cars, or from any other cause which may make the heating apparatus ineffective for a time.

"'Heaters for the purpose of heating cars with fire to be absolutely fire-proof, so that in case of a derailment or damages from wrecks, it will be almost impossible for such heating arrangement to set fire to the cars.

"'That all stoves for the use of cooking or heating purposes in colonist cars be forthwith dispensed with. Steam heating arrangements for boiling water for making tea or coffee, or for boiling eggs can be provided instead of stoves, with the exception of the cooking ranges in the dining-cars, as there is not the same liability from fire in the cooking ranges in dining-cars as there is in cooking stoves or ranges in colonist cars, owing to the fact that the dining-car is, as a general rule, placed in the part of the trains least exposed to danger.

"'I would also like to call attention to the fact that I consider the use of gas of any description in passenger coaches for the purpose of lighting such coaches, a menace to the life of the passengers in all cases of derailment or wrecked passenger trains; and I would strongly recommend the lighting of our passenger trains by a combination of electricity and oil lamps, the latter to be used only in case of serious defects or breakdowns in the electrical appliances. It seems to me that from the vast improvements that have been made in the last year or two, in the power of small engines, that baggage cars can readily be fitted with engines and electrical equipment to generate the electricity necessary for lighting of passenger trains while on the road.'

"I am further directed to ask that you inform the Board what time could reasonably be allowed for making the changes recommended by its Inspector, if the same should be adopted by the Board."

Delaware and Hudson Company.

The 77th annual report of the directors covers the operations of the company for the year 1906. After referring to the company's U.S. railways the report proceeds: Through stock ownership this company has acquired control of the Quebec, Montreal and Southern Ry. The road of the latter company extends from Noyan Jct. to St. Robert's Jct. upon the line which will be started immediately, and from St. Lambert to Pierreville. Its total mileage of constructed road is 145 miles. In connection therewith will be acquired the Napierville Jct. Ry. Co. extending from Rouse's Point to St. Constant, 27 miles. Negotiations are substantially completed for running rights from St. Constant to St. Lambert, opposite Montreal, and across the river into Montreal with the use of terminal facilities in that city, and also for running rights from Rouse's Point to Noyan Jct., where the existing line of the Quebec, Montreal and Southern Ry. begins, making the total distance covered by these running rights 16 miles. It is contemplated during the present year to extend the road easterly in the direction of Quebec, a distance of 48.5 miles, and when the Quebec Bridge is completed, the road will be further extended 43.5 miles to it. With these additions, the road will have a mileage of 263.5 miles with running rights on 16 miles, making 279.5 miles in all. Its maximum gradient will be 16 ft. to the mile, and its maximum curvature 1.3°. It will be the shortest line between Quebec and New York, between Montreal and New York, and between Quebec and Montreal. It will give this company's lines direct connections with all the important railways in eastern Canada, and will enable this company to efficiently serve the numerous paper mills located upon its lines with the supply of pulpwood necessary for their operation. Following are figures dealing with the company's railways and mines:

Gross earnings	$36,669,235.41	
Gross expenses and txs.	28,337,957.58	
Net earnings		$8,331,277.83
Interest and rentals		3,175,140.26
Net income for the year after all charges, being 12.28% on the capital stock ($42,000,000), was		$5,156,137.57

The total amount of anthracite coal produced by the company during the year was 5,401,389 tons, and the stock on hand Dec. 31, was 136,864 tons.

The condensed balance sheet showed assets of $75,736,646.95, against liabilities of $68,253,365.03. On the asset side there were decreases of $4,209,050.92; increases of liabilities of $13,776,331.25, and increase of profit and loss of $493,801.25, making altogether $18,479,183.42 to be accounted for by increases in assets of $16,407,726.55, and decreases of liabilities of $2,071,456.87. Among the increases of assets is the Quebec, Montreal and Southern Ry., carried at $810,356.30. The amount paid on account of the line to Dec. 31, 1906, was $1,810,356.30, of which $1,000,000 is represented by a temporary loan, leaving net value as an asset of $810,356.30. The stocks owned are valued at $23,162,650.16, of which $1,000,000 is represented by 10,000 shares of Q., M. and S. Ry. stock.

Prompt Unloading of Cars.

F. K. Lane, of the Interstate Commerce Commission, has written the chairman of the American Railway Clearing House, Chicago, as follows: "It is our desire to see everything done that is practical to stimulate the movement of equipment. We have found throughout the country that by reason of competition railroads have been bidding against each other for business by the granting of free time. Instances of this kind arose at our hearings in Chicago upon the general subject of car shortage, where the shippers confessed that they did not need the time that was granted them, and were willing to have it reduced from five to two days. Nothing can be added to the view expressed in the report on car shortage made by Commissioner Harlan and myself, and it remains the holding of the Commission that every effort put forth by the railroads to stop the using of cars as warehouses and limit their use to purely railroad purposes will have our cordial co-operation. Shippers must have a reasonable and not an excessive time to unload, and I think that most of the shippers realize that it is a part of good citizenship at a time such as this to release equipment speedily in the interest of the general business of the country."

G.T.R. SEMI-ANNUAL MEETING.

At the semi-annual meeting in London, Eng., recently, the directors' report for the half-year ended Dec. 31, was presented.

The following summary shows a comparison of the half-year's revenue account with that of the corresponding half-year, ended Dec. 31, 1905:

Dec. 31, 1905.		Dec. 31, 1906.
£3,288,993	Gross receipts	£3,584,846 19 11
	Deduct—	
2,345,716	Working expenses, being at the rate of 71.45% as compared with 71.32% in 1905.	2,561,496 11 4
£ 943,277	Net traffic receipts	£ 1,023,350 8 7
	Add—	
16,013	Amount received from International Bridge Co.	16,012 16 7
902	Interest on Toledo, Saginaw, and Muskegon bonds	1,323 2 3
6,507	Interest on Central Vermont Ry. bonds	6,506 14 3
61,856	Interest on securities of controlled lines and on St. Clair tunnel bonds acquired by the issue of G. T. 4% debenture stock	66,491 8 4
15,044	Balance of general interest account	42,440 10 2
£1,043,599	Net revenue receipts	£1,156,125 0 2

Following are the net revenue charges for the half-year, compared with the corresponding period:

Dec. 31, 1905.		Dec. 31, 1906.
£ 77,603	Rents (leased lines)	£ 77,603 0 9
488,746	Interest on debenture stocks and bonds of the Co	488,745 19 10
47,816	Interest on debenture stock and bonds of lines consolidated with the G.T. Co.	47,657 4 6
18,037	Canada Atlantic Ry. deficit.	34,263 3 11
£ 632,202		£ 648,269 9 0
17,381	*Deduct* — Detroit, Grand Haven, and Milwaukee surplus	15,609 15 0
£ 614,821		£ 632,659 14 0
428,778	Leaving a surplus of	523,465 6 2
£1,043,599		£1,156,125 0 2

Adding the balance of £16,077 1s. 7d. at the credit of net revenue account June 30, 1906, to the above surplus for the past half-year, the total amount available for dividend is £539,542 7s 9d., from which the directors recommend the payment of the following dividends, viz.:

Half-year's dividend on 4% guaranteed stock	£	162,741 9 4
Half-year's dividend on first preference stock		85,420 15 0
Half-year's dividend on second preference stock		63,210 0 4
Half-year's dividend of 3% on third preference stock		214,939 1 6
	£	526,311 6 2

leaving a balance of £13,231 1s. 7d. to be carried forward to next half-year's account.

Following is a comparison of the receipts for the half-years ending Dec. 31, 1906 and 1905:

TRAFFIC STATISTICS.

Description of receipts.	1906.	1905.	Increase.	Decrease.
	£	£	£	£
Passengers	1,120,305	1,023,981	96,324	....
Mails and express	172,504	161,616	10,888	....
Freight and live stock	2,214,744	2,027,180	187,564	....
Miscellaneous	77,294	76,216	1,078	....
	£3,584,847	£3,288,993	£295,854	....
Passengers carried	6,046,070	5,755,671	290,399	....
Average fare per passenger	3s.8¼d.	3s.6¾d.	1¼d.	....
Tons of freight and live stock	8,318,075	7,579,878	738,197	....
Average rate per ton	5s.4d.	5s.4¼d.	....	¼d.
Tons carried one mile	1,598,546,752	1,393,513,496	205,033,256	....
Earnings per train mile	86.52d.	81.60d.	4.92d.	....

The average rate per ton per mile on the entire freight business was 0.67 of a cent, compared with 0.71 of a cent in the corresponding half-year.

The working expenses, excluding taxes, amounted in the half-year to £2,489,611, or 69.45% of the gross receipts, as compared with £2,294,201, or 69.75% in the corresponding half-year; an increase in amount of £195,410, but a decrease in the proportion to the gross receipts of 0.30%.

Following is a comparison of the revenue expenditure, including taxes, for the half-years ended Dec. 31, 1906 and 1905:

The train mileage of the half-year compares with that for the half-year ended Dec. 31, 1905, as follows:

Description of expenditure.	1906.	1905.	Increase.	Decrease.
	£	£	£	£
Maintenance of way, and structures	513,674	625,060	....	111,386
Maintenance of equipment	694,215	476,790	217,425	....
Conducting transportation	1,209,739	1,123,155	86,584	....
General expenses	71,983	69,196	2,787	....
Taxes	71,885	51,515	20,370	....
Total	£2,561,496	£2,345,716	£215,780	....
Percentage of gross receipts	71.45	71.32	0.13	....
Expenditure per train-mile	61.82d.	58.19d.	3.62d.	....

Description of Mileage.	1906.	1905.	Increase.	Decrease.
Passenger	4,434,957	4,275,345	159,612	....
Freight	5,197,835	5,084,625	113,210	....
Mixed trains	310,848	314,196	....	3,348
Total	9,943,640	9,674,166	269,474	....

From the foregoing statements it will be observed that the G.T. gross receipts for the half-year show an increase of £295,854, or 9%; the working expenses, including taxes, an increase of £215,780, or 9.20%; and the train mileage an increase of 269,474, or 2.79%.

The total charges to the capital account for the half-year were £65,274 11s. 10d. Of this £190 10s. 2d. was discount and commission on 4% Guaranteed Stock issued during the half-year. The actual expenditure on capital account was: New works, £21,770 2s. 1d.; double track, £41,640 7s. 1d.; land purchased (balance), £1,673 12s. 6d.; total, £65,084 1s. 8d.

No additions to the rolling stock at the expense of capital were made during the half-year. Twenty 10-wheel passenger and 55 mogul freight engines and 49 box cars have been purchased and charged to revenue, in addition to 3 first-class, 5 baggage, and 3 flat cars, and 3 snow-ploughs built in the Company's shops. Thirty engines have been broken up or sold during the half-year.

The gross receipts of the Canada Atlantic Ry. for the half-year were £225,353, against £217,379 in 1905, and the working expenses were £197,513, against £161,575, leaving a net revenue balance of £27,840, against £55,804, a decrease of £27,964, compared with the corresponding period of 1905. The net revenue charges for the half-year were £62,103, so that there was a net revenue deficiency of £34,263. The number of passengers carried during the half-year was 262,366, against 237,608, an increase of 10.42%, and the passenger train receipts, including mails and express receipts, were £53,811, against £44,369, an increase of 21.28%. The quantity of freight moved was 831,410 tons, against 876,112 in 1905, a decrease of 5.10%; the receipts from freight traffic were £165,939, against £165,640.

The gross receipts of the G.T. Western Ry. for the half-year were £638,222, against £580,490 in 1905, and the working expenses were £537,112, against £477,568, leaving a net profit of £101,110, a decrease of £1,812, compared with the corresponding period of 1905. The net revenue charges for the half-year were £83,858, against £84,678, so that there was, on Dec. 31, a net revenue credit of £17,252, which is carried forward, as compared with £18,244 for the corresponding half-year of 1905. The number of passengers carried during the half-year was 928,026, against 876,296, an increase of 5.90%; and the passenger train receipts, including mails and express receipts, were £222,071, against £181,897, an increase of 22.09%. The quantity of freight moved during the half-year was 1,667,419 tons, against 1,569,898, an increase of 6.21%, and the receipts from this traffic were £415,560, against £397,874, an increase of 4.45%.

The gross receipts of the Detroit, Grand Haven, and Milwaukee Ry. for the half-year were £196,093, against £169,524 in 1905; the working expenses were £144,110, against £115,061, leaving a balance of £51,983, against £54,463, a decrease in net revenue of £2,480, compared with the corresponding half-year of 1905. The net revenue charges for the half-year were £36,373, against £37,081 in 1905, so that there was a net revenue surplus of £15,610, as compared with £17,382 for the corresponding period of 1905. The number of passengers carried during the half-year was 420,089, against 377,747, an increase of 11.21%; and the passenger receipts, including mails and express receipts, were £67,678, against £62,669, an increase of 7.99%. The quantity of freight moved was 821,097 tons, against 706,448 in 1905, an increase of 16.23%; and the receipts from freight traffic were £124,386, against £103,616 in 1905, an increase of 20.05%.

Construction operations on the line of the G.T. Pacific Ry. have been necessarily almost completely suspended during the winter months. In the meantime, rails, ties, and construction material of all kinds have been collected at convenient points, with a view to having everything in readiness to actively renew operations as early in the coming season as the weather will permit. The work of con-

struction was somewhat delayed during the past season, owing to the scarcity of labor, but strenuous efforts are being made to obtain an additional supply from Europe, and there is every prospect that there will be considerable immigration during the next few months of the class of labor required for railway construction. The Lake Superior Branch will be completed during the year to the point of junction with the main line. It is feared, however, that the section of the railway between the junction and Winnipeg, which is being constructed by the Government, will not be in a sufficiently forward state to connect the Lake Superior Branch with Winnipeg this year.

The retiring Directors are A. Hubbard, Sir Henry M. Jackson, Bart.; Hon. N. C. Roths child, and Lord Welby, all of whom are eligible and offer themselves for re-election. H. C. Newton, one of the auditors in London, and W. M. Ramsay, one of the auditors in Canada, also retire and offer themselves for re-election.

REPORTS OF OFFICIALS.

The Chief Engineer, J. Hobson, states that the length of the G.T.R. maintained and operated during 1906 was the same as for 1905, viz., 3,535 miles. A new second track is in course of construction between Lynden and Brantford, Ont., to accommodate the increased traffic between Lynden and Paris, via Brantford, Ont. At London, a new double-track bridge is being erected across the River Thames, at the Cove, where other improvements are being carried out in connection with the double-tracking of the line between London and Hyde Park. The expenditure during 1906, on the permanent way and structures, was $3,899,881.83, as against $4,349,459.13 in 1905. The outlay on the track and permanent way, together with repairs of roadway, ballast and ballasting, clearing snow, renewals of rails and ties, including their proportion of the cost of superintendence was $2,598,904.11 in 1905, or at the rate of $735.19 per mile; in 1906, the amount was $2,899,532.42, or at the rate of $820.24 per mile, an increase of about 11½%, caused principally by the large quantity of steel rails laid in main line tracks during the year 1906. New stations have been built at Brompton-ville, Compton, Lisle, Creemore, New Hamburg, Lucan, Ailsa Craig, Burlington Junction, Onondaga, Paris, Walkerton, Southampton, Aylmer, Jarvis, and Fort Erie. The materials used for renewals and repairs of main tracks and sidings were:

New steel rails laid in track	28,943 tons
Re-rolled steel rails laid in track	14,265 "
Partially-worn steel rails laid in branch lines and sidings	13,327 "
New ties placed in track	1,157,695
Ballast (cubic yards)	442,115

The Superintendent of Motive Power, W. D. Robb, reports expenditure, mileage, etc., as follows:

Half-year ended.	Total Expenditure.	Train Mileage.	Rate of Expenses per Mile. Train	Engine	Car.
			Cents	Cents	Cents
Dec. 1906...	$4,574,141	9,943,640	46.00	35.43	2.95
Dec. 1905..	3,967,857	9,674,166	41.02	31.96	2.54

An increase in expenditure of $606,284.00, or 15.28%, compared with an increase in train miles of 269,474, or 2.79%.

	Passenger Trains	Freight Trains	Mixed Trains.
The average number of cars moved per train was.....	4.8	25.2	7.9
And for the corresponding period.....	4.6	26.4	8.0

During the half-year 30 engines have been scrapped or sold. Of the latter 18 were purpurchased by the G.T. Western Ry. and three by the G.T. Pacific Ry.

The comparative cost of repairs per train, engine and car mile was:

Cost per Mile.	Repairs and Renewals of Locomotives. 1906.	1905.	All repairing charges including shop, machinery, tools, and marine equipment, etc. 1906.	1905.
	Cents.	Cents.	Cents.	Cents.
Train	15.17	11.05	17.32	13.31
Engine	11.69	8.61	13.34	10.37
Car	0.97	0.67	1.11	0.82

The Superintendent of Car Department, W. McWood, reports expenditure, mileage, etc., as follows:

Half-year ended.	Total Cost of Repairs and Renewals.	Total Miles run by Cars. Passenger.	Freight.	Total.	Cost per Mile. Car.	Train.
					Cents.	Cents.
Dec., 1906.	$1,655,835	21,968,838	132,975,561	154,944,399	1.069	16.65
" 1905.	1,033,148	20,595,259	135,850,006	156,445,265	0.660	10.68

An increase in expenditure of $622,687, or 60.27%; with a decrease in car miles of 1,500,866, or 0.96%.

Three first-class, 5 baggage and 3 flat cars, also 3 snow-ploughs and 2 rapid unloaders were built new in company's works at cost of revenue. In addition, 49 box cars were purchased and charged to revenue.

The revenue account for the half-year follows:

RECEIPTS.

	£ s. d.	£ s. d.
Passengers		1,128,280 17 4
Less—International bridge tolls	1,485 16 0

		99,491 9 5
		2,214,743 10 10
Miscellaneous receipts, rents, tolls, etc.		77,293 19 3
		£3,584,846 19 11

EXPENDITURE, JUNE 30, 1906

		£ s. d.
Maintenance of way and structures	14.33%	513,674 7 0
Maintenance of equipment	19.37%	694,215 10 2
Conducting transportation	33.74%	1,209,738 15 5
General expenses	2.01%	71,982 17 11
Total working expenses	69.45%	2,489,611 10 6
Taxes	2.00%	71,885 0 10
	71.45%	2,561,496 11 4
Balance to net revenue account		1,023,350 8 7
		£3,584,846 19 11

The President said the half-year under review had been uneventful but satisfactory. The company had earned the largest income recorded in any half-year, and for the first time was in a position to distribute 3% to the third preference shareholders. The gross receipts were £3,584,847, against £3,288,993 in the Dec. half-year of 1905, an increase of as nearly as possible 9%, and that increase is spread over all our branches of revenue—passengers, freight, and miscellaneous. The number of tons of freight and live stock moved increased from 7,579,878 tons in the half-year ended Dec., 1905, to 8,318,075 tons in the past half-year, an increase of about 9¾%. The number of passengers carried increased from 5,755,671 in the Dec. half-year of 1905 to 6,046,070 in the past half-year, an improvement of a little over 5%. Some misapprehension seems to have been caused owing to an announcement that the Railway Commissioners had made an order fixing the maximum rate for passengers per mile in the case of railways east of the Rocky Mountains at 3c. a mile. An impression seems to have been created in some quarters that this arrangement would be detrimental to the interests of the company and prejudicial to the revenue. But that is not the case. As a matter of fact, rates charged in Ontario and Quebec are not—except in some very unimportant particulars—in excess of 3c. a mile. As a general rule they are below that amount, and therefore the effect upon the G.T.R.—certainly at present—will be practically nothing. As regards the effect it may have upon the G.T.P. Ry., when that line comes into operation—well, for a considerable time to come, certainly, the profit will be derived from the movement of freight, and as regards the passenger traffic there is not much loss to be apprehended in that direction, seeing that for some time to come the company's principal business will be that of introducing immigrants into the country.

The total revenue expenditure showed an increase of £215,780 and the proportion to the gross receipts was 71.45%, compared with 71.32% in 1905. This increase was entirely due to increased taxation, the expenses of maintenance and operation, although showing an increase in amount of £195,410, being 0.30% less in the percentage proportion to receipts. The decrease in the expenditure under the head of maintenance of way and structures, £111,386, was due to a considerable extent to the special expenditure made during the eight years ended Dec., 1905, for the renewal of bridges. The amount at the credit of the renewal of bridges account is £52,796, which is estimated to be sufficient to complete the bridges covered by the original program, after which the charges for bridge renewals will become of a normal character. Fifteen new stations were erected during the year; there were small reductions in the cost of ballasting and ties, and increases in the cost of repairs of roadway due to increased wages, and increased mileage of new rails laid. The taxes paid showed an increase of £20,370, or practically 40%. He could only repeat that this was a matter over which the directors had no control, however much they might deplore the tendency of the Canadian legislatures to put increased burdens upon the railways. The G.T. Western Ry., and the Detroit, Grand Haven and Milwaukee Ry. continue to give very satisfactory results. In each case the fixed charges have been met and a substantial surplus has remained over. The Canada Atlantic Ry. still lagged behind, but the present deficiency was accounted for by the amounts being expended in working its condition up to the standard of the main line.

Referring to the G.T. Pacific Ry. the President said: "On the Lake Superior branch, the work is well advanced, and there is no doubt it will be completed in the course of the present summer. Going westward from Winnipeg, work is progressing speedily between that city and Edmonton—a distance

T. N. MOTLEY & CO., Southern R. R. Representatives.

BOSTON CHICAGO PHILADELPHIA PITTSBURGH

of 790 miles—and there is no doubt that that portion of the road will be completed this year, but possibly not quite so soon as we expected, in consequence of the scarcity of labor, but that we shall get through to Edmonton some time this year I have little doubt. The delay of the Government contractors in completing their portion between Winnipeg and Lake Superior Jct. may somewhat postpone the obtaining of a junction with our road. When navigation is open the grain and other freight will be brought down to Fort William and be taken across the lake to our numerous ports on Georgian Bay, and there connect with our road. After the close of navigation the freight will go by the main road, which you will see on the map, running direct from Winnipeg in the direction of Quebec. In order to obtain access to the G.T.R., a branch will be built connecting the transcontinental road with North Bay. We must establish a branch running from North Bay, which is the northernmost point of our system. Surveys have been completed for the construction of that road, which is about 245 miles; but it is unnecessary to take the work in hand until the Governme[illegible] is more advanced with their work across [illegible]. Contracts have been let for const[illegible]est of Quebec, but so far no work has [illegible]ommenced beyond about 150 miles i[illegible]diately to the west of Quebec. Beyond Edmonton, surveys have been made, and a great portion of the road is already located, and construction will be taken in hand as soon as possible, but this matter is less urgent than the completion of the road east of Edmonton. The important points on the road of the Grand Trunk Pacific at present are Fort William, Winnipeg, Edmonton, and Prince Rupert. Work is going on actively at Fort William in constructing the necessary buildings, and so forth, and making the harbor, and a vast quantity of material has already been accumulated there for the construction of the railway. The same thing applies further on at Portage la Prairie, about 40 or 50 miles west of Winnipeg, which is a great centre for the concentration of material. At Winnipeg a satisfactory arrangement has been made with the Canadian Northern Ry. to share with them the very extensive terminal accommodation. The Canadian Northern Ry. had obtained possession of what is probably the most eligible site for railway accommodation in Winnipeg. We have arranged with them to have a union station, and connected with that there will be extensive yards, and also a large hotel. The work will be taken in hand as soon as possible and will place us, when completed, in a very favorable position. As regards Edmonton, nothing has been concluded yet as to terminals, but we have received a bonus from the city of $100,000, and also exemption from taxation for a certain number of years. Not the least important point is our new port, Prince Rupert, which is the termination of the road. Undoubtedly some of these days it will acquire an importance equal to any of the other ports on the Pacific side. We have acquired there a tract of 24,000 acres of land. We shall not hold all that ourselves, for we shall dispose of what we do not want for our own purposes on advantageous terms. That gives you a general idea of what is being done. In the meantime, the G. T. Pacific Ry. directors and managers have not been behindhand with the ordering of the necessary equipment, 2,650 cars had been delivered at the end of last year, and a further large number have been contracted for. We were hopeful that we should be able to carry a certain amount of the harvest this year between Edmonton and Winnipeg eastward, but owing to the delay on the part of the Government contractors, I am not so hopeful as I was. What the prospects of the harvest may be for this year, it is impossible to say at present, but so far the conditions are not otherwise than favorable, but whether the harvest is better or worse than the bountiful ones which we have had during the last few years, it is satisfactory to know that according to estimates about 20% more grain land will come under cultivation this year than last year, so that even if the harvest is less plentiful than it was last year, and there should be any falling off in the average yield, the deficiency will probably be made up by the increased acreage under cultivation. As you are aware, the flood of immigrants is still flowing into the country. All through the winter, even in the worst and severest months, we have had news of train loads of immigrants being deposited at points all along the road. At June 30 last, no less than 3,071 miles of railway were under construction in the country, and something like 5,000 miles of new railway are under contract during the present year.

It has become an absolute necessity for our company to fall into line with its competitors, and, accordingly, we have obtained powers from Parliament for the creation of a pension fund, the contributions to which will form part of the company's working expenses. The matter is now under the consideration of the Board, so I am not in a position to-day to tell you precisely what the charge upon the revenues of the company will be; but a preliminary examination by our officers in Canada points to a contribution of something like $70,000 or $80,000 a year. A Superannuation and Provident Association does exist for the benefit of a limited number of officers on the G.T.R., to which the company has been in the habit of contributing an amount equal to that paid by the officers. The amount so paid last year was about $26,000, but this association will gradually disappear as the lives of the present subscribers fall in.

In February last we made a first issue of 4% debenture stock of the G.T. Pacific Ry. guaranteed by the G.T.R. Co., practically at par. You will have observed, during the recent troublous times in the city, the remarkable steadiness of G.T.R. securities.

In conclusion he moved the adoption of the report and the declaration of the following dividends: To the holders of the 4% guaranteed stock of £2%; to the holders of the first preference stock of £2 10s. %; to the holders of the second preference stock of £2 10s. %; to the holders of the third preference stock of £3%. The resolution was seconded by A. W. Smithers, and passed.

The retiring directors Lord Welby, Hon. N. C. Rothschild, Sir H. M. Jackson, and A. Hubbard were re-elected; as also were H. C. Newton, and W. M. Ramsay, one of the English and one of the Canadian auditors.

The annual convention of the International Brotherhood of Locomotive Engineers will be held at Ottawa, June 17 to 22. It is expected that there will be about 3,000 delegates and their friends in attendance.

The following freight tariffs have been filed with the Board of Railway Commissioners: Local freight mileage tariff, St. Maurice Valley Ry., (operated by the C.P.R.); Supplement No. 2 to W. No. 50, Supplement No. 2 to C.R.C. No. W. 2, C.P.R. Western Lines; Supplement No. 2, to W. No. 56, Supplement No. 2, to C.R.C. No. W. 3; Supplement No. 1, to W. 168, Supplement No. 1, to C.R.C. No. W. 7.

Judgment has been given by the Ontario courts in favor of T. Wallace for $13,717.50, with costs and interest, for ties supplied in 1904 to the Temiskaming and Northern Ontario Ry. The ties were supplied and passed prior to the change in the Commission in 1905, but on a re-inspection the Chief Engineer was directed to withhold his certificate for ties supplied in Mar., 1905. The recent case was a re-trial, on a direction from the Supreme Court.

Canadian Northern Ry. Earnings, etc.

Gross earnings, working expenses, net profits, increases or decreases over 1905-06, from July 1, 1906:

	Earnings.	Expenses.	Net Earnings.	Increase or Decrease.
July..	$ 603,800	$ 397,900	$ 205,900	$ 63,400+
Aug..	594,900	402,800	192,100	80,400+
Sept..	624,400	417,800	206,600	96,400+
Oct...	815,100	490,900	324,200	66,000+
Nov..	741,700	481,300	260,400	35,300+
Dec..	536,200	407,800	128,400	13,800−
Jan..	351,400	410,300	58,900 −	158,200
Feb.	333,200	363,600	30,400 −	113,900 −
Mar.	488,800	394,800	94,000 −	23,400 −
	$5,089,500	$3,767,200	$1,322,300	$ 32,200+

Approximate earnings for April, $569,900, against $544,800, for April, 1906.

C.P.R. Earnings, Expenses, etc.

Gross earnings, working expenses, net profits, increases or decreases over 1905-6, from July 1, 1906:—

	Earnings.	Expenses.	Net Profits.	Increase or Decrease.
J'ly	$5,967,967.82	$3,596,156.74	$2,371,811.08	$734,033.42+
Aug. 6	170,452.27	3,707,873.07	2,462,579.20	670,933.29+

	$52,071,118.64	$34,069,199.99	$18,001,918.65	$1,496 877 25+

Approximate earnings for April, $6,308,000 against $5,462,000 for April, 1906.

Duluth, South Shore and Atlantic Ry.—Gross earnings for Mar., $260,836.37; net earnings, $66,056.25; against $252,308.82 gross and $77,522.40 net for Mar., 1906. Net earnings for nine months ended Mar. 31, $726,892.66 against $757,466.22 for same period, 1905-06. Approximate earnings for April, $277,557, against $240,045 for April, 1906.

Mineral Range Ry.—Approximate earnings for April, $67,760 against $54,514 for April, 1906.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Gross earnings for Mar., $1,000,855.40; net earnings, $333,833.65, against $903,677.25 gross and $389,229.92 net for Mar., 1906. Net earnings for nine months ended Mar. 31, $3,970,655.99 against $4,563,805.61 for same period 1905-06. Approximate earnings for April, $1,137,171, against $946,323, for April, 1906.

Grand Trunk Ry. Earnings, Expenses, etc.

The following figures give the earnings and expenses of the G.T.R., the Canada Atlantic Ry., the G.T. Western Ry., and the Detroit, Grand Haven and Milwaukee Ry., separately for Mar. as compared with Mar., 1906.

GRAND TRUNK RAILWAY.

	1907	1906
Earnings	$2,721,200	$2,479,845
Expenses	1,946,300	1,767,573
Net earnings	$ 774,900	$ 712,272

CANADA ATLANTIC RAILWAY.

Earnings	$ 145,400	$ 157,605
Expenses	137,400	120,771
Net earnings	$ 8,000	$ 36,834

GRAND TRUNK WESTERN RAILWAY.

Earnings	$ 544,500	$ 481,643
Expenses	445,100	388,139
Net earnings	$ 99,400	$ 93,504

DETROIT, GRAND HAVEN & MILWAUKEE RY.

Earnings	$ 160,000	$ 149,399
Expenses	126,700	122,496
Net earnings	$ 33,300	$ 26,903

Approximate earnings for April, $3,747,960, against $2,532,293 for April, 1906.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to April 30.

	1907.	1906.	Increase.	Decrease.
Grand Trunk	£2,111,216	£1,891,768	£219,448	...
Canada Atlantic	108,633	108,351	282	...
G. T. Western	397,105	346,786	50,319	....
D. G. H. & M.	116,316	107,966	8,350	....
Total.....	£2,733,270	£2,454,871	£278,399	....

The St. Maurice Valley Ry., which extends from Three Rivers to Shawinigan, Que., 20.85 miles, is being operated temporarily by the C.P.R. for the owners. The time table bears the signatures of V. Burrill, President and W. H. Potter Trainmaster.

ATLANTIC CITY CONVENTIONS

Orders by the Railway Commissioners.

2762. April 19.—Approving Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.'s standard freight tariff, C.R.C. 137.

2846. Mar. 7.—Authorizing Tillsonburg Electric Light Works to carry its wires over C.P.R. tracks at King St. and Tillson Ave., Tillsonburg, Ont.

2847. April 15.—Authorizing C.P.R. to construct an additional spur to Carney Lumber Co.'s premises, Owen Sound, Ont.

2848. April 16.—Authorizing G. A. Brown, Chief Clerk of Traffic Dept., to inquire into complaint of St. John Ice Co. against New Brunswick Southern Ry.

2849. April 13.—Authorizing C.P.R. to alter location of track at end of Bay St. and lay several additional tracks in Owen Sound, Ont.

2850. April 13.—Confirming order 1361, Aug. 9, 1906, authorizing C.P.R. to construct branch line to Carney Lumber Co.'s premises, Owen Sound, Ont.

2851. April 16.—Authorizing Canadian Northern Ontario Ry. to cross C.P.R. at Little Key River, Ont.

2852. April 15.—Extending time for installation of interlocking plant at Milton, Ont., by C.P.R. until May 31, 1907.

2853. April 17.—Approving location of Canadian Northern Ry., mileage 0-37.96 from junction with main line at Dalmeny, Sask.

2854. April 16.—Authorizing G.T. Pacific Ry. to cross Canadian Northern Ry. tracks at parish lot 58, Portage la Prairie, Man.

2855. April 15.—Authorizing Crow's Nest Pass Lumber Co., Ltd., to erect a blow pipe across C.P.R. right of way at Wardner, B.C.

2856. April 15.—Authorizing C.P.R. to construct a siding to Standard Wire Fence Co.'s premises, Woodstock, Ont.

2857. April 15.—Authorizing Norfolk County Telephone Co. to cross Michigan Central Rd. tracks at James St., Waterford, Ont.

2858. April 15.—Authorizing C.P.R. to construct a spur line to Pease Foundry Co.'s premises, Toronto, Ont.

2859. April 15.—Approving revised location of C.P.R. Pheasant Hills Branch, mileage 471.6 to 499.2.

2860. April 15.—Authorizing C.P.R. to construct line near Greenwood, B.C., from main line for about 271 ft.

2861. April 15.—Authorizing G.T.R. Co. to construct a branch line to Lehigh Portland Cement Co.'s premises, County of Hastings, Ont.

2862. April 15.—Approving Maritime Express Co.'s by-law authorizing W. Fraser to prepare and issue tariffs of tolls.

2863. April 9.—Authorizing Ontario Iron and Steel Co. to lay a gas pipe under the G.T.R. tracks, Crowland tp., Ont.

2864. April 15.—Authorizing C.P.R. to construct branch line to Finlayson & Sons, premises, Norwood, Ont.

2865. April 16.—Authorizing Canadian Northern Ontario Ry. to connect its tracks with Toronto and York Radial Ry. tracks at Richmond Hill, Ont.

2866. April 16.—Authorizing C.P.R. to construct a branch line to J. Gunn & Sons' premises, Rockspur, Man.

2867. April 17.—Authorizing G.T. Pacific Ry. to temporarily use for construction purposes the crossing with Canadian Northern Ry., Carberry branch, in section 1, tp. 12, range 15, w. 1st mer., Man.

2868. April 9.—Directing Canada Southern Ry. to provide a suitable farm crossing for J. A. Hicks, Glenrae, Ont.

2869. April 16.—Authorizing C.P.R. to construct a branch line to London Fence Co.'s premises, Portage la Prairie, Man.

2870. April 12.—Ordering telephone companies to file with the Board particulars of free or reduced rates granted by them: also particulars of cases where service is given wholly or partly for consideration other than monetary payments.

2871. April 18.—Authorizing G.T.R. to use and operate C.P.R. spur line at Union Stock Yards, Toronto, from point marked K to point marked D.

2872. April 22.—Authorizing Georgian Bay and Seaboard Ry. Co. to cross certain streets in Coldwater, Ont.

2873. April 22.—Approving proposed location of C.P.R. Moose Jaw Branch, mile 270.9 to 295 8.

2874. April 22.—Approving proposed revised location of C.P.R. Pheasant Hills Branch, mile 499.2 to 562.6.

2875. April 19.—Authorizing C.P.R. to construct branch line to Standard Explosives Co.'s premises, Ste. Jeanne de L'Isle Perrot, Que.

2876. April 22.—Approving proposed location of Niagara, St. Catharines and Toronto Ry., between Toronto and Humberstone.

2877. April 19.—Authorizing Cabano Water Works Co. to lay an iron pipe under the Temiscouata Ry. Co.'s tracks at Cabano, Que.

2878. April 23.—Approving Brantford and Hamilton Electric Ry. location from near Langford, Ont., to the crossing of the Stone Road, Cainsville, Ont.

2879. April 23.—Approving interlocking and derailing plant to be installed by C.P.R. at the drawbridge crossing Lachine Canal, near Highlands, Que.

2880. April 23.—Authorizing Bell Telephone Co. to cross Canadian Northern Ry. tracks at joint traffic and C.N.R. Bridge, Emerson, Man.

2881. April 23.—Authorizing Niagara, St. Catharines and Toronto Ry. to construct four branch lines in Thorold, Ont.

2882. April 23.—Approving Central Ontario Ry. location from a point near Bancroft, Ont., mileage 18½ to a point near Whitney, Ont., mileage 42.

2883. April 19.—Authorizing St Mary's and Western Ont. Ry. to join its tracks with the Tillsonburg, Lake Erie and Pacific Ry. tracks, near Embro, Ont.

2884. April 19.—Authorizing C.P.R. to construct branch line into McLaughlin Lumber Co.'s premises, Silverdale, B.C.

2885. April 2.—Approving Vancouver, Westminster and Yukon Ry. line from 14th to 20th streets, New Westminster, B.C.

2886. April 19.—Authorizing the G.T.R. to construct a branch line from lot 23, 1st con., Thurlow tp., Ont., to the Lehigh Portland Cement Co.'s premises, lot 25.

2887. April 18.—Authorizing Charney Council to carry the highway across the G.T.R. west of Chaudiere Curve station, Que.

2888. April 24.—Extending the time for filing and approval of express companies' tolls until July 1, 1907.

2889. May 15.—Authorizing Bell Telephone Co. to carry its wires across C.P.R. tracks near Chesterville, Ont.

2890. April 23.—Authorizing P. Galibert to carry a water pipe under C.P.R. tracks on the north-west branch of Lachine Canal.

2891. Feb. 8.—Authorizing Kaministikwia Power Co. to cross C.P.R. tracks opposite the Ogilvie Flour Mill Co.'s new mill and elevator, Fort William, Ont.

2892. April 17.—Authorizing Quebec, Montreal and Southern Ry. to put in a double span on the South River bridge, near Henryville, Que.

2893. April 24.—Extending time in order of Mar. 26. authorizing Windsor and Tecumseh Ry. to cross temporarily the G.T.R. tracks leading to the Ford Automobile Works and the Ontario Asphalt Co.'s premises, Sandwich East, Ont.

2894. Feb. 8.—Amending Order of Aug. 7, 1906, granting leave to Kamisistikwia Power Co. to erect wires across C.P.R. and C.N.R. tracks, West Fort William, Ont.

2895. April 25.—Approving proposed deviation of G.T.R. between St. Lambert stasion and Ste. Rosalie Jct., Que., excepting the portion between the west end of Belœil bridge and m.p. 24 east of St. Hilaire station.

2896. April 25.—Approving proposed deviation and grade improvements of the G.T.R. between west end of Belœil bridge and mileage 21.20 to 25.00 east of St. Hilaire station, Que.

2897, 2898, 2899 April 2.—Authorizing Vancouver, Westminster and Yukon Ry. to cross C.P.R. tracks near 14th St., on Columbia St., and at 10th St., New Westminster, B.C.

2900. April 26.—Approving G.T.R. standard passenger tariff C.R.C. E485 on basis of 3c. per mile between all stations in Canada.

2901. April 26.—Authorizing Calgary and Edmonton Ry. to construct a spur line of 500 ft. in Red Deer, Alta., to the Great West Lumber Co.'s premises.

2902. April 25.—Authorizing G.T.R. to construct a branch line from St. Patrick St. to east of Gowrie St., Fergus, Ont.

2903. April 26.—Authorizing Toronto, Niagara and Western Ry. to construct its line along Burlington Beach, Ont., on Beach Road.

2904. April 26.—Authorizing C.P.R. to construct a branch line in Calgary, Alta., along the C.P.R. right of way and across MacLeod St.

2905. April 26.—Authorizing the Michigan Central Rd. to construct a branch line across Wilson Ave., Malott St., Gordon Ave., Scratch St., Irwin Ave., or Station St., Essex, Ont.

2906. April 26.—Authorizing Bell Telephone Co. to carry its wires across Brandon, Saskatchewan and Hudson Bay Ry. tracks, between Rosser and Pacific avenues, Brandon, Man.

2907. April 29.—Extending time for use of crossing for construction purposes only by Windsor, Essex and Lake Shore Ry. over the Michigan Central Rd. at Talbot St., Essex, Ont.

2908. April 30.—Authorizing Grand Trunk Pacific Ry. to construct 5 sub-structures over North Saskatchewan River.

2909. April 30.—Authorizing G. T. Pacific Ry. to build seven sub-structures over South Saskatchewan River, near Saskatoon, Sask.

2910. April 24.—Approving Klondike Mines Ry. located line from Sulphur Springs to the divide between Dominion and Flat Creek, Yukon, 45 miles.

2911. April 30.—Authorizing Quebec Ry. Light and Power Co. to construct a branch line from its main line to the projected pulp mill on the River Ste. Anne, St. Joachim, Montmorency, Que.

2912. April 30.—Authorizing Toronto and York Radial Ry. to carry a copper wire cable under the C.P.R. tracks at Yonge St., North Toronto, Ont.

2913, 2914. April 30.—Authorizing North American Telegraph Co. to carry 20 telegraph and telephone wires across C.P.R.

"HART" CONVERTIBLE CARS

Our Cars are not an Experiment. **Over 25,000 in actual service.**

Hart Convertible Cars have been in successful operation for the last four years on many of the leading railroads and during that time have been working under exceptionally hard conditions. This year we offer a car stronger in every way than heretofore produced, and guaranteed to stand up under the hardest steam shovel work and general road service.

tracks at Bogart's Crossing, 4 miles east of Tweed, and a similar number across the C.P.R. tracks at Black Creek Crossing, 2 miles east of Tweed, Ont.

2915. May 1.—Approving Brantford and Hamilton Electric Ry. location from Cainsville to the east limit of Brantford, Ont.

2916. May 1.—Authorizing C.P.R. to close public crossing and to open a new one in lieu on west side of Petite Riviere du Loup, near Louiseville, Que.

2917. May 1.—Authorizing W. K. Colbeck, of Grand Valley, Ont., to erect telephone wires across C.P.R. between townships of East and West Luther, Ont.

2918. April 30.—Authorizing the town of Oshawa, Ont., to construct Emma St. and Wilkinson Ave. over the Oshawa Ry. tracks.

2919. April 30.—Authorizing the G.T.R. to construct a branch line north of St. Etienne St., Montreal, to the Montreal Packing Co.'s premises.

2920. May 2.—Amending order of April 20, 1906, and authorizing the G.T.R. to divert Lake Shore Road, Hope tp., Ont.

2921. April 29.—Authorizing Niagara, St. Catharines and Toronto Ry. to carry its tracks over roads in Thorold tp. at 10 points.

2922. May 3.—Appointing J. Hardwell, Chief Traffic Officer, to make inquiry and report with respect to rolling stock, appliances, equipment, etc., on Canadian Northern Ry.

2923, 2924. May 7.—Authorizing Bell Telephone Co. to cross C.P.R. and G.T.R. tracks at Beaconsfield, Que.

2925-2930. April 30.—Authorizing North American Telegraph Company to carry 20 telegraph and telephone wires over C.P.R at various points.

2931-2949. April 30.—Approving proposed permanent work on 19 C.P.R. bridges on Quebec section.

2950. May 8.—Approving plans of substructure of railway at Lansdowne Ave., Toronto.

To United States Subscribers.

By the postal convention entered into recently between Canada and the United States, a very large increase has been made in the postage rate on periodicals passing from one country to the other. Heretofore the rate on periodicals mailed in Toronto, addressed to subscribers in the United States, has been a quarter of a cent a pound. On May 8 a rate of four cents a pound—an advance of 1,500%—went into effect. In common with other publishers, we have been compelled to advance our subscription rates to the United States to cover the additional cost of postage. To all subscribers who have paid in advance we shall supply THE RAILWAY AND MARINE WORLD up to the expiry of the current subscription without extra charge. To all others and to new subscribers in the United States the subscription price from June 1, 1906, will be $1.50 a year including postage, and all subscriptions must be paid strictly in advance.

After May 31 no dogs or other animals will be permitted in any steam railway car in the Eastern Canadian Passenger Association's territory, but will be carried only as baggage or express

The concordance to the Railway Act, as it appears in the Revised Statutes of Canada, 1906, chap. 37, compiled by J. E. W. Currier, of the Department of Railways and Canals, has been issued. A reference to the principal changes made in this new edition of the concordance was given in our Mar. issue.

June Birthdays.

Many happy returns of the day to—

Harry Abbott, President Vancouver and Lulu Island Ry., ex-General Superintendent C.P.R., Vancouver, B.C., born at Abbotsford, Que., June 14, 1829.

Jas. Anderson, Manager Sandwich, Windsor and Amherstburg Ry., Windsor, Ont., born at Ayr, Ont., June 20, 1851.

F. F. Backus, General Freight and Passenger Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y , June 4, 1860.

Archer Baker, European Manager C.P.R., London, Eng., born at York, Eng., June 21, 1845.

F. P. Brady, General Superintendent Lake Superior Division C.P.R., North Bay, Ont., born at Haverhill, N.H., June 22, 1853.

A. H. N. Bruce, C.E., Chief Engineer Napierville Jct., Ry., born at Ballyscullion, County Derry, Ireland, June 18, 1854.

E. Callaghan, Agent Hamilton Steamboat Co , Toronto, born at Kingston, Ont., June 17, 1875.

J. E. Dalrymple, General Freight Agent G.T.R., Montreal, born there, June 1, 1869.

W. H. Darcy, General Claims Agent C.P.R. Western Lines, Winnipeg, Man., born at Manorhamilton, Leitrim, Ireland, June 23, 1859.

A. E. Doucet, Division Engineer Transcontinental Ry. Surveys, Quebec, born at Montreal; June 9, 1860.

G. H. Eaton, Assistant Master Car Builder, C.P.R. Western Lines, Winnipeg, born in Staffordshire, Eng., June 9, 1860.

W. F. Fitch, President and General Manager Duluth, South Shore and Atlantic Ry. and Mineral Range Rd., Marquette, Mich., born at Circleville, Ohio, June 28, 1839.

A. A. Goodchild, Auditor of Stores and Mechanical Accounts C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

H. W. Harding, Local Secretary Canadian Northern Ry., London, Eng., born there June 6, 1869.

F. M. Hawley, city ticket agent G.T.R., Cobourg, Ont., born at Campbellford, Ont., June 22, 1874.

E. J. Hebert, General Agent C.P.R. Passenger Department, Montreal, born there June 18, 1864.

Carl Howe, Traffic Manager, Merchants Despatch Transportation Co., New York, born at Berrien Springs, Mich., June 11, 1870.

L. R. Johnson, Assistant Superintendent of Motive Power C.P.R. Eastern Lines, Montreal, born at Abingdon, Berks, Eng., June 22, 1855.

J. F. Jones, Superintendent St. Clair Tunnel G.T.R., Port Huron, Mich., born at Prairieville, Ill., June 4, 1851.

L. K Jones, Secretary Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

A. C. Lytle, Superintendent and General Freight and Passenger Agent, Orford Mountain Ry., Eastman, Que., born at Hemmingford, Que., June 6, 1854.

W. R. MacInnes, Freight Traffic Manager C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

E. H. McHenry, Fourth Vice-President New York, New Haven and Hartford Rd., and ex-Chief Engineer, C.P.R., born at Cincinnati, Ohio, June 25, 1859.

C. E. McPherson, General Passenger Agent C.P.R. Western Lines, Winnipeg, born at Chatham, Ont., June 7, 1861.

W. D. Matthews, director C.P.R., Toronto, born at Burford, Ont., June 22, 1850.

L. Mulkern, travelling freight agent, C.P.R., Toronto, born at London, Ont., June 18, 1871.

F. Price, Superintendent Car Service G.T.R., Montreal, born there June 11, 1864.

Jas. Stephenson, ex-Chief Superintendent G.T.R., Weston-Super-Mare, Somerset, Eng., born there June 2, 1837.

Quebec and Lake St. John Ry.

The directors' report presented at the annual meeting held in Quebec, May 10, contained the following:

The number of passengers carried during the year was 325,639, and the number of tons of freight 367,879. In the previous year the figures were 301,725 and 346,011. The freight consisted of the following number of car loads: cordwood, 1,124; pulpwood, 3,308; sawn lumber, 4,143; square timber, 560; ties, 812; pulp and paper, 1,427; brick, and stone, 259; cheese, 78; grain, 329; general merchandise, 5,914; total, 17,954.

The construction works on the branch line to La Tuque have been carried on by the contractor, J. Paquet, and by his sub-contractors, O'Brien & Fowler, with a large force of men during 1906, and also during the winter. The work has exceeded the estimates very largely, owing principally to a great deal of rock being found where test pits have led the engineers to expect earth and gravel Track is now laid to mile 30, and the grading thence to beyond mile 39 is almost completed, so that trains should be running to La Tuque not later than July next, and possibly earlier. The contractor is running regular trains to the end of the track, and the construction of the National Transcontinental Ry. having been commenced at La Tuque, men and material for this work are now being sent forward over the Q. & L. St. J. The water power at La Tuque has been purchased by a syndicate of U.S. paper mill manufacturers, who have also purchased from the company the land grant of 158,000 acres given by the Provincial Government to aid the construction of the branch to La Tuque The same purchasers have also acquired a large area of timber limits on the St. Maurice River, and have contracted to furnish the railway with not less than 4,000 carloads of freight annually for the next nine years. The branch line from Valcartier towards Gosford is being continued for a further distance of a mile, which will make the length of this branch 5½ miles. A considerable quantity of freight has been delivered at the end of the line, and only awaits the track to be brought to market. The branch line from Roberval to the Government Wharf on Lake St. John, a distance of about one mile, has been completed and was inspected by the Government engineers in Dec. last It is expected that this branch will be of great use in helping the steamboat navigation of Lake St. John, and thereby developing the territory on the north and west sides of the lake. The balance remaining unissued of the authorized issue of £500,000 of prior lien bonds has been disposed of during the past year, and has been and is being expended in the construction of the La Tuque, Gosford and Roberval Wharf branches, and also upon betterments on the main line. The ballasting of the main line from Lake Bouchette to Lake Edward was completed last year, and also a portion of the ballasting south of Lake Edward. Concrete and steel bridges have been constructed at the Rondeau and Jacot Rivers. The new dock at Quebec for the accommodation of canal boats and other light draught vessels has been completed. This dock is 700 ft. long, and is proving of very great benefit in accommodating the export trade of the railway. The yard at Quebec in rear of this dock has been nearly filled up, thus giving the railway a considerable increase in its yard accommodation. The pulp and cardboard mills and saw mills at the different points on the railway continued to be operated during the past year, and logs have been got out during the past winter to furnish them with a considerable increase of business. The colonization movement to the Lake St. John country has made satisfactory progress, and the Dominion Government is taking an active interest in this work, having

appointed a special agent to supervise it at Quebec. The board have pleasure in handing over to their successors in office a road in excellent physical condition, well equipped with rolling stock in a good state of repair, and controlling a steady and increasing volume of traffic.

Following are the officers and directors for the current year: President, D. B. Hanna, Toronto; Vice-Presidents, G. Lemoine, Quebec; Z. A. Lash, K.C., Toronto; other directors: F. C. Annesley, W. H. Moore, A. J. Mitchell, F. Nicholls, Toronto; J. T. Ross, E. Beaudet and Senator Tessier, Que. The following are representative directors: J. G. Garneau, as Mayor of Quebec; Hon. Judge Gagne, representing Chicoutimi, and G. Tanguay, M.P.P., and Senator Choquette, representing Quebec Province.

It will be noticed that a number of changes were made in the directorate, consequent on the control having been secured by Mackenzie, Mann & Co.

American Railway Engineering and Maintenance of Way Association.—The annual meeting was held at Chicago, Ill., recently, when a committee report was adopted, recommending changes in the present method of railway signals. The report recommended that the style of signal semaphore now in use be changed so that the signals will be given in the right hand upper quadrant of the circle instead of the lower right hand quadrant. The stop signal remains the same as heretofore, the arm of the semaphore being horizontal. But when the arm is inclined upward 45° it will mean proceed with caution instead of an arm declined the same number of degrees. The arm inclined upward at an angle of 90° will mean proceed instead of an arm declined downward of about the same angle. The association also recommended a change in the old plan of red lights for stop, yellow or green light for caution, and white light for proceed. The association recommended the yellow light for the night signal for caution, and a green light as the night indication for clear, thus doing away with the white light entirely Other questions were discussed and reported on. A. W. Johnston, General Manager New York, Cleveland and St. Louis Rd., Cleveland, Ohio, was elected President, and W. McNab, Assistant Engineer, G.T.R., Montreal, Vice-President. Mr. McNab is the only representative of a Canadian railway holding office.

The Quebec Board of Trade has passed a resolution calling upon the Dominion Government to establish a Canadian Lloyds for the carrying on of a marine insurance business. The resolution declares that the prejudices and pretensions of Lloyds in London are ruinous to Canadian maritime commerce, especially on the St. Lawrence route.

McRae, Chandler and McNeil, Ltd., is the title of a company incorporated under the Dominion Companies' Act, with a capital of $100,000 and offices at Montreal, for the purposes of carrying on a general contracting business in Canada and elsewhere. The provisional directors are: J. A. McRae, Niagara Falls, Ont; W. H. Chandler, J. H. McNeil, Toronto; F. H. Markey, K.C.; R. C. Grant, Montreal.

McCoy and Wilford have been incorporated under the Dominion Companies' Act, with a capital of $49,000 and offices at Lindsay, Ont., to carry on a railway and general contracting business, and to acquire the business heretofore carried on under the title of McCoy and Wilford. Various incidental powers are given. The provisional directors are: P. McCoy, Kingston, Ont.; F. R. Wilford, Mrs. M. M. Wilford, G. H. Hopkins, and F. A. Walters, Lindsay, Ont.

Inquiry re Canadian Northern Railway.

Order 2922 issued by the Board of Railway Commissioners, May 3, recites order 2844 issued April 12, published in our May issue, directing A. F. Dillinger to enquire into certain matters connected with the Canadian Northern Ry., and continues as follows:

"And whereas the said A. F. Dillinger has reported to the Board that the C.N.Ry. Co. is absolutely without facilities for operating even one-half of its mileage at the present time; that its locomotives and car shops at Winnipeg are entirely inadequate to take care of the locomotives and cars which, in the ordinary course, are required to be overhauled at least once a year, these shops being practically the same as those that were taken over from the Northern Pacific Ry. Co. a number of years ago, with the addition of some up-to-date machinery and a building that will take in about five passenger cars for general repairs; that on all well-regulated railways in the west locomotives undergo repairs at least once a year, while the transportation conditions on the C.N. Ry. during the past 12 months have not permitted the usual overhauling of engines, with the result that they are unable to perform the work expected of them; that, at the present time, the C.N. Ry. Co. has 168 engines of all classes to operate 3,000 miles of railway, and that 23 of those engines are undergoing repairs; that the company has on its lines 6,095 of its own cars and 5,008 foreign cars, or a total of 11,103 cars; that for the 30 days preceding his report the C.N.Ry. Co. had moved on an average 39,000 bush. of wheat a day, and that at this ratio it will take the company until Nov. 25, 1907, to move out the balance of the crop on its lines; that "the secret of the whole thing is lack of motive power and facilities for taking care of motive power that they have got, and that the company should have at least twice the power it has to operate its existing lines in anything like a satisfactory manner;

"And whereas it is in the public interest that the C.N. Ry. Co. should, as speedily as possible, procure and place upon its lines the additional locomotives and other rolling stock, appliances, facilities, and equipment necessary for enabling it to receive, carry, and deliver, without delay, and with due diligence, all traffic offered for carriage upon its lines: Now, therefore, in pursuance of the powers conferred upon it by sec. 60 of the Railway Act, and all other powers possessed by the Board in that respect; the Board orders that J. Hardwell, Chief Traffic Officer of the Board, be, and he is hereby, appointed and directed to make inquiry and report to the Board, what new locomotives and other rolling stock, appliances and equipment, in addition to those now possessed by it, the C.N.Ry. Co. has ordered for use on its lines of railway, and when the same respectively can reasonably be expected to be ready for use on such lines; what facilities for repairing and keeping in proper order and condition its locomotives and other rolling stock, appliances, and equipment, in addition to the facilities for such purposes now possessed by it, the C.N.Ry. Co. is now supplying and can reasonably be expected to supply and have ready for use within six months from the issue of this order; Whether, and within what time, and to what extent the C.P.R. Co. can, within six months after the issue of this order, obtain and place upon its line for use further locomotives and other rolling stock, appliances and equipment for receiving, carrying, and delivering traffic, beyond those now possessed and now ordered by the said company. And the Board doth further order that the said J. Hardwell report from time to time to the Board upon any of the matters aforesaid, as he may think desirable or as may be directed by the Board"

Winnipeg Joint Terminals.

The Dominion Parliament at its recent session passed an act confirming an agreement between the Canadian Northern Ry., the G.T. Pacific Ry., the Crown, and the Commissioners of the Transcontinental Ry., respecting the Winnipeg Terminals. In moving the second reading of the act Hon. H. R. Emmerson, then Minister of Railways and Canals, said the Canadian Northern Ry. was not in a position, owing to the fact that the property to be used was covered by various issues and forms of debentures of it and its predecessors, to convey land in fee simple. In lieu of that the C.N.R. conveyed to the G.T.P. Ry., and the Government in common with themselves, equal shares in possession of these lands with the right to use the same for terminal purposes for 999 years. The G.T P. Ry. and the Government were to be assured of the use and possession of the lands under the Act. The present buildings were to be removed and new terminals were to be constructed. The C.N.R. was to do the work under a Superintendent of Construction, who is to be appointed by that company, subject to the approval and removal at the instance of the Government. During the time the G.T.P.R. is lessee of the Eastern Division of the Transcontinental Ry., the C.N.R. is to enjoy a half-interest in the terminal, and the G.T.P.R. and the Government, together the other half interest. When the G.T.P.R. ceases to be a lessee of the Eastern Division of the Transcontinental Ry., the G.T.P.R. and the Government are each to enjoy independently a third undivided interest in the terminals. While the G.T.P.R. is the lessee of the Eastern Division the terminals will be operated by a terminal board of two persons, one to be appointed by each company; and when the G.T.P.R. ceases to be the lessee, the terminal board is to be composed of four persons, two to be appointed by the C.N.R., and one each by the G.T.P.R. and the Government. The compensation to be payable was regulated on the following basis: first, the lands were to be put in at a fixed valuation of $2,625,000, upon which interest at the rate of 4% a year was to be payable, the C.N.R. assuming one-half and the G.T.P.R. and the Government together the other half. Upon the cost of all the improvements to be made on the lands, both in the first instance, and from time to time as may be determined, the rate of interest to be paid is 4½%. While the G.T.P.R. is lessee of the Eastern Division the expenses of the maintenance and operations of the terminals are to be borne by the two railway companies on a wheelage basis, and thereafter if the Eastern Division is operated by the Government itself, the Government would pay one-third, and become a partner in equal shares with the two companies, paying on a wheelage basis. The agreement contains full directions for the guidance of the Terminal Board, and for resort to the courts in case there are any disagreements between the parties upon any points of the same. The general clauses of the act provide that nothing in the agreement shall be taken to over-ride any of the provisions of the Railway Act applicable to the companies or to the joint terminals mentioned in the agreement, that the C.N R. may issue securities for expenses under the agreement, and guaranteeing the use and possession of the joint terminals by the G.T.P.R. and the Government notwithstanding any mortgage or charge, whether securing debentures or otherwise heretofore or hereafter made by the C.N.R., or its predecessors or successors, or any default thereunder. Provision is also made in the act for the use of the terminals by other companies, and for the fixing of charges for the same.

It is understood that plans for the terminal buildings are being prepared by a New York firm of architects. The new terminals will be situated, a Winnipeg report states, at the corner of Main and Water streets, and will take up a large portion of the ground bounded by Water st., the Assiniboine River, Main st., and the Red River. Another report, also from Winnipeg, states that it has been finally decided to locate the terminals on the Broadway and Main St. site, the Hudson's Bay Co. having refused to alter the agreement made at the time certain lands were sold for terminal and station purposes.

Ontario Railway Subsidies.

The Premier of Ontario, speaking in the Legislature, recently, said the Government still believed in a general way that the time had come to stop the granting of land and the giving of any other assistance to railway construction, except in special cases, where the public interests were clearly served. In connection with the Algoma Central and Hudson Bay Ry., the Government had been urged to give a guarantee of bonds aggregating $8,500,000, in return for which the railway was to surrender its land grant of 20,000 acres a mile. This land grant was one of the securities now held by the Government for its guarantee of bonds of the Sault Ste. Marie industries, and further the time for earning the land grant had expired. The Government, however, had come to a decision to extend the time for earning the land grant for two years, and to release it from certain conditions imposed in connection with the guarantee of bonds by the Government.

The Canadian Northern Ontario Ry. proposed to extend its line from Sudbury to a junction with the Canadian Northern Ry. at Port Arthur, Ont. This line would open up the clay belt of northern Ontario, and on its merits was a line deserving of provincial aid. The company also asked for the revival of the subsidy of $2,000 and 5,000 acres of land a mile in aid of a line from Sudbury to Lake Abitibi, about 175 miles. The Government had decided to revive the cash subsidy only, conditional upon the line being swung to the west, so as not to be a menace to the Temiskaming and Northern Ontario Ry., the Government line. Aid by way of the guarantee of bonds of other lines for the C.N.R., it had been decided not to give.

It had been decided to give a cash subsidy of $5,000 towards the construction of a line of three or four miles long from Thessalon, on Georgian Bay, to the C.P.R. Algoma branch; to extend the time to Dec., 1909, within which the Toronto, Lindsay and Pembroke Ry. could earn the subsidy previously voted; to extend the time to Dec., 1910, within which the Irondale, Bancroft and Ottawa Ry. could earn the subsidy previously voted; and to extend the time for a year within which the subsidy previously voted could be earned by the Bracebridge and Trading Lake Ry., provided $35,000 was expended upon the work of construction by Dec. 31.

H. G. Reid, District Master Mechanic C.P.R., North Bay, Ont., writes: "I have been a regular subscriber to your paper for the past two or three years, and find it very interesting and helpful along mechanical lines."

The Midland Ry. Co. of Manitoba has filed with the Manitoba Government its by-law fixing the maximum passenger rates to be charged on its line, and the same has been approved by the Lieutenant-Governor-in-Council, as required by the Manitoba Railway Act.

Canadian Northern Ry. Construction, etc.

St. John Valley Ry.—The New Brunswick Legislature has passed a bill providing for the guarantee of bonds to the extent of $15,000 a mile for the construction of a railway along the St. John River Valley. The premier in laying the proposition before the Legislature, Mar. 28, said he had discussed the proposal with W. Mackenzie, President, and D. D. Mann, Vice-President of the Canadian Northern Ry., and with C. W. Spencer, General Manager of Mackenzie, Mann & Co.'s Eastern Lines. When it was announced that the National Transcontinental Railway Commissioners' engineers had recommended the adoption of the Central route through New Brunswick, it was felt that a hardship would be done to the people of the St. John River valley, and the Government thought it might aid in the construction of such a railway by the guarantee of bonds. He wrote Mackenzie, Mann & Co. on the subject with the result that that firm said the construction of the line could be arranged upon a guarantee of bonds to the extent of $15,000 a mile. The proposed line would cost for construction and equipment about $30,000 a mile. It was intended by the Government that bonds would not be issued until it was assured that the line would form part of the Canadian Northern Ry. transcontinental line, and that the bonds should also be guaranteed by the Canadian Northern Ry. As a local road there would no doubt be considerable traffic, but that would not be sufficient to justify a guarantee of bonds to the extent of $15,000 a mile.

The resolutions passed provide for the guarantee of principal and interest of first mortgage bonds of the Canadian Northern Ry., or such one of the companies owned and controlled by Mackenzie, Mann & Co. (Ltd.), and forming or intended to form part of their transcontinental railway, as may be authorized by law to construct and operate a line of railway from Woodstock or Centerville, following the valley of the St. John River to Fredericton, and thence to St. John, or to the C.P.R. near Westfield, or as near thereto as may be reasonably practicable. The bonds are to be secured upon a first mortgage of the line to be constructed, and the guarantee is not to exceed $15,000 a mile, the rate of interest is not to exceed 4%, and the principal shall be payable in not more than 50 years from the date of issue as may be determined by the Government. The guarantee shall be endorsed on the bonds from time to time as each 10 mile section is completed and approved of by the Provincial Engineer. The company is to provide in a satisfactory manner for the interest of the bonds during construction, and until the line has been fully completed and equipped to the satisfaction of the Provincial Engineer. The specifications for the building of the line shall require the construction of a first-class railway, to be laid with steel rails of not less than 67 lbs. per yard; the bridges to be of steel with concrete or stone substructures. The company shall be bound to provide by all proper means against the setting or spread of fires along the line. Any money paid by the Government, whether for principal or interest, shall be deemed to be paid in discharge of the liability of the Province, but not in discharge of the liability of the company under the bonds, or under the mortgage. In case the Government should be of opinion that there has been any unreasonable delay on the part of Mackenzie, Mann & Co. (Ltd.) in causing contracts for the construction and operation of the line to be entered into, it may by letters patent incorporate a company for the purpose of constructing and operating such line of railway, with all necessary powers. Upon such company being incorporated the Government may cause its first mortgage bonds to be guaranteed in the manner provided; such company having previously entered into a contract with the Dominion of Canada for the construction of a line entitling it to a subsidy of not less than $6,400 a mile, and further have entered into a contract with the C.P.R., the G.T. Pacific Ry., or the Canadian Northern Ry., for the operation of its line for 99 years at a rental sufficient to meet the interest of the bonds so guaranteed. It is to be distinctly understood, the resolution sets out in conclusion, that "the authority to guarantee bonds hereunder is only to be exercised in respect to such line upon a contract being made for its construction and operation as part of the system of one of the companies owning or constructing a transcontinental railway system, or as part of the Intercolonial Ry.

The resolutions were subsequently embodied in the bill to aid certain railways, and in passing through committee a provision was inserted to the effect that if one of the subsidiary companies of the Canadian Northern Ry. should be utilized to construct the railway, the C.N.R. must either enter into direct covenant with the Crown to pay the principal and interest on the bonds guaranteed or lease the line for 99 years at a rental sufficient to pay interest on the bonds at the rate of 4%. It was also provided that the route to be followed must be approved by the Government prior to the bonds being guaranteed. The estimated length of the projected line is 155 miles. The Premier stated at St. John, May 14, that the surveys for the line would be gone on with at once.

Canadian Northern Quebec Ry.—D. B. Hanna, Third Vice-President C.N.R., is reported as having stated at Quebec recently, that with the construction of its branch lines being proceeded with satisfactorily, he expected the line to reach Quebec in the near future. H. T. Hazen recently completed a trip of inspection over the new lines under contract, and he stated, on returning to Montreal, that very satisfactory progress was being made. Tracklaying on the line from St. Jerome to connect with the Montford and Gatineau branch was expected to be in progress early in June.

Canadian Northern Ontario Ry.—It is expected that the line from Hawkesbury to Ottawa, Ont., will be completed during the summer. Application has been made to the C.P.R. for running rights over the Alexandra bridge, Ottawa, in connection with the company's projected line westward through Pembroke to the French River. The company has filed plans showing an alternative route into Toronto, avoiding the residential districts. Owing to the fact that it is impossible to arrange for the laying out of the entire area in the east end of Toronto, purchased for yard accommodation, this year, the company will not require the tenants of all the houses to move until 1908. The question of the company's entrance into Ottawa has been under consideration, and the Deputy Minister of Railways advised the company, in place of securing a partially independent entrance, to join the G.T.R. at Hurdman's Bridge and come in over that company's line. The only difficulty which this suggestion presents is in regard to a connection with the company's line to the west.

Canadian Northern Ry.—An agreement has been reached between the Mayor of Port Arthur, the C.N. Ry. and the G.T. Pacific Ry., by which a right of way through the city is provided. The C. N. R. will construct north-easterly to the narrows of the Nepigon River, and on between Nepigon and Lory lakes to the Eastern Division of

the G.T. Pacific Ry. The latter railway will have running rights over the line to be so constructed.

G. T. Marks, H. A. Wiley and W. H. Plummer have issued a writ seeking to have the council restrained from proceeding further in the matter, by having the question put to a vote of the ratepayers.

D. D. Mann, Vice-President, in an interview at Winnipeg recently, said: "We will do less construction work this year than we have ever done. The energies of the company will be directed to the work of betterment of lines already constructed, and to supplying of equipment for these lines. The work to be done is of great consequence to the company. It will include the ballasting of hundreds of miles of track and the improvement of the roadway in every way. In addition to this there will be a large amount of building done. We will be occupied with putting up the numerous buildings we require in Winnipeg, which include the joint terminals with the G.T. Pacific Ry. We will commence work on extensive repair shops, etc., which the company require, the plans for which are now being completed by the architects. It will, of course, be impossible that the works should all be done this year, but it is expected that all the work in connection with these matters will be completed during 1908. The general work of the betterment of the line will, of course, be continued from year to year, but the company expects that a great deal of work will be completed in this matter during the present season."

D. B. Hanna, Third Vice-President, who has been making a general inspection of the line, states that the line generally is in a satisfactory condition. At Brandon, Man., May 10, he said a new station, freight shed, etc., costing $100,000, were to be erected.

It has been decided to practically reconstruct the line from Regina to Prince Albert, Sask., the work being started at Regina. It is proposed to lay 280,000 new ties and to relay the line with heavy steel as far as Disley, this year.

The company's bill asking for additional powers to construct branch lines, and an increase of bonding powers, was amended by the Railway Committee of the House of Commons the clauses providing power to construct additional branch lines being withdrawn.

Railway Commissioners' Rate Orders.

2800. April 11. In the matter of the application of the Canadian Freight Association, under the Railway Act, sec. 321, for approval of a proposed supplement, filed as Supplement 8 to Canadian Freight Classification 12: Whereas by order of Oct. 13, 1906, Supplement 7 to said Classification was approved, and by order of Nov. 12, 1906, Supplement 8 to the said Classification was approved. Said supplements were consolidated and issued by the Canadian Freight Association as Supplement 7. Upon the consent of the Canadian Manufacturers' Association and the report of the Chief Traffic Officer of the Board—It is ordered that the changes and additions embodied in the said proposed supplement are hereby legalized and sanctioned until such time or times as the Board shall revise, alter, or amend the same, the same to take effect not later than May 1, 1907.

The question of Sunday labor on the railways is being looked into by the Lord's Day Alliance pretty closely since the new act came into force. Breaches of the act are said to be frequent, and the Alliance is arranging with the Crown Attorney in Toronto to take proceedings against certain railways for typical breaches of the act.

TRADE AND SUPPLY NOTES.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Rhodes, Curry & Co. have added a rolling mill to their works at Amherst, N.S.

The Canadian Fairbanks Co. has opened a branch office in Quebec, R. Miquelon being appointed manager.

The Modoc Soap Co., of Philadelphia, Pa., manufacturers of the Perfect Car Cleaner, have adopted the word "Perfectol" as their trade mark.

The Canadian General Electric Co. has issued in pamphlet form a well-illustrated description of a visit to its Toronto and Peterboro works.

Robert W. Hunt & Co., Bureau of Inspection Tests and Consultation, have removed their New York office from 66 Broadway to the new West Street Building, 90 West Street.

The Standard Coupler Co. has removed its New York office from 160 Broadway to floor 16, United States Express Building, 2 Rector St., rear of Trinity Church. Its Chicago office has been removed from the Monadnock Block to the Fisher Building.

The Moncton, N.B., Board of Trade has been asked by E. A. Walberg, Montreal, to aid him in securing a lease of the old Intercolonial Ry. shops in that town, with a view of establishing a car works there. A resolution recommending the Town Council to grant free water and light, and tax exemption for 20 years, was passed.

The John McDougall Caledonian Iron Works Co., Ltd., Montreal, has opened sales offices as follows: Montreal, 82 Sovereign Bank Building; Toronto, 810 Traders Bank Building; Winnipeg, 251 Notre Dame Avenue; Nelson, B.C., Josephine St.; Vancouver, 416 Seymour St.; New Glasgow, N.S., Telephone Building. The company's principal products are boilers, water tanks, power plants, water works equipment and all kinds of hydraulic and mill machinery.

The Robb Engineering Co., Amherst, N.S., has issued an illustrated booklet descriptive of Robb-Mumford boilers, Robb-Mumford-Brady boilers, return tubular boilers, vertical boilers and marine boilers, which it manufactures. It has also issued an illustrated catalogue of the Robb-Armstrong engines, built at its works. The illustrations include engines installed by the company in England, Australia, Cuba, Spain, as well as in Canada and elsewhere.

The Prince of Wales, during his recent visit to Scotland, where he and the Princess were the guests of Lord and Lady Blythswood at Blythswood, went to the works of Babcock & Wilcox, Ltd., at Renfrew and spent over an hour going through the various departments. The visit was prompted by the Prince's desire to see the manufacture of water tube boilers similar to those which have been supplied to H.M.S. Dreadnought and other battleships of the most modern type.

S. H. Jones, President of the St. Thomas Brass Co., Ltd., St. Thomas, Ont.; the Canadian Bronze Co., Ltd., Montreal, and the Northwestern Brass Co., Ltd., Winnipeg, has removed his headquarters from Buffalo, N.Y., to 2 Rector St., New York City. The Magnus Metal Co., which has its headquarters in Buffalo, and of which Mr. Jones is General Manager, has sold out to the National Lead Co., a Guggenheimer concern, and its headquarters are now at 111 Broadway, New York.

Babcock and Wilcox, Ltd., Montreal, are supplying 2,000 h.p. additional B. & W. boilers, with superheaters and chain grate automatic stokers to the C.P.R. Angus shops, Montreal. They have also received orders recently from the Diamond Vale Coal Co., Coutlee, B.C.; St. Charles Condensing Co., Ingersoll, Ont.; Viau Freres, & Warden King & Son, Ltd., Montreal; J. R. Booth, Ottawa; Toronto University, Belleville Portland Cement Co., and two additional orders for Winnipeg Water Works.

The Robb Engineering Co., Amherst, N.S., has received the following orders recently: Sydney and Glace Bay Ry., Sydney, N.S., 1 Robb-Armstrong vertical enclosed engine; 2 return tubular boilers; 1 Robb feed water heater steam separator. Brockville Light and Power Co., Brockville, Ont., 1 return tubular boiler. Alberta Portland Cement Co., Calgary, Alta., 1 Robb-Armstrong cross compound Corliss engine. Vanderbeek & Sons, Jersey City, N.J., 1 Robb-Armstrong engine on skids, 1 return tubular boiler with castings for Dutch oven, 1 smoke stack, 1 Duplex steam pump, 1 complete rotary mill, 1 complete lath mill. Town of Truro, N.S., 1 Robb-Mumford water tube boiler, 1 Duplex feed pump, 1 Robb feed water heater. Intercolonial Ry., Moncton, N.B., 3 Robb-Mumford boilers. Mackenzie, Mann & Co., Ltd., Toronto, 1 Robb-Armstrong engine, 1 vertical engine, belted, 2 return tubular boilers, 1 Robb feed water heater, 2 Duplex feed pumps.

Railway Subsidy Contracts.

The following subsidy contracts have been entered into by the Dominion Government during the current year:

CANADIAN NORTHERN QUEBEC RY.—From near Garneau Jct. to or towards Quebec Bridge, 70 miles. Connecting its Montford and Gatineau line with the main line at St. Jerome, Que., 22 miles. (April 8 and 10.)

KLONDIKE MINES RY.—From Dawson to near Sulphur Springs, 31 miles; from near Sulphur Springs to the divide between Dominion and Flat Creeks, 45 miles; from the said divide to Stewart River, eight miles. (May 10.)

KOOTENAY CENTRAL RY.—From Golden towards the International boundary line via Windermere and Fort Steele, crossing the Crow's Nest Pass Ry. at or near Elko, B.C., 186 miles. (April 4.)

QUEBEC AND LAKE ST. JOHN RY.—From Roberval to the Government wharf at Lake St. John, Que., one mile. (Nov. 24, 1906.)

QUEBEC CENTRAL RY.—From St. Francis to St. George, Que., nine miles. (Jan. 28.)

TILLSONBURG, LAKE ERIE AND PACIFIC RY.—From Woodstock or from Ingersoll to Stratford, Ont., 35 miles. (Jan. 22.)

Canadian Railway Club.—At the annual meeting in Montreal May 7, the following officers and committees were elected for the current year: President, W. D. Robb, Superintendent Motive Power G.T.R.; First Vice-President, L. R. Johnson, Assistant Superintendent of Motive Power, C.P.R.; Second Vice-President, H. H. Vaughan, Assistant to Vice-President, C.P.R.; Executive Committee: W. E. Fowler, T. McHattie, A. A. Maver, W. M. Dietrich, W. H. Evans, Professor Morgan and G. T. Bell. Audit Committee: A. G. Walker, W. H. Gault, J. S. N. Dougall. J. Powell, chief draughtsman motive power department G.T.R., was re-elected Secretary, and S. S. Underwood, of the G.T.R., Treasurer.

Reports on Railway Accidents.

The Board of Railway Commissioners has decided to make public the reports of the investigations into the accidents on the C.P.R. at Mountain, Ont., on Mar. 1, and at Brunel, Ont., April 1. The report of E. C. Lalonde, Inspector of Accidents, on the Mountain accident is as follows:

"The accident was a head-on collision between passenger train 6, engine 908, conductor W. Burt, baggageman A. Lesperance, brakeman E. Williams, engineer J. Hartney, and fireman H. Richmond; and westbound extra freight train 984, conductor H. Scott, brakemen E. Suffel and W. J. O'Mara, engineer J. E. Manyon, and Fireman J. A. Rennick—in the yard at Mountain at 6 a.m.

"The cause of the collision was the failure of engineer J. E. Manyon, of train 984, to determine correctly the place where to meet the fast passenger train 6, when receiving despatcher's order 36, on form 19, at Winchester, advising that train 6 was running 50 minutes late from Kemptville Jct. to Vaudreuil.

"The result of the collision was that Engineer J. Hartney, of train 6, H. Richmond, fireman, and A. Lesperance, baggageman, employes of the same, train were injured, and W. Hitchins, Dominion Express messenger, and his assistant, J. J. Nicholson, of the same train, were burned to death while pinned in express car 1765, which was set on fire by oil lamps lighted in the car at the time of the collision.

"From the evidence it is shown that passenger train 6 was a superior train as to class and direction, and not scheduled to stop at any place between Kemptville Jct. and Vaudreuil. It consisted of six cars, two express and baggage cars, tourist car, Wabash passenger car, Pullman car Amedeo, and a C.P.R. sleeping car Algoma. The cars were equipped with and were burning gas except in the two express and baggage cars which were lighted by 4 ceiling lamps and two desk lamps. At 5.25 a.m. despatcher McRae issued an order, 36, addressed to train 6 and extra freight 984, 3rd no. 50 at Finch, extra 976 and 2nd no. 50 at Monklands, as follows:

"'Order No. 36.—No. 6, engine 908, will run 50 minutes late Kemptville Jct. to Vaudreuil.'

"The above order was correctly delivered to Conductor Burt, of the passenger train, at Kemptville Jct. This train is scheduled to leave Kemptville Jct., eastbound, at 4.59 a.m.; and being reported 50 minutes late, she was due to leave at 5.49 instead of 4.59 a.m., and left at 5.54 a.m., 5 minutes later than the time specified in the order. According to her scheduled running time 50 minutes late, plus five minutes more delay at Kemptville, she was due to pass Mountain, where the collision occurred, at 6.04 a.m. At 5.40 a.m., Fireman Rennick, on extra freight 940, the westbound freight train, consisting of 44 cars all told, while passing at Winchester, reecived from the agent order 36 on form 19, which he read and handed over to his engineer, J. E. Manyon. It read as follows:

"'No. 6, engine 908, will run 50 minutes late Kemptville Jct. to Vaudreuil.'

"A similar order was handed to Conductor H. Scott, when the van passed the station. Just previous to coming into Winchester. Engineer Manyon had looked at his watch and read the time 4.30 a.m. instead of 5.30 a.m., one hour earlier than it was. It was actually 5.30 a.m.; and after receiving this order he said to his fireman: 'We will have time to go to Kemptville and get coal before no. 6 is due there.' Fireman Rennick never looked at his watch to compare the time with his engineer, nor ascertain whether the engineer was right in his calculation or not. The train proceeded right along; and after passing Inkerman, the first station west of Winchester, he looked at his watch again and read it 4.48 a.m. instead of 5.48, and was proceeding with the intention of meeting no. 6 at Kemptville Jct., whereas he should not have gone further than Mountain, to clear the main line in time for no 6. Ten minutes was about the running time for extra 984 to get to Mountain, which would have made Mountain at 5.58 at the east end switch; and the collision occurred west of Mountain station at 6 a.m. As per C.P.R. rule, extra 984 should have been cleared of the main line at least five minutes before no. 6 arrived, or rather was due to pass.

"'Rule No 86 reads: 'An inferior train must keep out of the way of a superior train.'

"'Rule 214A: 'Engineers must read their train orders to their firemen, and conductors to their rear brakemen.'

"In this matter Engineer Manyon and Fireman Rennick knew perfectly well the contents of the order and should have compared their watches; the engineer should have read the order to Fireman Rennick, as per rule 214A. The head-end brakeman, E. Suffle, was riding in the engine cab after leaving Winchester, and was not made aware of the contents of order 36. Only the engineer told him and the fireman as follows: 'We have lots of time to go to Kemptville to take a little coal and water'; and nothing was said about the time. Conductor H. Scott received similar order as above stated; read the order to the rear-end brakeman W. J. O'Mara; and neither of them made a move to ascertain or to figure out the meeting point, only when too late to avoid the catastrophe.

"I therefore find that engineer of extra freight train 984, J. E. Manyon, and Conductor H. Scott, are responsible for this collision. inasmuch as they neglected their duty in regard to meeting no 6, thereby violating the company's rules: and Fireman J. A. Rennick is also responsible for not checking or comparing the time with his engineer, Manyon. Rear-end brakeman W. J. O'Mara is responsible for neglecting to signal the engineer to stop at the east end switch, to go on the siding, and neglecting to comply with rule 86. Despatcher McRae acted in violation of instructions set forth in rule 38 by completing the 19 order to extra 984 before 31 order was delivered to passenger train 6. The Assistant Superintendent, R. W. McCormick, being questioned on this matter, has admitted that it was a violation of instructions, and that McRae, the despatcher, in this case has since been dismissed for the above reason

"In view of the fact that there were no means of extinguishing the fire set to the baggage car after the collision, that the life of the two victims might have been saved if the fire had been checked by some available means, and that in cases of that kind water is rarely obtainable. I beg to recommend that the railway companies be requested to instal in each car on passenger trains sufficient underwriter fire extinguishers to be used in cases of fire."

THE BRUNEL ACCIDENT.

This accident was the derailment of passenger train 1, three-quarters mile east of Brunel, Ont., at 11.27 a.m. It was investigated by T. L. Simmons, Assistant Engineer, who reported as follows:

"On April 13, I inspected the scene of the accident which occurred near Brunel station, about 22 miles west of Chapleau. I was accompanied by A. L. Hertzberg, the company's Engineer of Maintenance, and W. K. Thomson, Assistant Superintendent. The accident was caused by a broken rail on the outside of a 5° 30″ curve, or, in other words, a curve having a radius of 1,040 ft. I examined the broken rail carefully and it appeared to be a good quality of close-grained steel and quite flawless except for a small portion about the size of the end of a lead pencil on the extreme outside of the base of the rail. The rail was 73 lb. to the yard and was manufactured by the Johnson Co., Lorain, in 1898. About 11 miles of these rails were placed in the track in the summer of 1898 and there was not a single failure until last winter when two broke. The rail appears to have been broken by the engine passing over it; the west side of the brake had been hammered by the wheels of the mail car and the express car passing over it. Then the rail on the east side of the break appears to have sprung out about half the width of the head of the rail, as there is the mark of the flange of the wheel where it mounted the rail.

The flaw referred to in the rail was very small, and could not be detected until after the rail was broken. The track in the vicinity is in good condition; the embankment is of standard width, and the rails and ties are in good condition. At the point where the rail was broken, the track had been shimmed up about half an inch, showing that the trackmen were paying attention to the track. The inner rail on the curve was not disturbed, and the ties were so little damaged that it was not necessary to replace them in repairing the track. I am of opinion that, considering the severity of the past winter, the company had done everything to keep the track in condition, and that the accident was due to something which they could have no knowledge of, and consequently were unable to provide for.

"At the time of the accident the train was running at a moderate rate of speed, and was made up of an engine, mail car, express car, baggage car, colonist car, two tourist cars, 1st class car, then another tourist car, then dining car and sleepers. For convenience I have numbered them, commencing with that next to engine. Cars 1 and 2 stayed on the track, car 3 was the first to leave the rails, and was followed by 4, 5, 6, 7, and 8. The dining cars and sleepers stayed on the track. The cars went off the track where there is a slight cut of about 3 ft., and about 100 ft. farther the cut runs out and the track runs on an embankment about 15 ft. high along the shore of a small bay of Lake Windermere. As soon as the cars emerged from the cut they went down the embankment on to the ice, and car 5 pushed past car 4 and lay parallel to it. Car 6 pushed the rear ends of these cars farther out on the ice. Five cars were burned, but the great loss of life all took place in car 5. From what information I could gather, it appears that car 4 turned over on its side, the bottom of the car where the gas tanks are located being close to the windows of car 4, or possibly from the tanks of both cars 4 and 5, entered the broken windows, and in some way became ignited, setting fire to the interior of the car so rapidly that a number of the passengers had no time to escape. I am of opinion that if there had been no gas on the train, not a life would have been lost."

In connection with the foregoing Inspector Lalonde says: "I beg to call the attention of the Board to that part of Mr. Simmons' report where he says: 'I am of the opinion that if there had been no gas on the train not a life would have been lost.' I fully concur in his opinion, with the additional fact that if the passenger coaches had been equipped with fire extinguishers, there is no doubt that most of the victims would have been saved; and I beg to recommend here what I recommended in my report on the accident at Mountain: that all passenger coaches should be equipped with underwriter fire extinguishers to be used in case of fire to rescue those imprisoned or pinned in the debris of any wreck."

The Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. has filed with the Board of Railway Commissioners a local mileage freight tariff, to be used in the absence of special tariffs giving lower rates, subject to Canadian freight classification.

CANADIAN NORTHERN ONTARIO RY. COMBINATION CAR—HALF CROSS SECTION SHOWING UNDER FRAME.

Combination Cars for C.N.O.R.

The Canadian Northern Ontario Ry. has received from the United States a combination parlor, dining and sleeping car, named Balmoral, which is the first of an order for four. The others are to be named Buckingham, Windsor, and Warwick, respectively. These cars are 72½ ft. long over end sills, 9 ft. 10½ ins. wide over side sills, and 14 ft. 6½ ins. high over all, the inside height being 6¾ ft. from top of sill to bottom of plate. At one end is an observation platform and an observation room, 9 ft. 8 ins long, containing six wicker chairs and a top which can be made up into a lower and an upper berth. Next comes the men's toilet and smoking room, 8 ft. 11 ins. long, and then the main room, 32 ft. 9¾ ins. long. Beyond that are two ladies toilets, one on each side of the passageway and a large kitchen in the end of the car. The kitchen end has a wide vestibule.

The berths are arranged so that the car can be converted from a parlor and dining car into a sleeping car for night travel. There are 20 large upholstered chairs for day use and the berths and bedding are stored in ventilated steel pockets built in the framing below the floor, and entirely concealed by the flush trap doors which form the body of the floor. To make up a berth the two chairs over a section are moved to one side and the double trap doors, 6 ft. 2 ins. long, are raised to a vertical position, forming the partitions between adjoining sections. The upper and lower berths are then raised out of the pocket to their proper height by means of light wire cables passing over sheaves on the partitions and around a winding drum under the berth pocket. This drum is turned by an extension crank handle passing down to a pinion under the floor. The two berths are raised to their proper height and made up into beds, and the chairs, hand baggage, etc. are stowed away in the pocket under the floor. Berth curtains are hung from a curtain rod carried on hangers which pull out from under the deck. It is claimed that there is 6 ins. more headroom in the lower berth than in an ordinary sleeping car, and that the berths are wider. The windows are high and the upper berth is lighted and ventilated from the outside. For use as a dining car, 10 double tables are carried in a large locker next to the kitchen and these are put up when required between each pair of chairs as in a cafe parlor car. Panelled lockers are provided in the wide piers between windows in which table silver is stored when not in use.

The peculiar construction of the berth pockets below the floor requires a special design of heavy composite underframe. Above the side sills the framing is standard with a few unimportant modifications. The side sills are made up of three timbers 8 in. deep with a total thickness of 8¼ in. and a ½-in. x 8-in. steel flitch plate. For the length of the berth pockets two 9-in. 13.25-lbs. channels are bolted under the main sill and below these is another timber 5¾ in. x 5⅝ in. The four center sills are continuous from end to end of the car, and are made up of 5-in. x 8-in. timbers with two ½-in. x 8-in. flitch plates. Under the centre sills are two 9-in. channels forming the inside walls of the berth pockets. The reinforcement of the sills makes unnecessary the use of cross-bearers between bolsters which would interfere with the berth pockets.

The car is finished inside with inlaid polished mahogany except in the kitchen, which is finished in cherry. The ceiling is painted a light olive green with gold decoration and art glass is used in the deck windows and over the side windows. The car is lighted by acetylene gas and heated by steam, and in every respect is equipped with the most modern and luxurious fittings.—Rd. Gazette.

National Transcontinental Railway.

The Dominion Parliament at its recent session voted $5,672,000 for surveys and construction of the Eastern Division.

By an act passed at the recent session of the Dominion Parliament it is provided that sections 2, 3 and 4 of the Wages Liability Act, chap. 98, of the Revised Statutes of 1906, shall apply to contractors and sub-contractors in the construction of the Eastern Division of the National Transcontinental Ry., or any part thereof, let under contract by the Commissioners, the Commissioners being substituted in the sections, for the purposes of such application, for the Minister entering into a contract or by whom the work under contract is being executed.

Tenders were invited by the National Transcontinental Ry. Commission for the construction and erection of six steel bridges in District F. The bridges are to be erected at the following points, the date given being the date when the work is to be completed: East and west branches of the Brokenhead River, Whitemouth River crossing, C.P.R. crossing near Rennie, Man., Feb. 1, 1908; Winnipeg River crossing, Mar. 15, 1908; Wabigoon River crossing, July 1, 1908. The bridges are to be constructed to carry the load designated as heavy in the general specifications for steel bridges of the Department of Railways and Canals. It was subsequently stated, however, that owing to the impossibility of the bridge building companies supplying the materials within the time required, the work had been withdrawn, that temporary bridges would be put up, and tenders for the permanent structures would be again called for in 1908.

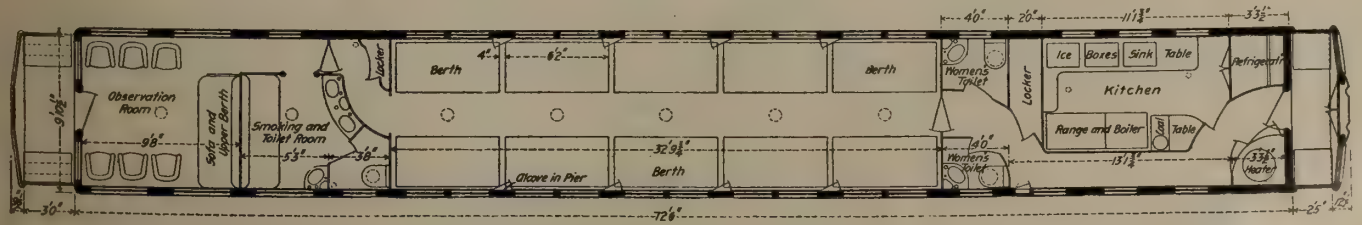
It is understood that the G.T. Pacific Ry. Co. will sublet the contracts for sections of the Eastern Division, which were recently awarded it by the commissioners. Work has been commenced near Edmundston, N.B., by Lyons and White, on their contract, Division 5. A number of sub-contracts have been let.

GRAND TRUNK PACIFIC RY.

J. D. McArthur, Winnipeg, who has the contract for the Eastern Division from Winnipeg easterly to Lake Superior Junction, Ont., has arranged for the Eastern Construction Co., Ottawa, to take over a portion of the contract. The total length of the line covered by the McArthur contract is 245 miles, but owing to the difficulties of the work, and the scarcity of labor, progress has not been as rapid as was anticipated.

It was stated in the House of Commons recently that the G.T. Pacific Ry. was, by an order-in-council, considered to be the first applicant for coal lands along the right of way in Alberta, Saskatchewan and British Columbia.

The B.C. Government has warned G.T. Pacific Ry. officials off the Indian reserve adjoining the Prince Rupert townsite, and a report from that place states that the entire surveying staff has been withdrawn and work generally has been suspended at the Pacific terminus of the line.



CANADIAN NORTHERN ONTARIO RY. FLOOR PLAN COMBINATION PARLOR, DINING AND SLEEPING CAR.

Salary-Raising Training For Railroad Men

There is no profession in which promotion depends in any higher degree upon a man's real ability and technical knowledge than in railroading. Quick promotion then for the railroader is the result of quick and also thorough acquirement of that technical training which will qualify him to hold a higher position. In no way can the ambitious railroad employe secure this technical knowledge so quickly and yet so simply as through the I. C. S. Courses of home training. These Courses have been written by the best railroad experts on this Continent and are taught after a manner that 15 years' experience in training hundreds of thousands of ambitious men for promotion and better earnings has proved to be the most practical and efficient. These Courses include instruction in LOCOMOTIVE MANAGEMENT, LOCOMOTIVE BOILERS, STEAM CYLINDERS, and VALVE GEARS, BREAKDOWNS, COMPOUND LOCOMOTIVES, TRAIN RULES, WESTINGHOUSE and NEW YORK AIR BRAKES, CAR LIGHTING and HEATING, and ELECTRIC HEADLIGHTS.

If **YOU** wish to secure the training in your own home, in your spare time, and at an insignificant cost, that will qualify you for promotion to the highest positions in your profession, simply mark and mail this coupon and we will tell you how you can do so. The fact that we have enabled hundreds of other railroad men to secure promotion in itself warrants your careful investigation of our plan if you really wish to better yourself. Don't let a postage stamp stand between you and a better position. **Mark and mail this coupon NOW.**

HOTEL TRAYMORE

ATLANTIC CITY, NEW JERSEY

OPEN ALL THE YEAR

To the original hotel has been added a ten-story fireproof building, equipped throughout with the most improved sanitary plumbing, steam heating and electric lighting. The sleeping rooms are spacious, light and airy, private bath with hot and cold fresh and salt water connecting each. The building is modern in every respect, each room affording an unobstructed view of the ocean, and the furnishings will be unsurpassed in the point of richness and comfort. Capacity, 600.

D. S. WHITE
PRESIDENT

Traymore Hotel Company
CHAS. O. MARQUETTE - MANAGER

Quebec Central Ry. Meeting

The following report for the year ended Dec. 30, 1906, was presented at the annual meeting in London, Eng., April 24:

1905.		1906.
$789,205	Gross earnings	$904,866
528,380	Working expenses	582,916
$260,825	Net earnings	$321,950
476	Interest on deposits	6,174
$261,301	Net revenue	$328,124

This statement shows an increase in gross earnings of $115,661, an increase in working expenses of $54,536, and an increase in net earnings of $61,125. The addition of $11,553 brought forward from 1905 made the available balance $339,677. After providing $99,983 for the year's interest on the outstanding prior lien bonds, and 4% debenture stock issued, $27,500 was charged against net revenue for alterations, additions, and improvements to stations, buildings, etc. There then remained a balance of $212,194, out of which has been paid the interest on the 3% second debenture stock, and the full interest on the 7% income bonds. These two payments absorbed $164,493, and left a surplus of $47,701, of which $29,000 has been applied to the replacement of two locomotives, $6,000 to the renewal of passenger cars, leaving a balance of $12,701 to be carried forward.

At Dec. 31, 1906, £329,337 of the 4% debenture stock had been issued. Of this £199,500 had been used for retiring prior lien bonds, of which £150,500 remained outstanding Dec. 30, 1906. The new extension of the Chaudiere Valley branch from Beauceville to St. George, a distance of nine miles, was opened for traffic Dec. 17, 1906, after being examined and fully approved by the Government engineers. It is anticipated that this addition to the system will develop fresh sources of traffic. Ice-house equipment and six refrigerator cars were placed in service in the early part of the summer to comply with the Dominion Government dairy department cold storage requirements, and the results have fully justified the expenditure entailed. The accounts have been audited by M. Young, accountant, of Toronto, as special auditor.

GENERAL BALANCE SHEET.

Share capital	£694,850	$3,381,603.33	
5% prior lien bonds	150,500	732,433.33	
4% debenture stock	329,337	1,602,773.40	
3% debenture stock	338,000	1,644,933.33	
7% income bonds	338,000	1,644,933.34	
Wages unpaid, Dec. 31, 1906			22,910.08
Sundry outstanding accounts			146,644.82
Interest on prior lien bonds unclaimed, accrued but not due			17,439.31
Interest on 4% debenture stock accrued but not due			28,695.17
Interest on 3% debenture stock unclaimed			352.41
Interest on 5% income bonds unclaimed			2,907.69
Interest on 7% income bonds unclaimed			5,872.17
Reserve contingent fund, Dec. 31, 1906			46,786.60
Net revenue balance Dec. 31, 1906			212,194.41
			$9,490,479.39
Cost of main line extensions and equipment, Dec. 31, 1905		$8,640,320.49	
Capital expenditure, 1906—			
Chaudiere Valley br'n'h St.George extension	$163,797.04		
New equipment	69,295.55		
		$233,092.59	
			$8,873,413.08
Investments in other companies			25,995.95
Sundry outstanding accounts			113,683.86
Sundry outstanding traffic accounts			13,836.31
Old rails			11,087.30
Materials and supplies			81,997.22
Fuel			27,411.85
Cash in hand, in bank, and in transmission			164,169.42
Cash in bank in London			178,884.40
			$9,490,479.39

The President, E. Dent, in moving the adoption of the report and statement of accounts, said: The gross earnings for 1906 were $904,866, the largest in the history of the company, being an increase of $115,661 over 1905, and the net earnings were $321,950, an increase of $61,126. The permanent way has been kept in good condition, over 58,000 new ties having been placed in the road, while 11 miles have been relaid with 70-lb. rails in substitution for old 56-lb. rails. This is the first time since the reconstruction of the company that the holders of the securities given in exchange for the old first mortgage bonds have received the equivalent to their full interest. As you may remember, each £100 5% first mortgage bond was exchanged into 5% income bonds, and these were afterwards split into equal proportions of 3% debenture stock and 7% income bonds. Payment in full of the interest on the new securities is equivalent to the full interest on the original bonds. There may be some on the other side of the table, as there are on this, who have retained their original investments in the company through the changes since 1881, when the old first mortgage bonds were issued. At the time of the default in 1886, before a bondholders' committee was appointed, the price of the bonds was about 20, but the securities now representing them are not only receiving their full interest, but the combined value of the two securities, at the selling price of to-day, is about 92½, the actual issue price of the original bonds. Last year was one of extraordinary business activity throughout the whole of Canada, including, of course, the Province of Quebec. There were no extra expenses for removing snow or working snow ploughs, and in the spring there was no interruption or loss of traffic on account of floods. The hauling capacity of engines in the winter was almost equal to summer conditions; as a rule it is anything from 25 to 40% less. The increase in passengers carried was over 18,000, and in freight moved the increase was over 100,000 tons, or more than 20%. Some of the old locomotives have been replaced by new, but as the latter are more powerful, an economy in haulage has been, and will be, effected. The construction of an extension from Beauceville to St. George was commenced on July 1, and has been in operation since Dec. 17, the day of its completion. This is a valuable addition to the Chaudiere Valley branch, and will add considerably to the traffic now existing. Already satisfactory development is being shown, new mills have been erected, and various industries are in course of being established. The General Manager wrote last month that there were some thousands of car-loads of traffic in sight on this extension, which will be handled this year. He says also that the inspection and reports of the Government engineer show that all the work done was first class in every particular. During the year it was hoped to divert and reconstruct part of the existing line from Beauce Junction to Beauceville. This branch of 15 miles along the Chaudiere Valley was constructed some 25 years ago, and at that time was believed to be above high-water mark, but owing to the gradual clearing of the timber the water now rises higher than formerly, and during the spring, for weeks at a time, a portion of the line has sometimes been submerged. The cost to the company of this diversion will be made up by the saving in expense in repairing the line every spring after the floods subside, as well as the gain by preventing a loss of revenue, which was often incurred owing to the interruption of traffic on the branch, which has now become an even more important one since its extension to St. George. We need not commence the building of the Scotts branch until 1908 or 1909, as from the latest reports it does not seem probable that the Quebec Bridge will be completed before 1909 or 1910. The earnings for the first three months this year show a decrease as compared with last year. This decrease is accounted for by the unusual severity of the weather and continuous low temperature, and also to the lack of car supply, which has been general throughout the country. The car shortage has been caused by the difficulties of operating owing to the severe weather, and also owing to the large increase in the amount of traffic offering. At present the situation is being considerably relieved, a better supply of cars coming in from connecting roads. The weekly earnings are now showing increases, and the outlook for traffic is favorable. The resolution was seconded by A. Bremner and passed unanimously.

The directors, E. Dent, A. Bremner, T. Lindley, and F. H. Norman, of London, Eng., and F. Grundy, Sherbrooke, Que., were re-elected. The other director, L. A. Carrier, M.P., of Levis, Que., is appointed by the Province of Quebec.

Temiskaming and Northern Ontario Ry.

The annual report of the Commissioners for the calendar year 1906, shows that the line from North Bay to Englehart, 138 miles, was being operated, and 75 miles of line were under construction. The property of the Commissioners is insured for $622,346.15 against fire; at the rate of 49c. per $100; the Commissioners' staff and operating employes are insured for $212.000 in connection with the Employers' Liability Act; and $40,000 of guarantee insurance is carried. The Kerr Lake branch, about five miles long, is being constructed by McQuigge and Hunt, who are also building the Haileybury spur. The Canadian Construction Co. has the contract for the Charlton branch, eight miles. J. L. Englehart was appointed chairman in Nov., and F. Dane was appointed commissioner. C.B. Smith retains his position as consulting engineer; the positions of Superintendent and Traffic Manager have been divided, J. H. Black being given the Superintendency, and W. D. Cunneyworth appointed Freight and Passenger Agent. A. A. Cole was given charge of the mining properties, and V. T. Bartram of the purchasing department. Following is the general balance sheet.

LIABILITIES.

Loan from Province		$9,248,454.80
Accounts payable		208,770.58
Unclaimed wages		456.65
Deposits on contracts		7,500.00
		$9,465,182.03

ASSETS.

Cost of road and equipment to Dec. 30, 1906		$7,426,805.84
Cost of 1st Division for 1906		507,967.57
Cost 2nd Division for 1906		1,148,842.34
Cost of equipment, 1906		333,620.56
Discount, stamps, and underwriting, London Loan		232,666.66
		$9,649,902.97
Less proceeds of sale of townsites and mining lands applied on cost of road	$123,674.60	
And proceeds from operation applied by the Treasurer of Ontario on original loan	100,000.00	
		223,674.69
		$9,426,228.37
Expended on James' Bay exploration		4,357.83

Operating expense to earnings	66%	55%

The report of E. A. McCarthy, Chief Engineer, gives details of the work done by the contractors on the extension northerly, and of the Commissioners' staff on the maintenance; while the Superintendent and the Freight and Passenger Agent report on traffic, and the growth of the population and industries along the line. The Master Mechanic gives a list of rolling stock and equipment as follows: 14 road engines, two switching locomotives, two official cars, 10 first-class passenger cars, 11 second-class passenger cars; nine mail, baggage and express cars; 10 stock cars, 50 box cars, 223 flat cars, nine conductor's vans, two snow plows, two flangers, one unloader, one wrecking crane, one steam shovel, and two gravel plows. The report also contains a statement as to the work of the mining agent, and copies of the various contracts entered into during the year.

Canadian Railways Finance Co.

At the Carey Street offices of the Board of Trade, in London, Eng., recently, a meeting of creditors and contributories in the Canadian Railways Finance Co. was held, under the presidency of H. W. Winearls, Official Receiver, who reported that no statement of affairs had been lodged, but it was estimated that £9,500 was due to bondholders, and £386 to unsecured creditors, whilst the only asset of value was a balance of £3 16s. 9d. at the bank. The company was formed to acquire the rights, powers, and privileges conferred by an act of the Canadian Parliament for the incorporation of the "Hudson's Bay and Pacific Railway Co.," but the only right the Official Receiver could discover was the liability to subscribe for £850,000 in shares. Negotiations were opened with L. G. Tewkesbury (who carried on business as the Investment Corporation of England) and other parties to make the necessary arrangements. In order to provide capital the company created £100,000 in bonds of £50 each, exchangeable into A shares, which according to a circular issued by the Investment Corporation, would be worth not less than £1,875 each. The Investment Corporation agreed to take these debentures at 50% discount at the rate of £10,000 a month, and in turn it promised to pay its agents £12 10s. commission for each bond disposed of. The directors repudiated the Investment Corporation's circulars, describing them as incorrect and misleading. Ultimately Tewkesbury was made bankrupt and the whole thing collapsed. At the meeting Col. Harris said he regarded the company as a swindle from its inception, and after an angry discussion, in which G. A. Whigham, a director, took part, the liquidation was left in the hands of the Official Receiver.—Canada Gazette, London, Eng.

The Hudson's Bay and Pacific Ry. Co. was incorporated by the Dominion Parliament in 1896, and acts granting extensions of time for construction were passed in 1898, 1901, 1903, and 1905. The provisional directors named in the act were: Admiral A. H. Markham, Capt. E. Burke, R.N.; Col. J. Harris, J. Weston, London, Eng.; J. R. Stewart, J. Reid, Glasgow, Scotland; G. H. Massy, J. Cochrane, Montreal, Que.; J. Ross, Niagara Falls, Ont.; W. F. Orr, Calgary, Alta., and S. J. Dawson, Port Arthur, Ont. The company was authorized to construct a railway from Port Churchill on Hudson Bay, through the territory north of the Churchill River to deep water at or near Fond du Lac, on Lake Athabasca, and from Port Churchill, Hudson Bay, through the territory north of the Nelson River, to or near the north-west end of Lake Winnipeg, thence through Saskatchewan to Prince Albert, thence through Alberta to Calgary, and also to construct and operate a branch line from near Manitou Lake, Sask., to Edmonton, Alta.

G.T.R. Betterments, Construction, Etc.

Montreal Track Elevation.—By an act passed at the recent session of the Quebec Legislature the Montreal City Council has been authorized to appropriate $2,000,000 towards the elevation of the G.T.R. tracks in the city. The civic deputation which recently visited Philadelphia, Pa., to look over the work of track elevation which has been carried out there, gathered a good deal of information which will be of value to them in arranging the agreement with the company, and in carrying out the work. The estimated cost of the work, a G.T.R. official states, will be more than $4,000,000, and the company asked the city to pay one-half of the cost.

St. Lambert-Ste. Rosalie Second Track.—A contract has been let to McRae, Chandler and McNeill for the construction of a second track between St. Lambert and Ste. Rosalie, Que., 33 miles. The work will, it is understood, be completed in the fall.

Station Buildings.—The work of reconstructing the Union Station at Sherbrooke, Que., will be taken in hand during the summer. Exclusive of the Ottawa and Toronto stations, the company proposes to erect 20 new station buildings in Ontario during the year. New freight shed accommodation is to be provided at Brantford, Ont.

Lindsay Westerly.—The 3.5 miles of new track laid near Lindsay, Ont., in 1906, was a diversion of the main line between Midland and Belleville for the purpose of enabling the company to handle its traffic more safely and expeditiously through the town of Lindsay. The diversion will not appreciably increase the mileage.

Allandale Shops.—Plans are being prepared for car and locomotive repair shops to be built at Allandale, Ont., for the Northern Division, the geographical position of which necessitates repair work being done locally instead of having to send cars and locomotives to Montreal, as at present.

Toronto-Niagara Line.—It is said that negotiations are in progress between the company and the Ontario Government Hydro-Electric Commission respecting the use of electric power by the G.T.R. It is stated that the company is contemplating the adoption of electricity as a motive power on its line between Toronto and Suspension Bridge, as well as on a number of other lines which may be conveniently served with power.

Improvements at London.—The negotiations for the elevation of the tracks and the other improvements contemplated in the city of London, Ont., have been interrupted by the resignation of F. H. McGuigan, Fourth Vice-President, but the London city officials say it is expected that everything will be got in order so that work may be started by the end of the summer.

The elevated track west of the city, which includes a big fill, and a bridge at Cove, has been completed.

Milwaukee Terminals.—The G.T.R has acquired 24½ acres of land at Milwaukee, Wis., on which it is proposed to lay out additional terminal facilities.

London, Eng., Offices.—A site is reported to have been purchased in Trafalgar Square, London, Eng., on which it is proposed to erect a large office building.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Atlantic, Quebec and Western Ry.—We have been advised that during 1906 the 20 miles from Paspebiac to Port Daniel, Que., were completed. Surveys for the line from Port Daniel to Gaspe have been made, and the location plans are nearly ready for submission to the Government. It is anticipated that a contract will be let for additional construction at an early date. J. V. Nimmo is Resident Engineer in charge of the work. (May, pg. 323.)

Bentick Arm and Quesnel Ry.—E. Bloomfield, R. C. Spinks and G. C. Van Horne were incorporated last session of the British Columbia Legislature with power to construct a railway from the confluence of the Rau Shuswap and south fork of the Fraser River, up the valley of the former and over the divide to the headwaters of the Swamp River, along that river valley via Long, Sandy and Cariboo lakes to Keithley Creek, thence down to the shore of Cariboo Lake and the north fork of the Quesnel River to Coquette pass; along the pass to the dam at the outlet of Quesnel Lake, along the Quesnel River to Quesnel Fork and Quesnel, crossing the Fraser River at some convenient point to near Blackwater, along the Blackwater River to Kuskya Lake, and following the Uhlgako, Salmon and Bella Coola Rivers to Bella Coola. The capital stock is fixed at $3,000,000, bonds to the extent of $25,000 a mile may be issued, and the company is empowered to make agreements of various kinds with other companies.

Central Ontario Ry.—The location plans of the extension from mileage 18½, near Bancroft, to Whitney, Ont., have been approved by the Board of Railway Commissioners. Construction is being pushed from Bancroft towards Whitney, and it is expected to have the first 20 miles of the extension opened for traffic during the summer.

East Kootenay Logging Ry.—A company with this title was incorporated at the last session of the British Columbia Legislature, the provisional directors being A. Leitch and W. F. Gurd, Cranbrook, B.C. The company is authorized to construct a railway from the C.P.R. Crow's Nest Pass branch on lot 5808, group one, to a point southerly of Rock Creek, 15 miles; to the International boundary on the Kootenay River, thence along Gold Creek northerly through lots 324, 314, 325, 313, 312 and 311, and intervening or adjacent lands. Also from about four miles east of Fort Steele Junction on the C.P.R. Crow's Nest Pass branch westerly for five miles, with branches north and south not exceeding three miles; and northerly on the northeasterly side of the C.N.P. branch of the C.P.R. not exceeding three miles. Also from between Low and Swansea sidings of the C.N.P. branch to one or more points distant not more than 10 miles easterly from the point of commencement; and a line following the course of the Upper Moyie River to a point six miles west of the easterly limit of lot 4592, group one. The capital stock is $150,000, and the company may issue bonds to the extent of $20,000 a mile. It may construct telegraph and telephone lines and enter into agreements of various kinds with other transportation companies. (May, pg. 323.)

Great Northern Ry., U.S.—The lines which have been constructed from the International boundary to Brandon, Man., under the title of the Brandon, Saskatchewan and Hudson Bay Ry., and to Portage la Prairie, under the title of the Midland Ry. of Manitoba, were opened for passenger traffic May 13. It is re-

ported that construction will be started at an early date on a line from Portage la Prairie to Winnipeg. In connection with the projected line to connect with the Vancouver, Victoria and Eastern Ry., the Strathcona, Alta., Board of Trade asked the general manager G.N.R., if the line would connect with that town. Mr. Ward replied, May 16, that at present, Strathcona was too far away for the company to consider an extension there.(May, pg. 323.)

International Ry. of New Brunswick.—Tenders have been invited for the St. John river end of the line, commencing at St. Leonard's, N.B. This section will connect with the portion at present under construction from Campbellton, N.B. The extension of the line is all through heavy timbered country and does not strike any town or village It will be principally earth-work, not a great deal of rock, and quite a few bridges of from 20 to 40 ft. spans, which will be steel superstructures on concrete piers. The gradients will not average more than 1%, although in two or three places there will be short gradients of about 3,000 ft. of 1½%, or 79 ft. to the mile. T. Malcolm is general contractor, and D. V. Brown, Chief Engineer. (May, pg. 325.)

Northern Empire Ry.—Application will be made next session of the Dominion Parliament for an act incorporating a company with this title to construct a railway from the International boundary near Cardston, Alta., northerly through Lethbridge to Fort McMurray, thence in a generally northwesterly direction passing at or near Fort Vermillion, the boundary line between B.C. and Yukon Territory, at or near Lower Port, B.C.; thence generally northwesterly by way of Dawson to the International boundary between Yukon Territory and Alaska. J. B. T. Caron, Ottawa, is solicitor for the applicants.

Nova Scotia Eastern Ry.—The N.S. Government has sent out three survey parties to locate routes for this projected line. L. Whitman, of Annapolis, N.S., is working from Dartmouth to Cole Harbor, to Lawrencetown, Musquodoboit Harbor and up the Musquodoboit River valley. J. J. Taylor, of Truro, has charge of a party working from Guysboro along the Salmon River valley to Cross Roads, Country Harbor. W. A. Hendry, of Halifax, is examining the various routes, starting at Sunny Brae. He will proceed down the St. Mary's River valley and connect with the second party's survey. The whole work is under the direction of R. McColl, Provincial Engineer, and is expected to be completed during the summer.

Ottawa Terminals Ry.—An act incorporating a company with this title has been passed by the Dominion Parliament. The object of the company, which is a subsidiary of the G.T.R. is to take over the agreements made between the G.T.R., the city, the Dominion Government and others respecting the erection of a central station in Ottawa. Under the act all railways entering Ottawa will be enabled to get in together and arrange for accommodation for each of them. The Ottawa City Council has been authorized by an act passed at the recent session to grant a fixed assessment of $150,000 for the station, and $500,000 for the hotel, which it is proposed to erect in conjunction with the station.

W. Wainwright, General Assistant and Comptroller, G.T.R., stated recently that organization of this company would be proceeded with at once, that plans for the new Union Station would be filed by July 15, and that construction would be commenced within six months. (Mar., pg. 161.)

Portland Canal Ry.—By an act passed last session of the British Columbia Legislature, C. H. Dickie, Duncan, B.C., was given an act incorporating a company with this title for the purpose of constructing a railway from near the head of Portland Canal, following the valley of the Bear River for 30 miles, and branch lines not exceeding 15 miles long in any one case. Branch lines are to be constructed along the Glacier, American and Bitter Creeks, but other branch lines are not specifically mentioned. The company may establish permanent tracks for collecting and distributing yards on the main line or any branch or branches. The capital stock is $1,000,000, and bonds to the extent of $30,000 a mile if the standard gauge is adopted, or $20,000 a mile if the line be constructed as a narrow gauge one. Construction is to be commenced by Dec. 31, 1908, and the company may amalgamate or make traffic and other agreements with other transportation companies.

Prince Edward Island Bridge.—It has been announced from Ottawa that the Deputy Minister of Railways has prepared a report favoring the construction of a bridge across Northumberland Strait, connecting P.E.I. and the mainland. The project is not regarded favorably by people on the Island, as it is stated that a bridge, which would be 7½ miles long, would not be practicable, and during a south-east or north-west gale traffic would be impossible, while in winter the bridge would be in danger of being swept away by ice.

Quebec Bridge and Ry. Co.—The Dominion Parliament at its recent session passed an act authorizing the Government to lend the Q.B. and Ry. Co. not exceeding $6,678,200, to bear interest at 3%. It is provided that as large a portion of the sum to be advanced as is required may be applied by the company in payment of debts to banks at present outstanding, on the pledge of bonds of the company previously issued, such bonds being a part of the $6,678,200 authorized to be guaranteed. The remainder of the money will be advanced as the work is proceeded with. Before any money is advanced the company must deposit with the Government all the bonds authorized to be guaranteed, which shall be held as security for the loan.

Quebec Central Ry.—A contract has been let to C. Gordon, Sherbrooke, Que., for about 3 miles of new line which it is proposed to construct between Beauceville and St. Joseph. This piece of line is being constructed in order to do away with the inconvenience caused by the flooding of the present line.

Queen Charlotte Islands Ry.—By an act passed last session of the British Columbia Legislature the time for the construction of this projected railway was extended for a further period. It is provided that the company shall expend $10,000 on surveys and construction before May 1, 1908. The terminal points of the line which the company may construct are mentioned as Skidegate Inlet and Rennell Sound.

Quinze and Blanche River Ry.—Following are the officers and directors for the current year: President, Hon. E. H. Bronson; Vice-President, F. P. Bronson; Secretary-Treasurer, L. Crannell; other directors, H. W. Cole and W. G. Bronson, all of Ottawa, Ont.

Rainy Hollow Ry.—Hon. Sir C. H. Tupper, W. M. Griffin and R. I. B. Warton, of Vancouver, were incorporated by an act passed last session of the British Columbia Legislature, as a company with this title, with power to construct a railway from the boundary line between Alaska and B.C., near the Klehini River (which flows into Lynn Canal), northerly along the valley of that river to the Rainy Hollow copper mines, and branch lines, not exceeding in any one case 20 miles in length. The capital stock is $500,000, and the company may issue bonds to the extent of $25,000 a mile. It has power to promote other companies in connection with its enterprise, and to make agreements of various kinds with other transportation companies. (May, pg. 327.)

St. Mary's and Western Ontario Ry.—A contract for the line from St. Mary's to Embro, Ont., where it will connect with the Tillsonburg, Lake Erie and Pacific Ry., leased to the C.P.R., has been let to J. E. Webb, Toronto. The contract embraces grading, tracklaying, ballasting and telegraph. The work is of a light character and presents no engineering difficulties. Owing to the high land intervening between St. Mary's and Embro there is considerable elevation to overcome, the summit being reached at Lakeside. The gradients on the whole are very favorable, the maximum not exceeding 0.8%. There will be a bridge at the crossing of the Thames at St. Mary's, and one under crossing of the G.T.R. at St. Mary's. The first sod was turned May 14, by the President, Jas. Chalmers. It is expressed that the work will be completed by Dec. 1. The line west of St. Mary's to Exeter and the St. Clair River, at Sarnia, Ont., will hardly be proceeded with this year. J. G. Macklin is Chief Engineer. (March, pg. 163.)

Temiskaming and Northern Ontario Ry.—The Commissioners made an inspection of the line, May 10, and the Minister of Public Works went over the line subsequently. It is expected to have a further 20 miles, from Englehart to Boston, open for traffic by Aug. 1, and that the line will be open to McDougall's Chute, 190 miles, from North Bay, by Oct. 1. This will leave about 60 miles to be constructed to the junction with the G.T. Pacific Ry., and it is expected that this will be completed by the end of 1908. A survey party has commenced work on the location of a branch line from Cobalt to Sudbury. (May, pg. 327.)

Toronto Union Station.—Barclay Parsons is preparing a report on the proposed Union Station for the city, on behalf of the city council. The Mayor and C. B. Smith, consulting engineer, recently discussed the whole matter with Mr. Parsons. (March, pg. 163, and Jan., pg. 7.)

Victoria and Sidney Ry.—Work has been commenced on the re-building of the bridges and culverts along the line from Victoria to Sidney, B.C. The old wooden structures are to be reconstructed with new timbers throughout, and the road-bed is to be ballasted and the wharf at Sidney given a thorough overhauling. F. Van Sant, Superintendent, says that the work will be done in sections so as not to interfere with traffic.

The Supreme Court has affirmed the convictions recorded at Mortlach and Ernfold, Sask., against the C.P.R. for setting the prairie on fire.

The Central Vermont Ry. Passenger Department has issued a well-illustrated book describing the summer resorts in Canada and the U.S. reached by its line.

The New York State Assembly has passed a law making it an offence for a railway company to employ more than 16 hours in any 24, any employe whose duties have to do with the movement of trains.

The C.P.R. is breaking up land in the vicinity of Maple Creek, Sask., for tree planting purposes. The company proposes to plant certain areas along its line with trees in order to ensure a supply of ties, etc., for its own use.

The Michigan State Senate has passed a bill requiring railways in the lower peninsula, whose net earnings exceed $1,200 a mile, to give a passenger rate of 2c. a mile; railways earning less than $1,200 a mile net, can charge 3c. a mile In the upper peninsula the rates are to be reduced to 3c. a mile from 4c.

C.P.R. Betterments, Construction, Etc.

Construction Programme for 1907.—Sir Thos. G. Shaughnessy recently gave out a statement in regard to the plans for new construction during the current year. This shows 958 miles of new lines, of which 266.64 miles are in Ontario, and 691.36 miles in Manitoba, Saskatchewan and Alberta. Second track work will be gone on with between St. Annes, Que., and Smith's Falls, Ont., 108 miles, and between Fort William, Ont., and Winnipeg, 426.7 miles. Following are the mileages of new construction.

	Miles
From Craighurst to Sudbury, Ont., completing the Toronto-Sudbury line	173.8
From Milverton to Goderich, Ont., completing the Guelph & Goderich Ry.	39.
From Walkerton, Ont., to Proton, Ont., Walkerton & Lucknow Ry.	37.5
From Listowel, Ont., to junction with the Guelph & Goderich Ry. at Linwood	16.34
From Teulon, Man., northward	20.00
Extension of the Pheasant Hills Branch to a junction with the Wetaskiwin Branch, completing a through connection between the Calgary & Edmonton Ry. at Wetaskiwin, Alta., and the main line at Kirkella, Man.	348.
From Lauder, in Southern Manitoba, westward	29.40
From Wolseley, Sask., to Kaiser, completing the Wolseley-Reston Branch	24.2
From Weyburn to Stoughton, in Southern Saskatchewan	37.
From Moosejaw, northward	50.
Extension of Wetaskiwin Branch, eastward	48.5
From Bredenbury on the Manitoba & Northwestern Ry., to Esterhazy, on the Pheasant Hills Branch	20.
From Sheho, Sask., on the Manitoba & Northwestern Ry., northwest to a junction with the Pheasant Hills Branch	82.89
From Lethbridge to Macleod—change of line	31.37

Sherbrooke, Que.—At the annual meeting of the British American Land Co., held in London, Eng., recently, the commissioner reported that the C.P.R. had recently completed surveys for a proposed new line from Lennoxville to Lake Megantic, and in the event of its construction being decided upon it was expected that the Land Co. would make a satisfactory sale of some of its property in Sherbrooke for station, sidings, works and so on. We were advised April 16 that there is no new line construction at Sherbrooke.

Place Viger Improvements.—It is stated in real estate circles in Montreal that the C.P.R. has purchased or has under option the whole area bounded by Papineau Ave. on the east, Place Viger station on the west, Notre Dame st. on the south, and Craig st. on the north, while for a considerable distance the property has been secured right down to the harbor front between Notre Dame st. and the river.

East End Cattle Market, Montreal.—A letter was read at the Montreal City Council market committee recently, offering to lease the east end cattle market for a term of years. The C.P.R. offered to make the necessary expenditures upon improving the accommodation at the market. The company asks for a 99 year lease, at $3,000 a year, but on the suggestion of the City Council is considering the question of purchasing the site.

Smith's Falls, Ont., Improvements.—The C.P.R. intends as soon as accommodation can be provided at Smith's Falls, Ont., to make that point the easterly terminal of the Chalk River section, so far as freight traffic is concerned. It is not proposed to abandon the shops at Carleton Place, and to build others at Smith's Falls, as press reports stated in connection with the proposed change. The change affects only the train and engine service, and the men who are employed in the handling of freight traffic between Smith's Falls and Chalk River.

Georgian Bay and Seaboard Ry.—A contract has been let to the Toronto Construction Co. for the construction of a section of this projected line from Victoria Harbor, to Coldwater, Ont., where a junction will be effected with the Toronto-Sudbury line. The contract covers the entire construction of the line, the ties, rails, etc., being supplied by the C.P.R. This piece of line, J. W. Leonard, Assistant General Manager, Montreal, stated recently, is all that it is proposed to construct at present. The line which the company is authorized to construct may extend from Victoria Harbor to some point on the Toronto-Montreal line, between Peterborough and Sharbot Lake, and surveys have been made of several possible routes.

Toronto Jct. to Bolton.—The portion of the old Toronto, Grey and Bruce Ry. between Toronto Junction and Bolton, Ont., 23 miles, is being practically reconstructed. The gradients are being reduced, some of the curvature taken out, and 80 lb. rails will be laid. This work is being done in connection with the approaching completion of the company's line through Parry Sound to Sudbury, Ont.

Guelph and Goderich Ry.—D. McNicoll, Vice-President, and other C.P.R. officials, went over the entire line to Goderich by special train, May 11.

Port Arthur Station.—The total length of the station building and covered platform at the proposed new station at Port Arthur, Ont., will be 362½ ft., the main building having a frontage of 99½ ft. In the basement the only excavated portion will be a boiler room 24 by 22 ft., with an annex 10 by 10 ft., and a stairway. On the platform level, the entrance from the town will be in the centre of the building, into the general waiting room, 46 by 23 ft., and immediately opposite the entrance will be the ticket office, which will have an outlook on to the platform by a large bay window. On the right hand side of the general waiting room will be the men's waiting room and on the left hand side the women's waiting room, each 24 ft. 9 in. by 22 ft. 8 in. There are toilet rooms off each waiting room. The tower is 16 by 20 ft., but will not be finished in the interior at present. On either side of the main building is a covered shelter, 16 ft. wide, the roof being carried on pillars spaced 12 ft. centers. At the end of the shelter to the left of the main building is another building in which is located the baggage room, 56 by 36 ft., and the express room 24 by 36 ft.

Port Arthur Yards, etc.—A. Price, General Superintendent Central Division, and J. G. Taylor, Superintendent Fort William Terminals, have been in consultation with the civic authorities at Port Arthur, Ont., in connection with projected improvements of the company's yards there. Mr. Taylor said the company had only about one-third of the yard room at Port Arthur that was necessary for the proper handling of the company's business there. An expenditure of $100,000 was contemplated during the current year. It is expected that a meeting between the Port Arthur and Fort William municipal councils, and W. Whyte, Second Vice-President, will be arranged at an early date to complete the settlement of a number of questions connected with trackage rights, etc., in which the C.P.R., the Canadian Northern Ry., and the G.T. Pacific Ry. are interested.

Electrical Development, Fort William-Winnipeg.—For some time past representatives of electrical manufacturing concerns have been going over the line between Fort William and Winnipeg, and investigating the water powers adjacent to the line at Fort William, Kenora and other points. Local reports state that it is considered likely that the company is looking forward to the utilization of electricity as a motive power on some sections of the line, if not the whole mileage, between these points.

Kenora Roundhouse.—We are advised that it is proposed to construct a 30-stall circular locomotive house at Kenora, Ont. The building will be 90 ft. in length.

Winnipeg Train Shed.—It was expected that the train shed over the tracks at the new Winnipeg station would be completed in May.

Winnipeg Shops.—The plans for the enlargement of the car shops at Winnipeg have been approved by the President, and construction will be gone on with during the year. The buildings will have concrete and brick walls, and mill construction for floors and roofs. Following are the dimensions of the existing shops with the dimensions and capacity of the proposed extensions:

Passenger car shop—The present car shop is 240 by 100, and a new one of similar dimensions will be constructed for the repair of coaches.

Pattern storage and pattern shop.—This will be a new two-story building, 100 by 25 ft.

Freight car shop.—The present shop is 313 by 100 ft., and it is proposed to construct an addition on the north side of the building 300 by 18 ft.

Tender and wheel shop.—This will be a new building. The work on tenders and wheels is at present done in the locomotive machine shop, but by the construction of the new building it will be possible to increase the output of locomotives in the present shop by 50%.

Foundry.—The present building is 120 by 90 ft., and the new building will be 100 by 90 ft.

Power house.—The present building is 100 by 100 ft., and the addition will be 100 by 50 ft., having a capacity for six extra boilers, each 250 h.p.

Lunch building.—For the accommodation of the employes a new lunch building 300 by 20 ft. will be provided.

It will be necessary to lay about 8,000 ft. of additional track to serve the new buildings.

Winnipeg Beach Branch.—The line from Winnipeg to Winnipeg Beach is to be relaid during the year with 80 lb. steel and material is being distributed for the work.

Brandon Improvements. — Orders have been received for the construction of a new machine shop in connection with the present roundhouse at Brandon, Man. It will be 200 ft. long, and will be built of brick on a concrete foundation. The water supply plant at the station will also be improved and increased.

Sheho Extension.—A contract is reported let to J. G. Hargreaves, Winnipeg, for 60 miles of grading on the extension from Sheho towards Saskatoon, Sask.

Moose Jaw Hotel.—We have been advised that at present nothing definite can be said about the proposal to erect a larger hotel at Moose Jaw, Sask.

Moose Jaw Shops, etc.—Tenders are under consideration for the erection of an addition to the blacksmith shop at the Moose Jaw, Sask., shops, 66 by 100 ft.

Plans have been prepared for the erection of a new hotel at this point, to cost $175,000. It is stated that when the new building is completed the present hotel will be utilized as offices.

A letter has been received by the city council asking it to fix its price on 15 acres of land lying west of the company's north branch line, as it was desired to obtain the same for yard extension purposes.

Calgary Station.—The plans for the proposed new station at Calgary, Alta., are being prepared by the company's architect at Montreal, and will have to be finally approved of by the Second Vice-President at Winnipeg, before tenders are invited.

POLSON IRON WORKS LIMITED, TORONTO

Gradient Reduction at Field, B.C.—"The Big Hill" at Field, B.C., has an eastbound gradient of 237 ft. to the mile. It is proposed to reduce this to 116 ft. to the mile, which will then be the maximum gradient on the main line on eastbound traffic. We were advised April 17 that it had not been definitely decided whether or not this work would be gone on with during this year.

Nicola, Kamloops and Similkameen Ry.—A train service between the junction with the C.P.R. at Spence's Bridge and Nicola, B.C., 47 miles, was put in operation early in April. The construction of the line from Nicola Lake will be proceeded with early in May.

Esquimalt and Nanaimo Ry.—The surveys now in progress are for the proposed extension from Wellington to the Alberni canal, and instructions have been given that the clearing of the right of way is to be proceeded with following the completion of the surveys. The distance between Wellington and Alberni is about 52 miles. The line will branch off from the east coast at about French Creek. The engineers in charge of the parties are H. H. Brown, who is working between Wellington and French Creek, and —. Shepherd, who is working between French Creek and Alberni.

During the summer of 1906 the company had two parties in the field for the purpose of reporting on the unexplored section of Vancouver Island, where the E. and N.R. has timber lands. Owing to the large area to be covered the reports were unsatisfactory. Four parties are being sent out during the current season.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—A contract is reported let to Foley Bros., St. Paul, Minn., for the construction of a line from Brooten to Duluth, Minn. It is said the line will be 180 miles long, and that it will have a maximum gradient of 5%, and a maximum curvature of 30. The line will cross the Great Northern Ry. and the Northern Pacific Ry. at a number of points.

The Department of Marine will order a gasoline propelled lifeboat for service on the west coast of Vancouver Island. It has not been decided where the lifeboat will be built.

The railways constituting the Western Trunk Lines, the Central Traffic Association and the Eastern Trunk Lines filed with the Interstate Commerce Commission tariffs increasing their rates on eastbound grain and grain products, to come into effect April 1. This date was subsequently altered to May 1. The rates generally show an increase of 2c. per 100 lbs. for grain and grain products from western points to New York.

During 1906 the C.P.R. carried over 6,500,000 pieces of baggage, an increase of about 1,000,000 over 1905. There was an increase of 56 in the number of corpses carried, the number transported in 1906 being 1,256. The classification shows that there was a decrease of over 800 in the number of bicycles carried, a decrease of 1,300 in baby carriages; an increase of 65,000 cans of milk, and an increase of 600 dogs carried in 1906 over 1905.

By an amendment to the Railway Act passed last session of the Dominion Parliament, the Board of Railway Commissioners is authorized to employ counsel to conduct or argue any question in the public interest if it appears to be necessary. The act also makes some small amendments to the provisions relating to the deposit of mortgages to secure bonds, and adds a section providing that the purchaser of a defaulting railway shall at the next session of Parliament apply for an act giving authority to hold and operate the railway so purchased.

Railway Rolling Stock Notes.

The Quebec and Lake St. John Ry. is in the market for a couple of locomotives.

The Canadian Locomotive Co., Kingston, Ont., has recently made delivery of five 10-wheel locomotives to the Canadian Northern Ry.

The Canadian Northern Ry. has received 100 flat cars from the Crossen Car Manufacturing Co., Cobourg, Ont., and has ordered 100 flat cars from the same company.

The Intercolonial Ry., between April 18 and May 16, received six consolidation locomotives from the Canadian Locomotive Co., Kingston, Ont., and 126 hopper cars, 30,000 lbs. capacity, from Rhodes, Curry & Co., Amherst, N.S.

M. P. and J. T. Davis, who have a contract on the Quebec section of the Eastern Division National Transcontinental Ry., have ordered 20 improved Hart convertible ballast cars, 34 ft. long, 80,000 lbs. capacity, from the Dominion Dump Car Co., Montreal.

The C.P.R. between April 14 and May 11 ordered the following rolling stock: 46 box cars, 14 flat cars, one baggage and smoking car, one baggage and express car, and one baggage car at its Angus, Montreal, shops; and six vans at its Farnham, Que., shops.

The Intercolonial Ry., between April 18 and May 16, ordered the following rolling stock: 100 platform cars, 80,000 lbs. capacity, two baggage and express cars, from Rhodes, Curry & Co., Amherst, N.S.; 34 stock cars from the Canada Car Co., Montreal.

It was stated in the House of Commons by the Acting Minister of Railways, before the closing of last session, that there were 2,246 cars belonging to the Intercolonial Ry., on railways in the United States. Every endeavor was being made to trace the cars and have them brought back.

The Atlantic, Quebec and Western Ry. at present has on its line two locomotives, eight flat cars, two box cars, 10 ballast cars, one snow plow and one ballast unloader. The company expects to be in the market for additional cars, and a steam shovel, but has not definitely decided as to its requirements.

The C.P.R. between April 14 and May 11 received the following rolling stock: 12 locomotives from the American Locomotive Co.'s Richmond works; three locomotives, four sleeping cars, seven first-class cars, 11 baggage and smoking cars, 15 mail and express cars, 284 box cars, 388 flat cars, and 118 steel coal cars from its Angus, Montreal, shops; and five vans from its Farnham, Que., shops.

The G.T. Pacific Ry. has placed an order with Rhodes, Curry & Co., Amherst, N.S., for 2,500 box cars, 60,000 lbs. capacity, to be delivered at the rate of 500 a year. Construction of the first 500 is being proceeded with. The specifications provide: length over end sills, 36 ft. 9¾ in.; width over side sills, 9 ft. 0¾ in.; height from rail to top of running board, 13 ft. 4 in. Simplex bolsters and brake beams.

The G.T.R. assembled at Montreal and dispatched to the G.T. Pacific Ry. at Winnipeg, and westward, between April 26 and May 1, the following rolling stock for construction work: 25 locomotives, 500 ballast cars, 1,000 flat cars, and 10 steam shovels, in addition to a number of store, sleeping and kitchen cars. The cars were sent out in complete trains, and went to Winnipeg over the C.P.R., as well as over the G.T.R. and its U.S. connections.

The G.T.R. has completed at its Point St. Charles, Montreal, shops, five new first-class passenger cars, 75 ft. 5 in. long, and weighing 106,000 lbs. each. The main section of each car will seat 60 persons and the smoking-room 12. The seats in the main body of the car are of the high swing-back pattern, upholstered in green plush, and the smoking-room seats are upholstered in leather. These coaches are for use in the Montreal-Chicago trains.

The Canadian Northern Ry., between April 15 and May 15, received the following rolling stock: Three 10-wheel locomotives from the Canadian Locomotive Co., Kingston, Ont.; two 10-wheel locomotives from the Locomotive and Machine Co., of Montreal; two first-class passenger coaches, six baggage cars, from Rhodes, Curry & Co., Amherst, N.S.; 50 flat cars from the Crossen Car Manufacturing Co., Cobourg, Ont.; 100 Hart convertible cars from the Canada Car Co., Montreal; and four first-class passenger coaches from the U.S.

The specifications for the 10 sleeping cars which the C.P.R. is having built at its Angus, Montreal, shops, provide for: length, 72 ft. over frame; width, 9 ft. 10½ in. over frame; capacity, 12 sections, smoking room and stateroom; body and underframe, wood; axles, 5 by 9 in., M.C.B.; bolsters, double; brake beams, Simplex with adjustable heads; brakes, Westinghouse air; brasses, 5 by 9 in., M.C.B.; couplers, Tower passenger; heating system, Gold with Frumveller heater; journal boxes, M.C.B. standard; roofs, standard passenger, covered with canvas; springs, 38 in., double elliptic; trucks, six-wheel, 5 by 9 in.; wheels, 36¼ in. steel tyred.

Following are some of the dimensions, etc., of the 50 box baggage cars which the C.P.R. is having built at its Angus, Montreal, shops: length, 36 ft. 8 in.; width, 9 ft. 0⅝ in., over frames; body and underframe, wood; axles, 5 by 9 in., M.C.B.; bolsters and brake beams, Simplex; brakes, Westinghouse air; brasses, 5 by 9 in., M.C.B.; couplers, Tower freight; trucks, all steel, diamond pattern; wheels, 34 in., steel tyred. These cars are being built after the general type of a box car, but with side doors of the refrigerator car type, and with steel-tyred wheels, with steam pipe and air signal pipe underneath car in order that they may be run in passenger service.

The C.P.R. is having built at its Farnham, Que., shops, 13 vans, 29 ft. by 9 ft. over frames. A point about these vans is that the centre and intermediate sills are carried out to the buffer beam and form the timbers for supporting the platform. This form of construction was adopted in order to adapt the vans to the heavy service which is required by them when a pusher is used at the end of the train in ascending gradients, etc. The specifications provide: body and underframe, wood; axles, 3¾ by 7 in., M.C.B.; bolsters, 6 in. plate with flat side bearings; brakes, Westinghouse air; brasses, 3¾ by 7 in., M.C.B.; couplers, Tower; heated by stove: wheels, 33 in., cast iron.

The Canadian Northern Ry. was reported to be negotiating in the U.S., April 30, for 15 second-hand 10-wheel locomotives for delivery by June 1. D. D. Mann stated in Winnipeg, Man., the same date, that the company had 140 locomotives on order for delivery this year and early in 1908, as follows: The Canadian Locomotive Co., Kingston, are under contract to deliver 55 locomotives at the following dates: 15 in ten weeks from April 25, 15 in nine weeks from Aug. 1, 25 during Mar., April and May, 1908. The Locomotive & Machine Co. of Montreal, 45 locomotives at the following dates: 10 in three weeks from April 29, 15 in four weeks from Sept. 15, 20 in five weeks from Dec. 1. The Canada Foundry Co., Toronto, 40 locomotives at the following dates: Five locomotives per month, beginning June 15, until the whole are delivered.

The Toronto, Hamilton and Buffalo Ry. Co.'s simple locomotive no. 11, built recently

N. J. Holden Company, Limited, Montreal, General Sales Agents for Canada

by the Locomotive and Machine Co. of Montreal, has the following general dimensions, etc.:

WHEELS.—Diameter of drivers, 73 inches.
WEIGHT.—In working order, total, 292,000 lbs.; on drivers, 182,000 lbs.
CYLINDERS.—Size, 20 x 26 ins.
VALVE MOTION.—Walschaert.
BOILER.—Type, extended wagon top; working pressure, 200 lbs.; diameter at smallest ring, 66¼ ins.
FIREBOX.—Length, 102 ins.; width, 65¾ ins.
TUBES.—Number, 336; diameter, 2 ins.; length, 15 ft. 0¼ ins.
HEATING SURFACE.—In sq. ft., tubes, 2,632; firebox, 160; total, 2,792.
GRATE SURFACE.—Sq. ft., 46.
TENDER.—Style, U shape, gravity sides; Truck, 2, 4 wheel centre bearing.
CAPACITY.—Water, 5,500 gals.; coal, nine tons.
COUPLERS.—Tower.
HEADLIGHTS.—18 ins. round.
BRAKES.—Westinghouse.
BLOW-OFF VALVES.—American Locomotive Co.
DRIVING WHEEL CENTRES.—Cast steel, 66 ins.

Railway Finance, Meetings, etc.

Atlantic and Lake Superior Rd.—The petition to the Exchequer Court for the confirmation of a scheme of arrangement between the company and its creditors, and between the Baie des Chaleurs Ry. and its creditors, will be heard in the Exchequer Court, Ottawa, June 10. All opposition to the proposed arrangements was required to be filed by May 31. The scheme of arrangement in each case provides for the handing over of the existing £500,000 Atlantic and Lake Superior Ry. bonds, and £409,400 of Baie des Chaleurs Ry. bonds to the Royal Trust Co., Montreal, and the issue by that company of certificates of participation in certain proportions of preferred, ordinary and deferred, among the several parties entitled thereto. The income from the bonds surrendered will be administered by a committee of seven and distributed as provided among the different certificates. The bondholders who do not transfer their bonds to the Trust Company shall remain creditors to the extent of principal and interest, but will rank only as unsecured creditors. The principal bondholder is the banking house of Galindez Bros., London, Eng., and in answer to a question in the Court May 9, J. Galindez said the unsecured creditors could get nothing at present, and could not be in any worse position under the proposed arrangement; they might perhaps be in a better condition.

Baie des Chaleurs Ry.—See Atlantic and Lake Superior Ry.

The Canadian Pacific Ry. Co. has decided to abolish the minimum charge of 2s. 6d. transmission fee with a view to encourage small investments, which has become a feature of the London, Eng., market. Shares may now be sent in to the company's office at 62-65 Charing Cross, for remittance to New York for transference into the buyers' names at a charge of 2d. per share. The insurance against loss of certificates, for which New York used to charge 2s. 6d.% of value for the single trip from New York to London, the company now undertakes to cover both the outward and return journeys for 1s. 6d.%, and the single journey for 1s.%.

Central Ontario Ry.—At the adjourned annual meeting at Trenton, Ont., May 18, the shareholders authorized a new issue of bonds amounting to $1,200,000 to retire the old bonds now past due. It was also decided to increase the capital stock from $750,000 to $3,340,000. Following are the officers and directors for the current year: President, S. J. Ritchie, Akron, Ohio; Vice-President, C. E. Ritchie, Akron, Ohio; Manager and Secretary, Geo. Collins, Trenton, Ont.; other directors: T. M. Kirkwood, Toronto; S. S. Lazier, Belleville, Ont.; W. S. Jaques, J. H. Stewart, R. Fraser, Trenton, Ont.; Treasurer, J. D. Rowe, Trenton, Ont.

Detroit River Tunnel Co.—The mortgage deed dated April 1, made by this company to the Guaranty Trust Co., of New York, securing bonds to an amount not exceeding $15,000,000, has been deposited with the Secretary of State at Ottawa.

At the annual meeting in Detroit, May 2, the following were elected directors: W. K. and F.W. Vanderbilt, C.M. Depew, S.F. Barger, W. H. Newman, H. McK. Twombly, H. B. Ledyard, N. Kingsmill, W. P. Torrance, H. Russel and C. F. Cox. The company does not issue an annual report.

Dominion Atlantic Ry.—Gross earnings for Mar., $73,400, against $63,703 for Mar., 1906, making for three months ended Mar. 31, $201,400 against $181,103 for same period, 1906.

Press reports state that the New York, New Haven and Hartford Ry. is negotiating for the purchase of the line, but officials of the company give the report little credence.

Grand Trunk Ry.—Press reports that the Wabash Rd. has purchased the G.T. Air Line between Glencoe and Fort Erie, Ont., were denied by R. S. Logan, Assistant to the Second Vice-President and General Manager, May 16. He stated that the lease of running rights which the G.T.R. gave to the Wabash Rd. of the line in question, has several years more to run.

Lake Erie and Detroit River Ry.—There was not a quorum of stockholders present May 7, the day fixed for the holding of the annual meeting. The report dealing with the finances of the company is incorporated in that of the Pere Marquette Rd. Following are the directors and officers: President, Judson Harmon, Cincinnati, Ohio; Vice-President, G. W. Perkins, New York City; F. H. Walker, A. Leslie, Walkerville, Ont.; A. H. Skirving, Chatham, Ont.; Secretary, T. J. Walsh; Treasurer, J. E. Howard, Cincinnati, Ohio.

Montreal and Vermont Junction Ry.—Following are the officers and directors for the current year: President, C. M. Hays; Vice-President, E. H. Fitzhugh; Secretary-Treasurer, A. H. Gilmour; Assistant Secretary-Treasurer, W. H. Chaffee; other directors: G. C. Jones, E. C. Smith, C. U. Witters; Auditor, W. G. Crabb. The President, Vice-President and G. C. Jones are managing directors. The company does not publish an annual report, the railway being operated as part of the Central Vermont Ry.

New Brunswick Southern Rd.—Lieut.-Col. H. H. McLean stated May 16, that while the line might have been purchased by the C.P.R. without his knowing it, he did not think a sale had been made. During the previous week officials of the Maine Central Rd. had been inspecting the line, and on the previous day he had received instructions from the Russell Sage office in New York authorizing the re-election of the present directorate and board of management at the annual meeting.

Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.—It was announced recently that the receipts issued by the bondholders' committee in respect of the 6% first mortgage bonds and the deferred interest certificates already deposited with the committee for the purpose of conversion into the company's guaranteed 4% mortgage debenture stock had to be lodged at the Canadian Northern Railway Co.'s offices in London, Eng., by June 1.

Quebec and Lake St. John Ry.—Receipts for Mar , $47,139, against $36,314 for Mar., 1906; making for three months ended Mar. 31, $116,962, against $90,603 for same period, 1906.

Quebec Central Ry.—Gross earnings for Mar., $71,371.65; net earnings, $23,126.08; against $76,077.76 gross and $29.424 net for Mar., 1906. Net earnings for three months ended Mar. 31, $39,687, against $66,432.10 for same period, 1906.

St. Lawrence and Adirondack Ry.—Net income for Mar., $27,182, against $26,549 for Mar., 1906.

Temiscouata Ry.—Traffic receipts for Mar., $14,364.42, against $16,043.87 for Mar., 1906.

Temiskaming and Northern Ontario Ry.—Traffic returns for the last week in April show 12,579 passengers carried against 7,894 in the corresponding week of 1906. The passenger receipts showed an increase of $3,669.62, and the freight receipts an increase of $2.645.-42 for the last week in April over those for the corresponding week of 1906.

Toronto, Hamilton and Buffalo Ry.—Earnings for April $82,852.87, against $61,146.14 for April, 1906.

Railway Commissioners' Report.

The Board of Railway Commissioners has issued its first report covering a period of 26 months from Feb. 1, 1904, to Mar. 31, 1906. The introduction contains information as to the creation of the Commission; its jurisdiction and general powers; its practice and procedure; the 114 public sittings held in various parts of the Dominion; the judgments delivered, and the organization of the records, traffic, engineering and accident branches. In the appendices are given in full the rules and regulations as to proceedings before the Board; a list of applications heard at the public sittings held during the period covered by it; a summary of the principal judgments delivered; report of the Chief Traffic Officer, as to tariffs filed, and traffic orders made; a list of examinations and inspections made by the engineering branch, the report of the Inspector of Accidents, and the order of the Board as to Car Service Rules. These orders cover the period of the Commission's work to Mar. 31, 1906, only. THE RAILWAY AND MARINE WORLD publishes monthly a list of the orders issued during the preceding month, and also publishes in full, the more important orders as to freight and passenger rates, etc. On Mar. 31, 1906, the staff of the Board comprised the following:

NAME.	OFFICE.	Salary per ann.
G. A. Mountain	Engineer	$4,800
J. Hardwell	Traffic Expert	3,500
A. G. Blair, Jr.	Law Clerk	2,500
E. C. Lalonde	Insp. of Acc	2,200
J. E. Duval	Insp. of Acc	2,200
C. A. Brown	Ch. Clk. Traff. Dept.	2,000
E. A. Primeau	Reg. and Acct	1,800
T. L. Simmons	Engineer	1,800
J. H. Tessier	Engineer	1,800
R. Richardson	Priv. Secy. to Ch. Com.	1,500
C. E. McMannus	Clk. Traffic Dept.	1,000
J. W. Thomson	Ch. Clk. Records Dept.	1,000
N. Ham	Clk. Traffic Dept.	900
H. W Messinger	Clk. Traffic Dept.	900
F. C. McGee	Clk. Record Dept.	800
C. S. Huband	Clk. Record Dept.	800
B. Chevrier	Clk. and Sten.	800
G. T. Riddell	Clk. Traffic Dept.	720
T. Chandler	Court Usher	700
L. J. Lewis	Clk. and Sten.	600
L. M. Cameron	Clk. and Sten.	600
R. Larose	Clk. and Sten.	550
J. Arbick	Messenger	510
D. Tangelier	Messenger	500
G. Taylor	Cook on Official Car	720

J. E. Duval resigned after the date of the report. The Secretary, A. D. Cartwright, is not included in the above list. His salary is fixed by the Governor-in-Council, the Railway Act providing that it shall not exceed $4,000 a year.

The Department of Marine has under preparation plans and specifications for the proposed cruiser for service on the Pacific Coast.

The passenger service between St. Paul, Minn., and Spokane, Wash., over the Minneapolis, St. Paul and Sault Ste. Marie Ry. to Portal, Sask.; the C.P.R. from Portal to the International boundary via Yahk, B.C., and the Spokane International Rd., will be placed in operation June 15.

EIGHTEEN TON DINKEY

VULCAN IRON WORKS

Wilkes-Barre, Pa., U.S.A.

We carry in stock the 9″ x 14″, 10″ x 14″, and 10″ x 16″ sizes of Contractors' Locomotives. We make them in larger sizes up to and including 16″ x 24″. We can now promise three to four weeks delivery on the 12″ x 16″ and 12″ x 18″ locomotives, standard gauge. We have the quickest steaming dinkey on the market, and it will pull more cars than any other dinkey of the same size and weight. Workmanship guaranteed.

Write for catalogue. Prices and terms will be found satisfactory.

Richard Southam Manager

TRANSPORTATION APPOINTMENTS.

Algoma Central and Hudson Bay Ry.—The position of Chief Engineer had not been filled May 20, but we have been advised that an appointment will be made in the near future. Mr. Wilde has resigned the position of Chief Engineer, Algoma Commercial Co., in charge of the land grant and other property. This position has been abolished and the duties will in future be discharged by the Chief Engineer of the A. C. and H. B. Ry.

Board of Railway Commissioners.—Jas. Clarke, heretofore conductor Ottawa Division G.T.R., has been appointed Inspector of Accidents, with headquarters at Winnipeg, Man.

Boston and Albany Rd.—W. J. Fripp, heretofore Assistant General Superintendent at Boston Mass., has been appointed General Superintendent there, succeeding J. B. Stewart, resigned. The position of Assistant General Superintendent has been abolished.

Canadian Northern Quebec Ry.—F. Shaw, heretofore city freight agent, Montreal, has been appointed commercial agent there.

Allan Macdonald has been appointed contracting freight agent at Montreal, a new position.

Canadian Northern Ry.—E. A. James, Manager, has been granted extended leave of absence due to ill-health. It is understood that he will not return to active service with this company.

D. B. Hanna, in addition to his duties as Third Vice-President, has assumed the duties, temporarily, of General Manager.

F. A. Folger, heretofore General Superintendent, Kingston and Pembroke Ry., was reported recently to have been appointed Superintendent C.N.R., with office at Winnipeg. We were officially advised, May 11, that the position which Mr. Folger will occupy in the C.N. Ry. service, had not then been determined.

J. B. Sheppard, heretofore in the C.P.R. local freight department, Toronto, has been appointed contracting freight agent, C.N.R. & C.N.O.R., at Toronto.

Canadian Pacific Ry.—E. Laforest, heretofore storekeeper at Quebec, has been transferred to headquarters at Montreal as assistant foreman in the iron storehouse, and is succeeded as storekeeper at Quebec by J. O. Dewar.

J. H. Mills, heretofore road foreman of locomotives, has been appointed District Master Mechanic, districts 1 and 2, Eastern Division. Headquarters, Montreal

W. G. Rankin is reported to have been appointed Claims Agent (personal injury, etc.) at Montreal. He has heretofore been in the Illinois Central Rd. service at Chicago.

In our May issue, among the C.P.R. appointments it was stated that F. L. Lamplough had been appointed Trainmaster at Ottawa, Ont. He is a G.T.R. official, not a C.P.R. one, and his appointment was correctly announced among the G.T.R. appointments in the same issue.

W. Borbridge, heretofore road foreman of locomotives, has been appointed District Master Mechanic, districts 3 and 4, Eastern Division. Headquarters, Ottawa.

J. Coughlin, heretofore roadmaster at White River, Ont., has been appointed roadmaster at Schrieber, Ont., succeeding A. Olson, transferred to the Western Lines.

W. B. Way, heretofore Trainmaster district 2, Lake Superior Division, has been appointed Assistant Superintendent. Office, White River.

L. B. Copland, heretofore roadmaster at Sudbury, Ont., has been appointed roadmaster at White River, Ont., succeeding J. Coughlin, transferred.

G. B. Williams has been appointed Inspector of Refrigerator Car Service for Western Lines, with headquarters at Winnipeg, reporting to the Assistant Superintendent of Car Service. His duties are to inspect and instruct in the matter of handling perishable shipments, and all parties interested in the handling of this class of traffic will be governed by his instructions.

The jurisdiction of the officers of district 2, Pacific Division, has been extended over the Nicola, Kamloops and Similkameen Ry., extending from Spence's Bridge to Nicola, B.C., which is being operated as the Nicola Branch, sub-section 2.

W. Stormont has been appointed roadmaster Shuswap section and the Shuswap and Okanagan branch, succeeding R. Watmore, resigned. Office, Sicamous Jct., B.C.

E. E. Austin, heretofore road foreman of locomotives at Revelstoke, has been appointed District Master Mechanic, district 3, Pacific Division. Office, Nelson, B.C. The position of road foreman of locomotives, district 3, Pacific Division, has been abolished.

The headquarters of S. Phipps, Master Mechanic of the Pacific Division, have been changed from Revelstoke to Vancouver, B.C.

A. Olson has been appointed roadmaster Lethbridge section, Dunmore Jct. to McLeod, Alta., vice G. Sandstrom, transferred.

G. Sandstrom has been appointed roadmaster Cranbrook section, McLeod, Alta., to Elko, B.C. Office, McLeod.

J. Telfer has been appointed roadmaster Sirdar section, having charge of track between Elko and Kootenay Landing, B.C., vice M. Newland, transferred. Office, Cranbrook, B.C.

Delaware and Hudson Rd.—C. S. Sims, heretofore assistant to the President Erie Rd., has been appointed General Manager D. and H. Rd., in charge of transportation matters. Office, Albany, N.Y.

Grand Trunk Pacific Ry.—M. C. Sturtevant, having resigned to go into private business, the office of General Assistant at Winnipeg has been abolished. O. O. Winter, the recently appointed General Superintendent there, will have temporary charge of the duties heretofore performed by the General Assistant.

Grand Trunk Ry.—W. G. Brownlee, heretofore Superintendent Middle Division, Toronto, has been appointed General Transportation Manager, in charge of maintenance and operation. Office, Montreal. He reports to the Third Vice-President.

W. H. Towner has been appointed acting general foreman at Toronto shops, vice J. C. Garden, assigned to other duties.

R. J. Cottrell has been appointed acting locomotive foreman at St Thomas, Ont., vice W. H. Towner, transferred.

J. C. Garden has been appointed acting Master Mechanic, Fort Gratiot, Mich., owing to J. T. McGrath's illness.

A. A. Tisdale, heretofore Assistant to the Fourth Vice-President, has been appointed Assistant to General Transportation Manager.

F. Mitchell, heretofore chief clerk to the Master of Bridges and Buildings, Toronto, has been appointed Chief Clerk to the General Transportation Manager.

G. Beckingham, heretofore roadmaster, Point St. Charles, Montreal, has been appointed Acting General Roadmaster, Eastern Division, succeeding D. McCooe, resigned.

E. Dunlop has been appointed roadmaster, district 31, succeeding J. Leslie, appointed General Roadmaster Quebec, Montreal and Southern Ry. Office, Ottawa.

W. Bibley, heretofore roadmaster G.T.R. and Wabash Rd., St. Thomas, Ont., has been appointed General Roadmaster Northern Division, G.T.R., succeeding P. H. McFadden, resigned. Office, Allandale, Ont.

The position of Assistant Trainmaster at Palmerston, Ont., recently held by N. B. Walton, who has resigned, has been abolished.

U. E. Gillen, heretofore Assistant Superintendent at London, Ont., has been appointed Superintendent of the Middle Division, succeeding W. G. Brownlee, promoted. Office, Toronto.

A. J. Nixon, heretofore Trainmaster at Stratford, Ont., has been appointed Assistant Superintendent at London, Ont., succeeding U. E. Gillen, promoted.

C. G. Bowker, heretofore Chief Dispatcher, Stratford, Ont., has been appointed Trainmaster there, succeeding A. J. Nixon, promoted.

H. L. Wilkinson, heretofore section foreman, Windsor, Ont., has been appointed roadmaster Southern Division, succeeding W. Bibley, transferred. Office, St. Thomas, Ont.

The following agents were appointed during April: Washago, Ont., H. F. Parks; Severn, Ont., T. E. Black; Callander, Ont., J. A. Bell; Gobles, Ont., E. H. Webber; Nixon, Ont., F. C. Cassidy; Black Rock, N.Y., Fort Erie, Ont., Bridgeburg, Ont., W. P. Lyon; Alma, Ont., D. Alair; Goldstone, Ont., I. J. Heldman; Pinkerton, Ont., E. E. Prine; St. Polycarpe Jct., Que., J. H. Hebert; Admaston, Ont., Miss E. Boyd. Outside Ticket Agents: Brampton, Ont., R. W. Lowry; St. Mary's, Ont., W. G. Kenny.

Halifax and Southwestern Ry.—G. C. Farish, Assistant Superintendent, is acting as Superintendent pending the appointment of a successor to the late J. D. Sullivan.

Michigan Central Rd.—C. J. Hupp, heretofore Assistant General Freight Agent, Detroit, Mich., has been appointed Industrial Agent, a new office. Headquarters, Detroit, Mich.

C. C. Griggs, heretofore Commercial Agent, Detroit, has been appointed Assistant General Freight Agent there, succeeding C. J. Hupp.

F. N. Davis, heretofore Division Freight Agent Grand Rapids, Mich., has been appointed Commercial Agent at Detroit, succeeding C. C. Griggs.

E. A. Treadway, heretofore travelling freight agent at Detroit, has been appointed Division Freight Agent at Grand Rapids, succeeding F. V. Davis.

J. Greenbaum has been appointed travelling freight agent at Detroit, succeeding E. A Treadway.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—W. H. Schutt is reported to have been appointed Assistant to the General Manager.

New York Central Lines.—B. B. Mitchell, Freight Traffic Manager, Lake Shore and Michigan Southern Rd., Chicago, Ill., has been appointed General Freight Traffic Manager of all N.Y.C. lines east and west of Buffalo, N.Y. Headquarters, Chicago, Ill., and New York City. He succeeds to the duties, but not to the position of the late G. J. Grammer, who had the title of Vice-President.

F. Le Barr, Assistant Freight Traffic Manager, N.Y.C.R., has been appointed Freight Traffic Manager, N.Y.C. lines east of Buffalo, N.Y.

G. H. Daniels, upon his own request, has been relieved of the duties of Manager, General Advertising Department, and will in future perform such duties as may be assigned to him. All correspondence pertaining to advertising should be addressed to the Advertising Department, N.Y.C. Lines, Grand Central Station, New York. We have been advised that no action has been taken with a view to appointing a successor for that particular position; for the present, at least, it will be abrogated.

J. B. Martin, heretofore travelling passenger agent at Watertown, N.Y., has been appointed to a similar position at Buffalo, N.Y., succeeding C. Hartigan, appointed General Agent Passenger Department at Montreal.

Niagara Navigation Co.—J. V. Foy has been appointed chief clerk in the general offices.

H. E. Weller has been appointed City Ticket Agent, Toronto.

THE DERRY-COLLARD COMPANY
BOOK NEWS SERVICE

A New Kind of a Book on Railroad Matters

Built on a new plan; is self-indexing, cross referenced and practically a cyclopedia of railroad matters boiled down into pocket form.

It is chuck full of information such as appears below and covers every phase of railroading from A to Z.

Coal—Bituminous—Average bituminous coal contains about 80 per cent. of carbon, 5 per cent. of hydrogen, 15 per cent. of other substance generally considered as foreign matter or impurities; ignites at about 1,800 degrees and weighs about 52 pounds per cubic foot. One ton of 2,000 pounds occupies 39 to 40 cubic feet. A bushel of 2,500 cubic inches weighs 75 pounds. Specific gravity 1.40.

Coal	B.T.U. per lb. combustible	Ash per cent.	Moisture per cent.
Anthracite	14,700	10 to 20	1 to 5
Semi-anthracite	14,900	10 to 20	1 to 5
Semi-bituminous	15,800	5 to 10	1 to 6
Bituminous—Eastern	15,000	5 to 20	2 to 6
" Western	14,200	8 to 25	6 to 15
Lignitæ	12,200	5 to 20	10 to 30

Coal—Consumption—Varies greatly with different conditions of trains, roads, locomotives, etc. Exact comparisons are impossible unless we know all conditions, which is seldom the case. Tests on several roads running into New York in 1897 give these results: Hard Coal: Average per train mile, 17.3 freight cars, 122 lbs.; average per train mile, 7 passenger cars, 112 lbs.; average per freight car mile, 7.05 lbs.; average per passenger car mile, 16 lbs. Soft Coal—Average per train mile, 18.15 freight cars, 120 lbs.; average per train mile, 7 passenger cars, 110 lbs.; average per freight car mile, 6.06 lbs.; average per passenger car mile, 15.07 lbs.

This is a book for the President, Manager, S. M. P., M.M., Traveling Engineer, Air Brakeman, Foreman of Shop or Roundhouse, Engineer, Fireman or Machinist: And the Price

$1.00 POSTPAID

THE DERRY-COLLARD CO.
ROOMS 2201-28
109 LIBERTY ST., NEW YORK

R. McGiffen has been appointed Freight Agent.

W. B. Hines has been appointed Baggage Agent.

Northern Navigation Co.—R. Beaumont has been appointed joint travelling passenger agent with the G.T.R. and the N.N. Co. His headquarters will be at the office of the G.T.R. District Passenger Agent, Union Station, Toronto.

C. D. George has been appointed travelling freight agent for the territory Napanee, Ont., and east, succeeding J. Nelligan, resigned. His headquarters will be in the office of the District Freight Agent, G.T.R., Montreal.

Northern Pacific Ry.—C. M. Levey, Third Vice-President, Tacoma, Wash., has been transferred to St. Paul, Minn., and given charge of maintenance and operation of all N. P. lines.

H. J. Horn, heretofore General Manager, has been appointed General Manager in charge of maintenance and operation of lines in Montana, North Dakota, Minnesota and Wisconsin.

H. C. Nutt, heretofore General Superintendent Michigan Central Rd., Detroit, Mich., has been appointed General Manager in charge of maintenance and operation of all N.P.R. lines in Washington, Idaho and Oregon. Office, Tacoma, Wash.

These General Managers will report to the Third Vice-President, St. Paul.

A new division was created May 1, called the Pasco Division, with headquarters at Pasco, Wash. J. L. DeForce, heretofore Trainmaster at Spokane, has been appointed the first Division Superintendent there.

J. C. Poore has been appointed Assistant General Passenger Agent, St. Paul, Minn.

Toronto, Hamilton and Buffalo Ry.—A Hamilton despatch to a Toronto paper stated recently that "Calvin Sinclair had been appointed General Freight and Passenger Agent of the T.H. & B.R. at Brantford." As a matter of fact, Mr. Sinclair has been sent to Brantford to relieve the regular agent, who is ill, and he is now "acting agent."

Wabash Rd.—H. Miller, heretofore General Manager, has been appointed Vice-President. Office, St. Louis, Mo.

A. A. Yonge, heretofore travelling freight agent at Boston, Mass., has been appointed New England freight agent there, succeeding W. P. Sargeant, deceased. He is succeeded as travelling freight agent by C. L. Wilder

---

Pere Marquette Rd.—It is understood that negotiations are nearing completion for the discharge of the receivership, which has been in force for a couple of years. The shareholders, it is stated, have offered to raise sufficient money to pay off the obligations incurred since the appointment of the Receiver for the P.M. Rd., and the Cincinnati, Hamilton and Dayton Rd., to which the P.M. Rd. had been leased.

The Master Car Builders' and the Master Mechanics' Associations will meet in Atlantic City, N.J., for the second year in succession during the current month. The first convention will open June 12, and the meetings will be continued until June 19.

In the action of Vallance against the Montreal and Cornwall Navigation Co., in which the plaintiff sought to recover $1,907.50, balance of account for new boilers supplied to the str. Filgate, the Quebec courts have found for the defendants on the cross claim of $1,559 for damages caused by delay in not having the boilers delivered in time to permit the vessel to go on her run May 1. The court also found, for the plaintiffs, for $348.50, the difference between the damage found to have been sustained by the defendants and the amount claimed for the boilers.

MAINLY ABOUT PEOPLE.

W. Evans, Inspector of Hulls, Toronto, is recovering from an operation for appendicitis.

C. H. Haswell, civil and marine engineer, died in New York May 12, as the result of a fall.

A. A. and Mrs. Allan, of Montreal, sailed from Montreal, May 10, on the S.S. Virginian, for England.

G. H. Ham, of the C.P.R. headquarters staff, returned to Montreal, May 10, after a trip to Mexico.

Mrs. Lukes, mother of Lewis Lukes, of Mackenzie, Mann & Co. (Ltd.), died in Toronto, May 12.

H S. Hendrie, youngest son of Hon. J. S. Hendrie, M.L.A., Hamilton, Ont., died at Baltimore, Ohio, May 6.

F. C. Daniels, C.P.R. locomotive inspector, Schrieber, Ont., died from injuries received in the yards there, May 5.

N. Guilford, formerly Vice-President New York Central and Hudson River Rd., died at Yonkers, N.Y., May 11, aged 66.

G. H. Webster, Secretary of the Eastern Canadian Passenger Association, is recovering from a serious attack of pneumonia.

Jas. Ross, President Dominion Coal Co., returned to Montreal, May 10, after having spent some months in the south of Europe.

R. Forget, M.P., President Richelieu and Ontario Navigation Co., has been elected chairman of the Montreal Stock Exchange.

Sir Sandford Fleming has been appointed a member of the Ottawa Improvement Commission, succeeding the late Sir Wm. Hingston.

R. B. Angus, director C.P.R., sailed in the Empress of Ireland on her last trip for the season from St. John, N.B., for Liverpool, Eng.

Lady and the Misses Shaughnessy arrived in Quebec, May 10, by the C.P.R. S.S. Empress of Ireland, after spending some months in Europe.

Point Butse, on the east side of Digby Island, Prince Rupert harbor, B.C., has been named after A. Butse, General Purchasing Agent, G.T.R.

Miss Agnes L. Campbell, daughter of Capt. P. M. Campbell, Collingwood, Ont., was married there May 16 to H. M. Dyment, of Barrie, Ont.

C. E. A. Goldman, Secretary-Treasurer of the Niagara, St. Catharines and Toronto Ry., was married in New York City to Mrs. C. K. Ansley, May 12.

Commander O. V. G. Spain, R.N., Dominion Wreck Commissioner, Ottawa, was married at Brooklyn, N.Y., May 4, to Miss B. Murray, of Toronto.

H. G. Cabret, General Superintendent of the Buenos Ayres and Rosario Ry., after spending some time in Montreal, returned to Buenos Ayres May 3.

The estate of the late Hon. A. G. Blair, first chairman of the Board of Railway Commissioners, has been valued for probate at over $192,000.

H. A. Thomas, heretofore District Passenger agent of the New York Central Lines in Buffalo, N.Y., has established a rail and steamship agency in that city.

Jas. Kent, Manager, and W. J. Camp, electrician, C.P.R. Telegraph Department, have completed a trip of inspection of the lines and offices to the Pacific coast.

W. S. Parke was presented with a silver tea service by a number of C.P.R. officials, on his leaving that company's service to join the staff of the Canada Car Co., Montreal.

A. J. J. Pfeiffer, General Manager of the Calcutta, India, tramways, was married in London, Eng., recently to Miss J. C. Newman, daughter of F. W. Newman, of Montreal.

H. T. Richardson, Superintendent C.P.R. Pacific Steamers at Hong Kong, passed through Montreal May 10, on his way to England, where he will spend a six months' holiday.

W. H. Evanson, traffic auditor of the C.P.R. Western Division, it is reported, has been selected by the Winnipeg Board of Control for appointment to the position of City Comptroller.

The marriage of Miss Hilda Wainwright, daughter of W. Wainwright, Comptroller and General Assistant G.T.R., to A. Chipman, is announced to take place in Montreal early in June.

C. M. Hays, Second Vice-President and General Manager G.T.R., celebrated his 51st birthday, May 16, by entertaining the heads of the various departments at dinner at the Canada Club, Montreal.

J. Hutton and C. Harris, of the C.P.R. engineering staff, on the construction of the Guelph and Goderich Ry., have left Goderich, Ont., for China, where they will be engaged on railway survey work.

C. W. Hibbard, General Passenger Agent of the Inter-oceanic Ry., of Mexico, is sending out to his Canadian railway friends literature descriptive of the country through which the line he is now engaged on runs.

Col. H. N. Ruttan, City Engineer of Winnipeg, is reported to have resigned his position. Among the duties of the position is the charge of a short line of railway connecting the city stone quarries with the C.P.R.

S. J. Selig, of the Intercolonial Ry. general audit staff at Moncton, N.B., died April 30. He was father of A. C. Selig, C.E., chief clerk to the Chief Engineer, I.C.R.; and B. Selig, of Rhodes, Curry & Co., Amherst, N.S.

E. A. James, Manager Canadian Northern Ry., who is on leave of absence, is not expected to return to that company's service. He left Winnipeg early in April for Victoria, B.C., and it is said that he intends to live there.

D. F. Henry, consulting engineer, Detroit, Mich., who was found dead in his rooms there, May 16, aged 74, was the originator of the proposal to construct a canal between Lakes St. Clair and Erie, through Kent County.

M. L. Hinman, who was connected with the Brooks Locomotive Works, Dunkirk, N.Y., died there May 3. He was Secretary and Treasurer of the company when it was merged in the American Locomotive Co. in 1901.

F. C. Bodwell, formerly on the survey staff of the G.T. Pacific Ry. near Edmonton, Alta., died at Victoria, B.C., recently. He was a brother of E. V. Bodwell, K.C., who formerly represented the Great Northern Ry., U.S., in B.C.

Major and Brevet-Lieut.-Col. G. M. Kirkpatrick, who was been appointed Assistant-Quartermaster-General in India, is a brother of G. A. Kirkpatrick, the recently appointed General Freight Agent, Atlantic Division, C.P.R., St. John, N.B.

C. E. Lambert, who has retired from active service owing to ill-health, was General Western Passenger Agent West Shore Rd., from 1884 to Feb., 1887, when he was appointed General Passenger Agent, which position he held on his retirement.

W. Askin, formerly commercial agent in Montreal of the Montreal and Lake Superior Line, was entertained at dinner there by a number of friends May 2, prior to his departure for Western Canada, where he purposes residing in future.

W. L. Lovitt, who died somewhat suddenly at Yarmouth, N.S., May 16, was one of the largest shipowners in Nova Scotia, and was largely interested in the Burrill-Johnson Iron Co., Yarmouth, which is engaged in building marine engines and boilers.

RUSSELL MOTOR CARS

"MADE TO GO"

These Motor Cars are of immense value in construction and inspection work of all kinds.

Save your Time **Save your Strength**

The Russell is a practical success on the road. Why not on the rails? All it needs to demonstrate its efficiency is **a trial.**

SIMPLE — STRONG — LIGHT

Weighs 300 pounds. Carries 4 men and Luggage.

R. H. Kerr, chief clerk in the C.P.R. Freight Traffic Manager's office, Montreal, was presented with a purse of gold by the staff of the department, April 26, on his leaving to join the company's construction staff west of Saskatoon, Sask.

C. H. Sullivan, who was in charge of the construction of the Victoria Bridge at Montreal for the builders, died at Ste. Anne de Bellevue, Que., April 27, where he was in charge of a bridge-widening contract on the C.P.R. for the Dominion Bridge Co.

D. Willcox, who resigned the presidency of the Delaware and Hudson Co., by cable from Europe, shot himself in his cabin on the S.S. Barbarossa while returning to New York. The suicide was reported when the steamer arrived in harbor April 27.

Mrs. G. M. Bosworth, wife of the Fourth Vice-President C.P.R., sailed for England May 31 on the Empress of Britain. On her return she will be accompanied by Miss Ruth Bosworth, who is at school in England, and who will "come out" in Montreal next winter.

C. K. Nimmo, who resigned the General Passenger Agency of the Rutland Rd. a short time since, is now manager of the Shattuck and Desmond Warehouse Co.'s warehouse, drayage and general city business at Los Angeles, Cal. His brother, W. J. Nimmo, is Secretary of the company.

Mrs. Oborne, wife of J. Oborne, General Superintendent Ontario Division C.P.R., died at Toronto, May 9. She was taken ill May 1, on her journey from Montreal, and could not be moved from the private car in which she was travelling to her new house. The funeral took place May 12, at Montreal.

Jas. N. Young, of Chicago, Ill., who died recently in California, was the principal promoter of the Toronto, Hamilton and Buffalo Ry. During the nine years he was engaged in pushing the interests of the railway he had a number of reverses, and lost something like $250,000 in the enterprise.

F. H. McGuigan, Vice-President Great Northern Ry., U.S., has been elected a director of the Crow's Nest Pass Coal Co. This company is interested in the Crow's Nest Southern Ry., which makes connection with the lines of the G.N. Ry. system, and owns the Morrissey, Fernie and Michel Ry. in B.C.

H. E. Vantelet, at one time in the C.P.R. engineering service, is suing the Dominion Government to recover $49,343.40. The statement of claim sets forth that in 1902 he was requested by the Department of Public Works to prepare detail plans of the steel sheds for certain wharves, overhead railways and crossings in Montreal harbor.

H. G. Reid, master mechanic, district no. 1, Lake Superior Division, C.P.R., North Bay, Ont., was born at Pembroke, Ont., Oct. 27, 1864. His record is: Mar. to Oct., 1884, engine cleaner; Oct., 1884, to Nov., 1887, fireman; Nov., 1887, to Dec., 1904, engineer; Dec., 1904, to June, 1905, relieving road foreman of locomotives; June, 1905, to Mar., 1907, engineer—all this service being at North Bay; Mar. to April, 1907, general foreman at Chapleau, Ont.

F. Moberley, of the G.T. Pacific Ry., Abitibi, has been appointed by the Ontario Government, Police Magistrate for the District of Nipissing, lying north of the southern boundaries of Bond, Currie, Bowman, Hislop, Guibord and Michaud tps., extending as far as Speight's line run in 1904; west to the district line between Algoma and Nipissing, and east to the Interprovincial boundary line, including the Abitibi Lake in Ontario, and the unsurveyed lands surrounding them.

J. B. Sheppard, who has been appointed contracting freight agent, Canadian Northern Ry., Toronto, was born at Teeswater, Ont., Nov. 27, 1881, and entered railway service 1897, his record being: 1897 to 1903, C.P.R. freight office, Toronto; 1903 to Jan., 1904, freight department Delaware, Lackawanna and Western Rd., Buffalo, N.Y.; Jan., 1904, to May, 1906, freight department, Lake Erie and Western Rd., Indianapolis, Ind.; May 1906, to April, 1907, freight department C.P.R., Toronto.

F. E. Barbour, who was recently appointed General Passenger Agent, Rutland Rd., Rutland, Vt., was born at Bangor, Me., April 3, 1870. He entered railway service, 1894, his record being: May, 1894, to June, 1898, clerk in freight and passenger office, New York Central and Hudson River Ry., Montreal; June, 1898, to April, 1902, travelling passenger agent same road, Albany, N.Y.; April, 1902, to April, 1907, general agent same road, Adirondack division, Montreal. In 1906, the duties of General Agent of the Rutland Rd. were added.

Randolph Macdonald, owing to business and other engagements, and a re-arrangement of the directorate of the Sovereign Bank, has resigned his position as President, being succeeded by Æ. Jarvis. Mr. Macdonald becomes Vice-President, succeeding D. M. Stewart, who has also resigned the position of General Manager. Mr. Jarvis, the new President, is, or has been, connected with the Hamilton, Grimsby and Beamsville Electric Ry.; Hamilton Iron and Steel Co.; Niagara, St. Catharines and Toronto Ry., and the Hamilton Steamboat Co.

C. G. Bowker, who has been appointed Trainmaster G.T.R. at Stratford, Ont., was born at Medford, N.J., April 21, 1871, and entered railway service in 1888, his record being: May, 1888, to Oct., 1890, operator, Philadelphia and Reading Rd.; Oct., 1890, to 1893, division operator, New England Division same road; 1893 to 1897, in charge of telegraph lines and electrical service, Buffalo Division, Lehigh Valley Rd.; 1897 to May, 1900, train dispatcher, Lehigh Valley Rd., Buffalo, N.Y.; May, 1900, to Feb., 1902, train dispatcher, G.T.R., London, Ont.; Feb., 1902, to Nov., 1905, train dispatcher, G.T.R., Durand, Mich.; Nov., 1905, to May, 1907, Chief Train Dispatcher, G.T.R., Stratford, Ont.

E. P. Lord, General Manager H. K. Porter Co., Pittsburg, Pa., died there April 13, aged 46. He was injured about three weeks previously by his horse rearing and falling backwards on him, and was believed to be progressing favorably towards recovery when apoplexy caused death. Born near Boston in 1860 he graduated from Yale University and afterwards from the Stevens Institute of Technology at Hoboken, N.J., and entered the Pennsylvania Rd. service, being located at Altoona Pa., and then at Fort Wayne, Md., as assistant Superintendent of Motive Power, subsequently becoming Superintendent of Motive Power Big Four Rd., and then going to the H. K. Porter Co. as Superintendent, afterwards becoming general manager.

G. T. Marks, of Port Arthur, Ont., who died in Toronto General Hospital May 20, aged 50, went to Port Arthur in 1873, and has ever since been prominently associated with its development as a marine railway and grain center. He was one of the promoters of the Port Arthur, Duluth and Western Ry., and of the Ontario and Rainy River Ry., which now form part of the Canadian Northern Ry., and was extensively engaged in grain shipping. In conjunction with his brother he owned and operated the S.S. Algonquin, one of the first Canadian grain carriers on the Great Lakes, and brought out the Neebing from England in 1904. His second wife, who survives him, is a daughter of J. H. Rowan, who was engineer of construction for the Dominion Government in charge of the sections of the C.P.R. east and west of Winnipeg in the seventies and early eighties.

W. G. Brownlee, who has been appointed General Transportation Manager G.T.R., was born at Lawrenceville, Ill., Sept. 9, 1858, and entered railway service in 1877, since which he has been consecutively to 1879, operator, Ohio, Mississippi Ry.; 1879 to 1881, operator and train dispatcher, Union Pacific Ry.; 1881 to 1884, train despatcher and Trainmaster Denver and Rio Grande Rd.; 1884 to 1887, train dispatcher, Union Pacific Rd., Laramie, Wyo.; 1887 to 1889, train dispatcher same road, St. Louis, Mo.; 1889 to 1892, Chief Dispatcher same road, St. Louis, Mo.; 1892 to Feb., 1900, Division Superintendent same road, St. Louis, Mo.; Feb., 1900, to May, 1901, Assistant Superintendent, Eastern Division G.T.R., Belleville, Ont.; June, 1901, to Mar., 1902, Superintendent Eastern Division same road, Montreal; Mar., 1902, to Dec., 1904, Superintendent Western Division same road, Detroit, Mich.; Jan., 1905, to April, 1907, Superintendent Middle Division, Toronto.

M. H. McLeod, Chief Engineer, Canadian Northern Ry., whose portrait is given on the first page of this issue, was born in Skye, Invernesshire, Scotland, July 13, 1857. His railway record is as follows: 1877, chainman, Victoria Ry., Ont.; 1879 to 1880, rodman and leveller, Credit Valley Ry.; 1881, transitman location surveys, Ontario & Sault Ste. Marie Ry.; 1882, resident engineer, construction Toronto and Ottawa Ry.; 1883 to 1885, assistant engineer, construction Lake Superior Section C.P.R.; 1886, on location and construction C.P.R. lines east of Montreal; 1887, on construction C.P.R., Sault Ste. Marie branch; 1888 to 1889, locating engineer, and in charge of construction, Windsor division, C.P.R.; 1890, locating engineer, Calgary & Edmonton Ry.; 1891, revision surveys C.P.R. and locating Niagara Falls, Park and River Ry.; 1892, revision surveys C.P.R. Chalk River to Sudbury; 1892 to 1895, Chief Engineer Lake Temiscamingue Colonization Ry.; 1896, division engineer, construction, Montreal and Ottawa Short Line, C.P.R.; 1897 to 1900, locating engineer, assistant chief Superintending engineer, and Chief Engineer and Superintendent, Crow's Nest Branch, C.P.R.; May, 1900, to date, Chief Engineer, Canadian Northern Ry.

E. G. Russell, who was engaged on the G.T. Pacific Ry. staff, and also held the position of postmaster at Prince Rupert, B.C., committed suicide by shooting himself with a revolver on his return to that town April 25. He was born at St. George, N.B., July 23, 1858, and entered railway service June 1, 1874, his record being: June to Aug., 1874, telegraph operator; Aug., 1874, to Aug., 1880, train dispatcher; Oct., 1880, to April, 1881, assistant to Superintendent; April, 1881, to April, 1882, train dispatcher; April, 1882, to Oct., 1886, Superintendent telegraphs; Oct., 1886, to Mar., 1888, Assistant General Superintendent (above service with the Minnesota and North-Western Rd., and its successor the Chicago, St. Paul and Kansas City Rd.); April to Nov., 1888, Assistant Superintendent Chicago Division, Illinois Central Rd., Cairo, Ill.; Nov., 1888, to Sept., 1889, Superintendent Chicago, Madison and Northern Rd., Rockford, Ill.; Sept., 1889, to Jan., 1890, also acting Superintendent of the Illinois Central Lines in Illinois and Wisconsin; Jan. to Dec., 1890, Superintendent Northern Lines Illinois Central Rd.; Dec., 1890, to Nov., 1891, Superintendent Wisconsin Division, same road; Mar., 1891, to Sept., 1892, Superintendent Transportation same road, Chicago, Ill.; Sept., 1892, to Jan., 1893, Superintendent Western Lines same road, Dubuque, Ia.; Feb., 1893, to April, 1899, Superintendent Rome, Watertown and Ogdensburg Rd.; April to July, 1899, Superintendent Morris and Essex Division, Delaware, Lackawanna and Western Rd.; July, 1899, to Sept., 1900, General Superintendent, same road; Feb., 1901, to 1903, Manager Intercolonial Ry.

HEAD OFFICE AND WORKS: **SYDNEY, CAPE BRETON, CANADA**

Railway Statistics for the Dominion.

The Department of Railways has adopted the schedules of the U.S. Interstate Commerce Commission for the collection of statistical information relating to Canadian railways. These schedules have been worked out with great care during a period of years and are regarded as the most complete and comprehensive available. By applying them to Canadian railways, it is believed that valuable and helpful comparisons might be made between the business of transportation in Canada, and that being carried on under similar conditions in the U.S. The new schedules are to be made the basis of the statistics for the current fiscal year. It is possible, that in the case of the smaller lines, a year or two will elapse before they will be in a position to readily supply the information required of them. This change has been made in the method of collecting and tabulating the statistics by J. L. Payne, Comptroller of Railway Statistics, to which position he was appointed in July, 1906. The methods followed up to that date were adopted at the establishment of the Department prior to 1875, and had undergone but slight modification. They were obviously defective and practically obsolete, in the light of modern practice and requirements. In connection with the abandonment of the old system, Mr. Payne has made a digest of the statistical information issued from year to year since 1875. The tables given represent a history in figures of the development of railways and the growth of railway business in Canada, from which we have made the following summaries and extracts:

MILEAGE.—It was in 1836 that railways were first operated in Canada, in which year 16 mles were open for traffic, and this remained the mileage until 1847, when an additional 38 miles were opened. In 1851 the mileage had increased to 159; in 1856 it had grown to 1,414, and since then the mileage operated at five year intervals had been:

1861	2,146 miles
1866	2,278 "
1871	2,695 "
1876	5,218 "
1881	7,331 "
1886	11,793 "
1891	13,838 "
1896	16,270 "
1901	18,140 "
1906	21,353 "

EQUIPMENT.—The totals given include hired locomotives and cars as well as those owned, but the information gathered in the past does not permit a comparison to be made between the tractive power of present day locomotives and those formerly in use, nor the relative capacity of cars. Some idea of the betterment in motive power may be had from the fact that in 1875 the volume of traffic was 5,786 tons of freight and 5,296 passengers per locomotive, as compared with 19,773 tons and 9,549 passengers in 1906. The same comparison applies to cars, the capacity of which has practically quadrupled within 30 years A loaded freight train of 250 tons was probably the maximum in 1875, whereas loads of 1,500 tons are now frequently hauled over the principal railways of the Dominion.

In addition to the above there are in use on Canadian railways 235 sleeping cars, 96 parlor cars, 80 dining cars and 61 official cars. In connection with freight service there are 1,655 refrigerator cars, 1,422 conductors' vans, 1,325 tool cars, 341 snow plows, 205 flangers, and cars of other descriptions. The grand total is 99,874 cars. Under the Railway Act of 1903 all cars were required to be equipped with air brakes and automatic couplers by Jan. 1, 1906, and the returns show that of all cars in use June 30, 1906, 91,015 were fitted with automatic couplers and 85,616 with air brakes.

	Locomotives	1st and 2nd Class Pass. Cars	Baggage Mail and Ex. Cars	Cattle, Box and Platform Cars	Dumping and Coal Cars
1875...	980	765	235	19,247	1,050
1876...	1,000	773	264	20,735	1,050
1881...	1,211	993	344	26,125	1,716
1886...	1,567	1,232	419	36,773	2,533
1891...	1,850	1,473	560	48,979	3,559
1896...	2,044	1,690	650	52,383	4,812
1901...	2,443	1,808	815	62,252	6,775
1906...	2,931	2,005	842	80,454	8,295

TRAFFIC.—The volume of traffic in the years quoted follows:

	Passengers Carried	Tons of Freight
1875	5,190,416	5,670,837
1876	5,544,814	6,331,757
1881	6,943,671	12,065,323
1886	9,861,024	15,670,460
1891	13,222,568	21,753,021
1896	14,810,407	24,266,825
1901	18,385,722	36,999,371
1906	27,989,782	57,966,713

The increase in the volume of passenger traffic during the whole period was 439.2%, and of passenger earnings 420.8%. The increase in the volume of freight traffic during the whole period was 922.1%, while the earnings therefrom increased by 574.4%.

ACCIDENTS.—The general average shows that only one passenger in 1,749,361 was fatally injured. For the years from 1896 to 1906 inclusive, the returns as to fatal accidents show:

	Passengers	Employes	Others	Total
1896	11	46	104	161
1897	7	76	130	213
1898	5	98	167	270
1899	20	119	145	284
1900	7	123	195	325
1901	16	118	183	317
1902	19	146	165	330
1903	53	186	181	420
1904	25	192	178	395
1905	35	206	227	468
1906	16	139	206	361

EARNINGS.—For the years already quoted the earnings were:

	Passengers	Freight	Mail and Ex	Miscellaneous	Total
1875...	$6,410,934	$12,073,570	$693,250	$292,784	$19,470,539
1876...	6,254,866	12,211,158	703,994	188,064	19,358,084
1881...	8,223,254	18,666,982	946,159	145,332	27,987,508
1886...	10,261,691	21,183,967	1,432,360	511,362	33,389,381
1891...	14,286,408	30,548,645	1,904,961	1,452,082	48,192,099
1896...	13,747,773	32,368,082	2,396,082	2,033,069	50,545,569
1901...	19,396,302	46,665,103	3,105,457	3,731,885	72,898,749
1906...	33,392,188	81,433,115	4,510,649	5,986,912	125,322,865

EXPENSES.—During the same years the expenditures were:

	Maintenance of Way Bldgs	Motive Power	Maintenance of Cars	Conducting Transportation	Total
1875...	$3,548,585	$4,679,270	$1,543,607	$5,653,079	$15,424,542
1876...	3,813,668	4,825,676	1,588,296	5,575,080	15,802,721
1881...	4,115,097	5,975,719	2,065,214	7,747,510	19,903,543
1886...	5,188,947	7,999 073	2,425,902	8,511,254	24,125,178
1891...	7,502,236	11,777,898	3,191,201	12,489,112	34,960.449
1896...	7,370,718	11,194,857	3,121,056	13,356,022	35,042,654
1901...	11,195,400	16,467,767	4,420,473	18,285,084	50,368,726
1906...	18,793,848	29,884,204	8,896,209	29,555,173	87,129,434

TRAIN MILEAGE.—Train and locomotive mileage for the years quoted:

	Passenger trains	Freight trains	Mixed trains	Train mileage	Engine mileage
1875...	5,206,353	10,910,181	1,563,644	17,680,178	19,633,026
1876...	5,837,461	9,616,148	2,650,019	18,103,628	21,001,052
1881...	8,298,957	15,163,634	2,099,487	27,301,306	34,265,003
1886...	9,214,131	15,914,127	5,182,557	30,481,086	37,359,499
1891...	14,987,647	23,592,370	4,819,161	43,399,178	56,950,343
1896...	15,846,645	23,299,776	5,354,181	44,500,602	55,786,960
1901...	19,115,472	23,888,302	10,345,620	53,349,394	68,621,424
1906...	28,071,648	39,045,168	5,606,666	72,723,482	94,180,788

GENERAL STATISTICS

	Freight Earnings per train mile	Average Earnings per ton carried	Passenger Earnings per train mile	Percentage of operat'g expenses to earnings
1875...	$0.968	$2.129	$1.231	81.1
1876...	0.995	1.928	1.071	81.6
1881...	1.081	1.547	0.991	71.9
1886...	1.004	1.351	1.114	72.4
1891...	1.075	1.404	0.953	72.5
1896...	1.130	1.333	0.868	69.3
1901...	1.363	1.261	1.015	69.0
1906...	1.824	1.405	1.189	69.5

It will be seen that the tendency of the earnings per ton has been downward, while the earnings per train mile have moved steadily upward. In the next report the statistics will show the earnings per ton per train mile, which is the basic item in considering the economic aspect of the transportation question. The passenger earnings per train mile are indefinite; if the data were sufficiently elaborate to show the number of passengers carried one mile, a factor would be had which would throw direct light on the passenger traffic of each railway. This information it is proposed to obtain in future years. For the first ten years during which the Department was collecting statistics, the average percentage of operating expenses to earnings was 76.8, while for the last ten years under review the average was 69.1%.

CAPITAL INVESTED.—The total capital invested amounts to $1,332,498,704, towards which there has been contributed:

Dominion Government subsidies	$194,188,584
Provincial Government subsidies	43,278,022
Municipal subsidies	17,125,164
Total	$254,591,770

Included in these payments, however, is the cost of the Intercolonial Ry. and the Temiskaming and Northern Ontario Ry. The division of the nominal capital paid up is as follows:

	Miles	Amount	Per Mile
Ordinary shares		$385,088,053.87	$17,896.09
Preference shares		176,567,341.38	8,205.56
Bonded debt		504,226,233.64	23,432.76
Capital from other sources		12,025,305.66	558.85
Dominion subsidies		194,188,584.18	9,024.47
Ontario	7,348	16,545,939.32	2,251.76
Quebec	3,407	16,754,426.16	4,917.65
N. Brunswick	1,623	4,186,137.71	2,579.26
N. Scotia	1,214	3,753,431.18	3,091.79
P.E.I.	267	.....	.....
Manitoba	2,823	1,916,952.75	679.05
B.C.	1,663	121,135.00	72.84
Alb. & Sask.	3,173	.....	.....
Municipal subsidies:			
Ontario		12,928,290.18	1,759.43
Quebec		2,896,536.08	850.17
New Brunswick		341,500.00	210.41
Nova Scotia		283,023.93	233.13
P.E.I.		.....	.....
Manitoba		490,600.00	173.79

Government Transportation Statistics.

In bringing forward the estimates for the Department of Railways and Canals in the House of Commons recently, Hon. H. R. Emmerson, then the Minister, made an exhaustive statement in which he dealt with a number of matters which had not been mentioned in the ministerial statements in previous years. Within recent years the Railway Commission and the Transcontinental Railway Commission have been added as branches of the Department. There are in the Department's employ about 3,000 persons in connection with the canals, over 9,500 on the Intercolonial Ry. and 1,300 on surveys, on transportation service and at headquarters under the Transcontinental Railway Commission. The total capital expenditure on the canal system during the past ten years was about $24,000,000. The capital expenditures on the different canals in that period was as follows:

Farran's Point	$ 869,256.51
Rapide Plat	661,480.40
Galops	4,559,479.31
" North Channel	1,539,590.72
River reaches	202,158.14
Galops channel	348,080.78
Lake St. Louise	243,512.66
Lake St. Francis	75,906.71
Cornwall	1,265,404.14
Lachine	1,452,937.67
Beauharnois	25,000.00
Soulanges	4,615,266.15
Welland	3,026,210.96
Sault Ste. Marie	1,095,664.16
Trent Valley	3,738,663.27
Carillon and Grenville	152,304.10
Cailbute Lock	3,282.00
Rideau	1,565.84
Tay	2,750.00
Murray	1,350.00
Total	$23,879,792.82

During the same period 5,131 miles of railway were constructed to which the Dominion contributed $15,338,508.30. This does not include the cost of either the Intercolonial or the Prince Edward Island Ry. There has been a large and continuous expenditure on capital account on the Intercolonial Ry. since the completion of the line on July 1, 1876. The standard of railway construction and equipment of to-day is far in advance of what was required at that time, and increasing expenditures are necessary to keep pace with the demands. Even within the last ten years there have been great advances made in the improvement of roadbeds and equipment which call for considerable capital expenditure. The average freight car to-day is 60,000 lbs.; a few years ago it was 40,000 lbs.; and locomotives have practically doubled in weight and price. To carry these greater weights the roadbed has to be relaid with heavier rails, and extra ballasting is required; portions of second track have to be constructed, curvature taken out and gradients reduced. There has not been so much work done in the way of reducing gradients on the I.C.R. as its interests demanded, but there has been an increase of the depth of ballasting, which had been met out of revenue and not out of capital. The line loses the use of a large number of its cars because there is not so much traffic coming off as there is going on to foreign lines. On Nov. 8, 1906, there were 4,403 I.C.R. cars off the line, while the total foreign cars on the line was 1,652; the total shortage owing to exchange of cars and those on branch lines being 2,028. These branch lines were constructed with the aid of Dominion and Provincial subsidies, but their freight equipment is small or non-existent. The I.C.R., seeking to gather up all the traffic it can, furnishes cars for these branch lines, to some extent to the disadvantage of shippers located on the main line.

The following table gives comparisons between the line in 1896 and in 1906:

	1896	1906	Inc. %
Length of line	1,182.5	1,477.92	25
Capital invested	$55,267,044	$81,238,728	41
Locomotives	204	347	70
Passenger car serv.	276	429	55
Freight car service	6,667	10,819	62
Ploughs, flangers, etc.	77	129	67
Engine mileage	4,714,661	9,304,511	99
Train mileage	3,842,502	7,424,831	93
Car mileage	43,005,684	93,746 123	117

In addition to this the line has been relaid with 80 lb. steel, replacing 62½ lb. rails; nearly the entire line has been reballasted; bridges have been replaced; new terminals have been provided, and new roundhouses built at many points.

Coming to the figures for 1906 there was an increase of 326,570 freight train miles, a decrease of 198,484 passenger train miles, and a decrease of 223,868 light and shunting engine miles as compared with 1905. The total engine mileage in 1906 was 9,304,511, against 9,400,293 in 1905; the freight car mileage was 78,399,746, against 72,739.921 in 1905; the passenger car mileage was 15,346.377, against 15,515.356 in 1905. The statistics also show:

	1906	1905
Tons carried one mile	851,211,445	711,049,733
" per engine mile	91.5	75.6
Passengers carried	2,737,160	2,810.960

The returns of the gross revenue were:

	1906	1905
Passengers	$2,297,716	$2,105,066
Freight	5,019,805	4,373,178
Mails, etc	326,307	305,277
Total	$7,643,828	$6,783,521

The expenditures were:

	1906	1905
Locomotive power	$2,930,075	$3,116,653
Cars, transportation and repairs	1,617,119	2,040,133
Maintenance of way and works	1,397,143	1,722,616
Station expenses	1,032,764	937,816
General charges	586,267	535,541
	$7,563,368	$8,352,759

The car mileage showed a gain of $121,456, against a loss of $16,065 in 1905; and the rental of leased lines was the same in both years, $140,000. The total improvement in the operation of the I.C.R. in 1906 as compared with 1905 was $1,787,219.

The cost per train mile was $1.021., and per engine mile 81.5c, against $1.166. and 90.5c. respectively for 1905. The revenue statistics showed:

	1906	1905
Earnings per train mile	$1.0294	$0.93
" freight car mile	0.06	0.06 1/10
" ton mile	0.05 897/1000	0.06 145/1000
" passenger	0.95 9/10	0.85 7/10
" passenger mile	0.19 7/10	0.19 3/10

For the fiscal year the I.C.R. hauled 851,211,445 tons of pay freight, using one car for every 14.22 tons. The result of the operations of the I.C.R. for 1906 showed a balance of earnings over expenditure of $61,915.34; to which must be added the profit derived from the Windsor branch, $31,966.34, making a total surplus of $93,881.87. The Prince Edward Island Ry. showed a loss of $36,982.24 in 1906, against a loss of $153 133.83 in 1905. The accounting system on these railways has been brought into harmony with that in use on other railways in Canada and the U.S.

The locomotive and car shops at Moncton, N.B., are being rebuilt out of capital, the cars, etc., burned being replaced out of revenue. The temporary shops, which were provided out of revenue, cost $60,000.

So far as the current financial year is concerned, the earnings for the six months ended Dec. 31, 1906, were $4,425,213.28, and the expenditure $4,047,556.43, showing a net surplus of $377,656.85.

The G.T.R. put in force, June 1, an increased rate of pay for its roadmasters, section foremen and section men.

ELECTRIC RAILWAYS.

Projects, Construction and Betterments.

Brantford and Hamilton Electric Ry.—The grading on the mountain section, for which Nicholson and Riley had the subcontract, has been taken over by F. Dickenson, who has practically completed his contract of grading from Ancaster to Brantford, Ont. The placing of ties and tracklaying will be started at an early date. A contract has been let to Woodman Bros. for the overhead work.

Calgary Electric Street Ry.—The ratepayers voted recently in favor of a by-law to raise $250,000 by means of debentures for the construction of an electric railway in the city. The work is to be done by the city council, which has appointed a special committee to take charge of the work.

Edmonton to Strathcona.—A report on the construction and operation of an electric railway between Edmonton and Strathcona, Alta., as a city enterprise is under consideration by the City Council. The report of City Engineer Keeley, presented recently, sets out that the cost of construction and operation of such a line would be less than on a purely city line. He gives the following figures as to the cost of operating a line in the city as against a line to Strathcona. First, as to the cost of operating the line adopted by the City Council. This is the most expensive. Its length is six miles. With a 15-minute service from 6 to 12 midnight, and a 6-car equipment, the cost of operation would be $138 a day, or $50,400 for a year. The cost of operating the route as recommended by the commissioners, which provided for five miles of trackage, would be for the same service $126 a day, or $46,000 a year. The cost of operating a Strathcona line would be on the same basis for a six-mile track and 30-minute service, cost $106.85 a day, or $39,000 a year. The service would require six cars, four of which would be placed on regular duty. The other two would be required for excursions and specials. The cost of operation would be slightly less, due to the fact of 30-minute service, which would answer for the greater part of the day. Also the capital invested would be slightly less because of the cutting out of the sub-station, and the chances are that there would be a far greater number of passengers carried on the Strathcona line than on an equal length of track in either of the two cities, while a 10-cent fare would be charged. The route surveyed between these points goes down Saskatchewan avenue and across the river by the bridge. The exact ascent of the Strathcona hill has not yet been determined upon. A comparatively easy gradient has been obtained.

Fort Frances to Duluth.—Proposals are being made for the construction of an electric railway from Fort Frances, Ont., to Duluth, Minn. It is stated that the run could be made in three hours, and that there will be plenty of power available on the completion of the power dam at the International Falls on Rainy River.

Hamilton, Waterloo and Guelph Ry.—The joint committee of the Hamilton City Council, Board of Trade, Parks Board and Trade and Labor Council, recently decided upon instruction to be given an engineer to select a route for this company from Rock Chapel to James St. A. F. McCallum has been appointed as the engineer. The company desires to run through Dundurn and Harvey parks, to which there is a strong objection on the part of citizens.

Grand Valley Ry.—Press reports from Brantford, Ont., state that conditional on an exchange of bonds by the present shareholders, the Grand Valley Ry. Co., the Brantford

Refineries:
PETROLEA, CANADA. MARIETTA, OHIO.

Street Ry. Co., and the Woodstock, Thames Valley and Ingersoll Electric Ry. Co., will be amalgamated and operated under the first mentioned name. Among the new works proposed are: Increase of track mileage, double-tracking on Colborne St., Brantford, extension to Cainsville, new line to Woodstock connecting with the Woodstock, Thames Valley and Ingersoll line which will be extended to London, and a new line to Port Dover. M. A. Verner, Pittsburg, Pa., it is stated, will control the operations of the new company.

Montreal and Southern Counties Ry.—The Montreal City Council has passed a by-law granting a right to enter the city by way of Common St. and Black's Bridge. The company will pay annually $500 a mile for the length of streets actually used; other companies to be allowed to use its tracks on Common, Grey Nuns and Williams streets on payment of reasonable compensation; the contract to extend for 24 years from Jan. 1, 1907, and to be renewable for periods of five years thereafter. The company's lines will reach the city over the Victoria Bridge, and will give communication with St. Lambert and other points on the south shore of the St. Lawrence.

St. Leon Ry.—The provisional directors named in the act incorporating this company are G. G. Ruel, G. T. Macdonald, L. W. Mitchell, F. C. Annesley, and M. H. Seed, Toronto, who are all in Mackenzie, Mann & Co.'s Toronto offices. The company, which has a capital of $100,000, is authorized to construct an electric railway from Louiseville to Three Rivers, via St. Leon, Que. It is given authority to develop and dispose of electric power.

St. John Suspension Bridge.—The New Brunswick Government has under consideration plans for the construction of a bridge across the St. John River at its mouth, to replace the present suspension bridge. The proposed new structure will be a cantilever one, and it will be made wide enough to accommodate a double track electric railway, in addition to a roadway for vehicles, and sidewalks for foot passengers.

Toronto and York Radial Ry.—A large block of land on the west side of Yonge St., Toronto, and north of the C.P.R. tracks, has been purchased. It is intended to erect a passenger and express station there. It was announced recently that the extension of the Metropolitan Division from Newmarket to Jackson's Point would be opened for traffic on June 1

Toronto, Niagara and Western Ry.—The Hamilton City Council was informed recently that the company had filed its plans for the line from Niagara Falls to Toronto. The line will run along the beach, and at Burlington there is a junction for a line which runs along near the Plains, thus encircling the bay. Another line enters the city over the Hamilton, Grimsby and Beamsville Electric Ry. tracks. The company proposes to use the terminal station in Hamilton. A line to Brantford and other points leave the city via York and Dundurn streets. The route map submitted to Brantford City Council shows a line from Hamilton, serving Langford, Cainsville, Brantford, Mount Vernon, Burford, Cathcart and Muir. The plan does not show the intended route through the city, but the general route through Brant county.

Toronto Ry.—The track on King St. is being relaid with 96 lb. rails. The City Council is considering the question of the construction of additional lines, and has before it a special report prepared by B. J. Arnold, of Chicago, in which a number of new lines are recommended.

Toronto Suburban Electric Ry.—A survey party has gone over the route between the end of the present line at Lambton Mills and Brampton, Ont., and directors are said to be considering whether this route should be adopted instead of the previously surveyed one from the present Western terminus.

Winnipeg Electric Street Ry.—W. Phillips, Manager, is quoted as saying that the company would construct a branch along Pembina highway in Fort Rouge, from Croydon St. to Portage Junction, on which the tracks would be laid during the summer. It was intended to extend as far as St. Norbert, but he could not say whether the tracks would be laid to that point this season or not.

Electric Railway Notes.

W. Williamson, a street railway conductor at Hamilton, Ont., has been fined $30 for being drunk whilst on duty.

J. H. Larmouth, C.E., Manager Peterboro Radial Ry., has been appointed examiner of motormen at Peterboro, Ont.

The councils of York tp., and the Village of Weston, Ont., have applied to the Ontario Railway and Municipal Board to compel the Toronto Suburban Ry. Co. to carry out its agreement.

The Montreal Street Ry. has adopted a new and more simple transfer slip than that formerly in use. Passengers have to ask for a transfer when paying their fare, and must board cars at the junction point only.

The Ontario Railway and Municipal Board has concluded its investigations into the overcrowding of the street cars in Toronto, and has made a report. In addition to making a number of recommendations as to various matters, the report recommends the construction of over 10 miles of additional double track lines, and the building of 100 cars.

The C.P.R. will start running early in June, an additional fast trans-continental train between Montreal and Vancouver to make the distance in 84 hours. The train will leave Montreal Mondays, Wednesdays and Fridays.

The board of conciliation to investigate the dispute between the G.T.R. and its machinists has been finally constituted. The members are: W. Nesbitt, K.C., for the company; J. G. O'Donoghue for the men; and Professor A. Shortt, Kingston, Ont., third arbitrator.

The rates for pilotage at Victoria, B.C., have been reduced to an extent varying from 20 to 28%, upon coasting vessels. The rates remain practically the same on all ocean liners, and will also apply to U.S. vessels plying to Victoria, from San Francisco and intermediate points, Skagway or any intervening port.

The C.P.R. Freight Traffic Manager has issued a circular to shippers calling attention to the necessity for more care in marking and addressing freight in order to prevent loss and miscarriage. Old marks should be effaced, the address or distinguishing mark properly stencilled, the goods and marks fully described on the way bill and the route definitely set out.

As the result of the recent conference between Commander Spain with President Livingstone, of the Lake Carriers' Association, and various U.S. officials, a Canadian tug—Home Rule—has been placed in charge of the navigation of Limekiln crossing. The channel is in Canadian waters, but was dredged out by the U.S. Government. Upbound vessels will be required to take the easterly channel, and downbound the westerly. It is the smaller class of upbound boats that have caused all the trouble. This arrangement will hold until the new rules now being prepared at Washington, and which will be agreed to by Canada, are promulgated. All expenses in connection with the matter is borne by the Lake Carriers' Association.

International Traction Co.

This company has in operation 356 miles of electric railway in the United States and Canada, including the following: Buffalo Ry., Buffalo Traction Co., Buffalo, Bellevue and Lancaster Ry., Buffalo and Niagara Falls Electric Ry., Buffalo and Lockport Ry., Elmwood Avenue and Tonawanda Electric Ry., Lockport and Olcott Ry., Buffalo, Tonawanda and Niagara Falls Electric Rd., Niagara Falls and Suspension Bridge Ry., Niagara Falls, Whirlpool and Northern Ry., Niagara Falls Suspension Bridge, Clifton Suspension Bridge, Lewiston Connecting Bridge, Queenston Heights Bridge Co., Niagara Falls Park and River Ry., which have been merged in the International Ry. Co., and the Crosstown Street Ry. Co., of Buffalo, and the Electric City Ry. Co., Niagara Falls, N.Y., which are operated as separate companies. The annual report for the year 1906 says:

"The physical condition of the property was not only fully maintained, but improved. The new car shops, finished during the year, are as complete as any in the country and afford every facility for the proper maintenance of equipment; a new model sub-station was established on the east side of Buffalo; 150 new cars, of the most up-to-date type, and costing nearly $1,000,000, were purchased; 12 miles of track were laid through Fillmore Ave., Buffalo, under franchise obtained in the fall of 1905, and this line will be open for traffic in the early spring. In view of the fact that a fast electric line is to be built from Toronto by way of Hamilton to Niagara Falls, Ont., in the near future, and as an electric line, now under construction, between Lockport and Rochester will be completed during 1907, both of which lines are to connect with our system, and as the capacity of our Niagara Falls line is already taxed to the utmost by present travel, a franchise has been secured, and it is proposed to build within the next 18 months a new double track line, over its own right-of-way, between Buffalo and Niagara Falls, connecting at Tonawanda with our Lockport division. Inasmuch as the company cannot increase its bonded indebtedness, it will be necessary, in order to carry out its undertakings, not only to expend the profits of 1907, but also to borrow $1,000,000 from the banks. While the directors regret that the payment of dividends must for these reasons be further delayed, they believe they are best serving the interests of the stockholders by maintaining their magnificent property in first-class physical condition, and by making such betterments and extensions as are necessary to keep abreast with the growth of the territory served."

Limited
302 Manning Chambers, TORONTO, CAN.

Toronto and York Radial Railway.

The Metropolitan Division of this line from Toronto to Newmarket, Ont., has been extended to Jackson's Point, Lake Simcoe, a further distance of 24.72 miles.

The line has been built entirely on the company's own right of way, 66 ft. wide, with greater widths where heavy cuts required them. One cut is 31 ft. deep. The right of way cost about $1,500 a mile. The heaviest curve outside the town of Newmarket is a 5° curve. The next is a 3°.50″ curve at Roach's Point. All others are 2° curves or under. All curves of 1° or over have transition curves at each end. The maximum gradient outside of Newmarket is 1½ per cent. The grading amounted to a little over 8,000 cubic yards per mile. There are two long trestles on the line; one at Newmarket at the overhead crossing of the G.T.R., 800 ft. long, including a plate girder span 82 ft. long over that railway, resting on concrete piers. The trestle is of wood, with a wooden Howe truss span of 50 ft. in the middle over the Holland River. The other is a pile trestle 332 ft. long over the Jersey River near Keswick. The line is well ballasted, having 10 inches of ballast under the ties. The rails are of 60 lbs. section made by the Algoma Steel Co., and are 33 ft. long. Cedar ties are used throughout. There are five through sidings, giving 700 ft. of clear siding room, and one through siding at Newmarket 1,300 ft. long. These sidings all turn out on the same side, and leave the main line on the proper alignment. No. 9 fangs are used. The points reached by this line are Newmarket, Sharon, Queensville, Ravenshoe (about one mile to east), Keswick, Orchard Beach (summer resort), Roach's Point (village with large summer population), Morton Park, Stouffville-on-the-Lake (summer resort), and Jackson's Point, with the village of Sutton one mile south. About 17 miles of the line is in view of Lake Simcoe throughout, and in most places is only far enough from the lake to avoid interference with the building of cottages and other resort buildings.

The feeder system of this line seems somewhat erratic at first glance, but this is caused by the peculiar gradients that had to be encountered in laying the track over one of the highest points in Ontario—the Pinnacle Hill—some 600 ft. higher than the southern terminus. The power for this line is supplied partly from Niagara Falls and by two generating stations and one sub-station. The generating stations are situated at Bond Lake and Keswick, and the sub-station in Newmarket. The power station at Keswick contains three Scotch marine boilers of 250 h.p. each, built by the Polson Iron Works, and equipped with automatic stokers, and fans driven by ideal engines. The coal is brought in at the back of the boiler room and emptied into the bins, and from there fired by hand to the hoppers of the stokers. A steel stack 50 ft. high and 50 ins. in diameter takes off all flue gases. Three 8-inch leads connect to a 15 in. main, and from there 2 ft. 7 in. headers are taken to two 500 h.p. cross compound condensing engines. Steam separators are installed above the throttle valves and steam is used at 130 lbs. pressure. A vacuum of 25 ins. is maintained by an independent jet condensor located in the basement, which is large enough to take care of both engines. The engines are 18 x 36 x 18 ins., and are belted direct to four compound wound d.c. generators built by the Canadian General Electric Co., and supply current at 625 volts to the switchboard, on which is located all the necessary switches, circuit breakers, ammeters, etc., for distribution of current to the line. Six 4-0 feeders leave this station, two going north five miles, two going direct to the line at the station and two going south, a distance of four miles, and the switchboard is wired to allow of these circuits being cut and independent of each other, and with trolley breaks at proper places. There is also a 4-0 feed and 4-0 trolley the full length of the line, which is in addition to any other feeder mentioned. A high pressure air pump pumps air at 350 lbs., for the air brake on the cars, to a tank located at the track. The injection water is taken direct from Lake Simcoe, and the condensed steam is pumped through a heater to the boilers, 1½ in. injectors are also used in case the boiler pump should happen to fail. The building is well lighted with windows by day and 5 arc lamps at night, and is located about 11 miles south of Jackson's Point. This station, although not built along the lines of the latest electrical engineering, was considered good practice by the company on account of the close proximity of Niagara power.

The sub-station at Newmarket, 14 miles south of Keswick, contains 2 Westinghouse rotary converters with step-down transformers and switchboards, with necessary switches, circuit-breakers, etc. The rotaries are 125 k.w. each, and start from the a.c. side, and synchronize dark. The current on the a.c. side is 350 volts, and is delivered to the line at 570 d.c. Two 500,000 c.m. lead-covered cables bring the current from the lightning arrester in the basement here to the first trolley post, where it is taken up and joins the regular feeder, one going each way. A car compressor is situated in the basement, and compressed air is used for cleaning the machines. The entire equipment of this station was furnished by the Westinghouse Co.

The station at Bond Lake, 10 miles south of Newmarket, contains four horizontal tubular boilers of 150 h.p. each, and one Scotch marine boiler of 250 h.p., built by the Polson Iron Works. The boilers are hand fired and connected to a 14 in. steam main by 6 in. leads. The steam is taken from here to two 350 h.p. and one 500 h.p. cross compound condensing engines. The 350 h.p. engines are 17½ x 32 x 42, and are belted direct to two 275 k.w. Westinghouse double current compound wound machines. These supply a.c. current at 350 volts 60-cycle, and this is stepped up to 16,500 volts for transmission to the Newmarket sub-station. The high tension line is transposed six times in this distance. These engines exhaust into independent jet condensors, and the condensed steam is pumped through heaters in the exhaust pipes back to the boilers. Steam is used at a pressure of 115 lbs., and a vacuum of 26 in. is maintained. The current on the d.c. side is generated at 570 volts, and sent direct through the switchboard to the line. The 500 h.p. engine in this station is similar to those at Keswick, and operates under the same conditions. Another compressor operated at 350 lbs. pressure is situated in the basement at Bond Lake. This station supplies current as far south as Thornhill—a distance of say 10 miles—where a trolley break is inserted, and from there down to North Toronto current is supplied by the Toronto Railway Co. and Niagara Falls power. Two 500,000 c.m. covered cables and one 4-0 covered feeder supplies current for this part of the line—a distance of 9 miles.

Recording steam gauges and recording volt meters are used at Keswick and Bond Lake Stations. The cars are despatched by means of the company's own telephone system. A bare copper circuit is strung on the same cross arms as the feeder.

The extension was announced to be opened for traffic June 1, with a service of four trips a day.

Electric Ry. Finance Meetings, Etc.

Berlin and Waterloo Street Ry.—The Berlin, Ont., Town Council has taken over the property of the Berlin and Waterloo Street Ry. Co., and is operating it, the railway having been placed under the management of the Light Commissioners.

Halifax Electric Tramway Co.—Railway earnings for April $12,982.13, against $12,221.44 for April, 1906.

Montreal Street Ry.—Passenger earnings for April, $270,540.31; total earnings, $274,635.30. against $232,145.63 passenger and $235,615.30 total for April 1906. Operating expenses, $166,421.95; rent leased lines, $339.96; city percentage on earnings, $19,015.68; interest on bonds and loans, $12,434.90; contingent for renewals, $13,527.02; surplus, $62,805.76; against $136,662.80 operating expenses; $15,555.01 city percentage on earnings, $13,777.91 interest on bonds and loans; $11,780.76 contingent for renewals, and $57,838.82 surplus for April, 1906. Rental of leased lines is an extra charge in the current year's accounts. Gross earnings for seven months ended April 30, $1,873,683; operating expenses, $1,240,078.94; fixed charges, $284,195.98; surplus, $349,408.83, against $1,641,937.89 gross earnings; $1,065,294.36 operating expenses; $219,738.59 fixed charges, and $356,904.74 surplus for same period 1905-06.

Toronto Ry.—Car earnings for April, $261,608.68, against $231,034.28 for April, 1906.

Sandwich, Windsor and Amherstburg Ry.

The annual report of the Detroit United Ry. Co., which owns the S. W. and A. Ry., for the year ended Dec. 31, 1906, contains the following particulars with reference to the latter line: The mileage on Jan. 1, 1906, was 25,184 miles, to which there had been added 0.076 miles. Passenger statistics—revenue passengers, 2,264,999; transfers, 165,720; employes, 39,872; total, 2,470,591. Receipts per revenue passenger, .0536; receipts per passenger, .0492. Mileage statistics—car mileage, 534,490; earnings per car mile, .2328; expenses per car mile, .1207; net earnings, .1121. The earnings and expenses of the different companies are not given, the totals only are published for the whole system as follows:

	1906
Gross earnings	$6,063,182.54
Operating expenses, including taxes	3,718,621.54
Net earnings from operation	$2,344,561.00
Income from other sources	58,757.73
Gross income less operating expenses	$2,403,318.73
DEDUCTIONS:	
Interest on funded and floating debt:	
Detroit United Ry.	$ 988,806.72
Rapid Ry.	135,050.00
Sandwich, Windsor & Amherstburg Ry.	18,000.00
Detroit, Monroe & Toledo Short Line Ry.	101,416.66
	$1,243,273.38
Dividends, Detroit United Ry.	625,000.00
Charged off for depreciation	250,000.00
Total deductions	$2,118,273.38
Surplus income	$ 285,045.35

There has been a special expenditure on the line of $130,080.57, for additions to the lighting plant in Windsor, Ont., the pavement and standardizing of tracks; the provision of additional feed wires; the purchase of four new open cars, and for part construction of the Windsor and Tecumseh extension. The general balance sheet of the S.W. and A. Ry. follows:

Capital stock		$ 297,000.00
Mortgage bonds		400,000.00
Bills payable		70,000.00
Accrued interest on bonds		1,500.00
Accrued insurance		366.69

ARTHUR M. GRANT, MANAGER.

Niagara, St. Catharines & Toronto Ry. & Navigation Companies.

Following are extracts from the directors' report presented at the annual meeting recently. Notwithstanding the very serious interruption to traffic during the summer by the almost complete reconstruction of the road-bed, the net earnings show a satisfactory result of the year's operations. During the year, almost the entire length of the main line between Port Dalhousie, St. Catharines and Niagara Falls was relaid with 80 lb. open hearth steel rails, the 56 lb. rails in previous use being used in the construction of branch lines. Nearly all the wooden trestles on the main line were either filled with earth filling or were replaced by steel and concrete spans and bridges, and the permanent way is now equal to any in the country, with a resultant economy in cost of maintenance and the ability to operate a faster train service.

It having been decided to be greatly to the advantage of the company to construct a branch line from Thorold, on the main line, to Fonthill and Welland, a distance of 11 miles, contracts were let, and construction to Fonthill is almost completed, and the remaining 4 miles to Welland will be completed some time this summer. This new line, it is anticipated, will add largely to the gross earnings without a corresponding increase in the percentage of operating expenses, and the net results should show an increased profit. Another branch line from St. Catharines to Niagara-on-the-Lake is under consideration. This extension should also prove a profitable undertaking, and estimates are being prepared by the engineers.

The equipment and rolling stock has been maintained in a high state of efficiency, but will have to be materially added to by reason of the increased mileage to be covered by the company's operations. The small hydraulic power station on the Welland Canal, owned by the company, has been sold and the proceeds of the sale will be expended in providing motor generators of 1000 h.p. capacity, which will be operated by electric power from Niagara Falls, and assure sufficient power for the requirements of the company's main line and the extensions now completed and under construction.

The steamboat Lakeside has been placed in first-class condition for the ensuing season's operations, and the steamboat Garden City is being thoroughly overhauled in Toronto, and will be much improved when placed in commission for the season of 1907.

The directors and officers for the current year are: President, F. Nicholls; Vice-President, E. R. Wood; Secretary-Treasurer, Æmilius Jarvis; Assistant Secretary-Treas., C. E. A. Goldman; other directors: D. D. Mann, Z. A. Lash, H. G. Nicholls.

Grain Elevator Notes.

The Northern Elevator Co. is building an elevator at Bender, Sask.

The British American Elevator Co. is considering a proposal to construct an elevator at Markaroff, Man.

The Prairie Milling Co. has been formed at Alameda, Man., and will erect a grist mill and an elevator there.

Proposals are under consideration for the construction of elevators at Melfort, Beatty Siding and Wentworth Siding, Sask.

The Saskatoon Milling and Elevator Co. is arranging to build a 100,000 bush. elevator in connection with its proposed new 500 barrel flour mill at Saskatoon, Sask.

The Society of Equity, an organization in Alberta, is reported to have contracted for the immediate erection of 120 grain elevators at different points in the prairie provinces.

A contract has been let to John S. Metcalf Co., Chicago, Ill., for the erection of an additional grain elevator at Tiffin, Ont., for the Grand Trunk Pacific Elevator Co., Ltd.

Two elevators are under construction on the line of the Midland Ry. of Manitoba at Carman, Man., one for McCabe Bros., Duluth, Minn., and the other for the Minneapolis Milling Co.

A proposition is under consideration for the erection of six elevators at different points on the shores of Lost Mountain Lake, Sask., in the event of its being opened up for navigation.

The Export Elevator Co., by supplemental letters patent, has been granted permission to decrease its capital from $500,000 to $389,800. The company carries on business under a Manitoba charter.

We are advised that it is the intention of the C.P.R. to rebuild Elevator D at Fort William, Ont., but an appropriation for the work has not been provided, and no contract for the work has been let.

The building developments in sight for the current year at Fort William, Ont., include elevators for the G.T. Pacific Ry., Consolidated Elevator Co., Ogilvie Milling Co., and Muirshead and Black.

The Canadian Elevator Co.'s elevator at Yorkton, Sask., collapsed May 2, and the 30,000 bush. of grain in storage were spread over the C.P.R. line. The whole of the north wall of the structure fell outwards.

The working house at the C.P.R. elevator D., Fort William, Ont., which was burned in the fall of 1906, is to be rebuilt, and the elevator itself is to be given an overhaul. The new working house is to have a capacity of 200 cars a day, about three times its old capacity.

The Estevan Farmers' Elevator and Trading Co., and the Hitchcock Farmers' Elevator, Trading and Supply Co., have been incorporated at Regina, Sask., under the Northwest Territories Ordinance respecting joint-stock companies'.

We are advised that the G.T. Pacific Ry. is receiving tenders for the construction of a large grain elevator at Fort William, Ont., and that until a contract is entered into, it will be impossible to give any definite information as to the dimensions of the structure.

The Montreal Harbor Commission has decided to add to the elevator facilities at the harbor by securing a fleet of 12 floating elevators and operating them in connection with its shore storage elevator. At present the Montreal Warehousing Co. operates a number of floating elevators in the harbor.

An elevator to have a capacity of 80,000 bush. is to be erected during the summer at Carstairs, Alta., by the Canadian Society of Equity. The local branch of the society has as officers: President, H. W. Wood; Secretary and Treasurer, M. R. Shantz; Corresponding Secretary, J. W. Simons, and these will have the management of the elevator.

The Montreal Harbor Commissioners have passed the following by-law: "No floating elevator shall be moved within the limits of the harbor under her own steam, without having on board a captain holding a master's minor waters certificate, and an engineer holding a third-class engineer's certificate." This by-law has been approved by an order-in-council.

T. Meredith & Co. is the title of a company incorporated under the Manitoba Companies' Act, with a capital of $1,000,000 and offices at Winnipeg, to carry on a number of businesses, including the construction and operation of grain elevators and flour mills. The provisional directors are: T. Meredith, W. W. Fraser, M. J. Armington, J. H. Nelson, and H. A. Robson, Winnipeg.

The Franklin Realty and Trading Co. has been incorporated under the Dominion Companies' Act, with a capital of $90,000 and offices at Nokomis, Sask., to carry on a number of businesses, including the ownership and operation of grain elevators and warehouses. The provisional directors are: A. L. Lockerby, T. H. Flett, G. C. Bowie, Montreal; S. A. Beman, A. C. Allison, Malone, N.Y.

The National Canada Land Co. has been incorporated under the Manitoba Companies' Act, with a capital of $100,000 and offices at Winnipeg, for the purpose of engaging in a variety of operations in connection with the development of the country, including the erection and operation of flour mills, grain elevators and warehouses. The provisional directors are: J. P. Jansen, C. J. Classen, T. L. Metcalfe, E. E. Sharpe, Winnipeg; and Hon. P. Jansen, of Jansen, Nebraska.

The Canadian Consolidated Flour Mills is the title of a company incorporated under the Manitoba Companies' Act, with a capital of $1,000,000 and offices at Winnipeg, for the purpose of dealing in all kinds of farm produce and in connection therewith to own and operate grain elevators, warehouses and flour mills, as well as a number of other industries. The provisional directors are: J. Innes, Hartney, Man.; V. Schwalm, Glenboro, Man.; P. Broadfoot, Gladstone, Man.; G. R. Wilson, Arden, Man.; J. H. Davidson, Neepawa, Man.; T. C. Bullock, Crystal City, Man.; C. C. Smith, Carnduff, Sask.

The Lake Champlain Transportation Co. has purchased the tug Peerless at New York, and will bring her to the lake via the Gulf of St. Lawrence and the Richelieu River.

MARINE DEPARTMENT.

Statistics of Canadian Shipping.

The total number of vessels remaining on the register books of the Dominion Dec. 31, 1906, including old and new vessels, sailing vessels, steamers and barges, was 7,512, measuring 654,179 tons register tonnage, being an increase of 187 vessels, and a decrease of 15,646 tons register, as compared with 1905. The number of steamers on the registry books on the same date was 2,810, with a gross tonnage of 375,263 tons. Assuming the average value to be $30 a ton, the value of the registered tonnage of Canada, Dec. 31, would be $19,625,370. Following is a summary showing the number of vessels and their tonnage by provinces:

	Sailing Ships and Steamers.	Steamers.	Gross Tonnage of Steamers.	Net Tonnage of Sailing Ships and Steamers.
Nova Scotia	2,159	212	25,159	187,328
Ontario	1,978	1,401	162,234	180,340
Quebec	1,344	406	89,973	143,340
New Brunswick	939	150	12,480	44,471
British Columbia	782	507	70,730	77,746
P. E. Island	149	16	3,923	10,761
Manitoba	149	107	8,138	8,341
Yukon District	11	10	2,485	1,763
Saskatchewan	1	1	141	89
Grand Total	7,512	2,810	375,263	654,179
Total, 1905	7,325	2,654	362,888	669,825

Alberta remains the only province in which no provision has been made for the registration of vessels. The ports of registry are distributed as follows: Ontario, 38; Nova Scotia, 21; New Brunswick, 7; Quebec, 6; British Columbia, 3; Prince Edward Island, Manitoba, Saskatchewan and Yukon, 1 each.

The ports having a net tonnage of 10,000 tons and over are:

	Vessels. Steam.	Sailing.	Net tonnage.
Montreal, Que	244	394	99,502
Victoria, B.C.	138	107	43,676
Windsor, N.S.	14	86	40,424
Quebec, Que.	151	485	39,394
Toronto, Ont.	301	88	33,847
Ottawa, Ont.	234	158	30,893
St. John, N.B.	82	257	28,558
Lunenburg, N.B.	9	300	26,593
Vancouver, B.C.	272	99	23,886
Parrsboro, N.S.	5	100	22,681
Halifax, N.S.	79	347	21,347
Kingston, Ont.	116	72	19,809
Yarmouth, N.S.	27	270	17,103
Maitland, N.S.	1	21	11,151
St. Catharines, Ont.	60	37	10,885
New Westminster, B.C.	97	69	10,184

The largest vessels on the register are:

STEAM.

Name.	Home Port.	Tonnage. Gross.	Regis.	h.p.

Canada	Windsor, N.S.	Ship	2,137
Kings County	" "	"	2,061
Lord Templetown	Victoria, B.C.	Barque	2 048

The steamer Wyefield, 3,235 tons gross, was removed from the register while the list of vessels for 1905 was going through the press. The ship Canada is a new sailing vessel on the register of over 2,000 tons. The names of 22 vessels were changed, and the register of 71 vessels were closed during the year. Of these latter the causes assigned for the closing af the register were: Broken up, 23; wrecked, 11; transferred to St. Johns, Nfld., 9; lost, 8; transferred to Bridgeton, Barbardoes, 5; stranded, 4; sold to foreigners, 4; burnt, 3; condemned as unseaworthy, missing, abandoned at sea and sunk by collision, one each.

The number of new vessels built and registered during 1906 was 397, measuring 21,741 tons register tonnage. Estimating the value of the new tonnage at $45 a ton, it gives a total value of $978,345 for new vessels. The new vessels were built and registered as follows:

	Vessels.	Tons.
Nova Scotia	154	7,538
British Columbia	82	2,774
Ontario	74	6,014
Quebec	50	3,940
New Brunswick	23	431
Manitoba	9	808
Prince Edward Island	4	147
Saskatchewan	1	89
Yukon District	....	....
Total	397	21,741
Total for 1905	352	19,781

The names, dimensions, etc., of these vessels were published in our columns from month to month, and lists are being published of the vessels registered during the current year.

Lake Freight Matters

Our Winnipeg correspondent wrote May 15: "The late opening of navigation to Lake Superior has had a decided strengthening influence on the freight market, as large numbers of U.S. boats that usually make one or two trips in the grain trade before entering on their ore contracts, were this season compelled to immediately commence on the ore, with the result that grain rates from Port Arthur and Fort William to Buffalo were forced up from 2c. to 2¼c., with tonnage scarce at that figure, and as most of the Canadian Georgian Bay tonnage had been tied up for the long trip to Kingston for two trips, and in some cases three trips, the effect was to mark rates up all around, and where bay tonnage for the opening had been chartered at 2c., later trips were made at 2¼c., and the present indications are that the Canadian fleet will be kept profitably employed in the grain trade until the 1907 crop commences to move, and owing to conditions on the U.S. side of the line a greater volume of coal will also move in Canadian bottoms than in former years, so taking it from all standpoints, the outlook for a prosperous season for the Canadian fleet is most encouraging.

The increase in the Canadian grain fleet has not probably been noticed by others than those directly interested, and it may surprise the public to learn that the increase has been over 100% in three years, and with vessels now actually in service, en route from England and actually being built in Canadian shipyards, the fleet now amounts to some 65 vessels, with a capacity to Georgian Bay ports of 5,453,000 bush. a week, or at the rate of 779 cars a day, which is a greater amount than the western railways have yet been able to handle to the lake ports. Of course, a number of these vessels are capable of trading through the Welland Canal and to Montreal, in which case, instead of making a round trip per week, they take some 10 to 14 days for the return trip to Kingston, and three weeks to Montreal, which reduces the weekly capacity to about 4,500,000 bush., as the Montreal traders are mostly engaged in the package freight trade and return loaded. The Canadian fleet is now made up as follows, viz.:

S.S.	Fairmount	capacity 110,000	bushels

Icebreaking on Thunder Bay.

Port Arthur and Fort William have had a peculiar experience this season. On April 10 the icebreaking tug James Whalen left Port Arthur for Fort William, breaking through ice 24 to 32 inches thick. At the mouth of Kaministikwia River, the ice was windrowed to a depth of 6 or 8 ft. and dynamite had to be used. On the morning of April 11, the steamers Murch and Bixby were placed for loading grain, and the James Whalen returned to Port Arthur. During the night the channel cut froze up so hard that on April 12 teams were driven across it. The tug was then set to work to cut a channel to open water in the lake. Ice from 24 to 36 in. in thickness was broken, and dynamite was used where the ice was windrowed. On April 28 the steamers were sighted coming from Sault Ste. Marie and the James Whalen piloted the following steamers into port: Midland Prince, light; Martin Mullen, Harry Coulby, Matthew Andrews, H. B. Hawgood and Saturn, with coal; and the Midland Queen, light. The captains of these steamers have put on record their appreciation of the services of the tug, and the Port Arthur Board of Trade in commenting upon the fact, and in urging the granting of a subsidy by the Dominion Government to the tug for a term of years for icebreaking services, set forth that in the ordinary course of events it was not expected that navigation would have been opened until May 24, that within four days of the opening of navigation 42 vessels of 192,550 tons arrived and departed with full cargoes. The stormy weather which subsequently prevailed drove the ice back, with the result that from May 11 to May 16 all traffic was suspended. Sixteen vessels, which had been tied up in the vicinity of Welcome Island, were piloted in through a channel broken by the James Whalen. The head of the lakes port has therefore been opened up twice this season.

The G.T.R. has filed its local standard passenger tariff no. 7, C.R.C., no. E 485, on a basis of 3c. a mile, which tariff cancels C.R.C. no. E 1.

A BOWSER OIL SUPPLY CAR EQUIPMENT

For Delivering Oil to Signal and Interlocking Towers, Way Stations, etc.

Heavy steel tanks of any desired capacity, with flanged steel heads and baffle plates to prevent splashing and to withstand the severe usage to which tanks are subjected.

These tanks are equipped with Self-Measuring Pumps that draw and accurately measure five gallons at each full stroke, and can be instantly adjusted to pump any desired part of five gallons.

Specially designed cars are not necessary. We can equip any standard car. Send for Bulletin 18.

Atlantic and Pacific Ocean Marine.

N. Lachance, for 36 years in the employ of the Allan Line, as a pilot on the St. Lawrence, died at Quebec recently, aged 76.

The S.S. Victoria, one of the steamers engaged in the new Vancouver-Mexico line, was reported ashore off Coronado, Cal., May 7.

Capt. Lauder, at one time chief officer of the C.P.R. S.S. Milwaukee, has retired from the marine service and has purchased a farm about 20 miles west of Edmonton, Sask.

The first over-sea steamer to arrive in the St. Lawrence was the Donaldson Line S.S. Marina from Glasgow, April 27, and she with the Allan Line S.S. Hibernian reached Montreal May 2.

The Allan Line S.S. Victorian, sailing from Montreal Mar. 24, called for mails off Sydney, N.S., and it is announced that mail steamers leaving Montreal, up to July 4, will call for mails at that port.

We have been advised by Donaldson Bros., Glasgow, Scotland, that they are not at present building another steamship for their Canadian trade, as press reports referred to in our last issue recently stated.

A recent press despatch from London, Eng., stated that the G.T.R. opened up negotiations with the White Star Line with a view of securing three of its steamships to open up a line between Liverpool and Montreal.

Nothing has been done with the wreck of the S.S. Bavarian now lying ashore at Indian Cove, Que. The engineers who had charge of the floating operations at Wye Rock, are consulting as to what is best to be done.

The Furness Line service between Halifax, N.S., and London, Eng., is to be strengthened by the addition of the steamships Rappahannock, Shenandoah, and Kanawha. The latter made her first trip to Halifax early in May.

J. T. Piper, for many years engaged on the Allan Line passenger staff at Quebec and Halifax, N.S., died at Quebec recently. He was a brother of Mrs. Lambkin, wife of the Assistant General Passenger Agent Intercolonial Ry., Halifax.

The Shipping Federation reports that desertions of seamen from trans-Atlantic vessels are becoming very common at Montreal. The blame for this is chiefly laid at the door of employment agents who tempt the crews to desert by the offer of higher wages.

The Allan Line, it is reported from Glasgow, Scotland, has placed an order for a 10,000 ton steamer similar to the Corsican, described in another column, for its Glasgow-Montreal service. The new steamer will be named the Hesperian, and is to be ready for service by May, 1908.

The Minister of Marine met a committee of Lloyds in London, Eng., May 17, and discussed the question of insurance rates for trans-Atlantic steamships using the St. Lawrence route. He described fully what the Dominion Government was doing with a view to making the route a thoroughly practicable and safe one.

Early in 1908 the new service between Vancouver and Great Britain via Australia and New Zealand will be put in operation. The new line is being subsidized by the Australian Government. It is proposed to give a sailing every three weeks from Great Britain to Vancouver direct, by way of the Suez Canal, Australia and New Zealand.

Speaking at the annual meeting of the British Iron and Steel Institute May 9, Sir Hugh Bell, the President, said it was not at all incredible to forecast that a century hence a ship with hardly any machinery or crew would speed across the Atlantic propelled by electric force generated by Niagara Falls and transmitted to the vessel wirelessly.

An official announcement was made by the Dominion Line in Liverpool, Eng., May 6, that an order had been placed in Belfast, Ireland, for the construction of another 14,000 ton twin-screw steamer for the Liverpool-Canada trade. The new steamer will be similar in size to the Alberta, now being built, will have a speed of 16 knots an hour, and it is reported will be named Albany.

The Shipping Federation of Canada has issued a signalling code for use at sea to communicate the ice conditions between vessels navigating the straits of Belle Isle. It has been prepared by Capt. W. H. Logan, of the Furness Line, and has been generally approved of by shipmasters. The circular gives instructions for using the code by day and night, and the code itself is divided into two sections: (1) Belle Isle to Point Amour; (2) Belle Isle to the 50th meridian.

The last sailing from St. John, N.B., of the winter port season was the C.P.R. S.S. Montreal, May 6. The statistics of the winter's trade show: value of freight handled, $19,387,300; grain shipped, 3,349,162 bush. import and export freight handled by C.P.R., 28,908 carloads; passengers landed, 30,025. The C.P.R. steamers with 37.7% of the sailings carried 65% of the outward freight; the Allan Line steamers with 17% of the sailings 12%, and the other lines with 28% of the sailings carried 13% of the outward business.

At the meeting of the Colonial Conference in London, Eng., May 14, Sir W. Laurier submitted a resolution favoring the establishment of a new mail route from Great Britain to Australia and New Zealand by Canada. The home port, it is suggested, shall be at Liverpool, but Bristol and Southampton shipping interests are desirous of putting in a claim for the terminals. The project is viewed favorably in many quarters, but an opinion is expressed that the amount of subsidy required will be larger than the benefits which will accrue to the participating countries.

A strike of longshoremen at Montreal, May 15, practically tied up trade at the harbor. There were 60,000 tons of freight lying at the sheds and 18 steamers lying alongside on May 14. The Department of Labor has been appealed to, and the question is under consideration as to whether the strike does not come within the terms of the act passed last session, which provides for the imposition of fines and imprisonment for leaving work before any matter in dispute be investigated by a board of conciliation. The members of the Shipping Federation applied for the appointment of such a board May 14, and the longshoremen later. The strike however collapsed May 23.

The English Court of Appeal has reserved judgment in the case of Tasker & Co. against Allan Bros. & Co. The action arose out of the freight charges of a consignment of flour from Milwaukee, Wis., to London, Eng., by the S.S. Hibernian. The Hibernian went ashore at Stormy Point, Nfld., and 366 bags of the 1,500 bags of flour forming the consignment were damaged and sold. The remaining 1,134 bags were transhipped and duly delivered, and the question in dispute was as to the freight charges, the plaintiffs alleging they had been overcharged £14 8s. 3d. The bills of lading provided for a through freight, and the plaintiffs contended they were to pay on the freight actually delivered, and were not liable for the inland charges on the portion of the consignment which was sold as damaged.

The Canadian Lake Line str. Morena, with a cargo of pig iron for Toronto, ran on the rocks near Cape Race, Nfld., May 19, and tore the bottom of the hull out. The vessel, which was on her way out from Great Britain to take up her new run between Montreal and Port Arthur, Ont., was fully insured.

The Steamboat Deerhound.

The Post Office Department has purchased in England the str. Deerhound, formerly owned by the West Cornwall Steamship Co., and engaged in the passenger, mail, and freight (mainly early vegetables and cut flowers) trade between the Scilly Isles and Penzance, Cornwall, for use as a mail tender at Rimouski, Que. The Deerhound is a steel twin screw steamer, 483 tons gross, 39 tons register, built and engined in Birkenhead in 1901. Her dimensions are: length, 189 ft.; breadth, 26.1 ft.; depth of hold, 9.5 ft.; draught, 8 ft. 6 in. She is fitted with triple expansion engines, cylinder, 16, 24 and 38 in. diameter by 24 in. stroke, steam being supplied by two return tubular boilers, at 160 lbs. pressure. On a consumption of one ton of Welsh coal an hour she steams 14 to 15 knots an hour and with forced draught will make 16 knots. The hull is divided by five watertight bulkheads; there are two decks, the promenade one being 139 ft. long; and there are dining and ladies' saloons. Electric lights is fitted throughout; steam steering gear is provided and there are capstans fore and aft She is reported to be an excellent seaboat.

HOTEL IMPERIAL

NEW YORK'S MOST POPULAR HOTEL

BROADWAY, 31st to 32nd STREET

RECENTLY ENLARGED TO 800 ROOMS

European Plan. Sumptuously refitted throughout. In the centre of New York's shopping and theatrical district. An ideal stopping place. Rates reasonable, with the best of service.

THE CONTINENTAL IRON WORKS, WEST AND CALYER STS., BOROUGH OF BROOKLYN. Near 10th and 23rd Street Ferries. NEW YORK

Sole Canadian Agent—MR. GEORGE HOLLAND, M.C. Soc. C.E., P.O. Box 529, MONTREAL

Maritime Provinces and Newfoundland.

Navigation on the St. John River, N.B., was opened April 29.

The Mahone Bay, N.S., schooner Bretwelda has been bought for St. Jacques, Nfld., owners.

The str. Beatrice, wrecked off Cranberry Head, N.S., in the fall of 1906, has been sold to J. C. Larder, for breaking up.

An order-in-council has been passed approving of by-laws for the pilotage district of Hillsboro and Hopewell, N.B.

The three-masted schooner Island City, owned in Moncton, N.B., which left Chatham, N.B., Nov 28, 1906, for New York, has been given up as lost.

The Charlottetown Navigation Co.'s str. Empress made her first trip for the season between Prince Edward Island and the mainland, May 3.

One of the last of the Charlottetown, P.E.I., fleet of square-rigged sailing ships, the Charles E. Lefurgey, was sold at Gulf Port, Miss., recently for $475.

Capt. Reid has purchased the str. Donzella in Great Britain for the coal trade, and was in charge on the voyage out. The steamer arrived at Halifax April 30.

The name of the schooner Mahone Packet, official number 116,524, registered at Lunenburg, N.S., has been changed by order-in-council to that of Olive Evans.

The Plant Line str. Halifax has returned to Halifax, N.S., from Key West, Fla., from which port she had been running during the winter. She went on the Halifax-Boston run May 1.

The Stetson, Cutter Co. of St. John, N.B., has purchased the tug Help from Capt. G. W. Brooks of Liverpool, N.S., and will use her in log towing for the pulp mills at Mispic and Union Point.

The Newfoundland Legislature at its recent session granted the following sums for additional steam services: Fogo district, $4,375; Northern Coastal service, $1,750; Bell Island, $500.

The str. Universe, running between Louisbourg, N.S., and New York, with coal, while returning to the former port in ballast, struck on White Point, N.S., April 25, and has since become a total wreck.

No tenders having been received for floating the stranded str. Turret Bell, Lloyds' agents are now offering the wreck for sale. The Turret Bell ran on the rocks at Cable Head, P.E.I., during a storm in the fall of 1906.

The Newfoundland Legislature at its recent session passed votes amounting to $32,489 for salaries of lighthouse keepers, $29,760 for the maintenance of lights and $4,000 for contingencies connected with the service.

A proclamation declares the port of Amherst, N.S., to be a port to which Part 12 of the Canada Shipping Act, chap. 113 of the Revised Statutes of 1906, shall apply, and F. A. Cotes has been appointed harbormaster.

The Newfoundland Legislature at its recent session passed an act respecting the whaling industry, which provides among other things that tow boats shall not be used in the prosecution of the industry under a penalty of $200 for each offence.

The Three Rivers Steamship Co., Georgetown, P.E.I., is having built at Shelburne, N.S., a steamer to take the place of the Electra. The vessel was launched April 26, and was taken to Yarmouth, N.S., for her engines, The principal dimensions are: length, 120 ft.; breadth, 25 ft.; depth of hold, 9 ft.

By an act passed at the recent session of the Newfoundland Legislature, schedule B attached to Chap. 118 of the Consolidated Statutes, entitled "Of Newfoundland Lloyds Classification and the Encouragement and Improvement of Shipbuilding," is repealed, and a new schedule is enacted. The schedule deals with the specifications of vessels claiming bounty and local class.

A pilotage district has been established for the Basin of Minas, N.S., the limits being south of a line drawn from Cape Blomidon to the south extremity of the largest of five islands in the county of Colchester, and thence to Cape Tenny. The following have been appointed pilotage commissioners for the district: Capt. W. R. Potter, Canning, N.S.; Capt. S. Smith, Lockhartville, N.S.; B. Borden, Avonport, N.S.

The str. Sygna, built recently at Middlesbrough, Eng., for charter by the Dominion Steel Co, Sydney, N.S.; arrived at that port, April 28. She is constructed on the cantilever system, which dispenses with all beams, pillars, webframes, etc., and is fitted with waterballast tanks, carried alongside under the deck on each side. She is practically of the same dimensions as the Christian Knudsen, described and illustrated in our issue of Jan., 1906.

The Nova Scotia Steel and Coal Co. has the following steamers under charter for its ore trade: Othello, 6,600 tons; Hero, 6,600 tons; Storford, 6,000 tons; Agnar, 2,450 tons; and the following for its coal trade: Wegedesk, 7,500 tons; Hermes, 6,700 tons; Somerstadt, 6,600 tons; Otta, 5,500 tons; Oscar II, 5,500 tons; Wagush, 5,500 tons; Bjorgvin, 4,400 tons; Aarstein, 2,450 tons; and Pors, 900 tons. The company's own steamers Woburn and Wasis will also be operated in these trades.

The Gloucester Navigation Co., which has been incorporated in New Brunswick, has a capital of $40,000 and offices at Caraquet, N.B., and proposes to engage in the navigation business on the Caraquet shore of the province. It is stated that $12,000 of the capital has been subscribed, and an arrangement has been made to purchase a steamer at St. John, N.B., for $4,500. Provincial and Dominion subsidies are being arranged for the service. The officers of the company are: President, Dr. A. Sarmany; Vice-President, Dr. F. X. Comeau, Secretary-Treasurer, P. P. Morais.

The following appointments have been made by the Dominion Government: Capt. M. Daly, harbormaster for Bathurst, N.S.; H. Thorpe, wharfinger at Chipman's Brook, N.S.; B. C. Knock, shipping master at Lunenburg, N.S.; Capt. Thos. Townsend, Secretary and Treasurer of the pilotage authority of Lunenburg, N.S. Capt. Thos. King, portwarden at Windsor, N.S.; S. Smith, wharfinger at Port Greville, N.S.; I. Beach, harbormaster at Port Greville, N.S.; A. Cheney, harbormaster at Whitehead, N.B.; J. W. Worster, harbormaster at Seal Cove, N.B.; T. Ingalls, Sr., harbormaster at Grand Harbor, N.B.

The Port Hood Richmond Ry. Coal Co. during the current season of navigation will utilize four or five steamers for the transportation of coal from its mines at Port Hood, N.S. It has purchased the James Irwin, 330 tons (which arrived from Liverpool, Eng., April 28); and expected to purchase another steamer of about 350 tons register in Great Britain, by the end of April. It has also chartered the Garibaldi, of 1,000 tons, and will charter other vessels as required. The steamers will carry return freight between Halifax and Port Hood on the one hand, and Prince Edward Island and New Brunswick ports on the other.

By an order-in-council the second section of the by-laws of the pilotage authority of St. John, N.B., has been repealed, and a new section substituted. The section deals with the qualifications necessary to eligibility for license as a pilot in the district as follows: "Every person not already licensed applying to be licensed as a pilot for the pilotage district of St. John, must make application to the Secretary at the office of the pilotage authority (on the printed form) and be a resident of the city or county of St. John, of not less than 21 years of age, and shall have continuously served, as an indentured apprentice (approved by the pilotage authority) in a licensed pilot boat, for a term of not less than five years, and shall have made two round voyages to Europe and back, or one round voyage to South America and back, as an articled seaman in either full-rigged vessels or steamships, in the discretion of the pilotage authority, and shall produce certificates from the masters of the vessels in which he made the voyages as to his capability as a seaman; also a certificate of good character while serving his apprenticeship from the pilot to whom he was indentured, and shall be examined before examiners appointed for that purpose by the pilotage authority, and at that examination shall answer such questions and show such fitness as will warrant them in giving him a certificate of his competency to perform all the duties of a pilot in the pilotage district; and a license shall forthwith issue to such person, on payment of the expense of such examination and a fee of $5."

Province of Quebec Marine.

The Quebec Superior Court has decided that the bed of the Magog River belongs to the Crown, the river being a floatable one.

The name of the steamer Garnet, official number 112,270, registered at Montreal, has been changed by order-in-council to Emerald.

The iron ship Dybrag, which was wrecked off Escoumains, in the fall of 1906, has been purchased by F. Gunn, Montreal, and is being broken up.

Navigation on the St. Lawrence River was opened April 24, and on April 30 water was let into the Lachine canal, and the inland season of navigation of 1907 opened.

The Department of Railways and Canals has under consideration tenders for the removal of shoals and the improvement of the channel west of the upper entrance to the Galops canal.

The Richelieu and Ontario Navigation Co.'s new str. Rapids King was given a trial trip in Toronto May 10. She left a few days later to take up her run through the St. Lawrence rapids to Montreal.

The Department of Marine does not propose at present to purchase a steamer to patrol the buoys, and perform service as a lighthouse tender on the St. Lawrence River, but will use one of the Government steamers for the purpose.

The Quebec Steamship Co. has sold its str. Caribbee, exMerionethshire to D. Bacon, New York. She was built at Glasgow, Scotland, 1878, and since she was bought from the Shire Line has been running for the Q.S. Co. out of New York.

The Montreal Harbor Commissioners are suing the owners of the str. Albert Marshall to recover $50,000 for the loss of one of their dredges sunk in a collision in Oct., 1906. Justice Dunlop presided and Capt. J. J. Riley acted as nautical assessor.

The Quebec Board of Trade has passed a resolution asking the Dominion Government to abolish all harbor dues, including hospital dues, now prevailing against shipping visiting the port of Quebec, thereby placing the port on an equal footing with Montreal.

The Richelieu and Ontario Navigation Co.'s str. Quebec has been moved from Sorel to Montreal, where the fitting and decoration will be completed. It is expected that

PATENTS PROTECTED BY THE PATENT TITLE AND GUARANTEE CO. NEW YORK

THE ANDERSON AUTOMATIC VALVES AND WATER COLUMNS FOR RAILROADS

Anderson Patent Altitude Valve
Connected to Tank Service
No Waste of Water
No Freezing of Floats

This valve maintains a uniform stage of water in tank or reservoir, doing away with the annoyance of floats or fixtures in the tanks. Accessible and protected from frost. Adapted for Buildings regardless of height.

Anderson Patent Float Va ve "Simply Has No Equal."

Cushioned in opening and closing. Float swivels to any angle desired.

"Angle or St. Way."

The Valves with an Absolute Guarantee.

For high and low pressure. Absolutely controls the water level in tanks or reservoirs. Instantly adjusted to operate quick or slow, as desired. "No waste of water." The upper portion of body being lined with bronze, also the valve or piston being solid bronze, makes the valve indestructible. Railroad men that use them say, "Their equal is not made."

"Angle or St. Way"

The Anderson Cushioned Non-Return Valves

"Life and Property Insurance Valves"

Why! endanger your power plant by using the regular angle, globe or gate valves at the boilers when you can get the Anderson Cushioned Non-Return Valve, which is an AUTOMATIC STOP VALVE, also a HAND-STOP VALVE, all in one?

The Heaviest Line OF AUTOMATIC VALVES AND TRAPS

For High-Pressure Steam and Water Service ever Presented to Users.

WARING-WHITE BUILDING CO., London, England

she will be completed and ready for her run between Montreal and Quebec July 1. Capt. A. Baker, of Quebec, has been appointed master.

Following are the officers and directors of La Compagnie de Navigation de Quebec for the current year: President, J. D. O. Picard; Vice-President, J. S. Matte; Treasurer, Thos. Duchaime; other directors: J. E. Sampson, L. A. Hudon, J. Beaudry, E. Cloutier, N. Portier, L. Beaubien, J. D. Marier.

The Minister of Marine is visiting the Baltic Sea, where ice crushing steamers are operated yearly to keep navigation open during the winter, with a view of gathering information that may be useful in perfecting designs for two additional ice crushing steamers which the department proposes to order for the St. Lawrence.

The engineers of the Department of Railways and Canals will investigate during the current summer the question of the construction of dams on the Ottawa River to conserve a steady flow of water during the dry season. It is claimed that every additional foot of water in the upper reaches of the Ottawa River adds three inches to the depth of the water in Montreal harbor.

The North Shore Transportation and Wreckage Co. is having the str. Polino overhauled and generally improved and redecorated. It was expected that the steamer would be put on the run between Montreal and Natashquan by the end of May, the officers being: O. C. Bernier, master; and U. Lacroix, chief engineer. It is proposed to have the steamer renamed Natashquan.

The Battle Island Transportation Co. has been incorporated under the Dominion Companies' Act, with a capital of $18,000 and office at Montreal, to carry on the business of forwarding and transporting goods and passengers on the rivers, lakes and waters of the Dominion of Canada; and to acquire steam and other vessels, or shares in companies owning the same. The provisional directors are: G. L. Wells, R. B. Hunter, T. Hunter, G. T. Webb, Fulton, N.Y.; and A. H. Lomer, Montreal.

The boundaries of the harbor of Saut au Mouton, Que., have been declared to include all the waters of the St. Lawrence River east of the eastern extremity of the most easterly Esquamine islet, west of a line drawn southeast from the extremity of Mille Vaches point, and north of a line drawn parallel to the shore line and at a distance of three marine leagues therefrom, together with all navigable waters emptying into this area. C. E. Holet has been appointed the first harbormaster.

The Canada-Bahama Fruit and Development Co. has been incorporated under the Dominion Companies' Acts, with a capital of $300,000 and offices at Montreal, with power among other things to carry on the business of shipowners and charterers, and of carriers and forwarders, of fruit, produce and merchandise of all kinds, and to make contracts for the carriage of mails, passengers, goods, wares and merchandise either in its own vessels or otherwise. The provisional directors for the purpose of incorporation are: V. E. Mitchell, E. F. Surveyor, J. W. Weldon, E. M. McDougall, S. J. LeHuray, of Montreal.

The New York State Assembly has passed an act providing for the incorporation of the Long Saulte Development Co. The act authorizes the company to construct and maintain dams, canals, power houses, and locks at or near Long Saulte Island, for the purpose of improving the navigation of the St. Lawrence River, and developing power from the water thereof, to construct and maintain a bridge, and carry on the manufacture of commodities. The matter is being considered by the International Waterways Commission. A. C. Davis, on behalf of the company, said the proposed works would render navigable a channel not now only open to vessels, and would give 45,000 h.p., against 4,000 h.p., which could be developed without the dams.

The Department of Marine and Fisheries has issued a notice to the effect that the provisions of the Canada Shipping Act, chap. 113 of the Revised Statutes of Canada, respecting the shipping and discharge of seamen on inland waters must be strictly observed on and after June 1. The act provides that the master must have a signed agreement with every seaman whom he carries as one of his crew.

THE BAKER HOT WATER CAR HEATERS

RIVETED STEEL SHELL HEATER

Attention is especially called to our FIRE PROOF HEATERS, with jointless steel casings, made of ¼ in. steel; Fire Proof and Break Proof. Single and Double Coils.

RIVETED STEEL HEATER, with Double Coils. Meets the demand for a smaller and cheaper Heater than our Fire Proofs.

PERFECTED HEATERS, Single and Double Coils.

The "MIGHTY MIDGET" HEATER, 19 inches in diameter. This Heater is especially adapted to ELECTRIC CARS.

STEAM ATTACHMENTS, to circulate the water of the Baker Heater by steam from the locomotive; or will circulate hot water independently of any Heater.

PIPE AND PIPE FITTINGS for Baker Heater work.

Avoid Infringements by ordering direct from the makers.

DOUBLE COIL JOINTLESS FIREPROOF STEEL HEATER

THE WILLIAM C. BAKER

HEATING AND SUPPLY COMPANY

143 Liberty Street - NEW YORK, U.S.A.

Ontario and the Great Lakes.

W. J. Farrasy has been appointed agent at Cleveland, Ohio, for the Merchants' Montreal Line.

The Midland Prince, the Midland Navigation Co.'s new vessel, left Collingwood on her first trip April 23.

The str. Missisquoi of Rockport, Ont., has been refitted, and her boilers rearranged prior to the opening of navigation.

Jno. McNaughton, assistant superintendent of the U.S. canal, Sault Ste. Marie, Mich., died there of pneumonia, May 10.

The str. Argyle is reported to have been chartered to a U.S. company for the season to run to points on the south shore of Lake Ontario.

The str. Corunna of the Canadian Lake Line sailed from Middlesbrough Eng., April 25, with a cargo of 1,000 tons of pig iron to be discharged at Toronto.

Capt. E. B. Smith of the Lake Ontario and Quebec Navigation Co.'s str. Alexandria commenced his 52nd season of navigation on the St. Lawrence River and Lake Ontario, May 1.

The Lake Erie Navigation Co. has been granted a license in Ontario under the law respecting extra-provincial companies, Alex. Leslie, Walkerville, Ont., being appointed its attorney.

W. H. Hopkins, Parry Sound, Ont., has been appointed harbor master of Depot Harbor, Ont., and H. R. McAllister, wharfinger of the Government wharf at Cockburn Island, Ont.

The tug Rheatta, of Buffalo, N.Y., has been purchased by Capt. G. Kinnie and his brother, J. Kinnie, marine engineer, of Midland, Ont. She will be operated on Georgian Bay.

The Niagara, St. Catharines and Toronto Navigation Co.'s str. Garden City has been given an extensive overhaul at Port Dalhousie, Ont., during the winter, and went on her run May 18.

The Montreal and Cornwall Navigation Co., commencing April 30, put on a service of four trips a week from Cornwall, Ont., to Montreal, Que. This will be double the service given in 1906.

The Turbine Steamship Co. is reported to be considering the purchase or chartering of two additional steamers, one of which will run between Toronto and north shore points to Brighton, Ont.

The new twin screw steamer for the Otonabee Navigation Co. was launched at Harwood, Ont, May 15, and named the Otonabee. When completed she will ply on Rice Lake and connecting waters.

The W. G. Kerr, owned by the Western Transit Co., Tonawanda, N.Y., cleared from Duluth, Minn., April 30, with a cargo of 440,000 bush of grain, the largest ever carried by a single vessel on the Great Lakes.

An order has been placed in Dundee, Scotland, for a new steamer for the Great Lakes trade. The vessel is to be 250 ft. long, 43 ft. beam and 26 ft. moulded depth, and will be ready for delivery in Sept.

The New Ontario Steamship Co. has passed a by-law increasing its capital stock from $100,000 to $500,000, which by-law has been confirmed by supplemental letters patent issued under the Ontario Companies' Act.

The Ontario Dock Co. has deposited with the Department of Public Works, Ottawa, plans of the dock it proposes to erect south of Lake St., Toronto, and is applying for an order-in-council approving of the same.

The tug Beaver of Cornwall, Ont., has been purchased by F. Gilbert, contractor, Montreal, from Capt. Bonar. The Beaver was built at Belleville, 1892, and has been engaged in towing on the Cornwall Canal for several years.

The Spanish River Navigation Co. has purchased the steam barge Arctic from the Rathbun Lumber Co., Deseronto, Ont. Capt. Bernhardt took charge of the vessel on the trip from Deseronto to Spanish River.

The Niagara Power Co. recently purchased the Gem, a small harbor tug, in New York. The Gem left for Buffalo, April 26, via Halifax and the St. Lawrence River and canals. It was expected the tug would be 35 days making the 1,700 miles trip.

The new passenger str. City of Cleveland, under construction at Detroit, Mich., for the Detroit and Cleveland Navigation Co., for the Detroit-Cleveland run, was destroyed by fire May 13. The damage is about $700,000, which is well covered by insurance.

Survey parties have been placed on the route making the final location of the extension of the Trent Valley Canal from Healey's Falls to Trenton, Ont. It is expected that this section of the canal will be placed under contract at an early date.

Tenders were received to May 29, by the Department of Railways and Canals, for the works connnected with the construction of section 2 of the Holland River Division of the Trent Canal. A. T. Kerr, Newmarket, Ont., is Division Engineer in charge of the work.

Capt. Thos. Donnelly, Kingston, Ont., has been seriously ill for some months, and has been ordered to give up all work for some time. His illness was the result of a severe cold contracted while investigating the loss of the str. Golspie in Dec., 1906.

Owing to the collision of the tug Schneck, bound from Sault Ste. Marie, Ont., to Ogdensburg, N.Y., with the Michigan Central Rd. bridge crossing the Welland Canal, near Welland, Ont., May 4, navigation on the canal was suspended until the evening of May 6.

The Northern Navigation Co.'s Lake Superior Division, operating in connection with the G.T.R. from Point Edward, Ont., consists of the steamers Huronic, Saronic, Majestic and Ionic. It is intended to supplement these steamers by extra tonnage in the fall.

Jas. McDonald is having built at Collingwood, Ont., a 75 ft. tug for his fishing business at Blind River, Ont. A second tug, of similar dimensions, is being completed at the same yard for Port Rowan, Ont., owners. This tug will be taken round to Lake Erie on completion.

Rosedale Limited has been incorporated under the Ontario Companies' Act with a capital of $100,000 and offices at Hamilton, Ont., to carry on a general navigation and transportation business. The provisional directors are: R. O. and A. B. MacKay, J. P. Steedman, T. Hobson, L. F. Stephens, of Hamilton, Ont.

The Ontario Court of Appeal has reserved judgment in the action of the Hamilton Steamboat Co. against MacKay. This was an action for an injunction to restrain defendants from using a slip at the foot of James St., Hamilton, in any way that might derogate from a grant made to plaintiffs by MacKay in Nov., 1888.

We are advised that while a vote has been passed by the Dominion Parliament for the provision of a steamer for use to patrol the buoys and other navigation marks on the Great Lakes, the Department does not propose to purchase a steamer. As in former seasons a suitable vessel will be chartered to perform the work.

The Dominion Government str. Bayfield has been given a thorough overhaul at her winter quarters, Owen Sound, Ont., during the winter. She is being fitted out for her summer's work on the hydrographic survey of Lake Superior, upon which she will start early in June. She will be stationed this summer in the vicinity of Rossport.

M. J. Butler, Deputy Minister of Railways and Canals, and L. Coste, C.E., have been directed by the Dominion Government to make a report upon the harbors on the eastern and southern shores of Georgian Bay. The Transportation Commission in its report recommended the development of one or more of these ports by the Dominion.

Upon the application of the Imperial Loan and Trust Co., Toronto, a creditor for $7,886.16 debentures, an order was granted May 15 directing the winding up of the Lake Ontario Navigation Co., which owns the str. Argyle. A motion was subsequently made to rescind the order, and the matter was adjourned to enable the company to pay the money.

The Wolverine Fish Co., which is authorized by the State of Michigan to own and operate steam and other vessels in connection with a fishing and transportation business on the Great Lakes, has been granted a license to do business in Ontario along similar lines. The capital to be employed in the Province is not to exceed $30,000. H. D. Lee, Toronto, is appointed its attorney.

The Hall Co. has purchased the str. Fred. Mercier, of Buffalo, for its fleet of colliers. The Fred. Mercier was built at Buffalo, N.Y., 1882, and has the following dimensions: length, 232 ft.; breadth, 35 ft.; depth, 18 ft.; gross, 1,224 tons. The engines are of the fore and aft compound type, cylinders 26 and 48 in. diameter by 42 in. stroke, steam being supplied by two firebox boilers 8 by 15 ft.

The Niagara Navigation Co. opened the season May 1 with the Chicora, making two round trips on week days between Toronto, Niagara Falls, Queenston and Lewiston. On May 20 the Chicora was withdrawn and the Chippewa and Corona were put on the route, giving four round trips each week day. The full service of six round trips is announced to go into effect June 10, when the Cayuga will be placed on the run.

The Canadian Fish and Transportation Co. has been incorporated under the Ontario Companies' Act, with a capital of $10,000 and offices at Sault Ste. Marie, Ont., with power among other things to acquire and operate steam and other vessels for use in its business. The provisional directors are: H. C. Hawkins, J. P. McDonald, J. Glanville, Blind River, Ont.; R. Beutel, W. M. McCormick, Bay City, Mich.; G. H. Whitehouse, Chicago, Ill.

The Wacondah Steamship Co., and the Neepawah Steamship Co., have been incorporated under the Ontario Companies' Act to carry on the business of a navigation and transportation company. The capital in each case is $100,000, the offices are at Hamilton, Ont., and the provisional directors are: W. G. Walton, F. A. Magee, F. H. Whitton, J. Milne, J. P. Steedman, C. E. Doolittle and R. O. MacKay, Hamilton.

Capt. Dunn has been reinstated as commander of the Dominion cruiser Vigilant, on Lake Erie, with full pay from the date of his suspension. He was suspended in order that charges made by J. S. Inkster, a former officer, might be investigated. H. H. Collins of St. Catharines, Ont., opened the inquiry at Windsor, April 25, but no one appeared to support the charges, and after some formal proceedings a report was sent to the Department exonerating the commander.

It is estimated that the grain carrying capacity of the Canadian steamers on the Upper Lakes will be increased during the current season by 1,200,000 bush. This is the capacity of 13 vessels purchased, built or building for Canadian owners, and it is possible that the total will be increased by two others having a capacity of 50,000 bush. each. The carrying capacity of the Canadian steamers engaged in the trade in the season of 1906, was approximately 4,500,000 bush.

SAVING TIME AND LIVES...

(From the British Admiralty Report)

The Submarine Bell increases the range at which the fog signal can be heard by a vessel until it approximates to the range of a light-vessel's light in clear weather, and, moreover, its bearings can be determined with quite sufficient accuracy for safe navigation in fog from distance far beyond the range of aerial fog-signals, if the vessel is equipped with receivers.

To double or treble the distance at which fog-signals can be heard is a great advantage to shipping, and the facility of determining the direction of a sound signal is in itself a very valuable discovery. Those who wait longest will incur the greatest loss in the meantime, both in ships and lives, and through delays to shipping which would otherwise be avoided.

The Mutual Transit Co., Buffalo, N.Y., will have its vessels on routes during the current season of navigation serving Buffalo, N.Y.; Fairport, Cleveland, Ohio; Gladstone, Hancoughton, Dollar Bay, Hubbell, Mich.; Duluth, Minn.; Superior, Wis.; Windsor, Fort William, Port Arthur, Ont. In addition to its own steamers, Northern King, Northern Queen, North Wind, Northern Wave, Northern Light, North Star, St. Paul, Minneapolis, Rhodes and Huron, the company will operate the steamers Reynolds, Gould and Chili under charter.

The Turbine Steamship Co.'s S.S. Turbinia was announced to run on the following week day schedule, beginning May 20: Leave Hamilton 7 a.m. for Toronto, leave Toronto 9.20 a.m. for Niagara on the Lake and Lewiston, N.Y.; leave Lewiston 11.40 p.m. for Niagara on the Lake and Toronto, leave Toronto 2 p.m. for Niagara on the Lake and Lewiston; leave Lewiston 5.30 p.m. for Niagara on the Lake and Hamilton, leave Toronto 7.50 p.m. for Hamilton. Owing to some accident to her machinery she did not start running on May 20, but it is now said, she will commence the route about June 1. The Turbine Co. has chartered the Lake Ontario and Quebec Navigation Co.'s steamboat Niagara to run between Hamilton, Oakville and Toronto, leaving Hamilton week days at 8 a.m via Oakville for Toronto, and leaving Toronto at 4 p.m. via Oakville for Hamilton.

At a meeting of the board of managers of the Lumber Carriers' Association held at Detroit, Mich., recently, lumber rates for the current season of navigation were fixed. Last season's rate of $2.50 per 1,000 ft. from the head of Lake Superior to Lakes Erie and Michigan was left unaltered. The $2 rates from Keweenaw Point and Georgian Bay to upper Lake Michigan and Lake Erie, and from upper Lake Michigan to Lake Erie were advanced 12½c. per thousand, from $2 to $2.12½. From lower Lake Michigan to Lake Erie, the rate will be $2.25 instead of $2.12½. From Lake Huron to Lake Erie the rate will be $1.87½ instead of $1.75. The rate on cedar posts is raised ¼c. per post, and that on cedar ties ½c. per tie.

The Parry Sound Transportation Co. has been incorporated under the Ontario Companies' Act, with a capital of $150,000 and offices at Toronto, to carry on a general navigation and forwarding business; to own and operate steam and other vessels; to acquire shares in other similar undertakings, and to construct, maintain and operate appliances and undertakings connected with or of benefit to the objects of the company. The provisional directors are: J. B. Miller, F. B. Polson, W. B. Tindall, R. I. Clarkson, and Mrs. J. Miller, Toronto. The company will operate the steamer Seguin between Parry Sound and Port Arthur, Ont., in the package freight trade. Capt. Wilson has been appointed master, and J. Marshall chief engineer.

F. E. Hall & Co., L'Orignal, are having built by the Grangemouth and Greenock Dockyard Co., Greenock, Scotland, a single deck type steamer specially adapted for the lumber trade. The vessel has not yet been named. When she arrives in Canada, which is expected to be during July, she will be put on a route between St. Lawrence Gulf ports and Upper Lake ports. Her dimensions are: length between perpendiculars, 240 ft.; extreme breadth, 41 ft.; moulded depth, 16.3 ft.; depth of hold, 14 ft. She will be fitted with triple expansion engine, cylinders 17,28 and 45 in. diameter by 33 in. stroke, steam being supplied by two Scotch boilers 10 ft. by 12 ft. at a working pressure of 185 lbs. per square inch. A press report states that a second steamer has been ordered at the same yards for Aug. delivery.

The Lake Carriers' Association has put in force the following increased rates of pay for first and second mates: First mates on first-class steamers $125 a month, and second mates $86 a month, an increase of $10 and $6, respectively. On second-class steel vessels first mates will receive $108 a month, and second mates $75 a month, an increase of $8 and $5, respectively. The wages of mates on third-class steel vessels remain the same as last year, $80 for first mates and $60 a month for second mates. On first-class wooden steamers the mates will receive an increase of $8 and $5, respectively, making the wages of first mates $108 a month, and the wages of second mates $75 a month. The wages of first and second mates on second-class wooden steamers remain the same as last year, $90 and $60 a month, respectively.

A deputation including M. J. Haney, Vice-Chairman of the Toronto Harbor Commission, waited on the Board of Control April 30, to urge the appointment of a commission for the purpose of securing a comprehensive plan of harbor improvement for Toronto. A communication was read suggesting that if Toronto was to progress as an industrial and commercial centre a comprehensive scheme would have to be adopted for enlarging and dredging the harbor, widening and deepening the channels so as to permit vessels drawing 20 ft. of water to pass, providing adequate dock and loading facilities, straightening the Don, and making Ashbridge's Bay district available for factory sites. The recommendations contained in the communication read will be sent to the Dominion and Ontario Governments for consideration.

An Ottawa despatch states that the report upon the Montreal-Georgian Bay waterway will not deal with the commercial advantages of the proposed canal, but will report upon the practicability of construction and the cost of the canal. The report will show, the despatch states, that the canal would practically make Fort William and Port Arthur ocean ports, and would shorten the distance by water from the head of the lakes to Montreal by about 400 miles. It is estimated that the cost of carrying grain from the head of the lakes to tidewater would be lessened at least 3½c. a bush. by the construction of the proposed canal. While it is stated the final estimates have not been completed, the present information in the possession of the staff shows that the total expenditure necessary to provide a 21 ft. waterway via French River, Lake Nipissing and the Ottawa River would be $105,000,000. It is stated that the canal will be constructed as a Government work.

The agreement between the G.T.R. and the Cobourg, Ont., Town Council regarding the operation of the car ferry from Charlotte, N.Y., was signed May 10. A few of the provisions of general interest are: The yearly rental to be paid to the town of Cobourg is $2,500, in equal payments of $1,250, on June 30, and Dec. 31. The first payment is to be made Dec., 1907. The lease is between three parties—the town of Cobourg, the G.T.R. in conjunction with the Ferry Co. and Buffalo, Rochester and Pittsburg Railway Co., to operate a ferry for loaded and unloaded cars, passengers and other traffic across Lake Ontario. The lease is for a period of 25 years, with privilege of renewal for three consecutive terms of 25 years each. There is nothing in the lease to interfere with legal claims of citizens along the street where the track now runs, for damages (if any), by construction of additional track. In case of increased traffic the crossings are to have protection as directed by the Railway Commission.

The Huntsville, Lake of Bays and Lake Simcoe Navigation Co. has not issued a report of its operations for 1906, but it was considered satisfactory by the shareholders present at the annual meeting. The passenger earnings for the year were about 50% greater than for 1905, while the total earnings were 40% greater than in 1905. During 1906 the company added three new steamboats, including the Algonquin, to its fleet, and has now under construction a steamer of similar size and capacity to the Algonquin. This steamer will be named the Iroquois, and is expected to be ready for service during June. The Algonquin and the Iroquois will be equipped with searchlights, and it is the intention to run them on special excursions at nights during the tourist season. The Canada Ry. News Co. has secured the contract for the news and refreshment counters on these steamers. The directors were re-elected and W. J. Moore was elected to fill the vacancy caused by the resignation of W. Duperow. Following are the officers and directors for the current year: President, C. O. Shaw; Vice-President, H. F. Chaffee; General Manager, S. H. Jacobs; Assistant General Manager and Secretary, W. J. Moore; Treasurer, J. McKee.

The tug Ajax was the first vessel to navigate the Trent Canal from Lakefield to Peterboro. She went through May 15.

W. Stewart, of Riverside, N.B., has been appointed a commissioner for the pilotage district of Hillsboro and Hopewell, N.B.

R. McCaul, for some years engineer of the Niagara Navigation Co.'s str. Chippewa, and a former resident of Kingston, Ont., died at Toronto, May 13.

The license of the St. Lawrence Terminal Co. to do business in the Province of Quebec, has been revoked by an order-in-council of the province, dated May 15.

The C.P.R. str. Princess Royal, now under construction at Esquimalt, B.C., will be fitted with wireless telegraph apparatus. The company's str. Princess May will also be similarly equipped.

The St. Lawrence Canadian Navigation Co. has passed a by-law increasing the number of its directors from five to seven. The by-law is signed by A. A. Bernard, President, and L. Laconture, Secretary.

The Nova Scotia Legislature at its recent session passed a resolution urging the Dominion Government to grant a tonnage bonus of $6 a ton to encourage the establishment of steel shipbuilding in Canada.

The Department of Canals is completing a dredge at Ottawa for use on the Rideau Canal. It is 97 ft. long over all. The old dredge St. Louis is being transformed into a houseboat for the men working at the dry dock.

The steamship building at Bridgeburg, Ont., for the St. Lawrence and Chicago Steam Navigation Co., is reported to be about 85% completed. The material for the 460 ft. steamer for R. O. and A. B. Mackay, to be built at the same place, is being delivered.

The improvement of Toronto harbor is not likely to be gone on with during the current year, as the report of the Public Works Department engineer, who recently investigated the question of deepening the present western entrance, had not been made May 16.

The Pittsburg and Erie Coal Co. has been incorporated under the Dominion Companies Act, with a capital of $20,000 and offices at Toronto, for the purpose among other things of owning, chartering or otherwise acquiring vessels of all descriptions and employing the same in the conveyance of passengers and goods between ports in Canada or elsewhere; and to construct and operate docks, wharves, warehouses and other works. The provisional directors are: D. W. Saunders, W. P. Torrance, E. C. Cattanach, J. L. Patient, and E. G. Goodwin, of Toronto.

It is proposed to arrange for a ferry service on the Saskatchewan River near Langham, Sask.

The Pioneer Navigation and Land Co.'s str. Alexandria and the str. Smith opened the season of navigation on the Assiniboine and Red rivers at Winnipeg, Man., April 26.

The Department of Marine has purchased the str. Lady of the Lake from the Northern Fish Co., for the fisheries protection service on Lake Winnipeg. The steamer is principally intended to look after the fish hatcheries. The Lady of the Lake was built at Selkirk, Man., 1897; she is a screw steamer, 201 tons gross, 155 tons register, having the following dimensions: length, 105 ft.; breadth, 18.5 ft.; depth, 8.9 ft. She has engines of 13 n.h.p.

The Northern Trading Co., Ltd., has been incorporated under the Manitoba Companies' Act, with a capital of $500,000 and offices at Winnipeg, to carry on the business of carriers of passengers, goods and merchandise upon land and water; to own and operate steam and other vessels, and to conduct a number of other businesses. The provisional directors are: T. S. Ewart, C. W. N. Kennedy, C. Vokes, W. M. Bannantyne, T. A. Irvine, Winnipeg.

The applicants for the act incorporating a company with the title of the International Canal and Power Co., which was refused at the recent session of the Dominion Parliament, were: G. W. Wolvin, H. J. MacKinnon, Port Arthur, Ont.; G. A. Graham, Fort William, Ont.; D. C. Cameron, Winnipeg; W. Johnston, Ottawa; T. Sturgiss, New York. The company proposed to construct canals or waterways to connect Lake Superior with the Saskatchewan River.

The Canadian Vessel Agency, Ltd., has been incorporated under the Manitoba Companies' Act, with a capital of $20,000 and offices at Winnipeg, to act as agents in chartering steam or other vessels; to act as agents of companies carrying on the marine insurance business; to acquire shares in steamship and similar companies, and to own and operate steam and other vessels; and to carry on any business which may legitimately be carried on in connection with the main objects of the company. The provisional directors are: W. R. Allan, E. F. Lang, G. K. Killam, R. McKay, E. S. Parker, Winnipeg.

The Hudson's Bay Co. is having built at Fort Smith, 650 miles north of Edmonton, Alta., a steamer to be named the Mackenzie River, for its Mackenzie river trade. The steamer is of composite build, the steel frames having been made in the U.S., taken by rail to Edmonton, Alta., and with the boiler and engine teamed across to Athabasca Landing. The frames, etc, are being sent on to Fort Smith by boat, and the lumber is being cut at Smith's Portage. The steamer will be put together during the summer and winter, and it is expected she will be ready to start on her initial run to Fort MacPherson in June, 1908. The hull is 135 ft. long, has a breadth of 25 ft. at water line, and is 5 ft. 4 in. deep. It will be divided into five watertight compartments. On a 4 ft. draught the steamer will carry 60 tons of cargo, in addition to 30 tons of fuel. The stern wheel will be 16 ft. diameter by 16 ft. long, and will be driven by engines developing 250 h.p.

Capt. C. E. Kingsmill, heretofore captain of H.M.S. Dominion, has been appointed to H.M.S. Ramilies, and given command of the division for special service vessels at Devonport, Eng. The appointment indicates that the Admiralty does not intend the accident to the Dominion in the Baie de Chaleurs last year to impede Captain Kingsmill's promotion.

B.C. and Pacific Coast Marine.

The C.P.R. has under consideration plans for the construction of a cement jetty on the south shore of Burrard Inlet, B.C.

As soon as the C.P.R. B.C. lake str. Okanagan is put on her run the str. Aberdeen will be put on the ways at Okanagan Landing for a general overhaul.

The B.C. Salvage Co.'s str. Maud has been chartered by the Lighthouse Section of the Department of Marine to aid in the work of establishing beacons and in lighthouse construction on the Pacific coast.

A tug has been built at Emerson, B.C., for the Emerson estate, F. M. Eddy, Manager. Her dimensions are: length, 65 ft.; breadth, 14 ft.; depth, 8 ft. A Scotch marine boiler, and a compound engine are being installed, the latter being constructed at Guelph, Ont.

The former Great Lakes passenger steamer Iroquois recently arrived at Seattle, Wash., after a run of 60 days from New York. She will be fitted with an oil burning apparatus, after which she will be put on the run between Seattle and Victoria, B.C., replacing the Indianapolis.

The Acting Minister of Marine stated in the House of Commons recently that it was intended to make a 25 ft. channel from New Westminster to the sea, but he could not say whether it was proposed to make that city a national port or not. The suggested improvements at Victoria harbor would cost about $1,000,000. Some work was to be done at Victoria during the current year, but he could not say if such work could be considered as part of the plan suggested by the Transportation Commission.

The C.P.R. has had built at Okanagan, B.C., a stern-wheel steamer for the Okanagan Lake service. The new steamer, which has been named the Okanagan, is a duplicate, so far as dimensions and general arrangements are concerned, of the Kuskanook, which was put on the Kootenay Lake service in 1906. The Okanagan has stateroom accommodation for 80 first-class passengers, and can accommodate up to 300 passengers by day. She will run between Okanagan and Penticton, B.C., and is expected to make 18 miles an hour.

Notices to Mariners.

The Department of Marine has issued the following notices:

No. 21. Mar. 25.—British Columbia—59. Vancouver Island, West coast, Clayoquot sound, Fortune channel, Mosquito harbor, Plover point, light established. 60. Vancouver Island, west coast, Clayoquot sound, Mosquito harbor, uncharted rocks. 61. Vancouver Island, west coast, Clayoquot sound, Fortune channel, uncharted rock. 62. Vancouver Island, west coast, Clayoquot sound, Bedwell sound, uncharted rock.

No. 22. April 12.—Ontario—63. Detroit River, Limekiln crossing, changes in channel and in aids to navigation.

No. 23. April 13.—General. 64. Chart compasses, error in variation. British Columbia—65. Vancouver Island, south coast, Juan de Fuca strait, Trial island, change in sounding of fog alarm.

No. 24. April 13.—Quebec—70. River St. Lawrence, chart vicinity of Port St. Frances issued. 71. River St. Lawrence, chart, Becancour to Champlain issued.

No. 25. April 17.—Ontario—72. Lake Erie, Port Colborne, west breakwater, east end, caution.

No. 26. April 17.—New Brunswick—73. Kennebecasis River, Perry point, light improved. Nova Scotia—74. South coast, southern approach to Gut of Canso, Cerberies rock, gas and whistling buoy established.

No. 27. April 19.—General—77. Caution when approaching British naval ports.

No. 28. April 20.—Nova Scotia—West coast, off Brier Island, southwest ledge, gas and whistling buoy to be established. 79. Halifax harbor, McNab Island, government rifle ranges. 80. Cape Breton Island, east coast, St. Ann harbor entrance, buoyage.

The following have been issued by the U.S. Hydrographic Department:

No. 17 April 27.—Lake St. Clair—767. St. Clair flats canal, change in buoyage. Lake Erie—768. Detroit River light, characteristic changed.

No. 18. May 4.—Washington—837. Juan de Fuca strait, Hein Bank buoy replaced by bell buoy. 838. Bellingham Bay, Post point, bell buoy established.

No. 19. May 11.—Lake Erie—867. Detroit River, Limekiln crossing, dredged channel, intended change in lights and buoys. 868. Pelee Island, obstruction to northward.

It is understood that the International Waterways Commission's work is very nearly completed, and that a final report will shortly be issued. All the chief points of difference have been unanimously settled so far as the Commission has power to do so.

"What is a Durham boat?" is a question being asked in the daily papers. These craft are frequently mentioned in the early records of the settlement of Canada in connection with the navigation of the St. Lawrence river. While a description of this type of boat would serve no useful purpose so far as navigation is concerned, the mention of the type brings to mind that there are pointers and sharpies, and other particularly Canadian developed boats in use on some of the rivers and lakes of the Dominion.

By an act passed last session of the Dominion Parliament the Canada Shipping Act, chap. 113 of the Revised Statutes, has been amended by the addition to sec. 566 of the following subsection: "2. Every vessel mentioned in this section or in the two next following sections shall, if it carries passengers, be subject to the provisions of this part applicable to passenger steamboats: Provided that a steamboat used exclusively for pleasure or private use without hire or remuneration of any kind or any object of profit shall not be deemed to carry passengers merely because it carries without hire or remuneration of any kind the guests or persons invited by the owner."

A criticism has been received from Newfoundland in regard to the publications issued by the Canadian Tidal and Current Survey, and complaining of alleged inaccuracies on account of unsystematic methods in the survey of currents. It may, however, be fairly said, on the other hand, that the publications produced give prima facie evidence of the work done having been well directed, and there is good reason to believe that tests of the tide tables for the current year will prove them to be in a creditable state of efficiency. There can be no doubt that the work in regard to currents in the Straits of Belle Isle, as well as off Cape Race, and in the Bay of Fundy, has done something to diminish accidents, while on the Pacific coast, where the tides are intricate and where the information formerly available was conspicuous by its unreliability, the government work lately accomplished has been especially appreciated and has gained a very high degree of respect in mariners' estimation.—Shipping Illustrated.

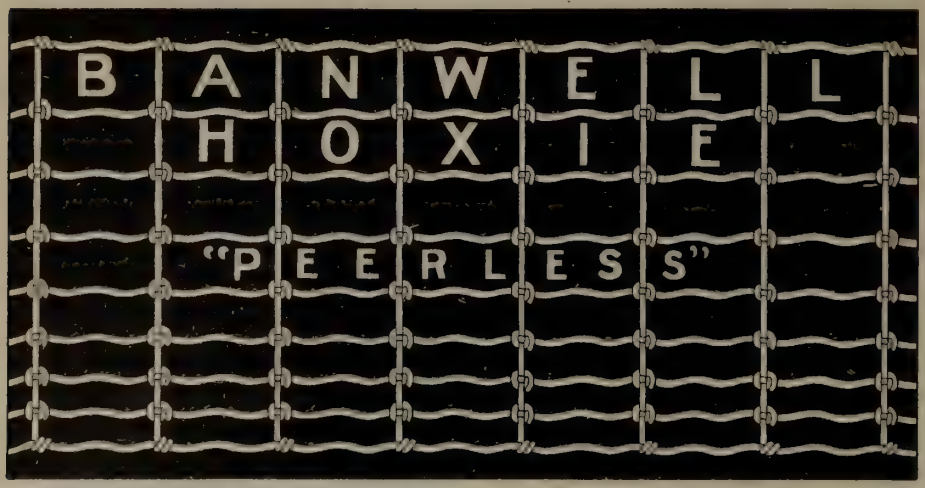
The Allan Line S.S. Corsican.

Following are particulars of the twin screw steamship Corsican, to run between Liverpool and Canada, which was launched on the Clyde, Scotland, April 29:

Length, 516 ft.; breadth, 61 ft. 3 ins.; depth from bottom of keel to top of deck at centre, 42 ft. 9 ins.; gross registered tonnage, about 11,500 tons; machinery: triple expansion twin screw engines of 8,500 i.h.p. Speed at sea about 16 knots. Number of passengers, 1st class, 300; 2nd class, 400; 3rd class, 1,500.

No effort has been spared to obtain construction of the first quality, the vessel not only conforming to highest class in the British Corporation, but possessing considerable additional strengthening in order to suit the owners' special needs. The scantlings of the main structure are all in excess of British Corporation requirements, and the vessel is an exceedingly fine specimen of naval architecture for the service intended. The hull of the vessel generally has been constructed of mild steel, open hearth process. The hull is divided into separate water-tight compartments by seven bulkheads, and to further ensure immunity from danger in the event of collision or stranding, a complete inner bottom is fitted, divided by numerous partitions into separate water ballast tanks, each tank being capable of being filled or emptied independently, so that the trim and draught of the vessel can be adjusted at any time to suit the conditions of service.

Four complete steel decks are fitted, viz., orlop, lower, main and shelter, the last named being completely sheathed with pitch pine, the lower and main decks being covered with the most modern substitute for wood. Above the shelter deck at the fore end is the forecastle deck, providing accommodation for stewards, firemen and crew. At the after end is a long combined poop and bridge sheathed with pitch pine, forming a promenade which is assigned partly to 2nd class passengers and partly to 3rd class. Above this is the promenade deck which is reserved exclusively for 1st class passengers, and above this again is the upper bridge deck on which is placed the officers' quarters, the flying bridge which is used for navigating purposes being formed by an extension of the officers' house roof. The passenger accommodation has been arranged in order that each individual may have a maximum of space and comfort. The now general practice of placing a number of staterooms on the promenade deck has been adhered to in this vessel, these rooms accommodating two occupants. The passages throughout the accommodation are extra wide, having abundance of light and air. Metallic beds having spring mattresses, patent fold-up lavatories, boot-racks, jewel cases, etc., are provided in each room. The ventilation has received special attention, the usual method of tube ventilator being supplemented by a complete installation on the thermo-tank system. The 1st class dining saloon, a large roomy apartment, is situated in the deck house at fore end of bridge deck, extending right across and is lit by extra large square windows on three sides. The decoration is carried out simply and in good taste, the panelling being in oak, with white enamelled ceilings relieved with gold. Passing through the entrance hall, which is on the same level and adjoins dining saloon, a grand staircase leads to music room entrance above and thence to the music room on the promenade deck. Large square windows round three sides provide light similar to dining saloon. The decoration of the music room is carried out in white with mural panels in silk, the ceiling enamelled white and picked out in gold. The 1st class smoking room, placed at the same level as the music room, is large and airily constructed, well lighted and ventilated, and as a further aid to ventilation



PEERLESS WOVEN WIRE FENCING

Made from uniformly heavy hard steel wire, well galvanized.
Made in large rolls ready to stretch up.
Requires but few posts; costs very little to erect.
Conforms perfectly to any surface, no matter how rough.
Reduces the cost of fence maintenance to a minimum.

BANWELL HOXIE WIRE FENCE COMPANY LIMITED
HAMILTON, ONTARIO

C.P.R. LANDS

THE CANADIAN PACIFIC RAILWAY COMPANY have 10,000,000 acres of selected lands for sale in Manitoba, Saskatchewan and Alberta.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd Meridian to Range 10 W., 4th Meridian (generally)	8.00 " "
Map No. 5—Calgary District	8.00 to 10.00 per acre.
Map No. 6—Part of Alberta—Edmonton, Battle and Saskatchewan Rivers Districts—Range 11 West, 4th Meridian to Range 7, West 5th Meridian	10.00 to 25.00 per acre.
Map No. 7—Part of Western Saskatchewan and Eastern Alberta, 3rd Meridian to Range 10 West, 4th Meridian	10.00 to 25.00 per acre.

Maps showing these lands in detail will be sent free on application.
All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160	Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$65.28	and nine instalments of	$160.00
"	"	9.00	"	"	215.70	"	"	"	73.46	"	"	180.00

"	"	15.00	"	"	359.50	"	"	"	122.44	"	"	300.00

Purchasers who do not undertake to go into residence on the land are required to pay one-sixth of the purchase money down, balance in five equal annual instalments with interest at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

CANADA NORTH-WEST LAND CO.

This Company has 550,000 acres of selected lands in Manitoba and Assiniboia which offer excellent opportunities to settlers and investors who desire to secure good lands in well-settled districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

Underwood

If you use a typewriter at all doubtless you use a visible writer—the other kind is obsolete. It may be that you have recently purchased some Underwood imitation for which strong claims were made; for instance, that the writing would remain in perfect and permanent alignment.

Everyone recognizes that the prime requisite of a typewriter is good work, and that good work necessitates accurate alignment. But no visible writer can possess this essential unless it has a guide at the printing point. The Underwood has the guide.

If you have a new Underwood-imitation use it for six months. If it holds its alignment without the aid of the repair-man we will present you with the best typewriter made—an Underwood. Make the test; you stand to lose nothing, and—we feel quite safe.

United Typewriter Co., Ltd.

THE NORTHERN NAVIGATION COMPANY

For Parry Sound, Byng Inlet and French River

Leave Collingwood 10.30 p.m. Mondays and Fridays.

For Sault Ste. Marie and Way Ports

Leave Collingwood 1.30 p.m. Owen Sound 11.30 p.m., Tuesday, Thursday and Saturday.

For Sault Ste. Marie, Port Arthur, Fort William and Duluth

Leave Sarnia 3.30 p.m. June 3, 7, 10, 12.

Sailings, 3, 12, through to Duluth.

Sailing 10th for freight business only.

Commencing June 17th, Passenger Steamers will leave Sarnia 3.30 p.m., every Monday, Wednesday, and Friday.

Friday steamer going through to Duluth.

Tickets and Information from all Railway Passenger Agents

a large teak skylight is fitted above the centre of the room. The decoration is in fumed oak with white ceiling, and comfortably placed seats and tables are fitted together, with a bar leading directly off this room. The sanitary arrangements may be described as perfect, being placed in detached blocks, so as to be easily accessible from any part of the accommodation. The 2nd class passengers are provided for in a style differing but little from the 1st class. Their dining saloon, smoking room, entrance hall and music room are quite as comfortable if not so ornate as is the 1st class. On the shelter deck is the dining saloon, which extends right across the ship and is tastefully decorated in white with a mahogany dado, the natural color of the wood making a pleasant contrast to the general color scheme. At the aft end of the engine casing of the bridge is the music room, the walls of which are done in mahogany with lincrusta panelling. In the same house is placed the entrance hall and smoking room, panelled in fumed oak. At different parts of the vessel comfortably fitted up entrance halls, smoking room and ladies' cabins are provided for 3rd class and steerage. A Marconi installation of wireless telegraphy is fitted on board.

The vessel will carry some 11,000 tons deadweight. Cargo loading and discharging facilities are unusually complete, six large cargo hatches being served by 12 powerful winches and derricks to suit, and a powerful warping winch in steering gear house. Large tanks capable of containing about 400 tons of fresh water are built into the ship for passengers' service. The machinery consists of two sets of triple expansion engines, the diameters of the cylinders being 28, 47 and 79 inches, with a stroke of 54 inches. The intermediate and low pressure cylinders are fitted with flat slide valves. Direct steam starting and reversing gear is fitted, also steam and hand gear for turning engines in port. The surface condenser is horizontal, and built of steel plates with cast iron ends; the condensing surface is 6,000 sq. ft. Propellers are three-bladed, having cast iron bosses and blades of manganese bronze. Three are seven boilers with a working pressure of 190 lbs. per sq. inch. Each boiler is fitted with four furnaces. Forced draught is supplied by two fans. There are 28 furnaces; the heating surface is 22,000 sq. ft., and the grate area 539 sq. ft. The machinery is estimated to drive the vessel on trial at a speed of over 17 knots. The builders are Barclay, Curle & Co., Ltd. The Corsican is booked to sail from Liverpool July 11 for Montreal.

Harbor and River Improvements.

The report of the Department of Public Works for the year ended June 30, 1906, shows an expenditure of $2,374,664.84 on harbor and river works, of $1,922,315.08 on dredging, etc., and of $151,995.35 on slides and booms in connection with the movement of lumber in rivers. The sums applied to harbor and river works were about the same as in 1904-05, but the expenditures on dredging have increased from $375,000 in 1903-04 to $1,460,000 in 1904-05, and to nearly $2,000,000 in 1905-06. The revenue of the department included $81,211.21 from slides and booms and $44,067.63 from graving docks. The income from graving docks shows an increase of nearly $20,000, of which $10,000 was received from Esquimalt, B.C.; $3,000 from Levis, Que., and more than $6,000 from Kingston, Ont. The report reviews the principal works in progress during the year.

In Manitoba the most important work devolving upon the department is the improvement of the St. Andrew's rapids of the Red River. That work which was begun some years ago, and which had to be abandoned on account of material changes in the accommodation to be given, was restarted during the year, a contract being entered into, upon altered plans, with Quinlan and Robertson. As a large portion of the work is being constructed of concrete, the department entered into a contract for the supply of the cement necessary, thus ensuring uniformity in the quality as well as in the examination and testing of the material.

A plan for the improvement of Port Arthur and Fort William harbors was adopted and tenders were invited for the dredging necessary to give 22 ft. of water and permit access to the wharves built by the Canadian Northern Ry. and the C.P.R. Arrangements were also made for the dredging of a basin at Mission River in order to accommodate the lake terminus of the National Transcontinental Ry. These dredging operations, representing the expenditure of a large amount of money, have been extended over a period of three years, owing to the difficulty in getting a larger number of dredges to work simultaneously and with proper results in a limited area. The work is being satisfactorily executed, and as it is proceeding it greatly increases the depth available. Dredging has been continued at Midland, Collingwood and other points in Ontario, whilst earnest consideration is being given to the further improvement of Midland, which has become an important terminal harbor, whence railways carry freight transported over the lakes from the west.

The Tarte pier at Montreal is practically completed. The undertaking carried on at Quebec by Dessault and Lemieux has been pushed with vigor, and when completed will afford greater accommodation for large ocean-going steamers than has heretofore been the case. The work consists of an extension of the old breakwater by a length of 1,460 ft., which will provide four berths for the largest steamers plying on the St. Lawrence. In 1904-05 and 1905-06 the expenditure on the Quebec contracts amounted to nearly $600,000. This appears, however, to be only the commencement of a larger work which will ultimately require to be built in Quebec harbor in order to provide the accommodation for the increasing trade. The class of vessels coming up the St. Lawrence is continually getting larger, their draught is rapidly increasing, and the officials of the department express an opinion that before many years have passed the new steamers that will trade to the St. Lawrence will require the greater accommodation, which the works as at present planned will be able to afford when they are completed. "In this connection," the report proceeds, "the Department has for some time had its attention drawn to the necessity of constructing a new graving dock for the St. Lawrence. It is a matter of very immediate moment and one which, if delayed, may have a far-reaching effect on the shipping trade of Canada. If the large vessels which are now used on the Atlantic Ocean be not sure of finding at their terminal points in the St. Lawrence a place where they can speedily and properly be repaired, should any accident occur, the trade accommodated by these large carriers will gradually find its way elsewhere, as the time has passed when small steamships are able successfully to compete with the larger ones, and the latter having won the day, will require repairing accommodation, which cannot be denied them if they are to continue to be engaged in the Canadian trade. The present dock, which was built in 1876, was, when designed, expected to be sufficient for the requirements of the country for many years to come. It is now 30 years old, and its dimensions are of the past. Those who are conversant with the revolution that has taken place in the size and capacity of the present large carriers, claim that the structure has outlived the usefulness mapped out for it when constructed. It can still, with its length of 600 ft., and its width at the entrance of 62 ft., accommodate vessels about 500 ft. long and under, but the depth over the entrance gate is such that deep draught vessels cannot enter it."

The dredging plant under the control of the Department includes the following:

St. Lawrence, self-propelling elevator dredge
Canada, self-propelling elevator dredge.
Prince Edward, spoon dredge.
George McKenzie, spoon or dipper dredge (wood en hull).
Cape Breton, boom and dipper dredge (steel hull).
New Dominion, spoon dredge (wooden hull).
New Brunswick, clam shell dredge (wooden hull).
W. S. Fielding, combined elevator and hydraulic hopper dredge.
King Edward, propelling hydraulic dredge.
Nakusp, self-propelling dipper dredge.
St. Louis, spoon dredge.
Priestman, barge and clamshell dredge
Queen, Nipissing, Ontario, Challenge, International, Mattawa, Dredge No. 2, Dredge No. 6, Winnipeg, Manitoba, Mudlark, dipper dredge.
Sir Richard, Richelieu, St. Maurice, Progress, Dredge No. 1, dredges.
Cricket, Rona, Muskrat II, Speedy, Montgomery, Blanche, Victoria, tugs; and an unnamed steel tug and tender in B.C.
A pile driver with boiler and engine mounted on scow; a stone lifter well large grips; wooden scow Reserve; a steam centre well stone lifter; a catamaran twin stone lifter; schooner Rutherford, two dump scows, and the snag boat Sampson.

Among the Express Companies.

The Dominion Ex. Co. has advanced its Winnipeg office to a general agency, W. M. Gordon being appointed general agent.

R. B. Colwell, route agent of the Dominion Ex. Co., Halifax, N.S., is on leave of absence. His duties are being performed by F. W. Branscombe.

W. A. Hart, Dominion Ex. Company agent, Halifax, N.S., has resigned and has been succeeded by W. R. Spooner from the company's Montreal office.

G. J. Bothwell has been appointed route agent Canadian Northern Ex. Co., with headquarters at Winnipeg, succeeding F. W. Bowles, transferred to Battleford, Sask.

The Dominion Ex. Co. has issued a yellow-covered Chinese almanack for the purpose of advertising its express money order system among the Chinese residents of Canada.

J. H. Sparling, Superintendent Canadian Ex. Co., Toronto, died rather suddenly May 4, aged 51. He had been in the company's service for over 30 years, commencing as a messenger at Orillia, Ont.

International Classification 17 is being used, according to a circular issued by the Canadian Ex. Co., on all business to and from U.S. points. The new scale N. in the classification takes the place of the Canadian Ex. Company's regular produce rates.

The Canadian Express Co. has opened offices at Birdsalls, Crookston, Foxboro, Myrtle, Ravensworth, Ont.; La Tuque Jct., Sacre Cœur, Que.; Canaan, N.B.; and has closed its offices at Brooklyn, Clarksville, Kennetcook, South Maitland and Windsor, N.S

The Maritime Express Co. ceased to operate on the Halifax and Southwestern Ry. June 1, and has been succeeded by the Halifax and Southwestern Ry. Express Department, the work of organizing which has been done by W. C. Muir, Auditor Canadian Northern Express Co.

We are officially advised that the Board of Railway Commissioners having granted the express companies doing business in Canada an extension to July 1, within which to have their tariffs of tolls approved, it is not intended to take up immediately the investigation of the tolls charged. Paragraphs in the daily papers stated that the commission proposed to take up the matter at the end of May.

STRUCTURAL IRON WORK OF ALL DESCRIPTIONS

The Canadian Expressmen's Mutual Benefit Association during 1906 received $2,118.99 and expended $1,527.57, the cash balance on hand now being $1,833.41. During the year 82 new members were enrolled. The officers for the current year are: President, E. Allen; Vice-President, B. S. Murray; Secretary-Treasurer, W. T. Murphy; Auditors, R. A. Mitchell, W. Ballingall and J. P. Hetherman.

The Newfoundland Legislature at its recent session passed an act providing that express companies doing business in the colony shall on or before Jan. 31 in each year furnish to the Minister of Finance and Customs statements of their affairs made up to Dec. 31 of the preceding year, showing the number of money orders issued, the number of orders and the amount of money sent out of the colony during the year; the number of orders and the amount of money orders received from each country abroad; the number of packages expressed within the colony; the number of packages sent out of the colony, and the number received from the different countries abroad. For failure to comply with the terms of the act a penalty of $10 a day is provided.

In connection with the reduction of the through immigrant rate which the C.P.R. has put in force between Liverpool, Eng., and Vancouver, B.C., the G.T.R. has applied to the Western Passenger Association for authority to meet the rate. It is argued that by means of the cut rate it will be possible to reach San Francisco, via California, cheaper than by the direct routes.

Telegraph and Cable Matters.

The G.N.W. Telegraph Co. has opened an office at Canfield Jct., Ont.

H. P. Dwight, President G.N.W. Telegraph Co., has resigned the presidency of the Canadian Birkbeck Investment and Savings Co.

The C.P.R. Telegraph Department has granted a 15% advance of wages, with a reduction of half-an-hour in the working time of night operators, to employes on the western lines.

Representatives of the Marconi Wireless Telegraph Co. were in North Sydney, May 9, it is reported, with the object of arranging for the construction of a wireless telegraph station there.

The Newfoundland Legislature at its recent session voted $13,500 for telegraph and cable extensions, repairs and office upkeep; and $120 for cable protection at Change Islands.

The Anglo-American Telegraph Co.'s cable between Cape Traverse, P.E.I., and Cape Tormentine, N.B., which was broken in Jan., was repaired May 12, by the cable repair str. Minia.

The C.P.R. Telegraph Department has opened offices at Nicola, B.C.; Rossburn Jct., and St. Norbert, Man.; Beaucage, Coniston, (James Bay Jct.), Heaslip, Midhurst, Moulinette, Shakespeare Mine, Ont.

It is stated that over 10,000 messages were transmitted between Prince Edward Island and the Nova Scotian mainland by the Marconi Wireless method at the Government stations during the recent winter.

The cable repair str. Minia has repaired what is claimed to be a deliberate breaking of the Anglo-American Telegraph Co.'s cable between Placentia, Nfld., and North Sydney, N.S. The breakage was about ten miles east and a quarter-mile north of Flat River, Nfld.

The fact that the late Dr. W. H. Drummond was in early life a telegraph operator in the employ of the Montreal Telegraph Co., has not been generally mentioned in the biographical notices. As an operator he was contemporary with the late Mayor Jas. Cochrane, of Montreal, and A. Walsh, local manager C.P.R. Telegraphs, Montreal.

General Telephone Matters.

The Bell Telephone Co. is arranging to give a continuous service—day and night—at Carman, Man.

A. G. Bell, the inventor of the telephone, has been granted the honorary degree of Doctor of Science by Oxford University.

The old G.N.W. Telegraph line between Union and Sparta, Ont., has been sold to E. A. Smith, who purposes utilizing it for a farmers' telephone line.

The Rosser, Man., municipal council has decided to take steps to instal a local telephone system in connection with the provincial long distance lines.

The St. Catharines, Ont., City Council is negotiating with the Stark Telephone, Light and Power Co., with respect to a franchise for a telephone system in that city.

The Eastern Telephone Co. is completing the installation of a new system in North Sydney and Sydney Mines, N.S. The company has also moved into a new exchange building.

THE B. GREENING WIRE CO., LIMITED
HAMILTON, ONT. MONTREAL, QUE.

The equipment for the automatic telephone system being installed at Edmonton, Alta., has been delivered. The new station is expected to be ready about the end of June, and the entire system equipped early in Sept.

The Bell Telephone Co. has decided to put in an entirely new plant at Chatham, Ont. New premises have been leased for an exchange, and it is proposed to put the wires in underground conduits as far as possible.

The Dominion Parliament has voted $10,000 towards the fund being raised for the purchase of the old Bell homestead at Brantford, Ont., for a public park, as a memorial of A. G. Bell's invention of the telephone.

The Minister of Public Work for Alberta informed a deputation from Vegreville recently that the Government was prepared to take over the local telephone system, and to construct a rural line from that place north to St. Paul's Crossing, Alta.

The telegraph line formerly operated by the G.N.W. Telegraph Co. between Listowel and Haysville, Ont., has been purchased by J. P. Ernst, and is being converted into a telephone line. It will have a connection with the Bell Telephone lines at Listowel.

The Bruce Telephone Co. is being organized for the purpose of constructing telephone lines throughout the county. Franchises have already been secured at Teeswater and in Culross tp., and negotiations are in progress for franchises in Walkerton, Brant and other Ontario municipalities.

The Winnipeg Council City Legislative Committee has sent a delegation to Montreal to attend the investigation into the matter of telephone tolls being held by the Board of Railway Commissioners. The delegation was instructed to put the case for a reduction of tolls as strongly as possible.

The Ontario Railway and Municipal Board is having standard specifications prepared for local and municipal telephones to be constructed under the act of 1906. The idea is to have the systems to be constructed inexpensive, but durable, and uniform so that connection can be made one with the other.

The Barrie, Ont., Town Council has passed a by-law granting a five years' exclusive franchise from April 1, 1906, to the Bell Telephone Co. The company is to pay $300 a year, and gives four free phones. The rates are not to exceed $25 for instruments in business places, and $20 for those in private houses.

The Montreal City Council has adopted a resolution protesting against rates charged by the Bell Telephone Co., and asking the Board of Railway Commissioners to fix rates at not more than $25 a year for private house lines, $35 a year for telephones for professional men, and $50 for telephones in business establishments.

The Glengarry Telephone Co. is being organized in Cornwall, Ont., for the purpose of constructing telephone lines through Glengarry county. The committee in charge of the project is P. Chisholm, Lochiel, Ont.; D. N. McLeod, Kirkhill, Ont.; D. McCaskell, Laggan, Ont. The committee has made arrangements for a connection with the Bell Telephone Co.

The Port Hope Telephone Co. has been incorporated under the Ontario Companies' Act, with a capital of $10,000 and offices in the township of Clarke, Ont., to carry on the business of a telephone company within the county of Northumberland. The provisional directors are: G.W. Jones, G. Payne, S. R. Jones, of Clarke tp.; W. H. Burley, A. P. Pollard, W. H. B. Dickenson, of Hope tp.

The Canadian Office and School Furniture Co. Limited
Preston, Ontario

The Uxbridge and Scott Telephone Co. has been incorporated under the Ontario Companies' Act, with a capital of $10,000 and offices at Uxbridge, Ont., to carry on a general telephone business in the county of Ontario. The provisional directors are: W. Lapp, W. S. Kennedy, B. A. Widdifield, W. J. Weldon, F. Shier, R. J. Moore, of Scott tp.; and W. S. Ormston, of Uxbridge, Ont.

The Coquitlam and Burnaby Telephone Co. has commenced construction on its line between New Westminster and Vancouver, B.C. It is proposed to construct lines to connect Vancouver, Burnaby, New Westminster, Coquitlam, and the Fraser Valley to Chilliwack. G. W. Hines and W. R. Austin, of New Westminster, are the principal promoters of the new line. The first named claims to have completed arrangements for a connection with the B.C. Telephone Co.'s lines at Vancouver.

The Board of Railway Commissioners opened an investigation into the question of telephone tolls at the office of the Bell Telephone Co., Montreal, April 29, and after some preliminary matters had been arranged the sitting was adjourned to May 13. G. F. Shepley, K.C., and W. S. Buell are acting as counsel for the crown in conducting the investigation, while J. Richardson is the accountant. W. D. Lighthall is acting on behalf of the Union of Canadian Municipalities, and N. Lafleur, K.C., represents the Bell Telephone Co.

The Okanagan Telephone Co. was incorporated by an act passed at the recent session of the British Columbia Legislature, with a capital of $500,000 and offices at Vernon, B.C., with power to construct telephone lines throughout the county of Yale, and all cities, towns and municipalities within the county. It has power to acquire other telephone lines, and to amalgamate with other similar companies. The company also has power to change its name, and in this connection it may be mentioned that the company originally applied for incorporation as the Coldstream Telephone Co. The provisional directors are: E. Bloomfield, R. C. Spinks and G. C Van Horne.

L. B. McFarlane, General Manager Bell Telephone Co., recently stated that the growth of the telephone business throughout Canada during 1906 had been phenomenal, and the company had been compelled to spend large sums in order to meet the demands. During the current year it was proposed to expend $2,500,000 upon extensions and improvements. About $800,000 would be expended in Montreal upon a rearrangement of the entire system, so that the company will be in a position to double the present number of subscribers. It has also been decided to establish a new exchange in the north end of Montreal at St. Joseph boulevard, and a new uptown exchange on Mountain avenue. A new exchange will also be constructed at Westmount, Que., and the conduit system in Montreal is to be largely extended.

The act providing for the granting of pensions to employes of the Intercolonial Ry. and the Prince Edward Island Ry., has been passed by the Dominion Parliament. The pension department is being organized, and it is said that several hundred employes will be put on the retired list in the course of a few months.

The C.P.R. has paid, under protest, the fees charged by the city of St. John, N.B, under the labor license by-law, in connection with the bringing in of its employes for the winter season of navigation. The fee is $7.50 for each man brought in. The C.P.R. argues that it is permanently settled in the city, and is paying sufficient taxes, so that it should be exempt from such further taxes as the labor license by-law. The matter will be taken to the Supreme Court.

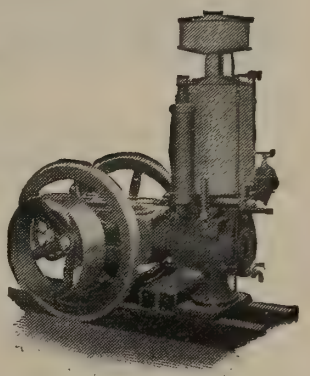
The "STICKNEY" ENGINE is something unique

The most ECONOMICAL ENGINE for RAILWAY PUMPING

The GOVERNOR is so sensitive that it never wastes fuel

Constructed without any useless frills but made to stand hard work.

Sizes from 1 H.P. to 25 H.P.



We state size of Cylinder and are prepared to guarantee power developed.

ONTARIO WIND ENGINE AND PUMP CO. LIMITED

WINNIPEG, MAN. TORONTO. MONTREAL, QUE.

ELLIS PATENT BUMPING POST

SIMPLE, STRONG AND LASTING.
ADAPTED TO ALL POSITIONS ON THE GROUND OR TRESTLES

MECHANICAL MFG. CO.
CHICAGO, ILL., U.S.A.

FERGUSON OIL FURNACES REDUCE SHOP COSTS 50%

Occupy Less Shop Space, Burn Less Oil, Heat More Material, and Insure Increased Outputs from Machines Using Heated Material. 800 Railroad Shops and 150 Manufacturing Plants Use Them

MONTREAL, - QUEBEC

I. A. YOUNG,
AGENT

SAFETY AND COAL ECONOMY

Are realized by our Hollow Staybolts. Steam from the center of a broken bolt gives positive warning, hence **SAFETY**

Air passing into the firebox through the hollow bolt helps combustion, hence **ECONOMY**

Tell-tale holes clog up. Hollow stays "never." Passage of air always keeps the holes open.

Also Solid Staybolt Iron made from the best double refined charcoal iron.

FALLS HOLLOW STAYBOLT Co.
ANY SIZE OUTSIDE OR INSIDE DIAMETER
AVERAGE LENGTH OF HOLLOW BARS
EIGHT TO TEN FT.
STAYBOLT BARS.
BOTH HOLLOW AND SOLID, MADE OF BEST QUALITY
DOUBLE REFINED CHARCOAL IRON OR STEEL. CUYAHOGA FALLS, O. U.S.A.

Orders by the Railway Commissioners.

2951 and 2952. May 18.—Authorizing Toronto Electric Light Co. to erect electric light wires over C.P.R., G.T.R. and Canadian Northern Ontario Ry. tracks, Queen St. East, Toronto.

2953. May 18.—Authorizing Napierville Jct. Ry. to operate its trains over G.T.R. tracks near Lacolle Jct., Que.

2954. May 18.—Authorizing C.P.R. to construct a branch and two spurs therefrom to Clarke and Clarke's premises, North Toronto.

2955. May 17.—Authorizing C.P.R. to construct a siding to McCann Milling Co.'s premises, Toronto.

2956. May 17.—Authorizing Ingersoll Telephone Co. to carry telephone wires over C. P. R. tracks, Mutual St., Ingersoll, Ont.

2957. May 17.—Approving location of Central Ontario Ry. mileage 0 to 19.3, Herschel tp., Hastings County, Ont.

2958 and 2959. May 17.—Authorizing Bell Telephone Co. crossings over C.P.R. and G.T.R. at Beaconsfield, Que.

2960. May 18.—Authorizing Town of Sarnia, Ont., to lay a sewer pipe under G.T.R. tracks at Christina St., Sarnia.

2961. April 30.—Authorizing Canadian Northern Ontario Ry. to cross C.P.R. tracks with construction trains in Cleland tp., Ont.

2962. May 18.—Authorizing C.P.R. to construct branch line to Cameron & Maudsley's premises, Gainsboro, Sask.

2963. May 18.—Approving location of G.T. Pacific Ry. between Portage La Prairie and High Bluff, Man.

2964. May 18.—Authorizing Northern Extension Ry. to cross C.P.R. and Canadian Northern Ry. tracks with aërial wires in St. John's Parish, Winnipeg.

2965. May 18.—Approving amended location of G.T. Pacific Ry. mileage 8 to 14, Saskatchewan.

2966. May 18.—Authorizing Montreal Water and Power Co. to lay water main across G.T.R. tracks at Greene Ave., Montreal.

2967 and 2968. May 7.—Authorizing G.T. Pacific Telegraph Co. to cross Canadian Northern Ry. at or near Saskatoon, Sask., and between Carberry and Neepawa, Man.

2969. May 18.—Approving location of C.P.R. Moose Jaw branch, from mileage 295.8 to 351.8, Alberta.

2970. May 20.—Authorizing C.P.R. to construct a branch line to B.C. Cattle Co.'s premises near Eburne, B.C.

2971. May 18.—Approving revised location of C.P.R. Lacombe branch to eastern boundary of sec. 26, tp. 36, r. 12, w. of 4th mer. from sec. 5, tp. 39, r. 19, w. of 4th mer.

2972. May 18.—Authorizing C.P.R. to construct a branch line from the Vancouver and Lulu Island Ry. across the foreshore of False Creek for about 331 ft.

2973. May 17.—Authorizing C.P.R. to construct branch line to Canada Traders Co.'s premises, Winnipeg.

2974. May 18.—Authorizing C.P.R. to construct branch line from its Bienfait, Saskatchewan, spur, for about 250 ft. northwesterly.

P159

S. P. HOWARD,

General Freight Agent Eastern and Lake Superior Divisions, Canadian Pacific Railway, and President Canadian Freight Association.

2975. May 18.—Authorizing C.P.R. to construct branch line to A. D. Gall Chemical & Petroleum Co.'s premises, near Mount Tremblant, Que., 5,657 ft.

2976 to 2990. May 2.—Approving plans of proposed permanent work on various bridges C.P.R. Quebec Section.

2991 and 2992. May 18.—Authorizing C.P.R. to reconstruct its bridges at Riviere des Mille Isles, Que., and Back River, Que.

2993. May 18.—Authorizing C.P.R. to construct a bridge at Six Mile Lake Creek, Ont.

2994 to 2997. May 2.—Approving proposed permanent work on various C.P.R. bridges, Quebec Section.

2998 to 3033. May 7.—Authorizing Bell Telephone Co. crossings over various railways.

3034. May 18.—Authorizing C. P. R to construct branch to Dominion Bridge Co.'s premises, Winnipeg.

3035. May 20.—Authorizing Village of Delormier, Que., to construct sewers and water pipes on Iberville St. under C.P.R. tracks.

3036 to 3039. May 20.—Authorizing Vancouver, Victoria and Eastern Ry. to carry its tracks over Old Yale Road, Ferry Road, Halls Prairie Road, and Clover Valley Road, New Westminster District, B.C

3040 to 3042. May 20.—Approving revised location of G.T. Pacific Ry. in Alberta, mileage 29.948 to 52.998, mileage 20.00 to 29.948, mileage 84.168 to 85.938.

3043. May 20.—Authorizing C.P.R. to construct branch line to J. L. Turner's premises, Beausejour, Man.

3044. May 18.—Authorizing G.T. Pacific Ry. to temporarily use crossing at grade with C.P.R. Miniota branch, Man.

3045. May 20.—Authorizing Innerkip Rural Telephone Association to cross G.T.R. tracks at nine points.

3046. May 22.—Extending time until Aug. 15 for installation of interlocking plant in tp. of Yarmouth, Ont., with crossing of C.P.R.

3047. May 22.—Authorizing C.P.R. to cross 21 streets and all lanes between Spadina Crescent and Avenue H. Saskatoon, Sask.

3048. May 21.—Authorizing City of Winnipeg to cross C.P.R. Stonewall branch with electric transmission lines to city pump station 5.

3049. May 2.—Defining protection to be given in regard to operation, etc., of Headingly Bridge, Assiniboine River, Man. (Application of the C.P.R.)

3050. May 21.—Approving Canadian Northern Ry. standard freight tariff C.R.C. 200.

3051 to 3056. May 20.—Authorizing Bell Telephone Co. crossings over various railways.

3057. May 23.—Appointing G. A. Mountain, Chief Engineer, and A. G. Blair, Law Clerk, to go to Ingersoll, Ont., and take evidence in connection with C.P.R. application to construct spur to Ingersoll Packing Co.'s premises.

3058. May 23.—Authorizing construction of branch line of Vancouver, Westminster & Yukon Ry. from its main line on south shore of False Creek, to Burrard Inlet, Vancouver, B.C.

3059. May 25.—Approving St. Maurice Valley Ry. local standard passenger tariff

Galena-Signal Oil Company,

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY.

GALENA RAILWAY SAFETY OIL

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT.

C.R.C. 1 between Three Rivers and Shawinigan Falls, Que.

3060 to 3078 and 3081 and 3082. April 2.—Authorizing the Vancouver, Westminster & Yukon Ry. Co. to cross with its tracks over various streets in Vancouver, B.C.

3079 and 3080. April 23.—Authorizing Vancouver, Westminster & Yukon Ry. Co. to cross the British Columbia Electric Railway tracks at Venables St. and Harris St., Vancouver, B.C.

3083. May 20.—Ordering Lake Erie & Detroit River Ry. Co. to install interlocking plant at crossing with G.T.R. in Chatham, Ont.

3084. May 21.—Correcting error in order approving location of G.T. Pacific Ry. from mileage 42 to 77.

3085. May 21.—Approving location of Montreal Park & Island Ry. from Vertu Road to Ste. Genevieve.

3086. May 28.—Authorizing Canadian Northern Quebec Ry. to connect its tracks with the C.P.R. tracks near Lachevrotiere, Que., at mileage 47.4 west from Quebec Bridge.

3087. May 28.—Authorizing Canadian Northern Quebec Ry. Co. to temporarily use for construction purposes only the crossing of the C.P.R. near Lachevrotiere, Que.

3088. May 7.—Authorizing the British Columbia Electric Ry. Co. to cross the Vancouver, Westminster & Yukon Ry. with transmission line at Burrard Inlet, Vancouver, B.C.

3089. May 27.—Amending conditions in order 714, Oct. 24, 1905, respecting crossing over the C.P.R. near Fourth St., Calgary, Alta.

3090. May 23.—Extending time for the filing and approval of express companies' tariffs of tolls until Aug. 1, 1907.

3091 and 3092. May 29.—Amending conditions of order of May 10, 1906, with respect to crossings of Ontario Power Co. over the G.T.R. in Stamford tp., Ont.

3093. May 27.—Authorizing the Trading Store of the Doukhobour Society to cross with its wires the C.N.R. tracks at Vereigen, Sask.

3094. May 27.—Authorizing the Canadian Northern Ry. to cross the Brandon, Saskatchewan and Hudson Bay Ry. tracks near Brandon, Man.

3095. May 22.—Authorizing the G.T.R. to acquire certain lands of John Fraser, Tay tp., Simcoe County, Ont.

3096. May 27.—Authorizing C.P.R. to reconstruct its bridge 102.5, Quebec section.

3097. May 30.—Authorizing Ontario Power Co. to carry transmission wires across G.T.R. tracks east of St. Catharines, Ont.

3097a. May 31.—Approving book of reference in connection with G.T.R. grade revision between St. Lambert and Ste. Rosalie, Que

3098. May 27.—Authorizing C.P.R. to construct a spur to opposite the Brandon Brewing Co.'s premises, Brandon, Man.

3099. May 24.—Authorizing Vancouver, Westminster and Yukon Ry. to cross the B.C. Electric Ry. track on Powell St., Vancouver, B.C.

3100. May 31.—Authorizing issue of subpœnas requiring the General Managers of the Northern Electric Mfg. Co. and the Wire and Cable Co., and such other officers and clerks as may be requested, to appear before the Board to give evidence upon application of the Bell Telephone Co. for the approval of its tariffs of tolls, and to produce such books, papers, etc., as counsel may desire to have produced.

3101. May 30.—Authorizing C.P.R. to grant reduced rate of $60 each from points in British Columbia to Montreal and return to members of the Bisley Team in British Columbia who go to England to compete in the National Rifle Association matches at Bisley.

3102. June 1.—Authorizing Niagara, St. Catharines & Toronto Ry. to open for carriage of traffic, its railway between Thorold and Fonthill, Ont., 6.8 miles.

3103. May 31.—Authorizing Bell Telephone Co. to erect wires across the Michigan Central Rd., 1¼ miles south of Victoria Park station, Niagara Falls Centre, Ont.

3104. June 1.—Authorizing Grand Trunk Pacific Ry. to construct a bridge over the Kaministikwia River at West Fort William, Ont.

3105. June 1.—Authorizing C.P.R. to reconstruct bridge 106.8, Quebec section.

3106. June 1.—Approving of location of Canadian Northern Ontario Ry. through County of Lennox, Ont., mileage 109.5 to 116, west from Ottawa.

3107. June 1.—Approving location of Canadian Northern Ontario Ry. through County of Addington, Ont., mileage 96 to 109.5, west from Ottawa.

3108. May 23.—Extending time fixed in order of Nov. 13, 1906, to Aug. 1, 1907, for express companies to file their tariffs of tolls, subject to the proviso that no increase is made in the rates or tolls now in force.

3109. May 21.—Authorizing Brampton Electric Light Co. to erect wires across G.T.R. right-of-way and tracks at Brampton, Ont.

3110. June 1.—Authorizing Canadian Northern Ontario Ry. to construct a bridge over the Pickerel River, 66.65 miles north of Parry Sound, Ont.

3111. May 19.—Permitting the City Gas Co. of London, Ont., to lay a gas main or pipe under the G.T.R. tracks where the same cross William St., at two different points.

3112. June 3.—Authorizing the Consolidated Elevator Co. to place wires under the C.P.R. right of way at the foot of Fort St., Fort William, Ont.

3113. April 24.—Authorizing the Vancouver, Westminster and Yukon Ry. to cross C.P.R. tracks at Burrard Inlet, Vancouver, B.C.

3114. May 1.—Approving of interlocking plant installed at crossing of Canadian Northern Ry. and C.P.R. at Findlay, Man.

3115. June 4.—Granting, temporarily, the crossing of the Canadian Northern Ry. by the C.P.R., near Brandon, Man.

3116. June 1.—Approving of interlocking plant installed at crossing of Canadian Northern Ry. and C.P.R. in the parish of St. James, Man.

3117. June 1.—Approval of interlocking plant installed at Carberry, Man., where the Canadian Northern Ry. crosses the C.P.R.

3118. May 23.—Extending time till Aug. 1, 1907, for opening for traffic that portion of the C.P.R. on the south bank of the Lachine Canal to its yard at Church St., Cote St. Paul, Que.

3119-3126. June 3.—Authorizing Ontario Power Co. to carry its transmission wires over the G.T.R. at 8 points in Stamford, Thorold and Grantham townships, Ont.

3127. June 4.—Authorizing Ontario Power Co. to carry its transmission wires over the G.T.R. east of St. Catharines, Ont

3128. June 7.—Extending time for approval of Bell Telephone Co.'s tariffs of tolls until Aug. 13.

3129. May 22.—Dispensing with day and night watchmen at G.T.R. crossings at Kent and Lindsay streets, Lindsay, Ont.

3130. May 23.—Directing Toronto Suburban Railway to instal a diamond crossing at St. Clair Ave. between Keele St. and Weston Road, Toronto Jct., Ont., at its crossing with the C.P.R.

3131. June 6.—Authorizing Bell Telephone Co. to carry wires over G.T.R. siding at Coleman Ave., Toronto, to Toronto Type Foundry Co.'s premises.

3132. June 6.—Approving Canadian Northern Ry. location in Manitoba, mileage 23.79 to 69.05, through townships 18, 19 and 20, range 5, w.p.m. and Oak Point Settlement.

3133, 3134. June 6.—Bell Telephone Co. crossings over C.P.R. and G.T.R.

3135. June 6.—Approving C.P.R. location from Nomininge, Que., ten miles northwesterly.

3136. June 6.—Approving revised location Canadian Northern Quebec Ry. in Portneuf and Quebec counties, mileage 13.8 to 37.5 west from Quebec bridge.

3137. June 6.—Approving deviation of Central Ontario Ry. from near mileage 8 to near mileage 12, Monteagle tp., Ont.

3138. May 22.—Authorizing C.P.R. to cross Town Line Road, Orangeville, Ont.

3139. June 6.—Approving Vancouver, Victoria and Eastern Ry. revised location from near Abbotsford to Matsqui, B.C., mileage 50 to 58.

3140. June 6.—Authorizing C. D. Winn, Port Colborne, Ont., to lay a gas main under G.T.R. tracks in Port Colborne.

3141. June 6.—Authorizing C.P.R. to construct spur of 254 ft. to certain premises of City of Calgary, Alta.

3142. June 6.—Authorizing Hamilton Powder Company to carry power and light wires across Esquimalt and Nanaimo Ry tracks at Northfield, B.C.

3143. June 6.—Authorizing C.P.R. to construct spur to J. Saunders' premises, Esterhazy, Sask.

3144, 3145, and 3146. June 10.—Bell Telephone Co. crossings over various railways.

3147. June 10.—Authorizing C.P.R. to construct a public highway over its tracks between Calumet, Que., and the Rouge River.

3148. May 22.—Authorizing J. D. Seeley, President St. John Ice Co., St. John, N.B., to institute legal proceedings against New Brunswick Southern Ry. for permitting W. E. Scully to obtain lower rates of transportation than authorized or in force and for transporting such goods at less than regular tolls in violation of the Railway Act.

3149. June 11.—Approving Brantford and Hamilton Electric Ry. location from east limit of Brantford, Ont., to the east side of Murray St., Brantford.

3150. June 11.—Authorizing Brantford and Hamilton Electric Ry. to cross Toronto Hamilton and Buffalo Ry. by means of an overcrossing, and the G.T.R. by means of an undercrossing, at Cainsville, Ont.

3151. June 6.—Authorizing Malahide and Bayham Telephone Association to cross G.T.R. at Forge Road east of Tillsonburg Jct., Ont.

3152, 3153, 3154. June 10.—Authorizing City of Woodstock, Ont., to lay pipes under G.T.R. tracks at Finkle, Wellington and Canterbury Streets, in that city.

3155. June 10.—Approving location of C.P.R. Toulon extension of Stonewall Branch, Man.

3156. June 10.—Approving Georgian Bay and Seaboard Ry (C.P.R.) location from mileage 0 to 3, Tay tp., Ont.

3157. June 10.—Approving Montreal Park and Island Ry. location from Stoney Point to Valois Point, Que.

3158. June 10.—Approving Canadian Northern Ontario location, mileage 5.36 to 10, west from Ottawa.

3159. June 10. — Approving Canadian Northern Ontario Ry. location, mileage 227 to 243, west from Ottawa, Ont.

3160. June 10.—Authorizing C.P.R. to construct spurs to Winnipeg Supply Co.'s premises.

3161. June 4.—Authorizing Niagara, St. Catharines and Toronto Ry. to re-issue its present standard freight tariff with such additional mileages as are required to cover extensions being made to Welland and Niagara-on-the-Lake, Ont.

3162. June 10.—Approving location of five stations and eight sidings of Brandon, Saskatchewan and Hudson's Bay Ry., Manitoba.

3164. May 23.—Dismissing application of G.T.R. re apportionment of cost of installing gates at Simcoe St., Cedar Dale, Ont., and directing G.T.R. to pay the village of Cedar Dale $25 costs of application.

3165. June 11.—Amending order 3087, May 28, by requiring that Canadian Northern Ry. locomotives and trains shall not proceed over the crossing of C.P.R. at Lachevrotiere, Que., until signalled by watchman in charge.

3166. June 12.—Authorizing C.P.R. to open second track from Eagle to Vermillion, Ont.

3167. June 14.—Authorizing C.P.R. to use crossing with Qu'Appelle, Long Lake and Saskatchewan Ry. at Saskatoon, Sask., until Sept. 30.

3168, 3169, and 3170. June 14.—Approving plans of interlocking plant of Pere Marquette Rd. with Windsor, Essex and Lake Shore Rapid Ry: at one mile east of Kingsville, at Landsowne Road and at Pelton, Ont.

3171, 3172. June 14.—Authorizing C.P.R. to run its trains over crossing with Canadian Northern Ry. at Carberry and Findlay, Man., without coming to a stop.

3173. June 14.—Approving Brandon, Saskatchewan and Hudson's Bay Ry. interlocking plant with Canadian Northern Ry. in Turtle Mountain municipality, Man.

Quebec Transportation Club.

At the annual meeting June 4, the following were elected: Hon. President, J. G. Scott, General Manager Q. & L. St. J. Ry.; 1st Hon. Vice-President, E. A. Evans, Manager Q.R.L. & P. Co.; 2nd Hon. Vice-President, E. Reynolds, Assistant Superintendent C.P.R.; President, A. Hardy, General Freight and Passenger Agent Q. & L. St. J. Ry.; 1st Vice-President, James Bain, Superintendent Q. & L. St. J. Ry.; 2nd Vice-President, F. S. Stocking, Agent Quebec Central Ry.; Secretary-Treasurer, A. H. Davis, C.P.R.; Committee, J. Hone, jr., C.P.R.; C. E. Tenny, G.T.R.; G. B. Ramsay, Dominion Steamship Line; H. N. Bartlett, Q.R.L. & P. Co., and J. S. Thom, Quebec Transportation and Forwarding Co. The club includes in its membership practically all of the leading transportation officials in the city of Quebec, and is in a flourishing condition. The members will probably have an outing in the fall.

The Cobalt Wonder Mining Co., a Maine, U.S., company, has been granted a license to do business in Ontario under the law governing extra-provincial companies. It is authorized to employ a capital of $1,000,000 and E. Day, Toronto, is named as its attorney. Among the various powers possessed by the company is that of the construction of railways in connection with its mining and smelting operations.

Recent Provincial Legislation

In addition to the acts mentioned in previous issues as having been passed by several of the Provincial Legislatures at their recent sessions, affecting transportation and allied interests, the following have been passed:

BRITISH COLUMBIA.

Bentick Arm and Quesnel Ry.—Act of incorporation.

British Columbia Railway Act.—Amending the provisions of the act.

East Kootenay Logging Ry.—Act of incorporation.

Howe Sound, Pemberton Valley and Northern Ry.—Act of incorporation.

Okanagan Telephone Co.—Act of incorporation.

Portland Canal Ry.—Act of incorporation.

Rainy Hollow Ry.—Act of incorporation.

NEW BRUNSWICK.

Canadian Terminal Ry.—Act of incorporation.

Gloucester Navigation Co.—Act of incorporation.

Imperial Coal Co.—Amending act of incorporation.

Imperial Dry Dock Co. of St. John.—Amending the act relating to the company and amending the act 63 Vict., chap. 30, for granting aid for the construction and equipment of a graving dock at St. John.

International Ry. Co. of N.B.—Amending the acts relating to the company.

New Brunswick Ry.—Amending the acts passed to facilitate the settlement of the company's lands.

New Brunswick Telephone Co.—Amending the act incorporating the company.

Railways.—Amending the act granting aid to certain railways.

St. John Ry.—Amending the act of incorporation.

Telephone companies.—Respecting telephone companies doing business in the province.

Tobique and Campbellton Ry.—Amending the act of incorporation.

NOVA SCOTIA.

Annapolis Valley Ry.—Act of incorporation.

Bear River and Caledonia River Ry.—Act of incorporation.

Bridgewater.—Enabling the town of Bridgewater to grant concessions to a car manufacturing company.

Cape Breton Coal, Iron and Ry. Co.—Amending chap. 110 of the statutes of 1895 and acts amending the same.

Eastern Extension Ry.—Amending statutes of 1905, chap. 3, respecting the claims of municipalities for refund of Eastern Extension Ry. land damages.

Halifax and South-Western Ry.—(1) Relating to the mortgages on the company's undertakings; (2) amending statutes of 1902, chap. 2, confirming the company's charter; (3) respecting certain claims for damages in connection with the railway.

Liverpool and Milton Ry.—Act in relation to company's powers.

Liverpool and Milton Tramway Co.—Amending statutes of 1896, chap. 88, incorporating the company, and the act of 1900 amending the same.

Lockport.—Authorizing the town of Lockport to borrow money to purchase a steamboat.

Margaree Coal and Ry. Co.—(1) Authorizing and confirming an agreement between the Government and the company; (2) Amending statutes of 1903-04, chap. 143, incorporating the company.

Nova Scotia Telephone Co.—Amending the company's act of incorporation, and acts amending the same.

Rhodes, Curry & Co., Ltd.—Amending the act of 1891 incorporating the company.

ONTARIO.

Berlin.—Authorizing the town corporation to acquire the Berlin and Waterloo Street Ry.

Burlington Beach.—Respecting the control of the Beach, certain areas of which are desired for the construction of an electric railway.

Fort William.—Incorporating the town as a city, and confirming by-laws having reference to telephone lines and electric railways, etc.

Grand Trunk Pacific Ry.—Respecting the lands formerly granted in aid of construction of the Lake Superior branch.

Hamilton, Grimsby and Beamsville Electric Ry.—Extending the company's powers as to the construction of certain lines.

Huntsville and Lake of Bays Ry.—Respecting the company's powers.

Nepigon Ry.—Extending time for construction.

Niagara Peninsula Ry.—Act of incorporation.

Ontario Interurban Ry.—Act of incorporation.

Ontario Railway and Municipal Board Act.—Amending the act of 1906.

Ottawa River Ry.—Amending the company's powers and extending time for construction.

Owen Sound, Shallow Lake and Wiarton Ry.—Act of incorporation.

Pembroke Southern Ry. — Authorizing amalgamation with the Canada Atlantic Ry.

Petrolea Rapid Ry.—Amending act of incorporation.

Port Arthur.—Incorporating the town as a city and confirming by-laws as to electric railways, etc.

Silver Bell Electric Ry.—Act of incorporation.

Stratford and St. Joseph Radial Ry.—Act of incorporation.

Temiskaming and Northern Ontario Ry.—Amending and consolidating the laws relating to the railway.

Thessalon and Northern Ry.—Act of incorporation.

Thurlow Ry.—Act of incorporation.

Windsor and Tecumseh Electric Ry.—Respecting the company and its amalgamation with the Sandwich, Windsor and Amherstburg Ry. Co.

The Bay of Quinte Ry. Co. has cancelled all special rates, that is special market day rates in force to Kingston and Napanee, as the management feels that in justice to the other towns on the line it could not continue to grant special fares for Kingston and Napanee and not give them to the other towns also. As the company sells 500 mile tickets at $10, or 2c. a mile, there is no occasion for a continuance of the low market day rates, the mileage tickets being on the lowest basis of any railway in Canada. The first-class fares on this line have always been on the basis of 3c. a mile, so that the recent order of the Railway Commissioners has not caused any material changes in the revision of the company's tariff.

The Canada Railway News Co. has passed a by-law increasing the number of its directors from five to six.

The Lake Superior Iron and Steel Co. has been incorporated under the Ontario Companies' Act, with a capital of $1,000,000 and offices at Sault Ste. Marie, Ont., to manufacture and deal in iron and its products; and to carry on the business of an engineer and contractor for the manufacture of iron and steel railway and highway bridges, cars and locomotives, steamships and other water craft. The provisional directors are: C. W. Thompson, H. B. Johnson, T. Gibson, E. W. Wright, E. P. Score, and H. T. Hunter, Toronto.

Superheated Steam on Locomotives.

At the recent meeting of the American Society of Mechanical Engineers, H. H. Vaughan, Assistant to the Vice-President C.P.R., presented a paper in which he gave a resume of the results that have been obtained on that road with locomotive superheaters. According to the author, the first application of superheated steam in North America was made by Roger Atkinson, then Mechanical Superintendent of the C.P.R., who applied a Schmidt smoke-box superheater to a 4-6-0 simple freight engine in 1901. In 1903 E. A. Williams, then mechanical superintendent of the same road, applied a Schmidt smoke-tube superheater to two 4-6-0 compound freight engines, and the results obtained from these installations were exceedingly satisfactory, the first engine showing a saving of 25% over corresponding simple engines and 18% over corresponding compound engines of the same class, while the latter engines showed a saving of from 15 to 20% over similar compound engines using saturated steam.

In 1904 the New York Central and Hudson River applied a Cole-Field smoke-tube superheater to a 4-4-2 passenger engine, and in the latter part of the same year the C.P.R. purchased 41 engines, 21 of which were equipped with this type of superheater, and 20 with the Schmidt smoke-tube superheater. Since that date all engines, other than those in switching service, constructed on the C.P.R., have been equipped with smoke-tube superheaters of various types, and on Dec. 31, 1906, there were in service on this road 197 engines equipped with superheaters of the following types:

Schmidt smokebox	1
Schmidt smoke-tube	32
Cole-Field tube	21
Cole return bend	55
Vaughan-Horsey return bend	88

This road has on order 175 locomotives for delivery during the present year, all of which are to be equipped with the Vaughan-Horsey type of superheater, which will make a total of 372 engines to which this principle has been applied.

On the railroads in the U.S. the progress has been far less rapid, and a reasonably complete list of the engines equipped at the end of 1906 is as follows:

Railways	Cole	Schmidt	Vaughan-Horsey	Total
N.Y.C. & H.R.	1	..	..	1
Chic., Burl. & Quincy	1	2	..	3
Rock Island	6	..	..	6
M., St. Paul & S.S.M.	1	..	..	1
Chic. & North-Western	1	..	..	1
Boston & Maine	1	..	..	1
Lake Shore & Mich. South.	1	..	1	2
Totals	12	2	1	15

The results obtained in coal economy have on the whole been exceedingly satisfactory. The results obtained from the first three engines on the C.P.R. have already been referred to. Subsequent results on a large number of superheaters have not, however, shown as large a percentage of saving as would naturally be expected when a device of this nature is applied in sufficient quantities to ensure the engines with which it is equipped being treated in exactly the same way as other engines to which no particular attention is given, and taking their chance with reference to the ability of the engine crews which handle them. Unfortunately, it is difficult to compare superheater simples with ordinary simples on the C.P.R., as previous to the introduction of the superheater most of the recent power purchased was of the compound type, and care has also to be exercised in making comparisons on account of the large variation in the coal consumed per ton-mile on the C.P.R. in the summer and winter. The most satisfactory comparison is arrived at by taking engines working over similar sections during the summer months, and the following table shows the performance of 2-8-0 superheater simples as compared with similar 2-8-0 compound and a 4-6-0 compound of about equal weight and also similar in design. The superheaters are of two types. M-4a being a Schmidt smoke-tube return bend and M-4b a Cole-Field tube, M-3a are 2-8-0 compounds and D-9 a 4-6-0 compound. These results are those obtained during the summer of 1905.

The D-9 engines may also be advantageously compared against three classes of 4-6-0 simple superheater engines of the D-10a class equipped with Schmidt smoke-tube return bend, the D-10b with a Cole return bend and D-10c with a Vaughan-Horsey return bend. These engines were run against each other during the months of Sept., Oct., Nov., Dec. and Jan., inclusive, on the Canadian Pacific between Fort William and Winnipeg, and the general result is given in table 2, with reference to which it should be noted that this section of the line is an exceedingly favorable one for compound locomotives.

	Section: Fort William to Ignace	Ignace to Kenora	Kenora to Winnipeg	Total
1300, D—9, Compound:				
Coal used	13,144	2,520	8,416	24,080
Relative consumption	100	100	100	100
700, D—10a Schmidt-Sup.:				
Coal used	207	6,073	2,170	8,450
Relative consumption	101.0	98.3	100.8	100.7
710, D—10b, Cole Sup.:				
Coal used	2,993	14,082	10,443	28,418
Relative consumption	88.5	105	100.5	99.5
740, D—10c, V.-H. Sup.:				
Coal used	5,842	....	....	5,842
Relative consumption	84.7	....	....	85.5

Previous to the introduction of the superheater, the D-9 engines had been by far the most economical yet used on that section. The superior economy of the D-10c engines is not easy to explain, and although the writer has discussed this question at some length before the New York Railway Club, he does not feel that there is sufficient data on the subject to regard it as a definite fact.

In the early part of 1906, the Cole superheaters were removed from the M-4 engines, and therefore during 1906 were used as simple engines, thus offering a good basis for comparison with the M-4a engines. This year some other classes of engines have been introduced. Two 4-6-0 simple passenger engines class E-5 have been converted to Vaughan-Horsey superheaters, class E-5d and some 2-8-0 simple engines class M-4e have been equipped with the same device, as well as some Pacific type 4-6-2, passenger engines class G-1-2. For purposes of comparison the results obtained from 2-8-0 class compound engines, M-1-2 of slightly smaller size than the M-4 are also shown. These engines are an economical and satisfactory type and offer a good basis for comparison.

In the majority of cases the superheater engines showed a decided saving, and the results between the 4-6-0 and 2-8-0 vary somewhat in accordance with the relative economy of these two general types of engines. Under some conditions the 2-8-0 are more economical, while under other conditions there is very little difference.

A very interesting result is that obtained from Field to Revelstoke. These are engines working on very heavy grades, and are fairly comparable for two classes of locomotives involved, as they were, both working together, and it will be noticed that a saving of 11% for the six months in favor of the superheaters was obtained. For the larger portion of this section the engines were working at long cut-offs where the gain from superheat would be expected to be less marked.

An interesting difference is shown between Swift Current and Medicine Hat. In freight service the D-9 freight compound engines show up exceedingly well in comparison with superheaters, but in passenger service on the same section the superheaters are much more efficient, the compound taking about 60% more coal, due to the loss in efficiency in the compound in passenger service and the relative gain in the superheater.

Tests on other roads so far as information has been received show in general a reasonable amount of saving. On the Chicago, Burlington & Quincy the road records show but little difference, and on this road the experience was not satisfactory, due very probably to trouble experienced with leakage at the joints in the headers. On the Boston & Maine comparative tests of two 4-6-0 engines equipped with Cole return bend superheaters in passenger service showed a gain of 14.7 ton-miles per pound of coal on the engine equipped with superheated steam. On the Chicago & North-Western tests comparing identical 4-4-2 passenger engines with and without Cole superheaters showed an economy of 9% in coal in favor of the superheater. On the Lake Shore & Michigan Southern tests of engines equipped with Cole and Vaughan-Horsey superheaters compared to similar engines using saturated steam showed a saving of 18.8% for the Cole and 22.1% for the Vaughan-Horsey superheater in coal per ton-mile.

From the general results of these figures it would appear safe to state that from 10 to 15% saving is obtained in freight service and 15 to 20% in passenger service on engines equipped with superheaters as compared with those using saturated steam, although this economy will be to a considerable extent lost if leakage occurs at the headers.

Results obtained from superheaters on the C.P.R. are such as to justify a continued construction of engines equipped with this device. The past three years have developed many troubles, but they have also indicated their remedy.

The automatic damper, first looked on as a desirable attachment, has proved to be a most important factor in the successful operation of the superheater engine. During the first year's experience it appeared to make but little difference whether this damper was operative or not, but it has been found that if neglected there is a gradual but serious deterioration in the ends of the superheater pipes. The structure of the metal becomes entirely destroyed and leaks occur at the return bends, and the metal in the pipes changes its structure until it can be broken in the hands. The damper is not difficult to maintain, simply requiring proper attention, but the design which has been used, and which was introduced with the original Schmidt superheater is not satisfactory, and can certainly be very much improved, and its maintenance made easier.

The writer sees no reason whatever for abandoning a valuable and important principle such as the use of superheated steam because troubles have been incurred through neglect in maintaining a small attachment which could easily have been attended to had its importance been appreciated, and after three years' experience feels justified in stating that if the dampers are properly maintained, the trouble through the destruction of the ends of the superheater pipes will not occur.

With properly maintained dampers the next source of trouble is leakage at the connections of the superheater pipes to the headers. In the Schmidt design properly put up, this occurs but very seldom, and the majority of engines with this arrangement will run from shopping to shopping without attention. The objection that has developed in the Schmidt arrangement is that should any leakage occur, especially in the flanges attached to the upper rows of superheater pipes, it is practically necessary to take down all the flanges and make the joints afresh, and this takes considerable time with a corresponding loss in the service of the engine.

The greatest trouble has come from having to do this on account of the leaks occurring at the return bends caused by dampers not being properly maintained, but apart from this trouble the writer considers the Schmidt to be a satisfactory design, although the inability to take out any defective element without disturbing others is to his mind a great objection.

The Cole type of superheater has given considerable trouble from leakage at the joints between the sub-headers and the main header. While this may be overcome by a modification in the design, the number of defects which have developed has been most serious. The joints are probably loosened by the action of the weight of the superheater pipes working backward and forward when the engine is in service, and the loosening of the joints causes a leakage of steam across the face of the copper gasket and rapidly cuts it away. Arrangements are now being made to support the lower ends of headers so as to prevent their movement, and it is thought that this will largely overcome the difficulty. No trouble is experienced in the joints between the superheater pipes and sub-headers, but the latter are difficult to take out one at a time without disturbing those adjacent, and thus in case of a defective superheater pipe it is generally necessary to make all the joints over again, which means considerable work.

The Vaughan-Horsey type gave considerable trouble at first on account of the fittings and union nuts being made of brass, which deteriorated in the heat of the gases, but since these parts have been made of steel, the trouble has been practically overcome, and on account of this design permitting any pair of superheater pipes to be withdrawn without disturbing another, a defective element can be taken out, the joints blinded, and the element replaced at the first convenient opportunity, which is of considerable advantage in roundhouse maintenance where engines are worked as hard and as continuously as they are in American practice.

In general the maintenance of superheaters has not proved expensive, but the troubles enumerated have led to annoying and inconvenient delays to power, which if not treated on their merits, might be held to condemn the device, but when analyzed, there seems to be no insuperable difficulty in remedying these, and with the proper remedy the writer firmly believes there is nothing about a superheater which should lead to its giving a less efficient service than a simple engine, and the slight additional expense is amply warranted by the saving obtained.

The smoke-tubes have given but little trouble, in fact less trouble than the ordinary 2 in. or 2¼ in. tubes which they replaced. On some bad water districts where the small tubes have to be reset every 20,000 or 30,000 miles, the smoke-tubes can be allowed to run through at least one resetting of the small tubes, which is probably due to the considerably better circulation and their greater thickness. Some difficulty has been experienced from the smoke-tubes stopping up with cinders, especially with the Field-tube type of superheater, which seems particularly bad in this respect. With the return bend type, however, on the majority of the roads there is no serious difficulty in this respect, although it is necessary to see that the tubes are properly and systematically blown out and kept clean. The expense in the labor involved in doing this is, however, negligible.

The maintenance of valve and piston rod packing is slightly greater on engines running with superheated steam than on simple engines, but with proper lubrication the difference is not serious. It is necessary to use hard, close-grained cast-iron for the valve and piston rings, but with suitable types of piston and valve stem packing there is practically no difference in the maintenance of simple and superheater engines.

In general, the writer believes that while it may be necessary to insist on the proper maintenance of superheaters the expense involved is not great, and with proper maintenance and the improvement in detailed design which experience is leading to, there will be practically no decrease in the mileage to be obtained from the superheater as compared to the simple engine, and that the additional cost of maintenance will be unimportant.

When engines equipped with superheated steam were introduced, it was considered necessary to use forced lubrication to the valves and cylinders, and this belief led to considerable trouble owing largely to the various forced feed lubricators employed which did not work satisfactorily with their rapid wear and the small amount of attention they received from the enginemen. During the past year, however, it has been found that the ordinary hydrostatic sight feed lubricator is quite as satisfactory on engines using superheated steam as on those using saturated, but it is necessary with the oil at present employed to lubricate the cylinders in addition to simply lubricating the valves, as in common simple engines. The present practice is to use separate feeds to each end of valve and to centre of cylinder near the top, and with this arrangement no difficulty is experienced with lubrication, although the writer believes it would be advantageous to use a rather heavier valve oil than is at present customary.

The writer's experience with locomotives using superheated steam has not been free from vexations and annoying troubles, but it has on the whole been exceedingly satisfactory.

The troubles encountered are being overcome as experience develops their cause, and the saving obtained is apparent in the reduction of the amount of coal used per ton-mile on various divisions of the road as superheater locomotives are introduced. The additional capacity of the engines and the reduction of the work required by the fireman, enabling trains to be handled better, and the development of an engine which in extremely cold weather can be as easily maintained as a simple engine with an economy equal or superior to that of a compound is an important advantage to any railroad working in northern latitudes.

So far as can be seen at present there is no valid reason for discontinuing the application of superheaters, and the writer expects that a considerable increase in the number in use will take place in the next few years.—Railroad Gazette.

The Newfoundland Legislature, at its recent session passed an act fixing the compensation to be paid in respect of the loss or injury to animals or freight upon the railways in the colony; and a further act respecting the hours of labor of railway servants.

July Birthdays.

Many happy returns of the day to—

J. H. Black, Superintendent Temiskaming and Northern Ontario Ry., North Bay, Ont., born near Smith's Falls, Ont., July 8, 1874.

D. E. Blair, Assistant Superintendent Montreal St. Ry., Montreal, born at St. Thomas, Montmagny, Que., July 25, 1877.

D. A. C. Coleman, Superintendent C.P.R., Nelson, B.C., born at Carleton Place, Ont., July 9, 1879.

Geo. Collins, Director, and Manager Central Ontario Ry., Trenton, Ont., born at Kingston, Ont., July 20, 1860.

D. D'E. Cooper, Canadian Freight Agent Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, General Foreign Freight Agent C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

E. J. Coyle, Assistant General Passenger Agent C.P.R., Vancouver, B.C., born at Stayner, Ont., July 23, 1870.

S. E. Dewey, chief clerk G.T.R., General Agent's Office, New York City, born at Beckenham, Kent, Eng., July 4, 1879.

J. F. Dolan, City Passenger and Ticket Agent Richelieu and Ontario Navigation Co., Montreal, born at Kingston, Ont., July 1, 1868.

W. R. Haldane, District Freight Agent C.P.R., Detroit, Mich., born at Galashiels, Scotland, July 6, 1867.

J. H. Hanna, ex-Division Freight Agent G.T.R. at Hamilton, Ont., now at Calgary, Alta, born at London, Ont., July 27, 1867.

R. K. Harris, Chief Engineer Orford Mountain Ry., Kingsbury, Que., born at Maitland, Ont., July 20, 1866.

A. D. Huff, Commercial Agent G.T.R., Pittsburg, Pa., born at Chatham, Ont., July 17, 1866.

C. A. Jaques, General Manager Merchants-Montreal Line Steamers, Montreal, born there July 15, 1849.

J. P. Kavanagh, Local Manager Ogdensburg Coal and Towing Co., Montreal, born at Plattsburg, N.Y., July 17, 1862.

D. T. Lawrence, Manager National Despatch-Great Eastern Line, Boston, Mass., born at Marysville, Ohio, July 20, 1871.

J. M. Lyons, General Passenger and Ticket Agent I.C.R., Moncton, N.B., born at Halifax, N.S., July 1, 1850.

T. J. Maguire, Accountant Quebec Central Ry., Sherbrooke, Que., born at Quebec, July 31, 1860.

C. N. Monsarrat, Engineer of Bridges C.P.R Montreal, born there July 2, 1871.

R. Preston, Master Mechanic C.P.R., Toronto, born there July 28, 1863.

J. E. Quick, General Baggage Agent G.T.R., Toronto, Ont., born at Richmond, Ontario Co., N.Y., July 10, 1851.

R. Reid, National Transcontinental Railway Commissioner, Ottawa, born at London, Ont., July 28, 1855.

W. C. Ross, Mechanical Foreman I.C.R., Richmond, N.S., born at Quebec, July 26, 1863.

G. G. Ruel, Assistant Solicitor Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

P. E. Ryan, Secretary National Transcontinental Railway Commission, Ottawa, born there July 26, 1876.

F. W. Snider, Superintendent Atlantic Division C.P.R. telegraphs, St. John, N.B., born in Halton Co., Ont., July 14, 1854.

Geo. Stephen, Assistant General Freight Agent Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1876.

T. Tait, Chairman Board Railway Commissioners for Victoria, Melbourne, Australia, born at Melbourne, Que., July 24, 1864.

Defects of United States Rails.

From the Railroad Gazette, New York

It is perhaps safe to say that there is no more striking example in this country of the dangerous and harmful possibilities of a great corporation than that which is now being afforded by the United States Steel Corporation in its attitude toward demands for sound rails. There is no individual, or combination of individuals, which knows better how to make good rails than does that corporation with its splendid army of experts. Nevertheless, it knowingly makes rails which break and kill people. The top of ingots are not being cropped off below the point where high phosphorus and impurities are found; specifications, as furnished by railroad companies, are totally disregarded, and rails, especially in the new and heavier sections, are furnished with spots in them so full of impurities and so brittle that they must of necessity break when subjected to the strain of traffic. The Steel Co. knows this quite well. The railroad companies also know it quite well. The Steel Co. declines to take cognizance of the fact, because this would mean considerable reduction of output, although no important loss of material. The railroad companies fail to take a firm stand because, in the interests of the tremendous traffic, which they derive directly and indirectly from the steel companies, they have not yet dared to do so.

Two points here are specially noteworthy: first, the criminal willingness of the Steel Corporation and the companies allied with it to manufacture rails that cost human life; second, the attitude, almost equally criminal, on the part of many high railroad officers, to ignore the plain truths that are being brought before them by their superintendents and chief engineers. At the recent meeting of the American Railway Association in Chicago it was asked by G. L. Peck, General Manager of the Pennsylvania Lines West, that any representative of the 230,000-odd miles of railroads in the U.S. present at the meeting who was satisfied with the rails he was receiving, should get up; nobody got up. The representatives of the steel manufacturers who were asked to defend their processes of manufacture had nothing to say.

It is obvious that such a state of affairs as this cannot continue, for public safety is involved. Since 1901, it has been impossible for railroad companies to have their specifications adhered to. The tremendous increases in rail breakages during these five years, when the Steel Corporation has had the matter in its own hands, are well shown in the statistics of rails broken and taken from track in New York State. During Jan., Feb. and Mar., 1907, 806 rails, rolled in the previous year, were broken and taken from track in the state of New York as against 29 rails, rolled in 1901, which broke during the same period. This record may be directly characterized as disgraceful—a disgrace to the reputation of the rail manufacturers, who are fully able to remedy the known defects if they wish to do so. The only answer which the rail manufacturers have brought against the charge is that traffic has grown materially heavier in the last few years, and that track structures, ballast, etc., are insufficient for the strain which is put upon them, with the result that high spots and low spots occur in the track, causing breakages which cannot be avoided. They suggest as a remedy the use of a still heavier rail section, weighing perhaps 150 lbs. to the yard. But it has been conclusively shown that the 100-lb. rails of 1905, 1906 and 1907 have made a far worse record in breakages than the 80-lb. rails rolled five years ago; therefore, it is evident that no help is to come from increased weight of section until better processes of manufacture are co-ordinately employed. The exact details of specification, already quite generally agreed on, and the proper shape of the cross-section, not so fully agreed to, need not be discussed at present. The trouble at the root of the present situation does not lie here. Heavy rails of the present day are materially deficient owing to three causes, capable of considerable sub-division, which can be outlined roughly as below:

Phosphorus and impurities which collect in the top of the ingot during cooling require that about one-third of the ingot should be cut off before the rails are rolled. Present practice in the steel mills cuts off a much smaller amount than this, leaving the ingot full of impurities, and with its phosphorus much higher than that allowed by the best specifications.

With the Bessemer process and the ores now used, it is extremely difficult to keep down the phosphorus. A high phosphorus content with high carbon added to give hardness and wearing qualities makes brittle steel. Open hearth rails, of course, furnish the solution of this difficulty.

In the efforts for output, rails are being finished at too high a temperature, and are not receiving enough work in the rolls. Before this can be completely remedied, it is probable that some change in the form of the cross-section will be necessary, but many of the gravest defects arising from rolling can be remedied while the section remains in its present shape.

The recent action of Mr. Harriman in ordering 150,000 tons of open hearth rails from the Tennessee Coal & Iron Co. and in throwing down the gage to the Bessemer steel makers adds much interest to the present situation. Mr. Harriman and his system are both big enough to be above the necessity of the traffic diplomacy that ties most of the railroads hand and foot, in a crisis like this. He reported 449 rails broken on his lines during Feb., of which 179 were 90-lb. rails that had been in the track only five or six months, and accepted Mr. Kruttschnitt's suggestion that damage claims should be instituted against the steel companies for the preventable harm thus done. By taking this position, he has greatly strengthened the hands of the committee of the American Railway Association.

The U.S. Steel Corporation definitely refuses to make rails according to specifications of chemical composition and details of rolling, while at the same time it is selling rails to the Japanese government for $10 a ton less than the price in this country, and is adhering to the required Japanese specifications.

A careful reading of letters from railroad officers makes it apparent that the roads which have suffered have been those combining heavy rails and heavy axle loads; that is to say, that the rails now made to carry maximum traffic are not capable of always performing their task. The need for a better and more scientifically unified railroad superstructure to carry great train loads is admitted by all. Defects in superstructure do not excuse gross imperfections in 100-lbs rails.

Rail makers claim that excessive rail breakages are due to the increased fibre stresses under modern heavy engines and cars. The record of at least one western road is contrary to this assertion, as shown by the following extract from a letter recently received from the general manager:

"The average rail section rolled at this time for main track weighs from 80 to 90 lbs. to the yard, and the average engine axle loading is from 40,000 to 50,000 lbs. The average rail section rolled 18 to 20 years ago for main track weighed 60 lbs. per yard, and the record of locomotive builders for that period shows that the average engine axle loading was from 25,000 to 32,000 lbs. The resulting fibre stresses under these two conditions are practically the same.

"The record of breakages of 60-lb. and 80-lb. rail on this system for the year 1906 discloses rather surprising results, bearing in mind that the same engines with more than 40,000 lbs. axle loads were used in regular service on both weights of rail:

"Mileage of 80-lb. rail rolled 1898 to 1906, 30% of total.

"Mileage of 60-lb. rail rolled 1881 to 1887, 70% of total.

"Breakages of 80-lb. rail, 25% of total number rails broken.

"Breakages of 60-lb. rail, 75% of total number rails broken.

"One 80-lb. rail was broken for each 20.5 miles of track laid with 80-lb. rail; one 60-lb. rail was broken for each 16.3 miles of track laid with 60-lb. rail, but when we consider that the fibre stress in the 60-lb. rail exceeded the stress in the 80-lb. rail, under actual loading, by 49%, it is apparent that the 80-lb. rail, subjected as it is to so much heavier deflection under its load than the 80-lb. rail, must be a rail of better quality than the 80-lb. rail with which it is compared."

The 80-lb. rails of recent rolling had, on the whole, a better chemical composition than the old light rails of 20 years ago. The difference in quality appears, therefore, to be due to differences in the mechanical and heat treatment during manufacture. Throughout the many recent discussions of rail failures, reference has frequently been made to the old John Brown rails imported from England between 1860 and 1870. These rails, low in carbon and all other hardening constituents, have given from 30 to 35 years' service before wearing out, not breaking. They were made by hammering the ingot into a bloom and rolling and rerolling at low temperature with frequent reheating. An output of 100 tons a week was exceptional. The whole secret of their long life was in the mechanical work put into the metal at low temperature, permeating to every part of the finished rail. Contrast this with the present methods of rail making. The ingot, 20 in. to 24 in. square, heated to a white heat and insufficiently cropped, is bloomed by a few heavy passes in one mill and immediately run into the rail-mill where it is finished, in some cases, in seven passes, and run to the cooling beds at a bright red heat. Such methods will produce 1,800 tons a day, but at the expense of violating most of the fundamental principles of the steel makers' art. Last year at the meeting of the Iron and Steel Institute, A. L. Colby, in defending the output of U.S. rail mills, said:

"The gradual increase in the daily output of U.S rail-mills during the last decade is not due to an increase in the speed of the rail train, prompted by a reckless desire for increased tonnage, independent of the quality, strength and finish of the product, but to radical improvements resulting in a much better balance between the producing and finishing ends of the mill."

It is not alone, however, the speed of the rail train which determines the quality of the finished rail. Fifteen or 20 years ago the almost universal practice was to re-heat the blooms before rolling into rails, and 13 to 15 passes were usually given in the mill. The engines and rolling mills of those days were not powerful enough to reduce an ingot in three passes, and a bloom in seven passes. No attempt was made to finish a white hot ingot in one heat far above the critical temperature of 825 degrees. It is putting the cart before the horse to hold the rails before the last pass; the previous overheating and lack of effective mechanical work leave the mass of metal in the interior of the head coarse and weak and cold rolling can only give a thin, hard shell, which soon wears off exposing the soft metal underneath. With modern mill practice the only way to secure hardness and wearing qualities throughout the head is to increase the carbon to a point where the rail is brittle because of the unavoidable presence of high phosphorus.

The value of annealing rails before finishing and thereby overcoming most of the faults of overheating and rapid working has long been recognized, but sadly neglected because it introduces a halt in the contin-

uity of the whole process of rail making from the blast furnace to the gagging presses. Robert Job has said:

"The toughness and elasticity of the fine granular structure produced by annealing at the proper temperature permit an increase in the hardening contents considerably beyond the point which otherwise would be safe, thus obtaining greater capacity for wear. Unfortunately, annealed rails, with their freedom from brittleness and internal strain, are of hardly more than theoretical interest, since they cannot be obtained in any considerable quantities under present conditions."

In view of the present deplorable conditions it would seem that any process of improving the quality of rails is of more than theoretical interest.

Salisbury and Harvey Railway.

An order was granted by the New Brunswick Equity Court, June 11, directing the sale of this line and passing the accounts of the Receiver from May, 1901, to June, 1907. This was a foreclosure suit and arose out of a mortgage given by the People's Trust Co., plaintiffs, to the Salisbury and Harvey Ry. Co., the Western Union Telegraph Co., and the Investment Improvement Co. of New York, to secure the payment of bonds to the amount of $250,000 and interest on mortgage given in 1890. In 1899 J. R. Ebony was appointed receiver, and the property was ordered to be sold. The order was cancelled later. In 1901 A. S. Swan was appointed receiver upon withdrawal of Mr. Ebony. A petition was presented by J. D. Hazen on behalf of the present receiver and owner of controlling interest in the bonds, A. S. Swan. The order was granted upon the facts set forth in the petition and with permission of J. M. Price, who appeared for the People's Trust Co. of Brooklyn, N.Y., and J. R. Ebony, the former receiver and a bondholder.

The S. and H. Ry. was originally incorporated as the Albert Ry. Co. in 1868, and was granted a Dominion subsidy in 1884, a subsidy by way of loan in 1886, a subsidy of rails at a valuation in 1888, and there was a revote of an unpaid balance in 1889. The company was reorganized by letters patent under the New Brunswick Companies' Act, as the Salisbury and Harvey Ry., and these were recognized and confirmed by the Dominion Parliament in 1891, when the company was given power to issue bonds. In 1900 the Dominion Parliament passed another act giving the company power to acquire other railways. The railway extends from Salisbury to Albert, N.B., 45 miles, of which 27 miles is laid with iron rails and 16 miles with 56-lb. steel rails; there are six miles of sidings. The railway at June 30, 1906, reported to the Dominion Government that it owned the following rolling stock: 3 locomotives, 1 first-class car, 2 baggage, mail and express cars, 5 box cars, 28 flat cars, 1 conductor's van, 1 snow plow and 1 flanger. Its operations for the year ended June 30 showed the following results: train mileage, 28,170 miles; engine mileage, 33,539 miles; passengers carried, 13,324; freight carried, 54,828 tons; income, $30,706.71; net earnings, $961.89. The financial statement at the same date was reported to the Dominion Government as: common stock, subscribed and paid up, $150,000; bonds issued, $250,000; Dominion Government subsidy, $29,665.45, including $14,665.45 of used iron rails, of which $29,391.01 had been paid; New Brunswick provincial subsidy, $455,000; municipal bonus, $70,000; total paid up, $704,391.01; cost of railway and equipment, $1,802,440.10.

The Dominion Government has paid $1,128,876 for 9 months ended Mar. 31, as against $1,227,560 for the preceding 12 months, as subsidies to various steamship companies.

The Crow's Nest Pass Coal Co. has been authorized by supplementary letters patent to increase its capital stock from $3,500,000 to $4,000,000.

The M.C.R. Detroit River Tunnel.

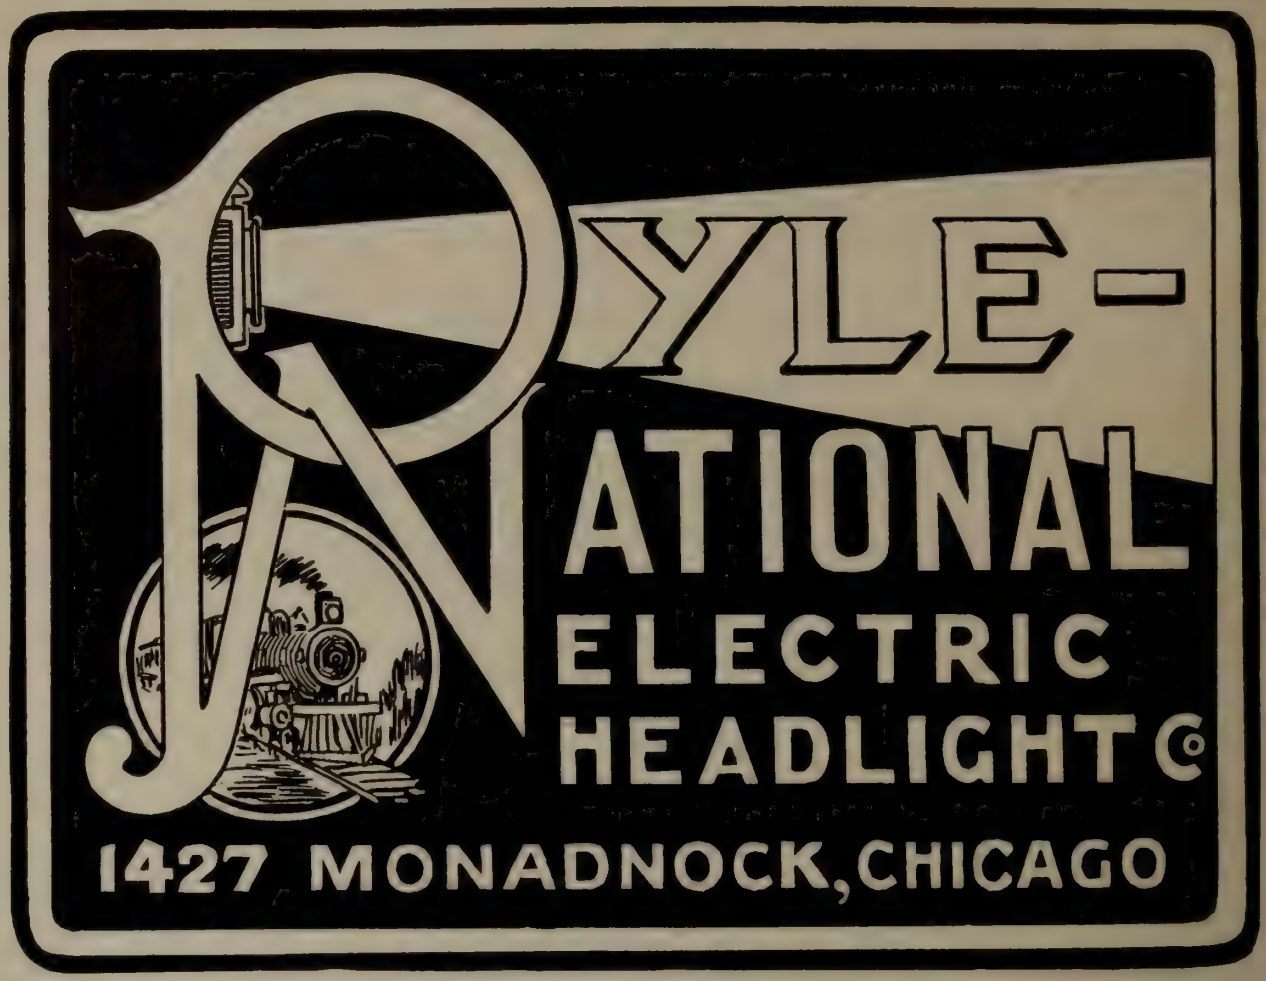
The tunnel being built under the Detroit River for the Michigan Central Rd. passenger and freight service, was illustrated and described in our issue of April, 1906, pg. 181. The following additional information has been received in regard to its electrical equipment. The electric section will be 4.5 miles long and will comprise within the yards some 15 miles of single track. Electric locomotives for operating through the tunnel were decided upon because they would not only permit of greater celerity in handling traffic, but also afford a complete solution of the ventilation problem. Six 100-ton direct-current locomotives of the swivel truck type, with geared motors, will comprise the initial equipment for hauling both freight and passenger trains. Each locomotive will be capable of hauling a 900-ton train up a 2% grade at a speed of 10 miles per hour. Four 280-horsepower motors will be mounted on each locomotive, two motors being placed on each of the two swivel trucks. The electric multiple unit control system will be furnished in enabling the locomotives to be operated singly or in train. Current for operating the motors will be taken from a third rail by means of contact shoes. Automatic, high-speed air brakes will form a necessary part of the equipment

Current for operating the system will be purchased from the Detroit Edison Co., and will be delivered to a substation at Detroit at a potential of 4,400 volts, and at a frequency of 60 cycles. At the substation two 1,000-kilowatt synchronous motor-generator sets will be installed for supplying direct current to the third rail at 650 volts. A 15-kilowatt, 125-volt exciter for the synchronous motor will be mounted on a shaft extension of each of the motor-generator sets.

A very complete electric lighting and electric pumping equipment forms a part of the project. The yards and approaches to the tunnel will be lighted by arc lamps, while the tunnel itself will be illuminated by incandescent lamps arranged on duplicate circuits. Alternating current from the main power supply, at a frequency of 60 cycles, will be used on the lighting circuits. To insure an uninterrupted lighting service, the lighting circuits in the tunnels are so arranged that half the lamps in both tunnels will burn if, by chance, either of the lighting circuits in the tunnels should be broken. A single 3-phase distributing circuit will run through each tunnel and from these circuits suitable connections will be made to step-down transformers. The secondaries of the step-down transformers will be interconnected with duplicate circuits for half the lamps in each of the tunnels.

For keeping the tunnel dry five sumps will be provided, each sump drained by induction motor centrifugal pumps arranged in duplicate. The motors on the pumps will operate directly at 4,400 volts and the controlling circuits with compensators will be centralized in the substation. For indicating the amount of water in each sump, a float system will be provided having both visible and audible indicating devices in the substation.

At the substation a regulating storage battery will be provided to carry the fluctuations of the load. If the main power supply from the Detroit Edison mains should be interrupted this storage battery will have sufficient capacity to operate the entire system for half an hour. In such an emergency the lighting and pumping alternating current equipment will be energized by 60 cycle, alternating current from a 50-kilowatt motor-generator set, the driving motor being supplied with current from the storage battery, Flexible switching arrangements will be installed to enable this interchange of power supply to be easily and quickly made.



NOVA SCOTIA STEEL AND COAL CO.

MANUFACTURERS OF LIMITED

Railway and Electric Car Axles, Angle Bars and Tie Plates, Railway Spikes

Tee Rails 12, 18, and 28 lb. per yard

ALL SIZES BAR STEEL FOR CAR-BUILDERS' USE. Spring, Machinery, Tire, Angles, and Merchant Bar Steel. Heavy Forgings of all Descriptions.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Algoma Central and Hudson's Bay Ry.—The Superior Copper Co. proposes to construct a spur line from mileage 38.4 on the A.C. and H.B.R. main line, known as Superior Mine station, to its mining property, 4¾ miles. J. F. Wilde was reported recently to be making a survey, and it was stated that the Government would be asked to grant a right of way. The Lake Superior Corporation, owning the A.C. and H.B. Ry., it was stated, had consented to supply all labor and equipment, and to do all the work under the supervision of the directors for a percentage of the cost of the road. It is expected the road will be completed and in operation by Sept. 1, and will cost $75,000. We were advised June 19 that it had not been decided who would undertake the work of constructing the line, but that it was quite likely that it would be done by the A.C. and H.B.R.

The Atlantic, Quebec and Western Ry.'s application for approval of its location from Matapedia to Edmundston, N. B., has been adjourned in order to enable a new map to be submitted showing the relation of the projected route to existing lines and the approved route of the National Transcontinental Ry. The route for which approval was asked was objected to by H. D. Lumsden, Chief Engineer National Transcontinental Ry. Commission, on the ground that it would parallel the National Transcontinental Ry. route for 23 miles from near the mouth of the Grand River up the St. John River to Edmundston, N.B. (June, pg. 407).

Canada Coal and Rd. Co.—See Maritime Coal, Ry. and Power Co.

Duluth, Rainy Lake and Winnipeg Ry.—The grading of this line to Pither's Point, opposite Fort Frances, Ont., is being pushed and the steel has been laid to within 30 miles of the Rainy River. The bridge over the Rainy River in which this company is jointly interested with the Canadian Northern Ry., is being progressed with, and it is expected that the railway and bridge will be completed so as to enable regular passenger trains to be run by the fall. The bridge, which is being erected at Rainier, about three miles east of International Falls, is for single track, and composed of eight 40 ft. deck plate girder spans and a roller lift bridge with one arm about 125 ft. long.

The Duluth-Thunder Bay Ry. Co. has been incorporated in the State of Minnesota for the purpose of constructing a railway from Superior, Wis., to Duluth, Minn., and thence along the north shore of Lake Superior to Fort William and Port Arthur, Ont. It is stated that the company has been formed in connection with the Wisconsin and Northern Minnesota Ry., and that the immediate object is the establishment of independent terminal facilities at Superior and Duluth. C. E. Wales, Vice-President of the Pittsburg Coal Co., is President.

Great Northern Ry. (U.S.A.) Lines in Canada.—A passenger service has been put on the Brandon, Saskatchewan and Hudson Bay Ry. which is the Canadian extension of the G.N. Ry. branch line formerly terminating at St. John, N.D. The line is 69.45 miles in length, at present terminating at Brandon, Man., where freight yards are being laid out. A contract is expected to be let at an early date for the erection of freight warehouses, and a passenger station at Brandon.

Under the title of the Midland Ry. of Manitoba, a line has been completed from Gretna on the International boundary to Portage la Prairie, Man., 77 miles, upon which a freight and passenger service is being operated. A steel bridge with trestle approaches giving a total length of over 800 ft. has been completed over the Assiniboine River at Portage la Prairie. Grading is in progress upon a line from Walhalla, N.D., to Morden, Man., 24 miles, under the charter of the M. Ry. of Manitoba, and it is expected that tracklaying will be commenced at an early date.

F. H. McGuigan, Vice-President G.N.R., was in Winnipeg, June 4, on a trip of inspection, and in company with P. E. Thain, Chief Engineer, in charge of Manitoba construction, went over the Portage la Prairie and Brandon lines. Mr. McGuigan stated his business was to get acquainted with the company's lines, and he could not say anything as to the prospects of the construction of a line into Winnipeg, nor as to the layout of the terminals there. (June, pg. 407).

Halifax and Southwestern Ry.—A contract has been let to the Lindsay Construction Co. for the erection of a steel bridge at the Dutch Village Road, just outside Halifax, N.S. The bridge will be erected on concrete abutments. (May, pg. 325).

Innisfail to Rocky Mountain House.—Capt. B. J. Saunders reached Edmonton, Alta., June 6, and is reported to have stated that the object of his five weeks' trip was to ascertain the feasibility of the construction of a railway running north and south, between the G.T. Pacific Ry. and the main line of the C.P.R. He was not at liberty, he said, to state who was projecting the new railway, but he could state that the result of his explorations showed that such a line could be constructed on the east side of the mountains. The party started from Innisfail, and worked to Rocky Mountain Lodge, an abandoned Hudson's Bay Co. post, about 200 miles up the Saskatchewan River.

Intercolonial Ry.—Tenders have been called for the construction of some additional buildings on the site of the new shops, Moncton, N.B. These buildings include a power house, gas producer house and dry kiln. The power house will consist of a steel frame building, 202½ by 69 ft., with curtain walls and roof of concrete. The gas producer house will consist of a steel frame building 39½ by 38 ft. 2 in., with curtain walls and roof of concrete. The transformer shelter will be 10 by 20 ft. of concrete, steel and wood. The dry kiln will be 75 ft. 10 in., by 25 ft. 4 in., of brick and wood, with a fan house extension

The plans for the new passenger station to be built at Amherst, N.S., for which tenders are under consideration, show an attractive design. The building will be of pressed brick with concrete foundation, the roof being covered with slates. A 10-ft. verandah will be carried around the sides and ends of the building. The total length along the track will be 183½ ft., with a depth of 28½ ft., except for about 22½ ft. in the center where it is 33 ft. In this center portion will be located the operators' office, 13 ft. 10 in. by 22 ft., ticket office, 10 ft. 10 in. by 22 ft., hall and staircase. Archways off the hall lead, on the one side, to a general waiting room 39 ft. 4 in. by 28½ ft., off which is a smoking room and lavatories, 26 ft. 8 in. by 28½ ft. and on the other side to a ladies' waiting room, 32 ft. 10 in. by 28½ ft., off which is a dressing room, 8 ft. by 24 ft., and lavatories. Separated from this accommodation by a brick wall is an express room 12 ft. 3 in. by 18 ft. 8 in., office 12 ft. 3 in. by 7 ft., and baggage room 41 ft. 3 in. by 26 ft. In the center part of the building upstairs is an office for the Western Union Telegraph Co., 15 by 20 ft.; the remaining part of the accommodation there is unallotted. The building will be heated with hot water and lighted by electricity. The interior finish throughout will be of various kinds of native woods, oiled and varnished. (May, pg. 325).

A contract is reported to have been let to J. B. McManus, Moncton, N.B., for the construction of a second track between Moncton and Painsec Jct., N.B., eight miles.

Kingston, Smith's Falls and Ottawa Ry.—Upon the hearing of the company's application for approval of its route between Kingston and Ottawa, Ont., May 28, M. K. Cowan, K.C., stated that the G.T.R. was interested in the company, and if a proper location was given would construct the line. The location plans are under consideration by the Board of Railway Commissioners.

London and Port Stanley Ry.—The Pere Marquette Rd., lessee of the L. and P.S.R., is constructing the abutments of a new bridge over the Thames just south of London, Ont. It is proposed to undertake the reconstruction of the bridge over Kettle Creek, St. Thomas, as soon as that over the Thames is completed. The question of the liability of the city of London, the virtual owner of the line, for the cost of the bridges is to be fought out, probably in the courts. The present bridges are too light for the traffic, and the lessee asked that they be reconstructed, but the city refused to do anything, whereupon the General Manager of the P.M.R. notified the company that it would do the work and charge the cost to the city. (May, pg. 325).

Maritime Coal, Ry. and Power Co.—This company took over June 1 the mining property and railway of the Canada Coal and Rd. Co., formerly known as the Joggins Ry., in Nova Scotia. The M.C. Ry. and P. Co. also owns the Chignecto coal mines and the railway connecting them with the Intercolonial Ry. The additional line acquired extends from Maccan to a shipping port on the Bay of Fundy, but it is proposed to extend the system to Northumberland Strait, thereby securing a shipping port that will put the company in close touch with the coal markets of the St. Lawrence River.

Michigan Central Rd.—The last section of the second track on the Canada Southern Ry., leased by the M.C.R., was completed June 4, when the last rails were laid near Waterford, Ont.

Midway and Vernon Ry.—Press reports state that arrangements have been completed to pay off the indebtedness of this company and to re-start construction.

Napierville Junction Ry.—Following are the officers and directors: President, L. F. Loree, New York; Vice-President and Assistant Treasurer, G. F. Hartt, Rouse's Point, at N.Y.; Secretary, L. J. Beique, Montreal; other directors: W. C. Witherbee, Port Henry, N.Y.; J. R. Myers, Rouse's Point, N.Y.; Hon. F. L. Beique, C. B. Hibbard, C. J. R. Bethune, Montreal; Treasurer, C. A. Walker, New York. The President and Treasurer are President and Treasurer respectively of the Delaware and Hudson Co., and C. B. Hibbard is General Manager of the Quebec, Montreal and Southern Rd., which recently was purchased by the D. and H. Co. The N.J. Ry. extends from the D. and H. Rd., near Lacolle at the International boundary between Quebec and N.Y., to St. Constant, Que., 27 miles, and was put in operation May 20. It is understood that the line will be extended to a junction with the Quebec, Montreal and Southern Ry. (Jan., pg 3.).

The New Brunswick Southern Ry. has secured the building originally used as a passenger station by the old St. John and Maine Ry., from the C.P.R., and has fitted it as a passenger station. It is only a few months ago that the company moved into a building near the ferry floats, which it obtained from the city council, in exchange for its old station facing the new Clarke wharf.

Nova Scotia Eastern Ry.—We are advised that the object of the surveys being made under the direction of the Nova Scotia Provincial Engineer in connection with this projected road is to locate the best line so

as to expedite the work in case the Government wishes to make a contract with any company for the construction of the line, and to enable the Government to estimate the cost so that it will be better able to deal with the contractors, or failing to secure a good company to construct the line the Government would be in a position to undertake the construction itself. There are three parties in the field, viz.: (1) In charge of L. Whitman, which is locating a line through Cole Harbour, Lawrencetown, Chezzetcook, Musquodoboit Harbor, Little River, Meaghers Grant, Middle and Upper Musquodoboit to Dean's Settlement. (2) In charge of J. J. Taylor, is locating a line from Guysboro towards Country Harbor Cross Roads. (3) In charge of W. R. Hendry, is working from Sunny Brae towards Country Harbor Cross Roads to meet the second party; and on effecting a junction the second and third parties will complete the location to the line being surveyed by the first party at Upper Musquodoboit. (June, pg. 409).

Nova Scotia Steel and Coal Co.'s Ry.—A contract is reported let to D. Sutherland, North Sydney, N.S., for the construction of a line from Sydney, no. 3, to the company's new colliery, no. 4, at Sydney Mines, a distance of about 2¼ miles. The contract includes clearing, grubbing, grading, excavating, tracklaying and ballasting, and it is expected that the work will be completed in about two months.

Pere Marquette Rd.—Plans have been prepared for the erection of a 24-stall roundhouse at St. Thomas, Ont., and for the conversion of the existing round-house into a coach-building and car repair shop.

Salisbury and Harvey Ry.—The reconstruction of the bridges on this line is being proceeded with under the direction of P. S. Archibald, C.E.; the old wooden Howe truss bridge over the Petitcodiac River at Salisbury, N.B., is being replaced by a 125 ft. steel span on stone abutments; a new 100 ft. span of pitch pine is being built over Turtle Creek, to replace the present spruce span. A new bridge will be constructed during the present season at Weldon.

Temiskaming and Northern Ontario Ry.—There are three survey parties working between Cobalt and Sudbury, one from Cobalt to the narrows of Temagami Lake, the second from the narrows of Temagami Lake south-westerly towards Sudbury, and the third from Sudbury north-easterly to meet the second party. Trial lines are being run so as to determine the most suitable location for a railway. The work being done at present is purely of an exploratory nature. (June, pg. 409).

The commissioners left Toronto June 11 for a trip over the line. They met the members of the Transcontinental Railway Commission at North Bay, and together went to the end of the track. The question of the junction of the T. and N.O. Ry. with the G.T. Pacific Ry., Eastern Division, near Lake Abitibi, was discussed.

A contract has been let to the O'Boyle Bros. Construction Co. of North Bay, Ont., for the erection of a stores building there to cost about $20,000. The building will be 105 by 35 ft., with basement and two stories. Concrete will be used for the foundations and walls, reinforced concrete floor slabs will be used, supported by steel beams and columns encased in concrete. The basement and ground floor will be used for heavy general stores and the upper floor for the master mechanic's offices and light stores.

Winnipeg City Power Plant.—The Winnipeg City Council has let a contract to W. Newman, for the construction of the tramway between Point du Boise and Lac du Bonnet, Man., in connection with the city's hydro-electric power plant.

C.P.R. Betterments, Construction, Etc.

Chateau Frontenac Extension.—The Quebec City Council granted May 30 the application of the C.P.R. for permission to erect a viaduct over Des Carrieres St., for the purpose of connecting the Chateau Frontenac with the proposed extension. W. S. Painter, the company's architect, stated that the extension planned was to be 250 ft. long and from 6 to 10 stories high, and would have 120 additional rooms. The plans had yet to be finally approved by the directors, but Mr. Painter stated that it was intended to have the new building completed by 1909.

New Industrial Siding at Montreal.—The C.P.R., as lessee of the Ontario and Quebec Ry., is applying to the Board of Railway Commissioners for an order authorizing it to construct a siding along the bank of the Lachine Canal, for about 1,400 ft., to the Dominion Car and Foundry Co.'s plant.

Guelph and Goderich Ry.—The line is practically completed in all details as far as Blyth, about six miles east of the terminus at Goderich, Ont., but it is not likely that a regular train service will be operated further west than Milverton, until the whole line is completed. The heavy work of carrying the line across the valley of the Maitland River at Goderich necessitated the construction of embankments, bridges and retaining walls, and was of such a character as to delay the work considerably. It is hoped to have the work finished by Aug. 1, but the engineers in charge are by no means confident that this can be done.

The branch from Linwood to Listowel is expected to be ready for the rails in Sept. The grading is light, the principal work being in clearing out the stumps left when the right of way was cut out.

Toronto-Sudbury Branch.—Work has so far progressed on the line from Bolton Jct., on the Owen Sound branch, towards Parry Sound, that a train service has been put on to Muskoka, 103.7 miles. At Bala the trains will connect with the Muskoka Lakes Navigation and Hotel Co.'s steamboats. Construction is in progress northward through Parry Sound to the French River, to which point the line has been completed from Romford, the point of junction with the transcontinental line near Sudbury. It is expected that the whole line will be completed within the next twelve months.

Woodbridge to Bolton.—A contract has been let to G. A. Begy & Co., St. Catharines, Ont., for reducing gradients and straightening out curves on the Owen Sound branch between Woodbridge and Bolton, Ont., about 10 miles. The work consists of earth excavations, concrete, fencing, etc., and is to be completed by Oct. 1. It is contemplated to construct a second track from Toronto Junction to Bolton Jct., 22.8 miles so as to provide for the increased traffic consequent on the approaching completion of the Toronto-Sudbury branch.

Winnipeg Shops.—The contract for the erection of the additional shop buildings at Winnipeg has been let to J. McDiarmaid & Co., Winnipeg, and the work will be gone on with at once.

Saskatoon to Battle River.—F. J. George, engineer in charge on the line under construction from Saskatoon, Sask., westerly, recently stated, after a trip over the route, that Contractor McArthur had the contract covered with men from mileage 135 to Battle River, mileage 235, and it was expected to have the grading completed this season. The grading between Saskatoon and Round Valley, about 135 miles, was expected to be completed early in July, and steel laying is being gone on with west of Battle River. Trains are being operated from Wetaskiwin easterly, and it is hoped to make a connection with this branch by the end of the year.

Calgary Station.—The Calgary, Alta., Board of Trade has received notice to move its building at once, as the site is required in connection with the erection of a new station there.

Edmonton Entrance.—W. Whyte, Second Vice-President, had a lengthened conference with the Edmonton, Alta., City Council June 3, relative to the proposed entrance of the C.P.R. line into the city. It is understood that a new agreement will be submitted to the company. The Mayor is quoted as having stated after the meeting that satisfactory progress had been made with the negotiations.

Bridge at Lethbridge.—Tenders are being called for the construction of a bridge on the Crow's Nest Pass line at Lethbridge, Alta. The bridge will be about a mile long, and about 300 ft. high.

Kootenay Central Ry.—It is reported that the C.P.R. is preparing to push forward work on this line, the construction of which was commenced in a small way at Golden, B.C., in 1906. The line, as proposed, starts from the C.P.R. transcontinental line at Golden, and follows the Kamloops Valley to the western foothills of the Rocky Mountains, which it will parallel to the valley of the Kootenay River where it will connect with the company's Crow's Nest Pass branch, probably near Cranbrook, B.C. The distance of the projected line is about 186 miles.

We have been advised that nothing definite has been decided with regard to the railway. It is understood, however, that W. Whyte, Second Vice-President, will make a trip of inspection over the route on an early date, after which a definite course of action with regard to the line will be decided upon.

Tourist Hotel for Kitsalano Beach.—The C.P.R., in agreeing to rent three acres of the beach at Kitsalano beach to the city of Vancouver, has reserved an acre and a half as the site of an hotel. Press reports state that the company is prepared to erect an hotel there at an early date.

Esquimalt and Nanaimo Ry.—Among the improvements being made upon this line is a diversion near Goldstream, the work being included in the appropriations for the year. It is intended to make a permanent line around the present trestle bridges at Waugh Creek and Goldstream, doing away with these altogether, and cross Goldstream with three steel spans, 100 ft., 80 ft. and 60 ft. respectively, on masonry abutments. The cost exclusive of the steel span is estimated at $40,000, and the contractors are Macdonell and Gzowski, Vancouver, B.C.

A survey party has been put in the field under H. Carry, to survey a route for a projected line from Duncan's to the foot of Cowichan Lake. Should a satisfactory line be located between these points it would prove a shorter route to Alberni and Clayoquot Sound than the proposed extension from Nanaimo.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—The Vice-President stated June 6 that no negotiations had been entered into with the Northern Pacific Ry. for acquiring its Little Falls branch. This statement was made in connection with a press report that the M. St. P. and S.S.M. Ry. had suspended work on the proposed extension from Brooton to Duluth, Minn., 180 miles, for which contracts had been let, an arrangement having been made with the N.P. Rd, for the transfer of that company's Little Falls branch line, 88 miles, and traffic rights over the N.P Ry. from Little Falls to Duluth.

Salary-Raising Training For Railroad Men

There is no profession in which promotion depends in any higher degree upon a man's real ability and technical knowledge than in railroading. Quick promotion then for the railroader is the result of quick and also thorough acquirement of that technical training which will qualify him to hold a higher position. In no way can the ambitious railroad employe secure this technical knowledge so quickly and yet so simply as through the I. C. S. Courses of home training. These Courses have been written by the best railroad experts on this Continent and are taught after a manner that 15 years' experience in training hundreds of thousands of ambitious men for promotion and better earnings has proved to be the most practical and efficient. These Courses include instruction in LOCOMOTIVE MANAGEMENT, LOCOMOTIVE BOILERS, STEAM CYLINDERS, and VALVE GEARS, BREAKDOWNS, COMPOUND LOCOMOTIVES, TRAIN RULES, WESTINGHOUSE and NEW YORK AIR BRAKES, CAR LIGHTING and HEATING, and ELECTRIC HEADLIGHTS.

If **YOU** wish to secure the training in your own home, in your spare time, and at an insignificant cost, that will qualify you for promotion to the highest positions in your profession, simply mark and mail this coupon and we will tell you how you can do so. The fact that we have enabled hundreds of other railroad men to secure promotion in itself warrants your careful investigation of our plan if you really wish to better yourself. Don't let a postage stamp stand between you and a better position. **Mark and mail this coupon NOW.**

Canadian Northern Ry. Construction, Etc.

St. John Valley Ry.—G. G. Ruel, Assistant Solicitor Canadian Northern Ry., and A. F. Stewart, of the engineering department of Mackenzie, Mann & Co., Ltd., spent some time recently in visiting the various points in the St. John Valley to be reached by the projected line for which the New Brunswick Legislature has approved a guarantee of bonds to the extent of $15,000 a mile. The route looked over near Woodstock was that of the projected Woodstock and Centreville Ry., which for a great part of the distance parallels the public highway. About one-half the distance was graded years ago. It is expected that engineering parties to locate the route will be sent out in the course of the summer.

Canadian Northern Quebec Ry.—D. D. Mann, Vice-President C.N.R., completed a trip of inspection June 10 over the lines of the C.N.Q.R. and of the Quebec and Lake St. John Ry., in the latter of which a controlling interest has been acquired. The question of the extension of this line from Roberval to the mining belt of the province, about 200 miles, is said to be under consideration. The question of the erection of car shops for the company's lines in the province is also said to be under consideration, but it is understood that the principal shops will be located at Longue Pointe, Montreal, where a large area of land was recently acquired.

Canadian Northern Ontario Ry.—The question of the route of this line between Toronto and Ottawa has been discussed by the Department of Railways and the Deputy Minister has asked the Government to appoint a special engineer to go over the proposed routes and decide which of the three should be adopted, as being best for the public. The routes proposed are via Smith's Falls, Perth and Lanark respectively.

Some negotiations are in progress between C.N.O.R. officials and the Owen Sound and Meaford Ry. Co., by which the charter and rights of that company would be utilized in the construction of a branch of the Toronto-Sudbury line to Owen Sound. The O.S. and M.R. Co. is also negotiating with the G.T.R. Surveys have been made for the line by the Manitoulin and North Shore Ry., one of the Lake Superior Corporation undertakings, and by the Huron and Ontario Ry. Co., which has outlined an extensive plan of electric railways.

Canadian Northern Ry.—D. B. Hanna, Third Vice-President and General Manager, completed an inspection of the line June 1, when he returned to Winnipeg from Edmonton, Alta. He stated that efforts would be made to improve conditions generally as much as possible, and to increase the rolling stock and other equipment. The reports of the construction and improvement work now in progress show that despite a number of disadvantages such as lack of labor and slow delivery of material, the work was going ahead favorably. A great deal of attention was being paid to the improvement of the road-bed along the main line and branches.

A contract has been let to S. Brown, Winnipeg, for the erection of a blacksmiths' shop, car repairing shop and planing mill, and other work in the C.N.R. yards at Fort Rouge. The round-house, which the company is erecting itself, is nearly completed.

Construction work on the Brandon-Regina line reached the C.P.R. branch running from Kenway to Souris, Man., June 5, and was suspended pending the obtaining of authority to lay a crossing. Contractor O'Keefe is constructing the line from south of Balgonie to Regina, Sask. Contractor Cowan is working on the line from Scarth towards the C.P.R. Kenway-Souris branch.

Michigan Central Railroad.

The report of the directors for the year ended Dec. 30, 1906, covers the operation of the following mileage: main lines, 270.07 miles; proprietary lines, 343.93 miles; leased lines, 1,117.34 miles; lines operated under trackage rights, 14 miles; total, 1,745.34 miles. Of these lines 380.04 miles are in Canada, and comprise the Canada Southern Ry., 226.18 miles (on which there are 213.73 miles of second track, and 141.03 miles of sidings), and 153.86 miles of branch lines of the Canada Southern Ry.

On Jan. 2, 1906, the M.C.R. leased direct the property of the Toledo, Canada Southern and Detroit Ry. Co., one of the railroads of the Canada Southern Ry. System, included in the agreement of Aug. 15, 1903, for the period of its corporate existence. Under the terms of the lease this company agrees to pay the principal and interest on $4,500,000.00 4% first mortgage bonds as they may be issued in accordance with its provisions. The date of maturity of these bonds is 50 years from Jan. 1, 1906, and the amount now outstanding is $3,100,000.00. Of this, $1,500,000.00 is held by the C.S. Ry. Co., in accordance with the terms of the lease, and will not draw interest while in its possession. The interest on the balance of the outstanding $1,600,000.00 of bonds is paid by the M.C.R. Co. Under the terms of the lease, in consideration of the M.C.R. guaranteeing both principal and interest of the $4,500,000.00 bond issue, the C.S. Ry. Co. is to deliver to the M.C. Ry. Co. on Mar. 1, 1913, the $1,500,000.00 bonds held by that company and the entire capital stock of the T.C.S. & D.R. Co. On Dec. 27, 1906, the M.C.R. Co. acquire a majority of the capital stock of the Chicago, Kalamazoo & Saginaw Ry. Co., the road of which extends from Pavilion to Woodbury, Mich., 55.30 miles, passing through Kalamazoo. On April 9, 1906, the M.C.R. Co. acquired 30,000 shares of the common stock, and on Sept. 26, 1906, purchased $3,000,000.00 4% first mortgage bonds of the Chicago, Indiana and Southern Rd. Co. On Sept. 25, 1906, articles of association of the St. Clair & Western Rd. Co., succeeding the Michigan Midland & Canada Rd. Co., a proprietary line of the C.S.Ry. Co., were filed.

Cost of road and equipment to Dec. 31, 1905, was	$35,363,838.08
Less—	
Premium received on M.C. Rd. 3½% gold bonds of 1952, credited to construction account	150,580.99
Total cost of road and equipment to Dec. 31, 1906	$35,213,257.09
This represents per mile owned (270.07) miles) $130,386	
Terminal Railroad, Chicago (Indiana Harbor Line), construction account was increased	$98,260.43

The gross earnings were $26,275,588.13, an increase of $2,991,719.89 over the previous year. The freight earnings were $18,650,229.56, an increase of $2,394,748.67. This was due to an increased movement in nearly all commodities and in the average distance of each ton carried. The passenger earnings were $5,928,874.02, an increase of $703,345.76, due to a general increase in both local and interline business. The express earnings were $901,415.00, a decrease of $71,870.19. The expenses of operation were $21,730,263.99, an increase of $2,864,347.56. Maintenance of way and structures showed an increase of $70,448.76. Maintenance of equipment increased $1,155,651.36, due to renewal charges on account of cars and locomotives. Conducting transportation increased $1,622,906.24. The net earnings were $4,545,324.14, an increase of $127,372.33. Other income was $402,003.85, an increase of $86,191.69, due to increased revenue from securities and interest on advances. First charges, $3,959,500.47, increased $199,190.22, the principal items being interest on additional bonds issued, and interest on loans. The profit from operation for the year, after payment of 5% in dividends upon the capital stock, was $50,927.52, which has been carried to the credit of income account.

Liverpool and Milton Railway.

By an act passed last session of the Nova Scotia Legislature, the L. and M. Ry. Co. was authorized to sell its line to the Halifax and South-Western Ry. Co., and for the purpose of aiding in the purchase the Government was authorized to advance to the latter company a sum not exceeding $13,500 a mile in cash, or provincial debentures or stock issued under the provisions of Chap. 15 of the Revised Statutes, bearing interest at 3½%. Upon the transfer of the line it is to become part of the H. and S.W. Ry., and subject to the mortgage held by the Government dated Aug. 20, 1901, and it shall also become subject to the existing legislation affecting the H. and S.W. Ry.

The L. and M. Ry. was constructed under an act of the Province of Nova Scotia, and extends from Liverpool to Milton, a distance of 5.50 miles. This mileage, together with half a mile of siding, is laid with 56 lb. steel. It owns 1 locomotive, 1 box car, 11 platform cars, 1 conductor's van and 1 snow plow. Its operations for the year ended June 30, 1906, showed: Passenger earnings, $1,036.52; freight earnings, $5,602.90; total, $6,639.42; operating expenses, $5,554.30; net earnings, $1,085.12. Total train and engine mileage, 7,400; passengers carried, 20,460; freight carried, 16,535 tons. The general financial statement showed: Share capital, authorized, $49,000; subscribed and paid up, $30,300; bonded debt, $25,000, of which $5,000 at 6% interest had been issued and sold. Capital from other sources, $24,000; total capital, $59,300; floating debt, $24,000 at 6%. Cost of railway, $59,900.

The Manual of Statistics, issued by the Manual of Statistics Publishing Co., New York, has reached the 29th year of its issue. The volume runs to 1064 pages, and gives in concise form a mass of information relating to railways, industrial companies, government securities, mining stocks, grain and cotton stocks, which are required by investors, speculators and stock market interests. The arrangement of the facts and the mass of detail given shows the care taken in collecting and arranging the information available. The tables showing the movement of the different stocks at representative exchanges in the U.S. and Canada, are especially valuable to the investor.

The C.P.R. new transcontinental train, which will be put on July 2, will be named Trans-Canada, Limited. It will leave Montreal at 12.30 p.m., and will run on an 85 hour schedule to Vancouver, B.C.

The Empire Coal and Tramway Co. asked its shareholders at a special meeting held at Moncton, N.B., June 28, to increase the number of its directors from three to five. W. B. Chandler, Moncton, is Secretary-Treasurer.

Eight "friendly suits" have been filed in the U.S. District Court at St. Paul, Minn., against the Great Northern Ry., the Northern Pacific Ry., the Chicago, Milwaukee and St. Paul Rd., the Chicago and Northwestern Rd., the Chicago, St. Paul, Minneapolis and Omaha Rd., the Minneapolis and St. Louis Rd., the Chicago Great Western Rd., and the Minneapolis, St. Paul and Sault Ste. Marie Ry., to enjoin them from putting into effect the commodity rate recently ordered by the Minnesota Railroad and Warehouse Commission.

HOTEL TRAYMORE

ATLANTIC CITY, NEW JERSEY

OPEN ALL THE YEAR

To the original hotel has been added a ten-story fireproof building, equipped throughout with the most improved sanitary plumbing, steam heating and electric lighting. The sleeping rooms are spacious, light and airy, private bath with hot and cold fresh and salt water connecting each. The building is modern in every respect, each room affording an unobstructed view of the ocean, and the furnishings will be unsurpassed in the point of richness and comfort. Capacity, 600.

TRADE AND SUPPLY NOTES.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Canadian General Electric Co. has issued a descriptive catalogue of alternating current ceiling fans, which it is putting on the market.

The Dominion Bridge Co. has been granted supplementary letters patent whereby its capital has been increased from $1,000,000 to $2,000,000.

The Canadian Oil Co., Toronto, has been authorized to do business in the Province of Quebec, its principal agents being Ryan and Bickerdike, Montreal.

The McConway & Torley Co., Pittsburg, Pa., have issued a catalogue descriptive of twentieth century developments in passenger service equipment, including steel passenger cars, Buhoup 3-stem couplers and Buhoup vestibules.

J. E. Ward, Vice-President and General Manager Gold Car Heating and Lighting Co., New York, has retired from the position of General Manager of that company, and will engage in business as a manufacturer and dealer in railway, steamship and contractors' supplies on his own account.

The Canadian Pilling Co. has been organized to build and sell compressed air and electrical applications of all descriptions, principally portable and stationary hoists, turntable tractors, winches, cranes and drills. President, J. L. Pilling; Vice-President, Jno. Taylor; General Manager, T. Arnold. Offices, 180 St. James St., Montreal.

The Dominion Bridge Co. has been granted supplementary letters patent under the Dominion Companies' Act, authorizing it to acquire, by purchase or otherwise, the property and good-will, etc., of other similar companies or firms; to hold shares in corporations of a similar nature; to form a union or working agreement with any steel company; to acquire or own such motive power as may be necessary for its business, and to sell any surplus power; to carry on any business germane to the objects for which the company is incorporated; to sell, lease or otherwise dispose, in whole or in part, of the company's property or assets; to act as agent for any corporation or individual; and to do all such other things as may be deemed necessary or useful in the attainment of the above objects.

The American Locomotive Co. has issued a pamphlet illustrating and describing different designs of 8-wheel or American type passenger locomotives. This is the eighth of the series of pamphlets which is being issued by this company to cover the various standard types of locomotives. It contains illustrations of 25 different designs of 8-wheel type locomotives, the principal dimensions of each design being given on the page opposite the illustration. The pamphlet constitutes a very complete record of the production of the company in this type of engine, and the arrangement is very convenient for the selection of a design best suited to meet the particular requirements.

The Robb Engineering Co., Amherst, N.S., has received the following orders recently: N. and M. Smith, Halifax, N.S., one 80 h.p. Robb-Armstrong engine; Columbia River Lumber Co., Golden, B.C., one 125 h.p. Robb-Armstrong engine; Temiskaming and Northern Ontario Ry., one 80 h.p. Robb-Armstrong engine; Canadian Pacific Ry., one 80 h.p. Robb-Armstrong engine; Canadian Westinghouse Co., one 100 h.p. Robb-Armstrong engine; Somerville, Ltd., Toronto, one 200 h.p. Robb-Armstrong Corliss engine, two 100 h.p. return tubular boilers, one 200 h.p. feed water heater, 1 duplex boiler feed pump; W. P. McNeil & Co., New Glasgow, N.S., one 150 h.p. Robb-Mumford boiler; Montreal General Hospital, two 150 h.p. return tubular boilers; Canadian Hand Drill Co., Sherbrooke, Que., one Robb-Armstrong tandem compound engine; Chambers Electric Co., Truro, N.S., one Robb-Armstrong vertical cross compound engine.

A paper was read at the recent convention of Master Boiler Builders at Cleveland, Ohio, on "Hydrostatic Tests of Boilers," by T. W. Lowe, of the C.P.R.

It is reported that it has been decided to refer to the Intercolonial Ry. in future as the "I.R.C." instead of the "I.C.R." The new initials stand for Intercolonial Ry. Canada, while the old ones stood for Inter-Colonial Ry. It has been claimed that the old initials brought about confusion with the Illinois Central Rd.

The Canadian Northern Quebec Ry., and its connecting line the Quebec and Lake St. John Ry., inaugurated a service between Montreal and the Saguenay, via Riviere à Pierre Jct., June 16. The new train leaves Montreal at 8.30 a.m., Roberval being reached at 6.55 p.m., and Chicoutimi at 10.35. A train is also run from Riviere à Pierre to Quebec, reaching that point at 4.45 p.m. The train to Montreal leaves Chicoutimi 5.45 a.m.; Roberval, 7.10 a.m., and reaches Montreal 5.45 p.m.

The Caledonia Springs Co. has been incorporated under the Dominion Companies' Act, with a capital of $200,000 and offices at Montreal, to acquire by lease, purchase or otherwise from the C.P.R., or as much as may be necessary, the Caledonia Springs property, and to carry on the business of bottling and selling the mineral waters of the springs, together with various incidental powers. The provisional directors are: Hon. L. J. Forget; C. R. Hosmer, A. D. MacTier, W. R. Baker, S. W. Beatty, Montreal, all of whom are C.P.R. directors or officials.

The Portage la Prairie Construction Co. has been incorporated under the Manitoba Companies' Act, with a capital of $100,000 and offices at Portage la Prairie, Man., for the purpose of carrying on a general contracting business, including bridges, telegraph and telephone lines, railways and tramways, including any and every branch of work involved in railway or tramway construction; to deal in contractors' supplies, and to purchase or otherwise acquire stocks, bonds, or other securities of any other corporation. The provisional directors are: G. B. Housser, W. Armstrong, W. Richardson, M. A. Ferris, H. Armstrong, A. L. Hamilton, and P. Whimster, Portage la Prairie.

The Chicago Transportation Association, consisting of the travelling, contracting and soliciting freight and passenger agents having headquarters in Chicago, has been reorganized and the following officers have been elected for the current year: President, T. M. Cunerty, Erie Rd.; Vice-President, A. S. Hindman, Michigan Central Rd.; Secretary, C. R. Boak, Intercolonial Ry.; Treasurer, G. H. Brown, Grand Trunk Ry. The meetings are held on the second Monday of each month with the exception of July and August. On June 15 a tally-ho party, and trip to one of Chicago's popular pleasure resorts was held under the auspices of the Association. This is the first of a number of enjoyable times which the entertainment committee has planned for the summer.

Railway Rolling Stock Notes.

The Anglo-Newfoundland Development Co. has ordered a locomotive in the U.S.

The Canadian Northern Ry. has ordered two switching locomotives from the American Locomotive Co.

The Central Ontario Ry. has placed an order for one first-class passenger car with the Crossen Car Manufacturing Co., Cobourg, Ont.

The Grand Trunk Pacific Ry. has placed an order for 20 construction cars for its engineering and telegraph departments with the Canada Car Co., Montreal.

The Canadian Northern Ry. received between May 13 and June 13 seven passenger cars and 100 flat cars from the Crossen Car Manufacturing Co., Cobourg, Ont.

The Prince Edward Island Ry. is having constructed, at its Charlottetown shops, a combined first-class passenger and smoking car, a number of freight cars and a snow plow.

The C.P.R. between May 15 and June 12 placed orders for 10 switching locomotives, 1 standard wing snow plow and 1 double-track snow plow at its Angus, Montreal, shops.

The Canada Car Co., Montreal, is building 20 Hart convertible ballast cars for the Dominion Dump Car Co., Montreal. They are of the same general dimensions as those described in our issue of Sept., 1906, as having been ordered for the G.T. Pacific Ry.

The C.P.R. has ordered at its Angus, Montreal, shops, 10 switching locomotives of the six-wheeled coupled type, class U. 3c, with cylinders 18 and 26 ins., 52 in. driving wheels, and weighing 126,000 lbs. each. These are duplicates of those built in 1905 and 1906 which were fully described by us at that time.

The general dimensions of the baggage and express cars and baggage cars under construction at the C.P.R. Angus, Montreal, shops, are similar to those described in our Sept. issue, 1906; the dimensions of the baggage and smoking cars under construction at the same shops are similar to those described in our Nov. issue, 1906, and the vans are similar to those described in our last issue.

The Intercolonial Ry. has placed an order with the Canada Car Co., Montreal, for 34 double-deck stock cars. The specifications provide: Length over end sills, 36 ft.; width over side sills, 9 ft.; height inside, 8 ft.; door opening, 4 ft.; wheel base of trucks, 5 ft. 2 in.; Simplex bolsters and brake beams; Susemihl roller side bearings; cast iron journal boxes, 4¼ by 8in. journals with malleable iron lids and wedges; 33 in. cast iron wheels, 650 lbs. weight.

The C.P.R. between May 15 and June 12 received the following rolling stock: 6 freight locomotives from the American Locomotive Co.'s Richmond, Va., works; 10 freight locomotives from another U. S. firm; 1 freight locomotive from the Locomotive and Machine Co. of Montreal; 5 Pacific type passenger locomotives, 11 dining cars, 5 sleeping cars, 5 first-class cars, 137 box cars, 67 flat cars, 44 steel coal cars and 165 Hart convertible ballast cars, from its Angus, Montreal, shops.

The Canadian Northern Ry. between May 15 and June 15 received the following rolling stock: seven 10-wheel locomotives from the Canadian Locomotive Co., Kingston, Ont.; eight 10-wheel locomotives from the Locomotive and Machine Co. of Montreal; 225 box cars, 1 mail and express car, and 4 baggage cars from Rhodes, Curry & Co., Amherst, N.S., 2 stock cars, 25 flat cars and 8 second-class cars from the Crossen Car Manufacturing Co., Cobourg, Ont.; 100 Hart convertible cars from the Canada Car Co., Montreal.

Railway Finance, Meetings, etc.

Atlantic and Lake Superior Ry.—An order was made June 10 by the Exchequer Court confirming the scheme of arrangement filed in March, and amended in some details by the court. In pursuance of the scheme of arrangement the bondholders of the Baie des Chaleurs Ry.—one of the companies amalgamated to form the A. and L.S. Ry.—are invited to transfer and deliver to the Royal Trust Co., Montreal, up to July 15, the bonds held by them. Bonds not so transferred are barred from the benefits of the special trust fund, and the holders of the same will rank as ordinary unsecured creditors. A special general meeting of the shareholders of the B. d C. Ry. Co. was called to be held in Montreal, June 15, for the purpose of declaring the forfeiture of the shares belonging to those shareholders who have made default in the payment of any call payable by them for the space of two months after the time appointed for the pavment thereof, and of authorizing the directors to sell the shares so forfeited either at public auction or by private sale.

Baie des Chaleurs Ry.—See Atlantic and Lake Superior Ry.

Canada Coal and Rd. Co.—See Maritime Coal, Ry. and Power Co.

Canada Southern Ry.—The annual meeting was held at St. Thomas, Ont., June 5. No separate report is issued for the C.S.R. Co., it being leased in perpetuity to the Michigan Central Rd. Following are the directors for the current year: W. K. and F. W. Vanderbilt; H. McK. Twombly, W. H. Newman, C. M. Depew, S. F. Barger, H. B. Ledyard, E. A. Wickes, J. E. Brown. These are also the directors of the different subsidiary companies.

Intercolonial Ry.—For the nine months ended Mar. 31, the accounts show a surplus of receipts over expenditures of $218,000, and the estimates of officials is that the surplus of receipts over expenditures for the year ended June 30 will reach $400,000.

London and Port Stanley Ry.—The City Auditor presented a report to the London, Ont., City Council, June 10, of an audit of the Pere Marquette Rd. books, showing the L. and P.S. Ry. earnings. The total earnings for the year ended Dec. 31, 1906, were $143,-736.06 against $131,056.24 for 1905. The city is entitled to 10% upon all income over $80,000, but as in 1905 owing to an error the city was paid this percentage on $35,493.23 of earnings to which it was not entitled, it will only receive 10% on $28,901.24 for 1906.

Lotbiniere and Megantic Ry.—An act passed at the recent session of the Quebec Legislature gives the company power to sell or lease its line to any other company. In the act incorporating the Quebec Eastern Ry. Co., a section specially authorizes the L. and M.R. Co. to sell its line to that company.

Maritime Coal, Ry. and Power Co.—At a meeting of shareholders in Montreal, May 29, a resolution was passed ratifying the purchase of the property and undertaking of the Canada Coal and Rd. Co. By this purchase the M.C.R. and P. Co. becomes the owner of an additional area of over 17 square miles of coal-bearing lands, together with 12 miles of railway, terminal facilities and rolling stock. The railway extends from Maccan, N.S., through the coal lands to the coal docks on the Bay of Fundy. Possession of the property was taken June 1, and the new owners propose to open up some new mining areas and to pursue an aggressive policy of development. Senator Mitchell is President of the company.

The Canada Coal and Rd. Co. was incorporated under the Nova Scotia Companies' Act, with a capital of $600,000 in common and preferred stock, of which $300,000 of common stock had been issued, and $150,000 of the $300,000 of preferred stock. The company took over the Joggins Ry., which was constructed under the authority of an act of the Nova Scotia Legislature passed in 1883. The railway is 12 miles long and there are 3.50 miles of sidings—all of which are laid with 56-lb. steel rails. At June 30, 1906, its rolling stock consisted of two locomotives, one first-class car, one second-class car, two baggage, mail and express cars; five platform cars, and one snow plow. During the year the train mileage was 22,450, and the engine mileage, 29,768 miles; 11,328 passengers, and 102,245 tons of freight (97,202 tons being coal) were carried. The total earnings were $43,080.46, and net earnings $12,428.72. The general statement shows that $300,000 of the common stock had been subscribed and paid up; $61,000 had been paid up on the $150,000 preferred stock issued; there had been received $37,500 by way of subsidy from the Dominion Government, and $35,200 from the Nova Scotia Government. The cost of the railway and equipment is given as $168,-061.25, and at June 30, 1906, there was a floating debt of $478.14.

Montreal, Ottawa and Occidental Ry.—At the last session of the Quebec Legislature, a vote of $750 was made towards the payment of one year's interest to June 30, 1908, at 3%, on $25,000 purchase price of the fuel yard at Quebec, acquired for M., O. and O. R.

Pere Marquette Rd.—The plans for the discharge of the receivership, which have been under consideration for some time, are understood to have been finally agreed upon. The P.M. stockholders, in order to put an end to the receivership, have expressed themselves as willing to subscribe $5,000,000 cash for new P.M. preferred stock at par. The money thus received would be sufficient to pay off all obligations including those incurred since the appointment of the receiver, and to give the road a fair amount of working capital. The present preferred stockholders, who subscribed for the new preferred stock at par, are understood to have agreed also that there shall be no obligation to pay dividends upon this additional issue until the expiration of a certain number of years, and that thereafter the dividend shall be cumulative.

Phillipsburg Ry. and Quarry Co.—By an act passed last session of the Quebec Legislature the outstanding stock of the company, amounting to $124,500, is declared to have been validly issued and paid up; the company is authorized to sell its undertaking or any part of it to any other company, and the stock or bonds received for the sale distributed among the directors and shareholders; it is also given power to change its name to that of the Phillipsburg Ry. Co.

Temiskaming and Northern Ontario Ry.—The Attorney-General of Ontario has granted the necessary fiat to enable Coates Sons & Co., financial agents, London, Eng., to bring an action against the Province to recover £3,000 in connection with the flotation of a loan of £1,200,000 to meet Treasury bills issued in connection with the construction of the T. and N.O. Ry. Coates & Co. claim that the late Provincial Government entered into an agreement by which that firm would negotiate financial matters in respect of the railway upon the London market, but the present Government repudiates any such contract.

The net receipts for the three months ended Mar. 31, are reported to be $40,563, against $38,364 for same period, 1906.

Toronto, Hamilton and Buffalo Ry.—The annual meeting was held at Hamilton, Ont., June 5, when general routine business was transacted. The company does not issue a report. The railway is owned by the New York Central and Hudson River Rd. and the C.P.R. The officers and directors for the current year are: W. H. Vanderbilt, W. H. Newman, C. F. Cox, New York; H. B. Ledyard, Detroit, Mich.; J. N. Beckley, Rochester, N.Y.; Sir T. G. Shaughnessy, D. McNicoll, Montreal; E. B. Osler, N. Kingsmill, W. P. Torrance, Toronto; D'Arcy Scott, Ottawa.

Earnings for May, $91,418.45, against $57,789.53 for May, 1906.

Wabash Rd.—A refunding and extension mortgage for $200,000,000, in favor of the Bowling Green Trust Co., J. C. Von Blaircom and Jas. B. Forgan, has been filed at Detroit. It will run for 50 years at 4%, and is to cover an issue of bonds to be issued in denominations of $1,000. Holders of old securities are permitted to exchange their holdings for an equivalent in the new mortgage bonds. The present indebtedness to be taken up is $89,000,000 and the remainder of the issue is to be devoted to extensions and improvements of the system

G.T.R. Betterments, Construction, Etc.

Port Hope Viaduct.—In connection with the recent investigation by the Board of Railway Commissioners into the application of the G.T.R. respecting the viaduct at Port Hope, Ont., the judgment of the Board is that the viaduct should not be filled in between the east side of Mill St. and the west side of elevated tracks, and that full width openings should be left for King St. and John St. The formal order had not been issued June 12.

Toronto Eastern Entrance Plans.—It has been decided by the Dominion Department of Justice, that the application of the G.T.R. for approval of its route map for a new eastern entrance into Toronto does not come within the jurisdiction of the Minister of Railways, according to Sec. 167 of the Railway Act. This decision does not set forth that the application has to come before the Board of Railway Commissioners. The procedure in a case like the present, where a railway desires to change the location of its completed line, appears to have been left in a doubtful state by the various amendments made to the act.

Stratford Shop Extension.—C. M. Hays wrote recently to the Mayor of Stratford, Ont., stating that a contract had been let to the Canadian Bridge Co., Walkerville, Ont., for the furnishing and erection of the structural steel work for the additions to the company's shops at Stratford. The work should be completed within eight months. The present boiler erecting and machine shop will be done away with and an entire new steel and cement structure erected. The new building will be 950 ft. long and run from the street line of Nelson St. eastward. The shops will be 175 ft. wide, 53 ft. wider than the present structure. One large 120-ton electric crane will be installed to enable the largest locomotive to be lifted up bodily and carried from one end of the shop to the other. Smaller electric cranes will also be installed for handling lighter work throughout the shops. The new additions will be 20 ft. higher and 72 ft. wider than the present large tender shop which was erected two years ago. The total length of the new shops will be 950 ft., and will include boiler, erecting and machine departments. Eventually, 750 ft. of the old shops will be removed to make way for the new structure.

Hyde Park, London, Ont.—The extensive work of cutting through Hyde Park hill, west of London, Ont., which has been in progress for about a year, is expected to be completed by the end of the summer. The hill has been cut down about 70 ft. at its summit, and room has been provided for the laying of four tracks. This work has been done in connection with the bridge recently completed at the Cove, and represents an expenditure of about $1,000,000.

A Central Vermont Ry. Decision.

The Vermont Board of Railroad Commissioners has rendered a decision in the case of the petition of the residents of Milton, Vt., vs. the Central Vermont Ry. Co., to make Milton, a town of about 1,800 population, a flag station for the New England States Limited, a through passenger train from Montreal to Boston and New York, especially devoted to carrying interstate and international passengers. It was shown in evidence that the schedule time of this train from St. Johns to White River Jct., a distance of 163 miles and the C.V.R. portion of its trip, is 4 hours and 35 minutes. The train now makes 10 stops between St. Johns and White River Jct., including one of seven minutes at St. Albans, and has heavy transfers at Essex and Montpelier Junctions. The time necessarily consumed in making these stops is between 35 and 45 minutes. Assuming that the stops can be made in 35 minutes, the running time of this train from St. Johns to White River Jct. must be 41 miles per hour in order to make the schedule time. In order to accommodate the passengers bound for Boston, connection must be made with the Boston and Maine Rd. at White River Jct. and also at Bellows Falls upon the Fitchburg division of that road; and in order to accommodate passengers for New York, connection must be made with the Rutland Rd. at Burlington, and with the New York, New Haven and Hartford Rd. at Springfield by the way of the Boston and Maine and Central Vermont train which is made up at White River Jct. for Springfield.

That part of no. 2, the Montreal train which is destined for Springfield, is made up at Montreal with a day coach and a Pullman car which, on arriving at White River Jct., are taken by the Boston and Maine train that goes over the Connecticut and Passumpsic division of that road, and is attached at White River Jct. to a train for Springfield. If the Boston and Maine train over the Connecticut and Passumpsic division of that road is delayed by the late arrival of no. 2, the passengers over the Connecticut and Passumpsic division and the passengers over the Central Vermont lose their connection at Springfield for New York. This train is the only day train over the Boston and Maine Rd. for New York by way of Springfield, is a very heavy train, and in summer consists of a number of drawing-room cars in addition to its day coaches. The Boston and Maine Rd. objects to any delay at White River Jct. which endangers their passengers reaching New York by the afternoon express by way of Springfield, which reaches New York at 9.30 p.m. The connection at Springfield is close, and the New York, New Haven and Hartford Rd. refuses to make any delay for the Boston and Maine and Central Vermont passengers. If they fail to make connection, there is only a local train which takes them to New York at 11 p.m.

No. 2 makes close connection with the Rutland Rd. at Burlington, arriving there at 11.52, the Rutland train leaving at 11.55, and the Rutland refuses to delay its train, which is a New York train, for more than five minutes; and delay on the part of no. 2 endangers the connection at Burlington for all passengers west of Montreal bound for New York by way of the Rutland Rd. and the New York Central. No. 2, under a contract with the U.S. Government, carries sealed mail pouches from Montreal to St. Albans; and at St. Albans a U.S. mail car is attached, and the train is run as a regular mail train from St. Albans to Springfield. During the summer of 1900 and continuously from the summer of 1901 until Dec. 23, 1906, Milton was a flag station for no. 2. While Milton was thus a flag station, the Central Vermont Ry. had great difficulty and often failed in making the connections above indicated, and to obviate the difficulty, on Dec. 23, 1906, they discontinued stopping no. 2 at Stanbridge and St. Armand, Que., and at Milton and Richmond, Vt. The time thus gained has since enabled the C.V.R. to better ensure making the above connections. Through no. 2, the C.V.R. is in sharp competition with the C.P.R. and the Boston and Maine Rd. with the Rutland Rd. and the Delaware and Hudson Co., which leaves Montreal over the G.T.R., for the through passenger traffic from Montreal to New York and Boston.

The opinion of the Board of Railroad Commissioners is as follows: "We think that the C.V.R. Co. has fully performed its duty toward the town of Milton and vicinity, in the way of furnishing it proper and adequate accommodation, without stopping this interstate and international train as the petitioners desire. The limited train has come to keep pace with the competitive demand for speed. Trains could not be such in name or fact if compelled to stop at the smaller stations. Slight local inconvenience must, in many instances, yield to the superior rights of through traffic. This matter cannot be viewed alone in the light of ordering this train to stop at Milton, which might not require more than three minutes. As was said by the U.S. Supreme Court in Mississippi Railroad Commission vs. Illinois Central Rd. Co.: 'It is the question whether these trains can be stopped at all at any particular station when proper and adequate facilities are otherwise afforded at such station. If the commission can order such a train to be stopped at a particular locality under such circumstances, then it could do so as to other localities, and in that way the usefulness of a through train would be ruined and the train turned from a through to a local one. . . . . The legislature of a State could not itself make such an order, and it cannot delegate the power to a commission to do so, in its discretion, when adequate facilities are otherwise furnished. The transportation of passengers on interstate trains as rapidly as can with safety be done is the inexorable demand of the public who use such trains. Competition between great trunk lines is fierce and at times bitter. Each line must do its best even to obtain its fair share of the transportation between States, both of passengers and freight. A wholly unnecessary, even though a small obstacle, ought not in fairness to be placed in the way of an interstate road, which may thus be unable to meet the competition of its rivals.'

"The petitioners claimed, and the evidence tended to show, that in spite of the time saved by not stopping at Milton and other like stations, no. 2 continued to miss connections at White River Jct. and other points. To the Board this evidence would seem to indicate, not an argument for reinstating Milton as a flag station, but rather a reason for discontinuing stopping at this and other like stations, as the company has already done."—Railway World.

It is proposed to establish a chair of engineering at the University of Manitoba, and a stipend of $2,500 is being offered for a professor.

In reference to the question of accidents on Canadian railways arising from defective rails some special investigations have been made by officers of the Board of Railway Commissioners, but we were informed June 12, that no report had been submitted to the board, and until this was done no general consideration would be given to the matter. No circular, we were informed, had been issued to the railway companies on the subject.

Air Brake Association.

At the annual convention of this association at Cleveland, Ohio, recently, a paper was presented by W. C. Hunter, Manager New Brunswick Coal and Ry. Co., on "Maintenance of Air Brakes under Freight Cars and a System of Keeping Check of Repairs."

There being some 2,000,000 freight cars in the United States and Canada equipped with air brakes, representing an investment of approximately $60,000,000, the committee believes that their maintenance in efficient condition is an important subject, not only because inefficient air brakes fail to earn a fair return on their cost as a train stopping mechanism, but from the fact that brakes in bad order cause loss and damage to lading, and to rolling stock, the aggregate cost of which is an incalculably large sum. It follows, however, that a very necessary feature of the work of maintenance is a well-defined system of keeping check of all air brake repairs, and also of the general condition of the brakes. The paper describes how one important Canadian railway does air brake repair work, the manner of recording the work done and the general condition of its freight car air brakes. Reference is made to the system of keeping record of these general repairs, by which data are at hand to quickly ascertain when any car on the railway had its brake overhauled, the nature of repairs and when it is due to again be overhauled. With the use of such a system a record is always available, showing how many freight car air brakes are in operation on the road each day, the number in good order, how many are in bad order or cut out, on what part of the line the most trouble occurs with brakes and what it consists of. Other forms of defect cards are described and while these apparently somewhat complex systems require additional clerical help, stationery, etc., the committee has no doubts that it pays. Considerable discussion followed the paper, the sentiment varying not a little as to the best form of card for general use, and the subject was closed with the understanding that it be carefully considered and again brought up at the next convention.

Mr. Hunter was elected Second Vice-President, and W. J. Hatch, of the C.P.R., a member of the Executive Committee for the current year.

The corner-stone of the transportation building, which the C.P.R., the G.T.R. and the Canadian Northern Ry. are erecting on the exhibition grounds, Toronto, was laid June 4, by the Premier of Ontario.

The Western Canada Immigration Association has received a grant of $5,000 from the G.T.R. in furtherance of its programme of advertising Canada. H. R. Charlton, of the G.T.R. advertising department, has been elected a member of the executive committee.

A charge laid under the Lord's Day Act against the G.T.R. the company's yardmaster at East York, and a fireman employed at the yard there, is being investigated by one of the magistrates for York County. The specific charge is for carrying on their usual avocation on a certain specified Sunday in April, and the proceedings are instituted under the authority of the Attorney-General of Ontario.

The Stratford Rapid Transfer Co. is being organized in Stratford, Ont., with a capital of $40,000, to conduct an automobile passenger and delivery system. Following are the provisional officers: President, E. K. Barnsdale; Vice-President, F. J. Corrie; Managing Director, J. S. Smith; Secretary, E. A. Rea; Treasurer, Dr. Forester. The company expects to have its motors on the streets early in July, and will give a 5c. fare, six tickets for 25c., with one transfer.

MAINLY ABOUT PEOPLE.

F. White, C.E., Montreal, died there May 27, after a short illness.

J. P. Dawes, Montreal, a director of the Dominion Bridge Co., died there June 12.

B. J. Coghlin, of B. J. Coghlin & Co., has left Montreal for his annual trip to England and Ireland.

R. B. Angus, director C.P.R., and Mrs. Angus, Montreal, celebrated their golden wedding June 13.

Jas. T. Barnes, assistant chief train dispatcher, C.P.R., Brandon, Man., died there suddenly, May 23.

G. A. Walton, C.P.R. station ticket agent, Winnipeg, was married there, May 25, to Miss E. M. Macdonald.

W. Nicol, a former G.T.R. station agent at Brantford, Ont., has been appointed postmaster at Regina, Sask.

H. Newnham, of the C.P.R. General Freight Department, Montreal, was married at St. John, N.B., June 4, to Miss F. A. Kay.

A. MacArthur, President of MacArthur Bros. Co., railway contractors, Chicago, Ill., died at Riverside, Ill., June 2, aged 73.

A. R. Creelman, K.C., chief counsel C.P.R., and the Misses Creelman, sailed on the Empress of Ireland for England, June 14.

J. J. Hartnedy, assistant Superintendent Canadian Northern Ry. sleeping and dining cars at Edmonton, Alta., died there recently.

R. G. Reid, President Reid Newfoundland Co., is making a visit to Newfoundland, in connection with the company's undertakings there.

W. J. Crossen, of the Crossen Car Manufacturing Co., Cobourg, Ont., has been elected a director of the Cobourg Summer Horse Show.

M. A. Piggott, Hamilton, Ont., one of the contractors for the Guelph and Goderich Ry., is engaging in mining in the Cobalt district.

C. H. Dancer, Chief Engineer for the Manitoba Government, has been appointed Deputy Minister of Public Works and Chief Engineer.

T. P. Phelan, Toronto, President of the Canada Ry. News Co., has been elected President of the Ontario License-holders Protective Association.

Miss L. Forget, daughter of Hon. L. J. Forget, director C.P.R., was married at Ste. Anne de Bellevue June 13 to W. W. Skinner, Montreal.

Sir C. Rivers Wilson, President G.T.R., is expected at Montreal, early in July, for the purpose of making his annual trip of inspection over the line.

John Waldie, who died in Toronto June 12, was President of the Victoria Harbor Lumber Co., and interested in marine transportation on the Great Lakes.

The engagement is announced of Miss C. M. Cross, daughter of W. Cross, Assistant to the Second Vice-President C.P.R., Winnipeg, Man., to R. L. Dennison.

A Moncton, N.B., despatch says the engagement is announced of D. Pottinger, General Manager Government Railways, to Mrs. Read, widow of F. P. Read.

O. F. French, formerly General Manager of the Cuyahoga Telegraph Co. in Ohio, has been appointed Deputy Minister of Railways, Telephones and Telegraphs for Manitoba.

S. MacDougall has resigned his position as Manager of the Ottawa Branch of the Sovereign Bank to join the Eastern Construction Co., which is engaged in railway contracts.

Miss R. H. Wainwright, daughter of W. Wainwright, General Assistant and Comptroller G.T.R., was married at Montreal June 12, to A. R. Chipman, of St. Stephen, N.B.

E. L. Corbett was presented with a travelling bag, etc., by his fellow-clerks in the Intercolonial freight office at St. John, N.B., June 17, on his leaving to enter the C.P.R service.

Mrs. A. B. Foster, who died at Cowansville, Que., recently, was widow of the late Hon. A. B. Foster, of Waterloo, Que., well known as a railway promoter, contractor and financier.

A. W. Wheatley, heretofore Assistant Superintendent of Motive Power, Union Pacific Rd., has been appointed General Inspector American Locomotive Co., with office at Schenectady, N.Y.

L. V. Druce, Commercial Agent G.T.R., Seattle, Wash., is reported to be a grandson of the eccentric toy dealer of London, Eng., who it is claimed in certain circles was also the Duke of Portland.

C. E. Crowley formerly of the G.T.R. Engineering Staff at Toronto, and latterly with the Northern Ry. of Costa Rica, has been appointed Resident Engineer of that line with office at San Jose, C.R.

C. C. Malloch, of Ottawa, on the Georgian Bay Canal survey staff, was drowned at Mille Isles Rapids, Lake of Two Mountains, June 3, while on survey duty. He was in a launch when he was fouled by a cable and thrown into the water.

C. M. Hays, Second Vice-President and General Manager G.T.R., returned to Montreal, June 14, from Chicago, Ill., where he was attending the annual meetings of terminal and other companies in which the G.T.R. is interested.

A. J. Nixon was presented with an address and a diamond ring by the G.T.R. employes at Stratford, Ont., where he had been Trainmaster, on leaving June 4 to take up his new duties as Assistant Superintendent at London, Ont.

P. S. Archibald, C.E., Moncton, N.B., General Manager Elgin and Havelock Ry., has been appointed a member of the board of investigation in connection with the labor troubles at the Cumberland Ry. and Coal Co. mines, Springhill, N.S.

A Montreal dispatch of June 25 said that E. A. James, ex-Manager Canadian Northern Ry., had had an interview there with D. McNicoll, Vice-President C.P.R., and that it was rumored he might re-enter the latter company's service.

A. Moffatt, train despatcher Intercolonial Ry., Sydney, N.S., received injuries to his head from some falling timbers on board the steamboat Montcalm, June 9, while the vessel was transferring mails to the Allan Line S.S. Virginian at Sydney.

The King's birthday honors include the following: Knighthood, Nathaniel Dunlop, chairman of the Allan Steamship Line; Knight Bachelor, R. G. Reid, President Reid Newfoundland Co.; Victorian Order Knight Commander, Sir Thos. G. Shaughnessy.

U. E. Gillen was entertained at dinner by the representatives of the transportation interests in London, Ont., June 10, in connection with his recent promotion from Assistant Superintendent there to Superintendent Middle Division, Toronto.

J. H. Dougherty, for many years secretary to W. Wainwright, General Assistant and Comptroller, G.T.R., Montreal, was presented with a travelling bag by the office staff, May 31, on his leaving the company's service to engage in private business in Winnipeg.

J. A. Yorrick, Canadian Freight and Passenger Agent, Chicago, Burlington and Quincy Rd., Toronto, was presented with a cabinet of silver and an address by the representatives of the transportation companies in the city, June 11, on the occasion of his marriage.

Sir Thos. G. Shaughnessy, President C.P.R., arrived in Winnipeg, June 17, on a trip of inspection, and for the purpose of discussing matters connected with the extension of the western lines. He returned to Montreal via the Minneapolis, St. Paul and Sault Ste. Marie Ry.

E. N. Todd, Assistant Export and Import Freight Agent C.P.R., Toronto, was married there June 11 to Miss C. C. Benson. They went to the Pacific Coast for their honeymoon. The officials and staff of the C.P.R. Freight Department, Toronto, gave Mr. Todd a handsome present of cut glass.

H. Montgomery, who has been appointed Assistant Superintendent of Motive Power Bangor and Aroostook Rd., Milo, Me., is a native of London, Ont., and served his apprenticeship in the Canada Southern Ry. shops at St. Thomas, Ont. He was subsequently engaged on the Chicago, St. Paul, Minneapolis and Omaha Rd., the Chicago and Northwestern Rd., and the Central Rd. of New Jersey.

W. Borbidge, who has been appointed district master mechanic, C.P.R., Ottawa, was born at St. John's, Que., April 12, 1855, and entered railway service in 1872, since which his record has been: 1872 to 1874, brakesman, Brockville and Ottawa Ry., and Canada Central Ry.; 1874 to 1879, fireman and fitter in roundhouse, same roads; 1879 to 1898, locomotive engineer same roads and their successor, the C.P.R.; 1898 to May, 1907, road foreman of locomotives, C.P.R.

Lieut.-Governor Jas. Dunsmuir, of British Columbia, was on board his yacht Thistle, May 27, with a large party, returning to Victoria, when a fire broke out on board as the vessel was off Queen Charlotte Sound. The party got away in the boats and had travelled 32 miles before they were sighted by a southbound steamboat and picked up. They were landed at Vancouver. The vessel was burned to the water's edge, and the party and crew lost everything.

J. H. Mills, who has been appointed district master mechanic, C.P.R., at Montreal, was born at Sherbrooke, Que., April 23, 1865, and entered railway service as bridgeman, 1889, and in the following year became a fireman, since which his record has been: 1890 to Jan., 1897, fireman; Jan., 1897, to Jan., 1902, locomotive engineer; Jan., 1902, to April, 1904, appointed to general shops Montreal, to take charge and deliver new power; April, 1904, to May, 1907, road foreman of locomotives; entire service with C.P.R.

F. J. Balch, who has been appointed Assistant General Freight Agent, Ottawa and New York Ry., Ottawa, was born in Massena, N.Y., April 15, 1870, and entered railway service in 1888, having previously spent two years in telegraph service. His record is: 1888 to 1891, agent, operator and latterly as outside ticket agent at summer resorts in the Adirondacks for the Chateauguay Rd.; 1891 to 1898, division agent, Canada Atlantic Ry., Rouse's Point, N.Y.; 1898 to Dec., 1900, in charge of Canada Atlantic Ry. terminals at Swanton, Vt.; Dec., 1900, to Dec., 1901, clerk West Shore Rd., Weehawken, N.J.; Dec. 1901, to June, 1907, chief clerk in general freight office, Ottawa and New York Ry., Ottawa.

R. W. Rigg, who resigned his position as Contracting Freight Agent G.T.R. in Liverpool, Eng., to enter the West of England China Clay Co.'s service, was entertained at a farewell dinner in Liverpool recently, and presented with a silver tea and coffee service and an illuminated address, subscribed for by the G.T.R. traffic staff at Colonial House, Liverpool, and by Liverpool shippers, who were well represented at the dinner by some

of the best known men in the Canadian trade. Among those present were: F. C. Salter, G.T.R. European Traffic Agent, Liverpool; H. Cuthbertson, Agent Canadian Express Co.; J. Renton, Assistant Freight Agent G.T.R., and S. G. Tate, heretofore Freight Agent for the American Express Co. in Liverpool, and formerly of St. Thomas, Ont., who succeeds Mr. Rigg.

S. P. Howard, whose portrait appears on the first page of this issue, was born in Montreal, Dec. 30, 1866, and entered transportation service under the Montreal Harbor Commissioners, serving as clerk in the Wharfinger and Harbor Master's office and subsequently as private secretary to the chairman of the board. He entered the C.P.R. service Feb. 1, 1883, his record since being: 1883 to 1886, stenographer to General Freight Agent; 1886 to 1888, chief clerk Foreign Freight Department; 1888 to 1891, Travelling Freight Agent; 1891 to 1898, City Freight Agent, Montreal; 1898 to July, 1901, Assistant General Freight Agent; July, 1901, to present date, General Freight Agent, Eastern and Lake Superior Divisions, Montreal; entire railway service with the C.P.R. at Montreal. He is President of the Canadian Freight Association for the current year.

D. C. Coleman, who has been appointed Superintendent C.P.R., Nelson, B.C., was born at Carleton Place, July 9, 1879, and entered railway service 1899, his record being: Nov., 1899, to Jan., 1900, stenographer, Assistant Engineer's office, Fort William, Ont.; Jan., 1900, to July, 1900, Secretary to Superintendent at Fort William, Ont.; July, 1900, to Sept., 1900, Secretary to General Superintendent, Winnipeg; Sept., 1900, to Feb., 1901, Secretary to Superintendent, Fort William, Ont.; Feb., 1901, to Mar., 1901, Secretary to Superintendent, Cranbrook, B.C.; Mar., 1901, to May, 1902, chief clerk Superintendent's office, Cranbrook; June 1, 1902, to April, 1903, chief clerk General Superintendent's office, Lake Superior Division, North Bay, Ont.; April, 1903, to Feb., 1904, General Superintendent's acountant, Lake Superior Division, North Bay; Feb., 1904, to Mar., 1907, chief clerk General Superintendent's office, Central Division, Winnipeg; Mar., 1907, to June, 1907, chief clerk Assistant General Manager's office, Western Lines, Winnipeg; entire service with C.P.R.

It is proposed to provide offices for the Temiskaming and Northern Ontario Ry. Commissioners and the Ontario Railway and Municipal Board, in a wing which it is proposed to add to the Legislative Buildings in Queen's Park, Toronto.

Following are the officers and directors of the Lake St. Joseph Hotel Co.: President, B. Leonard; Vice-President, J. G. Scott; other directors: J. T. Ross, Hon. J. Tessier, Lieut.-Col. W. J. Ray, J. H. Holt, A. Pickard, W. H. Brown, A. E. Doucet, A. Hardy, G Lemoine; Secretary, L. G. Scott.

The Brotherhood of Locomotive Engineers held its annual convention in Quebec, June 18, and following days. The business sessions were private. The social gatherings included a reception by the Mayor, a concert at the auditorium, a picnic at Lake St. Joseph, an excursion to Ste. Anne de Beaupre and Montmorency Falls, and a trip on the river.

The committee of railway officials appointed to prepare a standard code of operating rules for Canadian railways has completed its work. The results of the committee's investigations and discussion have been embodied in a report which has been submitted to the General Managers of the respective companies. The rules will be subsequently submitted for approval to the Board of Railway Commissioners

TRANSPORTATION APPOINTMENTS.

Algoma Central and Hudson Bay Ry.—C. N. Coburn, heretofore Assistant Division Engineer, Eastern Division C.P.R., Montreal, has been appointed Chief Engineer A. C. and H.B.R., and Manitoulin and North Shore Ry. Office at Sault Ste. Marie, Ont.

Canadian Northern Ry.—F. A. Folger, formerly Superintendent Kingston and Pembroke Ry., has been appointed Trainmaster district 4, C.N.R. Headquarters, Kamsack, Sask.

Canadian Pacific Ry.—A. D. MacTier, heretofore General Fuel Agent, has been appointed Assistant to the Vice-President. Office, Montreal.

T. Britt has been appointed Acting General Fuel Agent.

N. R. DesBrisay, heretofore in the C.P.R. ticket office at St. John, N.B., is reported to have been appointed ticket agent on one of the company's Atlantic steamers.

M. G. Murphy, heretofore chief clerk to the District Passenger Agent, Atlantic Division, St. John, N.B., has been appointed general travelling passenger agent western lines.

E. W. DuVal, heretofore chief clerk to the General Superintendent Western Division, Calgary, Alta., is reported to have been appointed chief clerk to the Assistant General Manager at Winnipeg, succeeding D. C. Coleman, promoted.

H. W. Willis, heretofore Manager of the company's Hotel Vancouver at Vancouver, has been appointed Manager of the Royal Alexandra Hotel, Winnipeg.

J. H. Longworth has been appointed City Freight Agent at Brandon, and Travelling Freight Agent for Western Manitoba. His territory will consist of the city of Brandon, the Lenore and Miniota branches, the Rapid City and Broadview sections, Brandon to Boissevain via Napinka and Deloraine to Lyleton. Headquarters, Brandon, Man.

J. E. Ryan, heretofore Assistant Chief Train Dispatcher (night duty) district 2, Central Division, Winnipeg, has been appointed Chief Train Dispatcher, district 4, Brandon, Man., succeeding the late J. T. Barnes.

E. H. Cook has been appointed rule instructor district 5, Central Division. Headquarters, Moose Jaw, Sask.

The Western Division, which had previously been divided into two operating divisions since the old Western Division was divided into the Central and Western Divisions, was divided into three operating districts June 1. The new districts are:

District 1.—Medicine Hat, Calgary, and Lethbridge sections, including Lethbridge terminal. Headquarters, Medicine Hat, Alta.

District 2.—Laggan section, including Calgary terminals; Edmonton section, Wetaskiwin and Lacombe branches. Headquarters, Calgary, Alta.

District 3.—Sirdar, Cranbrook, Crow's Nest and Macleod sections, Curzon and Kimberley branches. Headquarters, Cranbrook, B.C.

J. S. Lawrence, heretofore Superintendent district 3, Pacific Division, Nelson, B.C., has been appointed Superintendent district 1, Western Division. Office, Medicine Hat, Alta.

A. Hobkirk, heretofore road foreman at Calgary, Alta., has been appointed Trainmaster district 1, Western Division. Office, Lethbridge, Alta.

A. Allan, heretofore assistant Chief Train Dispatcher (night duty) at Calgary, Alta., has been appointed Chief Train Dispatcher, district 1, Western Division, at Medicine Hat, Alta.

J. Niblock, heretofore Superintendent of old district 1, Western Division, has been appointed Superintendent district 2, Western Division. Office, Calgary, Alta.

E. L. Chudleigh, heretofore Assistant Superintendent of old district 1, Western Division, has been appointed Assistant Superintendent district 2, Western Division. Office, Strathcona, Alta.

T. R. Flett, heretofore Trainmaster of old district 1, Western Division, has been appointed Trainmaster district 2, at Calgary, Alta.

C. E. Mansfield, heretofore Chief Train Dispatcher of old district 1, Western Division, has been appointed Trainmaster district 2.

G. Erickson, heretofore Superintendent of old district 2, Western Division, has been appointed Superintendent district 3. Office, Cranbrook, B.C.

J. R. McNabb, heretofore Trainmaster of old district 2, Western Division, has been appointed Trainmaster district 3. Office, Macleod, Alta.

J. H. Scott, heretofore Chief Train Dispatcher of old district 2, Western Division, has been appointed Chief Train Dispatcher, district 3.

F. W. Scott has been appointed roadmaster Calgary section, succeeding J. A. Armstrong. Office, Medicine Hat, Alta.

O. Fryk has been appointed acting roadmaster Laggan section, succeeding F. W. Scott, transferred to the Calgary section.

D. C. Coleman, heretofore chief clerk in the Assistant General Manager's office, Winnipeg, has been appointed Superintendent district 3, Pacific Division, succeeding J. S. Lawrence, transferred. Office, Nelson, B.C.

Stewart Gordon, heretofore acting Manager of the Royal Alexandra Hotel, Winnipeg, has been appointed Manager of the new Empress Hotel at Victoria, B.C., which it is expected will be opened in Aug.

P. Wade has been appointed General Roadmaster district 3, Pacific Division, with headquarters at Nelson. He will have charge of maintenance of way and extra track work, the assistant roadmasters reporting to him.

J. McGrath has been appointed Assistant Roadmaster at Nelson. He will have charge of the Slocan Lake, Rossland, and Trail branches, the Procter extension, the Lardo, Nakusp, and Slocan, and Boundary sections (Nelson to Castlegar Jct.)

E. L. Franson has been appointed Assistant Roadmaster at Eholt. He will have charge of Phœnix and Mother Lode branches, and the Boundary section (Castlegar Jct. to Midway).

J. S. Carter, heretofore District Passenger Agent at Nelson, B.C., has been appointed General Agent, Passenger Department. Office, Spokane, Wash.

F. A. Valentine, heretofore Travelling Passenger Agent at Los Angeles, Cal., has been appointed to a similar position at Spokane, Wash.

F. R. Johnson has been appointed General Agent, Passenger Department, Portland, Ore.

C. B. Reade has been appointed Travelling Passenger Agent, Portland, Ore.

F. M. Cummings has been appointed manager of the Hotel Vancouver, Vancouver, B.C.

Delaware and Hudson Rd.—C. S. Sims, General Manager, has been elected also a director, succeeding A. I. Culver, resigned.

W. H. Williams has been appointed Assistant to the President. Office, New York City.

Dominion Atlantic Ry.—Thos. Cook & Son, 245 Broadway, New York, have been appointed General Ticket Agents for that city.

R. L. Chipman, heretofore chief clerk in the company's office at Halifax, N.S., has been appointed freight agent at New York. Office, pier at foot of East 20th St., New York City

Erie Rd.—J. N. Hill and O. Mills have been elected directors succeeding J. J. Hill and D. O. Mills, resigned. J. N. Hill has also been elected a member of the Executive Committee, succeeding the late S. Spencer.

Grand Trunk Pacific Ry.—C. D. Fisher, heretofore Chief Train Dispatcher, district 3, Central Division, C.P.R., Brandon, is reported to have received an appointment on the G.T. Pacific Ry. at Winnipeg Man.

T. M. Tennant, Port Arthur, Ont., has been employed by the G.T.P.R. to purchase ties. He has resigned his seat in the city council in consequence.

Grand Trunk Ry.—F. J. Henstridge, heretofore chief clerk Division Freight Agent's office, Hamilton, Ont., has been transferred to a similar position in the Division Freight Agent's office, Montreal.

W. R. Tiffin, Superintendent Northern Division, Allandale, Ont., who was on leave of absence, has resumed his duties.

J. D. McMillan has been appointed Assistant Trainmaster districts 11, 12, 13 and 14, Northern Division. Office, Allandale, Ont. We are advised that this appointment is only temporary.

C. H. Dean, heretofore cashier G. T. R. and Wabash Rd., St. Thomas, has been appointed station agent at Welland, Ont., succeeding W. R. White, resigned.

W. S. Wilson has been appointed Chief Dispatcher at Stratford, Ont., succeeding C. G. Bowker, promoted.

The following agents have been appointed: Cardina, Ont., E. J. Wormington; Keene, Ont., T. A. Weir (Acting); Omemee Jct., Ont. W. T. Byam; Brechin, Ont., J. L. Dodds; Stouffville, Ont., C. A. Caldwell; Thornhill, Ont., J. W. Wiggins; Thornton, Ont., W. I. Wilson; Glen Huron, Ont., E. N. Marshall; Nottawa, Ont., E. N. Marshall; Copetown, Ont., J. H. Burke; Merritton, Ont., W. F. Davidson; Thorold, Ont., W. E. Miller; Cargill, Ont., J. T. Clancy; Bluevale, Ont., W. J. Masters; Canfield Jct., Ont., F. W. Shearing; Maxville, Ont., E. J. Goodier; Vankleek Hill, Ont., Jas. Robertson (Acting); Renfrew, Ont., W. H. Harris; Caldwell, Ont., T. J. O'Reilly.

S. G. Tate, heretofore freight agent American Express Co., Liverpool, Eng., has been appointed contracting freight agent G.T.R. Office, Colonial House, Liverpool.

Great Northern Ry., U.S.—W. W. Broughton, heretofore Freight Traffic Manager, has been appointed General Traffic Manager, succeeding to the duties heretofore performed by B. Campbell as Fourth Vice-President. Office, St. Paul, Minn.

W. P. Kenney, heretofore assistant to the Fourth Vice-President, has been appointed Assistant Traffic Manager. Office, St. Paul.

A. L. Craig, heretofore Passenger Traffic Manager, has been appointed General Passenger Agent, with jurisdiction over the passenger department. Office, St. Paul.

The offices of Freight Traffic Manager and Passenger Traffic Manager have been abolished.

Manitoulin and North Shore Ry.—See Algoma Central and Hudson Bay Ry.

The Maritime Coal, Ry. and Power Co. having taken over the Canada Coal and Rd. Co.'s railway and other property June 1, has retained Geo. B. Burchell's services as Manager of its railway.

Michigan Central Rd.—S. W. Brown, heretofore Assistant General Superintendent Lake Shore and Michigan Southern Rd., has been appointed General Superintendent M.C.R., succeeding H. C. Nutt, resigned.

W. H. Sellew, heretofore Divisional Engineer at Detroit, Mich., has been appointed Principal Assistant Engineer there, and is succeeded as Division Engineer by M. C. Cleveland.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—E. L. Cardle, heretofore contracting freight agent at St. Paul, Minn., has been appointed general agent at Portland, Ore.

National Transcontinental Ry. Commission.—G. Grant, C.E., has been appointed Inspector of Construction to the Commission.

National Despatch Great Eastern Line.—The office of D. T. Lawrence, Manager of this company, operating in connection with the G.T.R. System, the Central Vermont Ry., and the Boston and Maine Rd., and connection, has been moved from Buffalo, N.Y., to 110 State St., Boston Mass. The line is not now separately represented in Buffalo, its business being attended to by E. J. Hilliard, Commercial Agent G.T.R.

New York Central Lines.—H. D. Carter, General Freight Agent, has been appointed First Assistant Freight Traffic Manager of lines east. W. S. Kallman, General Freight Agent of the West Shore Rd., has been appointed Second Assistant Freight Traffic Manager of lines east. I .H. Hubbell, First Assistant General Freight Agent of the N.Y.C. and H.R. Rd., has been appointed General Freight Agent of the N.Y.C. and H.R.R., and of the West Shore Rd. W. A. Newman, Second Assistant General Freight Agent, succeeds Mr. Hubbell. D. E. Gelatt, Division Freight Agent at New York, succeeds Mr. Newman.

The Freight Traffic Manager N.Y.C. lines east of Buffalo is F. LeBau, not F. LeBarr as stated in our last issue.

New York, New Haven and Hartford Rd.—B. Campbell, heretofore Fourth Vice-President Great Northern Rd., U.S., has been appointed Fourth Vice-President, N.Y., N.H and H. Rd.

Ottawa and New York Ry., and New York and Ottawa Ry.—F. J. Balch, heretofore chief clerk General Freight Department, has been appointed Assistant General Freight Agent. Office, Ottawa, Ont

G. H. Phillips, heretofore General Freight and Passenger Agent, has been appointed Superintendent and General Freight Agent, S. F. Beamish having resigned the Superintendency.

H. K. Gays, heretofore Assistant General Passenger Agent, has been appointed General Passenger Agent.

A Newfoundland Project.

A cable was received at St. John's, Nfld., June 5, from the Premier in London, Eng., stating that the syndicate which had entered into an agreement with the Newfoundland Government for a fast Atlantic steamship service was prepared to begin the survey of the proposed railway line across the island immediately. This project is a distinct one from that with which the name of Lord Strathcona is connected, although, if carried out, it may form part of the "All Red" round the world line of steamship and railway communication which was discussed at the recent Colonial Conference in London.

The act passed at the last session of the Newfoundland Legislature with respect to the establishment of speedier communication between Great Britain and the continent of America, confirms our agreement made between the Government of the colony and A. L. Ochs, G. Ochs, T. F. Dalglish, carrying on business in London, Eng., and Paris, France, as Ochs Bros., and H. C. Thompson, of London, Eng. The agreement sets forth that the contractors desire to form a company with the title of the British Newfoundland Railway and Steamship Co., for the purpose of establishing a speedy means of communication between Great Britain, Ireland and the continent of America, by way of Newfoundland. The contractors are empowered to construct a railway in Newfoundland from Notre Dame Bay to the western coast of the island, the route to be subject to the approval of the Government. The contractors propose to provide three steamships of not less than 5,000 tons and capable of maintaining an average ocean speed of 17 knots an hour in moderate weather; such steamships to sail from some port in Great Britain or Ireland once a week, and call at Notre Dame Bay, St. John's, Nfld.; a port in Canada or in the U.S.; and to make similar calls on the return trip. From Jan. 1 to May 1 in each year, the steamships shall only be bound to call at St. John's and the Canadian or U.S. port agreed on. The contractors shall also maintain a 20-knot steamship to connect the port on the western coast of Newfoundland with a port on the Gaspe coast of Quebec or New Brunswick, two round trips a week to be made by such steamships. The contractors are also authorized to connect the projected railway with the existing railway of the colony, or to construct a separate line into St. John's. The agreement provides for the fixing of rates; frees the vessels from port and pilotage charges, etc.; and for the payment by the Government of a subsidy of $75,000 a year for 25 years, for the carriage of the mails. The remuneration for this service shall be fixed by arbitration if the agreement is extended beyond the 25 years. The agreement also sets forth that the Government will grant a 100 ft. right of way for the railway through all crown lands; provided an area of one square mile of crown lands at Notre Dame Bay, and on the west coast for terminal purposes, and 1,500 acres of land in respect of each mile of railway constructed, the total area of land to be granted not to exceed 125,000 acres. The railway is to be completed within five years. The agreement also sets forth that within eight years the company may construct a railway from some point on the previously-mentioned line to the Strait of Belle Isle, and through the Labrador territory subject to the jurisdiction of Newfoundland, to the Quebec boundary. Power is also given to construct a tunnel under the Strait of Belle Isle to connect the two portions of the railway, or to operate a railway ferry across the strait; and at the Quebec boundary to connect with any railway constructed under the laws of the Province of Quebec or of the Dominion of Canada. No subsidies are to be given for the construction of this line except the track 100 ft. wide, a reasonable area for stations and a square mile for terminals on either shore of the Strait of Belle Isle, but the Government grants and secures to the company the sole right to tunnel under the strait for 25 years from the completion of its railway. The company may construct a telegraph line along its railway, but such line is to be used for the purposes of the contractors only, except when it may be required for Government purposes. In the event of any differences arising between the parties out of the agreement, the questions are to be submitted to arbitration.

National Transcontinental Railway.

The central route for the Eastern Division of the line through New Brunswick has been finally approved, and the necessary order-in-council has been passed. Instructions have been given to the engineers to complete the location from Chipman to Grand Falls, N.B. This work will take several weeks to complete, and it is expected that tenders for the construction of this section will be asked for at an early date. The line is under contract from Moncton westerly for 50 miles, the G.T. Pacific Ry. Co. having the contract. Tenders were received to June 25 by the commissioners for the construction of an eight mile section from the terminal point of the 50 mile section west of Moncton to Chipman. When the Chipman-Grand Falls section has been let, the whole of the line from Quebec to Moncton will be under contract as well as a considerable mileage between Quebec and Winnipeg. The gap for which the location has not been completed, and for which tenders have not been asked, include

THE DOMINION WIRE ROPE CO., MONTREAL LIMITED

the mileage between the junction of the line with the Temiskaming and Northern Ontario Ry., and the junction with the Lake Superior branch from Fort William and Port Arthur, Ont. Of the three contracts recently given to the G.T. Pacific Ry. Co., that for 50 miles from La Tuque westerly has been sublet to McDonald and O'Brien. It has been reported in the daily papers that a U.S. contracting firm had obtained a sub-contract to do the work on the Moncton 50 miles, and that the G.T. Pacific Construction Co. would do the work on the 150 mile section easterly from the Abitibi River.

The Transcontinental Railway Commissioners made an inspection trip over the Quebec-La Tuque section, and subsequently went to Winnipeg, where they arrived June 10. Before leaving they authorized the statement that work on the shops and yards at that point would be commenced forthwith.

Tenders were received by the Commissioners to June 25 for the construction and erection of the superstructure of five steel bridges in District B. The bridges are to be in accordance with the general specifications for steel bridges of the Department of Railways, 1905, and to be able to stand the test of the load designated "heavy" in the specifications.

Tenders were also received up to June 25 for 65,371 tons of 80-lb. steel rails, either open hearth or Bessemer at the option of the Commissioners, together with the necessary fastenings for the same.

Tenders for the supply of 200,000 ties were received up to June 14. Delivery is to be made commencing April 1, 1908, at Rennie Jct. siding, Ont., or on the line of the Transcontinental Ry. eastwardly therefrom in such numbers as to allow 3,000 ties to the mile.

GRAND TRUNK PACIFIC RY.

C. Schrieber, Consulting Engineer to the Department of Railways, is making a trip of inspection over the route of the line from Winnipeg to the Pacific Coast. He visited various points on the route between Winnipeg and Edmonton, and will follow the route through the Yellowhead Pass to the Pacific Coast. Upon his report the final approval of the route will depend.

F. W. Morse, Vice-President, stated as the result of his recent visit to Winnipeg and various points at which construction is being gone on with, that things are in a much more satisfactory shape than was thought possible a few weeks ago. The delays caused by the severe winter, however, had extinguished all hope of being able to connect Edmonton with the Great Lakes this year. At the present rate of progress the rails will reach Saskatoon, which is considerably more than half the distance from Winnipeg to Edmonton, by the fall.

The route from Portage la Prairie to Winnipeg has been approved, and on June 11 it was reported that C. P. Wright, a local contractor, had started grading operations. The portion of the route in Winnipeg is not approved of by the city authorities, and the Board of Works passed a resolution June 12 protesting against the proposed entry into Fort Rouge. A subcommittee was appointed to set out the objections fully and to take steps to oppose the plans when the Railway Commission meets in Winnipeg in July. We are officially advised that the contract of the construction of the roadbed between Winnipeg and Portage la Prairie about 54 miles, has been let to Treat & Johnston, of Winnipeg.

F. W. Morse is quoted as having stated that the branch line from near Yorkton to Regina, Sask., would be the first branch to be constructed west of Winnipeg.

Vote on Per Diem Rules.

The following circular was issued by the Secretary of the American Railway Association June 1. At the meeting of the Association held at Chicago April 24, the Secretary was directed to submit to the members for a letter ballot the question of the adoption of the proposed new per diem rule 3, clauses a to m, with the propositions separated so as to permit a vote upon new rule 3 unamended, and with the amendment to the latter part of clause m included. The following resolution was also adopted:

"Resolved—That the question of the adoption of rule 3 of the per diem rules as herewith submitted be presented to the members of the Association for a letter ballot; the new rule, if adopted, to take effect Sept. 1, 1907, provided it is approved by a majority of the membership of the Association representing two-thirds of the cars owned or controlled by the members of the Association, and after announcement by the Secretary of the requisite majority having been obtained. The ballot to close May 25, 1907."

The total membership of the Association is 328, and the cars owned and controlled by the members 2,087,846. The majority requisite for approval was 165 members, owning and controlling 1,391,897 cars. 45 memberships, owning or controlling 58,262 cars, did not vote. The vote on the adoption of the first proposed form of rule 3 (unamended) was as follows: Yes—174 memberships, representing 1,340,467 cars owned or controlled. No—99 memberships, representing 677,548 cars owned or controlled. 10 memberships of those who voted, representing 11,569 cars owned or controlled, did not vote on this proposition. The affirmative vote on the first proposed form of per diem rule 3 was a majority of the memberships of the Association, but they do not represent two-thirds of the cars owned or controlled by the members of the Association. The first proposed form of rule 3 is, therefore, not adopted.

The vote on the adoption of the second proposed form of rule 3 (amended) was as follows: Yes—155 memberships, representing 1,122,507 cars owned or controlled. No—124 memberships, representing 899,454 cars owned or controlled. 4 memberships of those who voted, representing 7,623 cars, did not vote on this proposition. The affirmative vote on the adoption of the second proposed form of per diem rule 3 was not either a majority of the memberships nor two-thirds of the cars owned and controlled by the members of the Association. The second proposed form of rule 3 is, therefore, not adopted. Both of the proposed new forms of per diem rule 3 are, therefore, lost.

Attention is called to the fact that by the vote of the Association, as announced March 23, 1907, per diem rule 3, as now printed in the code of per diem rules was abolished from July 1, 1907, when the 50c per diem rate becomes effective.

Orders by the Railway Commissioners.

3163. May 23.—Authorizing G.T.R. to construct a second track from North Parkdale Station to Toronto Jct., Ont.

3174-3176. June 14.—To carry its wires over certain railways.

3177. June 14.—Rescinding order 2533 and granting Bell Telephone Co. leave to cross C.P.R. tracks at Drew St., Woodstock, Ont.

3178. June 14.—Authorizing C.P.R. to construct a spur near Jaffray, B.C., to the Jewell Lumber Co.'s premises.

3179. June 14.—Authorizing C.P.R. to construct spurs at Lundbrek, Alta., on Breckenridge & Lund Coal Co.'s property.

3180. June 14.—Authorizing C.P.R. to construct a spur from its Cranbrook Section to the East Kootenay Lumber Co.'s premises.

3181. June 14.—Approving interlocking plant installed in the parish of St. James, Man., where the C.P.R. crosses the Northern Extension Ry.

3182. June 14.—Authorizing opening for traffic of the Michigan Central Rd. second track between Bridgeburg and Niagara Jct., Ont., 2.10 miles; also its new track between Waterford and Hagersville, Ont., 12.75 miles.

3183. June 14.—Authorizing the C.P.R. to open for traffic its second track extending from Molson and Whitemouth, Man., 16 miles.

3184. June 15.—Authorizing the National Transcontinental Ry. Commissioners to operate trains on the N.T.R. where it crosses the Canadian Northern Quebec Ry. track near Tawachiche Station, Que., pending installation of interlocking plant as provided in order 1945.

3185. June 13.—Authorizing the Dominion Minister of Public Works to construct a highway crossing where the Quebec Ry. Light and Power Co.'s line intersects the road leading to the wharf, in the Parish of Chateau Richer, Que.

3186. June 14.—Approving of G.T.R. book of reference in connection with proposed deviation and grade improvement of railway between St. Lambert and Ste. Rosalie Jct., Que., approved in order 2895.

3187. June 13.—Authorizing C.P.R. to construct a branch line across Dewdney St., and upon and along Smith St., Regina, Sask.

3188. June 12.—Authorizing the G.T. Pacific Ry. to connect its tracks with the Midland Ry. of Manitoba and the Canadian Northern Ry. tracks at Portage la Prairie, Man.

3189. June 13.—Amending order of Sept. 26, 1906, granting the C.P.R. leave to construct its Toronto-Sudbury branch through the Town of Bala, by substituting in lieu of the level crossing a subway under the C.P.R. tracks.

The Canadian Northern Ex. Co. has been registered at Regina, Sask., under the ordinance of the Northwest Territories respecting foreign companies.

In reference to the report mentioned in our last issue to the effect that the Intercolonial Ry. would in future be known in abreviated form as the I.R.C. instead of the I.C.R., we are advised that the initial which appear on the ends of box freight cars and in some cases on their doors are being painted I.R.C. instead of I.C.R. This is all there is to the matter.

The Assiniboia, the first of the two additional steamships ordered by the C.P.R. for the Great Lakes, was launched at Glasgow, Scotland, June 26. Her dimensions are: Length, 336 ft.; breadth, 46 ft.; depth, 26¾ ft.; built of steel, constructed to be classed at Lloyds as A1 for Canadian lake service. She will have accommodation for over 250 first-class passengers. She will have a speed of over 16 miles an hour, with all the modern devices for the safety and comfort of her passengers. The interior fittings and furnishings will be of the latest and most improved patterns, remarkably more for their solidity, simplicity, good taste and quality, than for mere display. The Assiniboia will cross the Atlantic under her own steam in Sept., and will be cut in two at Quebec and rejoined at some point on Lake Erie above the Welland Canal. The other steamship which is being built for the C.P.R. at the same place will be named Keewatin.

The Death of A. W. Mackenzie.

Alex. Wm. Mackenzie, second son of Wm. Mackenzie, President Canadian Northern Ry., etc., died at his house, 97 Glen Road, Toronto, on June 6. He was at the Ontario Jockey Club races at Toronto on May 30, and, on returning home in the evening, complained of being unwell. Dr. Jno. Caven, his family physician, was called in, and after a consultation with Dr. Primrose, it was decided that he was suffering from appendicitis, and that the only possible chance of saving his life was to operate. Dr. Primrose performed the operation on June 1, and Mr. Mackenzie progressed favorably until about 4 p.m. on June 6, when he suddenly grew worse, dying at 8.30 p.m., his wife, mother, brother, J. M. Mackenzie, and mother-in-law, Mrs. Kirkland, being with him. His father and four sisters, Miss Mackenzie, and the Misses Ethel, Catherine and Grace Mackenzie, were in England, and his two other sisters, Mrs. A. M. Grantham and Mrs. Scott Griffin, were on the Atlantic en route home.

A. W. Mackenzie was born at Kirkfield, Ont., Dec. 5, 1877, and was educated at Ridley College, St. Catharines, Ont., and at Toronto University. After leaving college, he at once entered business life in connection with his father's varied interests, and at the time of his death was Treasurer of the Canadian Northern Ry. Co., Canadian Northern Quebec Ry. Co., Canadian Northern Ontario Ry. Co., Canadian Northern Express Co., Canadian Northern Telegraph Co., and the Halifax and Southwestern Ry. Co.; Secretary-Treasurer of the Inverness Railway and Coal Co., and the Pacific Coal and Oil Co.; Purchasing Agent, Mackenzie, Mann & Co., Limited; Vice-President of the Rio de Janeiro Tramway, Light and Power Co., and the Sao Paulo Tramway, Light and Power Co. He was also a director of the Ontario Jockey Club, and a member of the Toronto Club, the Toronto Hunt and Country Club, the Albany Club, and the Lambton Golf club.

He married Miss Kirkland, only daughter of the late A. Kirkland, Manager of the Bank of Montreal, Toronto, who, with two children, a boy of five and a girl aged two, survives him. He was a thorough, all-round sportsman, one of the best cricketers in Ontario, a good rugby football player, an excellent horseman, following the hounds well, and also a polo player. With his brother, R. J. Mackenzie, of Winnipeg, he owned the Kirkfield stable of racehorses.

The funeral, which took place on June 9, was a military one, as he was a lieutenant in the 48th Highlanders, and was very largely attended. The coffin, draped with a flag, was carried on a gun carriage to Toronto Union Station, and thence by special train, consisting of the Canadian Northern Ry private cars Atikokan and Athabasca, the palace car Balmoral, and a first-class car and baggage car, over the G.T.R. to Kirkfield, where service was held in the Roman Catholic church, the interment taking place in the cemetery. The relatives present were: Mrs. Wm. Mackenzie, R. J. and J. M. Mackenzie, A. M. Grantham, Scott Griffin, Ewan and Alex. Mackenzie, uncles, and Capt. Kirkland, brother-in-law. The honorary citizen pallbearers were: J. L. Counsell, A. J. Hills, T. G. Leith, K. R. Marshall, J. Meredith and G. G. Mitchell. The honorary military pallbearers were lieutenants of the 48th Highlanders, and the coffin was carried by non-commissioned officers. B. Company, of which A. W. Mackenzie was lieutenant, formed the escort.

Mrs. Scott Griffin and Mrs. A. M. Grantham only arrived in Toronto about an hour before the funeral, their husbands having met their steamer in New York and broken the news to them. R. J. Mackenzie, the oldest brother, reached Toronto from Winnipeg the morning of the funeral. Wm. Mackenzie sailed from England by the first steamer possible, arriving in Toronto on June 18, and the Misses Mackenzie arrived at the same time, although they reached New York by another steamer. They were met there by Mrs. Mackenzie, Mrs. Grantham and Mr. and Mrs. Scott Griffin.

A. W. Mackenzie was a young man of great promise, and with a splendid future before him. With the great wealth which he would have inherited, and with the enormous business enterprises of which he would have become one of the chief owners, he would, had he been spared, have been one of the most prominent men in Canada in a few years. He

ALEXANDER WILLIAM MACKENZIE,
Born Dec. 5, 1877. Died June 6, 1907.

was an industrious worker, with a good grasp of business matters, a clean sportsman and a thoroughly manly and steady man in every way. And he was absolutely unspoiled and without affectation or "side." To his father and mother, especially, the blow is a very severe one. By his friends, "Alec" Mackenzie will be truly mourned. He had a very lovable disposition, and was most constant and loyal in his friendships.

Railway Accounting Methods.

The U.S. Interstate Commerce Commission has issued the following circular to railway companies under its jurisdiction:

The purpose of this circular is to advise carriers subject to the act to regulate commerce that the Commission has duly considered the recommendations submitted by the Association of American Railway Accounting Officers, dated April 26, 1907, relative to—

Operating revenue accounts,
Operating expense accounts
Outside operations,
Train, engine, and car miles,
Construction and equipment expenditures,

and the several texts therefor, but it is not at this time prepared to promulgate a final order covering the details of these accounts, Recognizing, however, the necessity for advising carriers at the earliest practicable date of the intentions of the Commission in respect to the general and the primary operating accounts to be put in force on July 1, 1907, and to the end that preparations may be made by carriers for the introduction of these accounts on the date named, this circular, defining in a general way the objects and scope of the operating accounts, is issued.

The general and the primary operating accounts which are herein promulgated are drawn with the view of eliminating from such accounts, as far as practicable, all revenues earned or expenditures made that are not directly incident to performing the service of transportation, such as operations for which specific arbitraries or allowances are included in the rate for special service other than rail transportation, or for which an additional collection is made from shippers, consignees, or passengers for a special service performed, or operations designed or used to furnish products or services not directly connected with rail transportation. Such operations are classified as 'Outside operations" and will be dealt with directly through the Income Account.

The requirements of operating officers, as well as the requirements of the Commission, have been held in mind in formulating these classifications, and in this connection it may be proper to add that carriers are at liberty to sub-divide the primary accounts here submitted to meet local requirements or temporary conditions, provided that the integrity of these primary accounts be not destroyed, and, further, that a record of important and permanent sub-divisions be filed with this office. The Commission has no desire to obstruct the further development of accounting methods. On the contrary, its aim will be to co-operate with the carriers to perfect such methods. The accounts promulgated by this circular are:

1. Operating revenue accounts;
2. Operating expense accounts; and

the general and the primary accounts under each will be found in the classifications herewith submitted.

OPERATING REVENUE ACCOUNTS

as herein defined, cover—

1. Revenues derived from the transportation of traffic, including mail and express, for which a specific rate or charge is made.

2. Revenues derived from operations other than the transportation of traffic, the expenses of which can not be accurately determined and separated from operating expenses.

Revenues from operations are consequently divided into two general accounts, namely:

I. Revenue from transportation, and
II. Revenues from operations other than transportation.

These two general accounts are subdivided into nineteen primary accounts, which analysis results in the following classification of operating revenues:

I. Revenue from transportation—
1. Freight revenue.
2. Passenger revenue.
3. Excess-baggage revenue.
4. Parlor and chair car revenue.
5. Mail revenue.
6. Express revenue
7. Milk revenue (on passenger trains)
8. Other passenger train service.

Montreal Ticket Office:
141 ST. JAMES STREET.

Toronto Ticket Office:
51 KING ST. EAST (King Edward Hotel Block)

9. Switching revenue.
10. Special service train revenue.
11. Miscellaneous transportation revenue.

II. Revenue from operations other than transportation—
12. Station and train privileges.
13. Parcel-room receipts.
14. Storage—freight.
15. Storage—baggage.
16. Car service.
17. Telegraph service.
18. Rents of buildings and other property.
19. Miscellaneous.

The aggregate of the revenues covered by the nineteen primary accounts listed above produces, "Total operating revenue," which reduced by "Operating expenses," leaves "Net operating revenue," a phrase which is substituted for the phrase "Income from operation" as used hitherto on page 31 of the form for annual report of carriers.

From "Net operating revenue" taxes are to be deducted, and the remainder, called "Operating income," will be carried to the Income Account.

OPERATING EXPENSE ACCOUNTS

as herein defined, cover—

1. Costs to maintain the integrity of the property operated from which operating revenues are derived.

2. Costs incident to transportation and administration incurred in performing the services incident to the production of the revenues enumerated in the classification of operating revenue accounts.

It should be understood that these operating expenses must not be burdened with expenditures for additions, such as new and additional equipment, tracks, buildings, ballast, and other additions to the property, the purposes of which are to improve the property operated; with expenditures for maintaining and operating property, the operations of which are classified as "Outside operations;" or with expenditures for rents of property used in operation, such as tracks, yards, terminals, and equipment. Neither should they be reduced by rents received for the use of a carrier's property by another carrier or others, such as rents for tracks, yards, terminals, and equipment; nor for buildings and other property the operating costs of which can be separated from other costs of maintenance and operation.

Operating expenses are divided into five general accounts, viz.:

I. Maintenance of way and structures.
II. Maintenance of equipment.
III. Traffic expenses.
IV. Transportation expenses.
V. General expenses.

These five general accounts are subdivided into 121 primary accounts, which analysis results in the following classification of operating expenses:

I. Maintenance of Way and Structures—
Superintendence.
Ballast.
Ties.
Rails.
Other track material.
Roadway and track.
Removal of snow, sand, and ice.
Tunnels.
Bridges, trestles, and culverts.

Other expenses.
General administration joint tracks, yards, and terminals—Dr.
General administration joint tracks, yards, and terminals—Cr.

It will be observed that the primary accounts of operating expenses have been accepted as recommended by the Association of American Railway Accounting Officers, with the exception of

Hire of locomotives—Debit balance.

Mileage and per diem of passenger train cars—Debit balance, and

Mileage and per diem of freight train cars—Debit balance.

It is held that with certain modifications, which will be fully explained in the text when promulgated, the revenues drawn from the expenses incident to the hire of equipment should be treated as an income item and dealt with through the income account rather than through the operating accounts.

It should be also observed that the accounts are not numbered. The reason for this is that it has not been possible to arrive at any final conclusion relative to the extent to which the rule of depreciation should be applied to the maintenance of way and structure accounts. It is intended to make this matter a subject of special investigation during the coming fiscal year.

In case this circular does not contain adequate information for the purpose for which it is issued accounting officers are requested to write for more definite instructions.

In connection with the foregoing the following extracts from the report of the Comptroller of Railways Statistics for Canada dated Nov. 13, 1906, will be of interest:

"By way of preface to my first report, it may not be considered amiss to allude to the steps which have been taken to reorganize the statistical branch of this department. The methods which had been followed up to July 1 last, when I was asked by you to take charge, were obviously defective. They had been adopted upwards of 30 years ago, when railway development in Canada was on a relatively small scale, and with slight modifications were continued down to this year. They were in keeping with the primitive conditions which prevailed in 1875; but had, by a natural process, become practically obsolete for present purposes. In this situation I was asked by you to make such changes as would place our railway statistics on an up-to-date basis, so that accurate and far-reaching comparisons might be made between the results of operation in Canada and in other countries. It was decided that the schedules of the Interstate Commerce Commission at Washington would best accomplish that purpose. They had been worked out with great care during a period of years, and were regarded as the most complete and comprehensive available. By applying them to Canadian railways, it was believed that valuable and helpful comparisons might

be made between the business of transportation in the Dominion and that being carried on, under similar conditions, in the United States. It is gratifying to be able to report that not a single railway made default this year in the submission of statistical data. In preceding years there were a number of delinquents. The new schedules will be made the basis of our statistics for the current fiscal year, and will be sent out in the course of a few weeks. It is possible the usual difficulties will be encountered in fitting a new system to the railways which have grown accustomed to the old forms; but the principal roads will be quite prepared to meet the demands upon them. Their methods of book-keeping will enable them to satisfactorily answer the somewhat elaborate table of questions, and in this way it is hoped the data for 1907 will be reasonably full and accurate. In the case of the smaller lines, it may be that a year or two will elapse before they will be in a position to readily supply the information required of them. Every effort however, will be made on the part of this office to assist them in the matter." Mr. Payne wrote us on June 27: "The change in the schedules made by the Interstate Commerce Commission has relation almost wholly to the operating expenses. The classification for two or three years past has been limited to some 57 items, and it has now been decided to elaborate these to over 100. As you are aware, we have adopted the schedules and classifications of the I.C. Commission, and for the purposes of uniformity we intend to follow this new elaboration. It may be that we shall not be able to carry it into effect for another year, and, to a large extent, it concerns only the principal railways. Nothing has yet been issued from this office on the subject."

The recommendations of the Association of American Accounting Officers referred to in the Interstate Commerce Commission's circular were prepared by a committee of 25 members. In a recent interview in the Montreal Gazette, I. G. Ogden, Third Vice-President C.P.R., said that that company would willingly adopt all the requests of the Interstate Commission, in order to standardize the system of railway accounting on this continent, not only in the interest of the C.P.R. itself, but of European investors, who would thereby at once secure an absolutely accurate method of comparison between the Canadian and U.S. roads. Mr. Ogden further said: "I have been familiar all the way through with the proceedings leading up to this order of the Interstate Commerce Commission, as I was one of the committee of 25 American railway accountants and officers who were conferring with the chief statistician of the Interstate Commerce Commission on the negotiations for the adoption of a standard system. And although I was unable to attend the meetings I was kept in close touch with their proceedings. I see no objection to the main features of the new order. In fact in a great many things the new system is really an adoption of the accounting system which has been in use by the C.P.R. ever since its organization. Take, for instance, the very important question of taxes. The C.P.R. has always included them in its operation expenses. Under the new rule all roads in the U.S. are to do the same, and, if as seems likely, the Canadian Railway Commission adopts the same system, all the Canadian railways will have to do the same. We expect to use the new classification of accounts as proposed by the Interstate Commerce Commission, although there were several variations regarding details which we would have desired. I hope that the Comptroller of Railway Statistics and the Canadian Railway Commission will practically adopt the new classification, as it will make comparison between Canadian railways amongst themselves, and also between Canadian and U.S. railways comparatively easy. The result will be that European and other investors will be in a far better position to compare the operations of the different railways on this continent and use the published figures as a standard guide to investment, and that is why the C.P.R. has decided to adopt this system regardless of any objections to minor details."

F. A. Shaw has been appointed commercial agent, and A. Macdonald contracting freight agent C.P.R. at Montreal, and not on the C.N. Quebec Ry., as stated in our last issue.

J. A. Sheedy has been appointed Master of Bridges and Buildings, Western Division, G.T.R., with charge of all matters pertaining to bridge and building department. Office, Durand, Mich.

Barlow Cumberland, Vice-President Niagara Navigation Co., in enclosing his renewal subscription to THE RAILWAY AND MARINE WORLD recently, said: "With congratulations on the advance of the paper to be one of greatest interest and absolute value."

We have been advised that while consideration is being given to the proposal to lengthen the Upper Lakes steamers Athabasca, Alberta and Manitoba, no decision has been reached. If the work is done at all it will be done during next winter, and the lengthened steamers will be ready for the season of navigation of 1908.

In connection with the recent trip of Prince Fushimi of Japan through Canada the following decorations, etc., have been distributed: Sir Thos. G. Shaughnessy, President C.P.R., Order of the Sacred Treasure, Second Class; W. R. Baker, Assistant to President C.P.R., Order of the Sacred Treasure, Third Class; C. M. Hays, Second Vice-President and General Manager G.T.R., Order of the Rising Sun of the Third Class; H. R. Charlton, Advertising Agent G.T.R., Order of the Sacred Treasure of the Sixth Class; D. Pottinger, I.S.O., General Manager Intercolonial Ry., Order of the Rising Sun of the Fifth Class.

Thos. Britt, who has been appointed acting General Fuel Agent, C.P.R., at Montreal, was born there Feb. 3, 1871. After leaving school he entered Carbray, Routh & Co.'s service in Montreal, serving in a junior capacity up to Feb. 1, 1887, when he entered the C.P.R. Stores Department service as a junior clerk. Shortly afterwards he was transferred to the fuel branch of the Stores Department, and remained with that branch during the period following its transfer to and as part of the Car Service Department in June, 1892. Upon the organization of the Fuel Department in Nov., 1899, he was appointed chief clerk and remained in that capacity until his present appointment in June, 1907.

E. D. MacKenzie, Canadian Freight Agent Pennsylvania Rd., who has been located in Toronto for a number of years, resigned recently to go into private business at Oil City, Pa. Before leaving he was presented with a silver loving-cup by Toronto transportation officials, D. D'E. Cooper, Canadian Freight Agent Lehigh Valley Rd., making the presentation, and M. H. Brown, General Freight Agent C.P.R., Ontario Division, presiding at the gathering. Since the foregoing was written we have been officially advised that Mr. MacKenzie has been granted three months' furlough, as he has some personal matters which he wishes to take up before definitely deciding as to leaving the company's service. The management would very much regret to see Mr. MacKenzie resign, therefore nothing will be done to fill his position permanently until he definitely decides whether he will return to the service or not.

Canadian Pacific Railway Supply Cars.

By J. A. Callaghan, General Storekeeper, C.P.R.

On the C.P.R. supply cars have been in running service for something like 20 years. I believe we are the originators of this important arm of the stores service, our first cars going into commission early in the eighties; be this as it may, and granting we are amongst the pioneer railway companies using supply cars, we are far enough beyond the experimental period in operating them to be quite satisfied as to their value.

To serve the company's lines east of the Great Lakes we have three modern supply cars which were put into commission early this year. They are 41 ft. long over frame or 40 ft. 2 in. clear length inside, 9 ft. 5 in. wide over frame or 8½ ft. clear width inside, with a clearance height inside of 8 ft. They are fitted up with shelving arranged to take care of the various small supplies for stations, sections, etc. Oil tanks are provided with capacity of 1,500 gal. headlight, 150 gal. signal, and 150 gal. car oil. Sleeping accommodation is provided for the man in charge, and he can, when necessary, get his own meals; in short, as the supply car men practically live in these cars from 22 to 26 days in the month, we have aimed at making them as comfortable as possible.

Following is an outline of the method followed on our line in handling the supply car portion of stores department business. Requisitions from the various district superintendents and others who are authorized to issue same are received in the General Storekeeper's office on the 25th of the month preceding one in which supplies are required. They are then checked, indexed and assorted as to districts, after which they are passed along to the shipping slip clerks, where abstracts from them are made in triplicate. The original requisitions are then given to the supply car staff, who prepare forms which are simply a summary of the requisitions. This done the original requisitions are returned to the office for file. The material is then picked out and loaded into the cars. Headlight oil, which is a large item in the stocking of the cars, is handled as follows: The oil company delivers the oil to us in tanks drawn by horses right alongside of cars, and the oil is pumped out direct from these into our tanks in the cars by air. All other materials are loaded from the general store into small lorry trucks and are run out of the building on rails to the side doors of the cars, so that the labor loading into the cars is reduced to the minimum. When cars are properly stocked and ready to start out, and we figure on getting them away first day of each month, the man in charge is given two of the forms already referred to, namely, the duplicate and triplicate, the original being retained in the general store. Assuming the man and car are now ready for the trip, and the supply car man has wired the superintendent in charge of the district he will first cover advising dates, train numbers, time of departure, etc., so that all concerned may be in turn advised by the superintendent, the beginning of a 2,400 mile run is made. At the various stopping places the goods are delivered from the car to agents and others when the supply car man has satisfied himself the material is necessary and that the worn-out articles are on hand to be turned in. The receipt covering the delivery is made by the party receiving goods signing the duplicate and triplicate forms, which are altered to agree exactly with the goods delivered. This method is followed throughout the trip and the duplicate form so signed is promptly mailed to the General Storekeeper's office at the close of each day's business where they are compared with the originals. These latter forms are then filled out as to weights,

units, prices, etc., and forwarded to the audit office for invoicing. The triplicates are delivered to party receiving goods, who pass them on to their district superintendent for his record and when same have served this latter official's purpose they are returned to the office of the General Storekeeper.

On the return of cars to headquarters a report is made by each of the men covering all transactions other than the regular, such as non-issuance of supplies account, excessive orders, non-turning in of worn-out material, extraordinary issues, account wrecks, etc., all of which are incorporated in one statement and forwarded to the office of the Vice-President. This about completes the operating details.

With regard to the labor saving in the distribution of material from these cars, the following data is offered for consideration: The car which covers the Atlantic Division takes care of 400 requisitions per month, the Ontario Division car 600, and the one running over the Lake Superior and Eastern Divisions 550. These figures are based on the monthly average for 1906—say 1,500 requisitions are filled from the cars monthly. What would this mean if these orders were filled from the general storehouse—1,500 way-bills and the same number of advice notes, and possibly double the number of packages, such as boxes, barrels, and bundles, with a like number of tags properly addressed. Then again, there is the double handling if this class of shipments are made through the storehouse in order to get the thousand and one small packages into the properly routed ordinary freight cars which are daily being loaded for the various divisions; couple with this condition the opportunity offered for losses apart from the delays in delivery and you have a fair idea of the advantages the supply cars offer in the disbursing of this class of material over the storehouse shipments. Not alone does the economy attached to this part of the service affect the stores, all other departments served by the cars are in a more or less measure equally affected and considered.

Again there is a further field of usefulness which we find of value, in transferring obsolete or surplus material from the small roundhouses and car repairing yards on the various routings of the cars to headquarters, and that is the delivery to the supply car men of lists of such obsolete or surplus material on hand at certain points on his run, and which he together with the car or locomotive foreman check over and turn into the car. These lists are made up from the store inspector's reports and consist in the main of small but valuable material which it is considered in the company's interest to ship in the supply car rather than by the ordinary freight. This feature, together with the return of old, worn-out material which the cars also bring in, make use of them both ways, which is a detail to be watched where the light haulage of a car as on our line is to be seriously considered. The cars are as a rule attached to way freight, though on some of the more sparsely settled districts they are put on through freights, but never on regular passenger trains. The men in charge advise the office daily as to their movements.

F. A. Lee has been appointed acting Roadmaster Montreal Terminals, G.T.R.

A daily fast freight service has been inaugurated between Montreal and Quebec and intermediate points by the Canadian Northern Quebec and Quebec & Lake St. John Railways, via Riviere a Pierre Jct. Leaving Montreal 8.00 p.m., arriving Quebec 8.00 a.m.; and leaving Quebec 7.30 p.m., arriving Montreal 7.30 a.m. These trains also handle through cars to and from Joliette, Shawinigan Falls, Grand Mere, Hervey Jct., La Tuque, Chicoutimi, etc.

ELECTRIC RAILWAYS.

Projects, Construction and Betterments.

The Berlin and Bridgeport Electric Street Ry. is owned by the B. and B.E.S. Ry. Co., Limited, but was operated by the Berlin and Waterloo Street Ry. Co. Its standing is not affected by the taking over of the B. and W. S. R. by the Berlin Town Council. It is being operated by the company, power, etc., being rented from the town. Its franchise has yet 15 years to run.

British Columbia Electric Ry.—Before a decision is finally reached as to the construction of the proposed electric railway to Chilliwack, the company has asked the New Westminster, B.C., City Council for a right of way from the steel bridge to the station at the corner of Eighth and Front streets. (April, pg. 271.)

Cape Breton Electric Co.—Construction is expected to be started immediately on the company's new transmission line from Sydney to North Sydney, N.S. The company owns the electric railway as well the power and electric light services.

Chatham, Wallaceburg and Lake Erie Electric Ry.—M. Campbell and C. Hadley, Chatham, Ont., who went to Towanda, Pa., to interview the interests controlling the company, were informed June 3 that the $30,000 of bonds having been taken up locally the work of extending the line to the lake would be gone on with this summer. (Mar., pg. 189.)

Dunnville, Wellandport and Beamsville Electric Ry.—Application is being made to the municipalities interested to grant franchises for the construction and operation of this projected electric railway. The plans contemplate the construction of a line 40 miles in length, from Port Maitland to Beamsville, Ont., the main line passing through Dunnville, Attercliffe, Wellandport, Bismarck, St. Ann's and Spring Creek. A branch line is also projected to Fonthill, passing through Boyle, Fenwick, Pelham Centre, and Ridgeville.

Edmonton, Alta.—The first spike in the Edmonton electric railway track, which is being constructed by the city council, was driven, June 15, by the Mayor.

Grand Valley Ry.—M. A. Verner, of Pittsburg, Pa., representing the purchasers of the line, together with the Brantford Street Ry., and the Woodstock, Thames Valley and Ingersoll Electric Ry., stated in Brantford June 5 that the amalgamated company would proceed at once to construct a line to connect the existing G.V. Ry. with the W. T. V. and I. Ry., would extend the latter to London, and construct a line from Brantford to Port Dover, Ont. (June, pg. 427.)

Moncton, N.B.—A resolution was passed June 4, appointing the city council as a body a committee to take steps to aid and encourage the building of a street railway in the city. (April, pg. 271.)

Montreal Park and Island Ry.—The by-law of Aug. 4, 1902, granting the right to establish a tramway in the parish of Longue Pointe, was approved at the last session of the Quebec Legislature, by the act incorporating the municipality of the parish as a town.

Montreal and Southern Counties Ry.—Application is being made to the Montreal City Council for permission to construct a line on three or four streets in order to reach the vicinity of McGill st. The law department advised the council that the company had the necessary powers to enter Montreal, but required permission to utilize certain streets. A by-law was in preparation and was discussed at a meeting of the council June 24. (June, pg. 429.)

Ottawa Electric Ry.—The Ottawa City Council committee on street railway extensions was informed June 12 that the company would construct a line from Albert St., up Preston St. to the Experimental Farm, and traversing Dalhousie St. from north to south. Some other extensions were discussed, but the company's officials stated that the difficulties in the way of obtaining rails prevented anything further being done. (Mar., pg. 191.)

Quebec and Saguenay Ry.—Reports in Quebec state that an early start is to be made with the construction of this projected railway from Cap Tourmente to Murray Bay. (Jan., pg. 45.)

Quebec Ry., Light and Power Co.—A line is being constructed from Beaupre, Que., on the Q. Ry., L. and P. Co.'s Montmorency Division to High Falls, a distance of about three miles, by the Ste. Anne Power Co., to connect its mill on the Ste. Anne River with the existing railway, and will be used for the conveyance of freight only. The line will be operated by the Q. Ry., L. and P. Co. E. Conway, Quebec, is the contractor.

The equipment for the new power plant at the Natural Steps, Montmorency Falls, is being delivered at Quebec by the Canadian Westinghouse Co., Hamilton, Ont. (April, pg. 271.)

Suburban Tramway and Power Co.—The act respecting the town of Longue Pointe, passed last session of the Quebec Legislature, among other things confirmed a by-law passed Sept. 6, 1904, and duly approved by the taxpayers and the Lieutenant-Governor, authorizing the S.T. and P. Co. to establish a system of tramways in the municipality. Sec. 16 of the act provides that the company, which has built and operates a tramway in the municipality of the parish of Longue Pointe from its western boundary to the property of P. Bernard, is confirmed in the possession and enjoyment of the right-of-way for a double track granted by the corporation by by-law, and it is declared that the company shall enjoy all the rights and privileges set forth, provided the indemnity determined upon mutually or by arbitration shall be paid to the expropriated parties according to the Quebec Railway Act. It is also provided that the present conditions relating to the establishment and operation of the tramway may be modified by agreement between the company and the municipality.

Toronto and York Radial Ry.—The Ontario Railway and Municipal Board's engineer having inspected the extension from Newmarket to Jackson's Point, Ont., a regular service was put in operation June 1. (June, pg. 429.)

Windsor and Tecumseh Electric Ry.—This electric railway, which is owned by the Sandwich, Windsor and Amherstburg Ry., has been completed, and application was made June 11 to the Ontario Railway and Municipal Board for an order permitting the line to be operated. (April, pg. 273.)

Winnipeg Electric Street Ry.—A letter to the Winnipeg Board of Control, June 1, set forth that the company was willing to go ahead at once with the double-tracking of the line on Portage Ave., from Nella st. west, the Belt line and William Ave. The Board decided that the whole question of double-tracking should be taken up at a conference which it was decided to hold the following week. Plans of what the company proposed to do were subsequently considered by the Board of Works and the following approved: On Higgins Ave. from Austin St. to Point Douglas Ave., subject to the condition that the company change the plan at the bends at Curtis and Meade Sts., if required to do so by the city, in the event of the city straightening out this street. (June, pg. 429.)

The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario.

W. E. DAVIS, Passenger Traffic Manager, MONTREAL. G. T. BELL, General Passenger and Ticket Agent, MONTREAL, QUE.

Electric Ry. Finance Meetings, Etc.

Berlin and Waterloo Street Ry.—The Berlin, Ont., Town Council, having taken over the B. and W. S. Ry., has had to interview the Waterloo Town Council respecting the use of the town's streets. The Waterloo council asks for the carrying out of considerable improvements in the road-bed, and 5% on the gross receipts up to $25,000, and 1% for each $5,000 additional. The Berlin council considers this too high, and has appealed to the Ontario Railway and Municipal Board.

Grand Valley Ry.—The Board of Railway Commissioners will be asked July 3 to recommend the Governor-General-in-Council to sanction agreements made between the G.V. Ry., the Brantford Street Ry., and the Woodstock, Thames Valley and Ingersoll Ry., or either of them for purchasing, leasing or amalgamating with either of them or their properties, or any of them by the G.V. Ry. Co.

M. A. Verner, of Pittsburg, Pa., representing the purchasers, was in Brantford, June 5, to close up the transaction. The amount involved in the transfer and in the extensions contemplated, is $4,000,000. J. S. Clark, ex-President of the G.V. Ry., is seeking to restrain the company, and its directors, from selling the line. The writ contains allegations against the directors, or some of them, of having fraudulently procured in their own names a large number of bonds and shares, and by such means obtained control of the company, that they have secured benefits to themselves to the prejudice of other shareholders, and that they have incurred large liabilities for purposes and objects of their own; that they have arranged to sell the line for personal gain, the knowledge of which has been withheld from the other shareholders and bondholders; and that they have conspired together to deceive the other shareholders and bondholders. A categorical denial is given to the whole of the charges on behalf of the directors: W. S. Dinnick, A. J. Pattison, E. T. Fox, J. J. Warren, J. S. King, J. Firstbrook, of Toronto; W. R. Turnbull and J. G. Wallace, of Woodstock, Ont.

A special meeting of the shareholders was held at Brantford, June 24, for the purpose of authorizing the issue of bonds to the extent of $30,000 a mile in accordance with the terms of the company's act, to authorize the execution of the necessary mortgage and to approve of agreements for the amalgamation of the Brantford Street Ry., and the Woodstock, Thames Valley and Ingersoll Electric Ry., or either of them, with the G.V. Ry.

Halifax Electric Tramway Co.—Railway receipts for May, $13,039.47, against $12,-251.81 for May, 1906.

Levis County Ry.—A copy of the deed of mortgage and conveyance from the Levis County Ry., to the National Trust Co., trustee for the bondholders, dated May 29, has been filed with the Provincial Secretary at Quebec. W. G. Talbot, Montreal, is Secretary-Treasurer of the company.

Montreal Street Ry.—Passenger earnings for May, $291,640.38; total earnings, $295,-951.89; against $259,951.31 passenger and $264,272.35, total for May 1906. Operating expenses, $170,495.51; rent leased lines, $339.96; city percentage on earnings, $22,-614.22; interest on bonds and loans, $12,-371.56; contingent for renewals, $14,306.94; surplus, $75,823.70; against $149,073.96 operating expenses; $18,315.52 city percentage on earnings, $15,707.84 interest on bonds and loans, $13,212.62 contingent for renewals, and $67,942.41 surplus for May, 1906. Rental of leased lines is an extra charge in the current year's accounts. Gross earnings for eight months ended May 31, $2,169,635.64; operating expenses, $1,410-567.55; fixed charges, $333,828.66; surplus, $425,239.43; against $1,906,190.04 gross earnings, $1,214,358.54 operating expenses, $266,974.57 fixed charges, and $424,856.93 surplus for the same period 1905-06.

Ottawa Electric Ry.—An offer is reported to have been made by a U.S. syndicate for the franchises, etc., of the company, but the shareholders show no evidence of any desire to sell. The Ontario Court of Appeal has decided that the storage battery which the company installed is exempt from taxation. The city council had placed an assessment of $4,000 on it.

Sherbrooke Street Ry.—Application was made to the Sherbrooke, Que., City Council recently in connection with the proposed amalgamation of the Street Ry. and the Power, Light and Heat Companies, for an extension of franchise, but it was refused. The company proposed to give a 5% reduction in rates, and to supply 500 hp. of energy at cost.

Woodstock Ry., Light and Power Co.—A company with this title, which has power among other things to construct an electric railway, has purchased the electric light plant and other property at Woodstock, N.B., from Hon. H. A. Connell.

St. John, N.B., Railway Report.

Following are extracts from the report for the year ended April 30, presented at the annual meeting June 12. The year's business showed a net profit after providing for interest on bonds and all other charges of $51,342.87, out of which two half-yearly dividends of 3%, amounting to $48,000, were declared, leaving a balance of $3,-342.87, which has been transferred to profit and loss account. While the gross earnings of the street railway part of the system shows a satisfactory increase, the net earnings are less than last year, caused by the increased expenditure necessary to maintain the service in the highest possible efficiency, and to give a car service that would meet the requirements of the public. The company's efforts in this direction have met with general approbation. The road-bed, rolling stock, power station and equipment have been maintained in a high state of efficiency. The popularity of the company's seaside park was further demonstrated during the past year. The company has extended its street railway system to St. John West, and is erecting a trestle along Rodney Wharf so that cars can connect with the city ferry system. The caving in of Union St., caused by the dredging operations in connection with the new docks, has delayed completion of the loop on the south side of Carleton, and also prevents making the necessary connections to operate cars on Rodney Wharf. During the past year six closed and twelve open cars, also one nose plow and one sweeper were purchased. Car sheds have been built in St. John West, and improvements in the power house completed. The City Council has just granted permission to double-track the railway system from the head of King St., around by Haymarket Square, through Paradise Row to Mill St. While the company cannot expect any increased revenue from this work it will give additional accommodation to the public and enable it to give a service in that part of the system equal to the other lines. The company has been negotiating with the Government respecting the building of a new bridge at the Falls and has been assured that it will be shortly constructed. When this is completed it will be able to give an efficient service from the east side to all parts of the west side, and through express cars can be run from King St. to St. John West and Fairville. The profits of the street railway system are small as compared with other cities of the same size as St. John. The city of St. John being compactly built and the grades steep, only small cars can be used. If large cars could be operated a less number of motormen and conductors would be required.

After referring to the company's gas plant and incandescent lighting and power plant the report proceeded: "We regret to report that at the last session of the Legislature, the city of St. John presented a bill to the Legislature respecting the putting down of new permanent pavements in the streets. This bill provided that on streets where our railway ran the Council could compel us to put down permanent pavements from curb to curb. This was an attempt to interfere with our charter rights, as under our charter we are only liable to keep in repair streets under 60 ft. in width where a double track is laid, and for 18 in. outside the rail on all other streets. We are glad to be able to report that on this matter the Legislature unanimously refused to consent to the City's Bill and the Attorney-General laid down the principle, which was supported by the leader of the Opposition and all the members of the Legislature, namely, that our charter rights would not be interfered with by the Legislature in future. We are sure the investing public will be glad to learn that such correct principles have been adopted by our Legislature. It would strike at the root of the highest principles of legislation if charter rights of companies could be interfered with or taken away without compensation. We recognize that we owe a duty to the public of providing a first-class service in all the departments of our business at a fair price. On the other hand, we take the ground that we are entitled to fair and consistent treatment, and that our shareholders and bondholders should be protected against any encroachment on our vested interests.

"It will be necessary to issue $300,000 of bonds, and we would recommend that these be issued in denominations of $100 and $500, payable in 20 years, on May 1, 1927, bearing interest at 5%. Our Legislature has authorized the issuing of these bonds, and provided that they shall be a charge on the real and personal property of the company, after the bonds now outstanding. We recommend that our shareholders have the prior right to take up these bonds at par, bonds not so taken to be offered to the public at a premium. Our present issue of bonds are selling at a substantial premium."

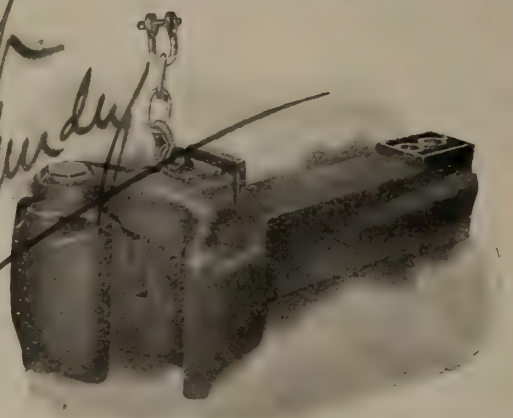
SNOW AND ICE CUTTING DEVICE.—MONTREAL STREET RAILWAY.

The Montreal Street Ry. has used successfully for three years a home-made ice and snow cutter which is attached to cars and is intended to keep ice and snow from packing in the track. Above are reproduced the working drawings for a cutter as adapted to the company's standard double-trucks, but the device can be used on any kind of single or double-truck. The teeth are cut from steel bars and last a season or more. The practice in Montreal is to have a sufficient number of cars equipped with the cutter from Nov. to April, to insure that one of these devices will pass over all main lines every 20 or 30 minutes; that is, there is one cutter to every three or four miles of track according to conditions of street traffic. The device is intended not so much to shave down ice that has been allowed to form, as to prevent its formation by keeping the surface continually broken. The company does not find the use of the cutter necessary on branch lines where the street traffic is light, because the snow between rails is rarely packed sufficiently to encourage formation of ice between rails. The principal points to be observed in order to have the most satisfactory results are: First—Keep all cutters adjusted to a standard height above rail. Second—Attachment to truck should be made at random in order that teeth on different cars will not all gage into the same furrows. Third—Adjustment of distance from rail should be made periodically with the help of a straight-edge 2½ ins. or 3 ins. wide, set across the rails under the teeth. No picking of ice has been necessary on the Montreal lines since the cutters were put into service, and the roadway between the rails is kept perfectly smooth and level at a uniform height above the rail. This is a very important factor in the operation of sweepers or plows.

THE WASHBURN
INTERNATIONAL OR I COUPLER



It is up-to-date in every respect, having a knuckle opener, lock set, automatic release, economy lugs and heavy wearing part.

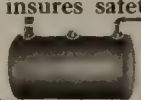
Cable Address: "CANDEC."

This Bureau is prepared to undertake all legitimate investigations in Criminal, Civil, or Commercial Cases for Transportation Companies, Banking and other Corporations, and for private individuals.——Private Patrols and Special Bank Guards.——Uniformed Patrolmen furnished for Expositions, Race Tracks, etc., and operatives suitable for all classes of detective work.

STOP!

Your present method of handling oil in signal and interlocking towers is dangerous. It's out of date because safety is not considered. It's out of date because the Bowser insures safety.



We manufacture oil house equipments, oil storage systems oil tanks and pumps.

THE BOWSER SYSTEM
OF OIL STORAGE FOR SIGNAL TOWERS, ETC.

Provides for storing the oil in an underground tank outside the tower alongside the track where the tank can be easily filled direct from the supply car.

An adjustable measure pump in the tower draws exactly enough oil at each stroke to fill a lamp, measuring the oil directly into the lamp.

There is no spill, no waste, no overflow, no evaporation, no gases and no danger, no tin funnels, no measures, no oily waste. For information send for bulletin 18

S. F. BOWSER & CO., Inc.,
Fort Wayne, Ind.

Cut 126—S.M. Pump in Tower

Canadian Street Railway Association.

The annual meeting was held at Windsor, Ont., June 14, the following companies being represented by the officials named: International Ry., N. P. Baker, Superintendent, Niagara Falls; G. Chambers, General Agent, Buffalo, N.Y.; London St. Ry. Co., C. B. King, Manager; Montreal Park and Island Ry., Montreal St. Ry., Montreal Terminal Ry., P. Dubee, Secretary; Niagara, St. Catharines and Toronto Ry., G. B. Burson, Local Solicitor; Ottawa Electric Ry., J. E. Hutchison, Superintendent; Sandwich, Windsor and Amherstburg Ry., Windsor and Tecumseh Ry., J. Anderson, Manager; Toronto and York Radial Ry., W. H. Moore, Manager; F. P. Livingstone, Traffic Manager; Toronto Ry., W. H. Moore, Assistant to President; A. M. Grantham, Superintendent of Construction and Purchasing Agent; W. H. Nix, Chief Roadmaster; Toronto Suburban Ry., A. H. Royce, President; J. H. Cornish, Engineer. There were also present J. E. Rothery, General Manager East Liverpool, Ohio, Power, Light and Traction Co.; Acton Burrows, Managing Director RAILWAY AND MARINE WORLD. W. Moore, President, occupied the chair.

The reports of the Executive Committee and the Secretary-Treasurer dealt with a number of important matters, particularly the legislation affecting electric railway interests passed at the last session of the Ontario Legislature and the proceedings of the Ontario Railway and Municipal Board. Papers were read on the standardization of electric railway equipment by C. B. King, and on electric railway development in Ontario and Quebec, by R. J. Clark and P. Dubee. The reports and papers were very fully discussed, the entire day being devoted to them.

In the evening the members of the Association, on the invitation of J. Anderson, Manager Sandwich, Windsor and Amherstburg Ry., and accompanied by several prominent Windsor citizens and officials of the Detroit United Railway Co., which owns the S.,W. & A. Ry., went by special car from Windsor to Amherstburg and dined in the pavilion on Bois Blanc Island in the Detroit River, a charming outing spot which is a favorite rendezvous for Detroit and Windsor people. There were a number of interesting speeches, several public men from the Windsor and Amherstburg districts testifying to the excellent work and satisfactory service of the S. W. & A. Ry. and to Mr. Anderson's efficiency.

On June 15 the meeting was centred in Detroit, when a paper by H. A. Burson on the polyphase induction motor was read.

J. Kerwin, Superintendent of Tracks, Detroit United Ry., gave an interesting address on track construction, which was very fully discussed by Messrs. Grantham, Hutchison and others.

Officers for the current year were elected as follows: President, E. A. Evans, General Manager Quebec Ry., Light and Power Co.; Vice-President, J. E. Hutchison, Superintendent Ottawa Electric Ry.; Executive Committee, A. M. Grantham, Superintendent of Construction and Purchasing Agent Toronto Ry.; C. B. King, Manager London St. Ry.; D. Macdonald, Manager Montreal St. Ry.; Counsel, A. H. Royce, President Toronto Suburban Ry.

After luncheon the members accompanied by H. Bullen, General Superintendent; P. Dohrman, Asst. General Superintendent; J. Kerwin, Superintendent of Tracks; E. J. Burdick, Superintendent of Motive Power, and R. Oakman, Right of Way and Real Estate Commissioner, Detroit United Railway, boarded the D.U.R. private car 7,500 and proceeded to the Harper yards, the headquarters for the track construction department of the D.U.R. city and interurban lines, where a very instructive hour was spent in looking into the systems in use. Then the party proceeded to Bingham's Lakeside Inn, on the shore of Lake St. Clair, on the Detroit and Mt. Clemens shore Line Ry., about 23 miles from Detroit and 2½ miles from Mt. Clemens. They dined here, under the chairmanship of Jas. Anderson, and spent a very enjoyable evening. The Detroit power houses were also visited.

The Polyphase Induction Motor.

By H. A. Burson, M.Sc., St. Catharines

The alternating current motor, in its different forms, has during recent years been engaging, more and more, the attention of electrical engineers. This is due to tremendous development in the application of electrical energy to commercial uses, and the centralization of power plants. The large hydro-electric or steam-driven plant, from which power is transmitted to long distances, has replaced the small isolated plants distributing power over a comparatively small territory. This has meant a more thorough study of the economical distribution of power, resulting in the adoption of alternating current generators, transformers, and the transmission of electrical energy at high voltage. The direct current motor drive has been replaced in many instances by induction motor, both in manufactories, and, to a certain extent, in electric railway work. The object of this paper is to briefly describe the characteristics and performance of the polyphase induction motor, both constant and variable speed types.

In principle the induction motor is essentially a transformer, having a much larger magnetic leakage than an ordinary static transformer. The motor consists of a stationary element, the stator, and a rotating element, the rotor. The stator corresponds to the primary of a transformer, while the rotor is a secondary. In order that the secondary may rotate, it is necessary that there be an air-gap in the magnetic circuit, which results in a large increase in the magnetic leakage. This large magnetic leakage results in giving the induction motor characteristics which are very different from those of the static transformer. The characteristics of the latter are such that the power factor continues to increase with the load, whereas in the case of the induction motor, the power factor will increase with the load to a certain point, after which it begins to decrease.

The constant speed type of an induction motor is one in which the rotor or secondary windings are short-circuited. In operation a polyphase, e.m.f., is impressed on the primary or stator windings, which produces a rotating field. This rotating field induces in the secondary or rotor an e.m.f., which, when the motor is at rest, is of the same frequency as the impressed e.m.f. The interaction between the fields due to the impressed and induced e.m.f's., is such as to induce a pull on the rotor periphery in the direction of field rotation. Hence, if free to rotate, the rotor will revolve in the direction of field rotation.

With the short-circuited secondary, the current taken at the start is heavy, owing to the induced e.m.f. in the rotor circuit being maximum. As the speed of the motor increases, however, the induced e.m.f. decreases, resulting in the corresponding decrease in the current taken from the line. The starting current taken by the ordinary motor, when thrown on full line voltage, will be from four to six times the full load current, which, in the case of a large motor, produces a very heavy draft on the line. It is therefore customary to use an auto-transformer in starting, and applying from 30 to 60% of the normal voltage to the motor, depending upon the character of the starting load.

The resistance of the rotor circuit is a most important factor in the operation of the motor, since the starting torque, the starting current, the efficient and over load capacity, are all affected by the resistance of the rotor circuit. In order to obtain a high starting torque, or low starting current, it is necessary that this resistance be high, which means a reduction in the overload capacity and efficient. In the squirrel cage motor, where the rotor resistance is a fixed quantity, it is therefore necessary that the resistance be such as to give a sufficiently high starting torque, without the undue reduction in efficient or overload capacity.

The variable speed type of motor is one in which the rotor resistance may be adjusted. The rotor windings, instead of being permanently short-circuited, are connected to collector rings, across which is an adjustable resistance. At start, this resistance is all in circuit, resulting in giving a high starting torque, with a comparatively low current. As the motor speeds up the resistance is cut out, and, when maximum speed is reached, the rotor windings are short-circuited. In this way, it is possible to obtain a motor having high starting torque, low starting current, and high efficient underload. The speed for a given load depends upon the value of the rotor resistance. In fact, the slip or percentage of reduction from maximum speed is equal to the resistance loss in the rotor, divided by the total net input into the rotor. It will therefore be seen that by varying the rotor resistance, any speed from zero to maximum may be obtained for a given load. This type of motor, therefore, lends itself to conditions requiring variable speed, such as hoists, cranes and street railway service

In this country, very little, if anything, has been done towards applying polyphase induction motors to street railway work. In Europe, however, there has been in operation for some time, the Valtellina line, which was completely equipped with cars operated by polyphase induction motors, and the results obtained have been so successful that the system has been extended, the same type of motor being used. A good description of this line may be found in the proceedings of the A.I.E.E. for 1905, in a paper by Mr. Waterman.

The chief disadvantages of the polyphase motor for traction work are the difficulties in the construction and maintenance of the over-head system, and a very small clearance between the rotor and stator. In the ordinary type of motor, this clearance will not be more than from four to five hundredths of an inch on a side. This, for traction work, necessitates the use of very heavy and massive bearings, so that the wear of the bearing may be so small as not to allow the dropping of the rotor on the stator. As regards the over-head system, two or three trolley wires are required, which, although not such a serious item for inter-urban work, would be entirely unsuitable for city work, where so many crossings are required. Engineers in this country have been working towards single phase street railway motors, and there are now in operation several lines using these motors with success. The two principal types developed are the repulsion motor and the series alternating current motor, and their relative advantages and disadvantages have been for the last two years a much discussed question. All the difficulties of operation have not as yet been overcome, but it is extremely probable that the next few years will see high speed interurban lines in this country operating the single alternating current apparatus, notwithstanding the success which polyphase traction has achieved in Europe.

Electric Ry. Development in Ontario.

By R. J. Clark, Assistant to the Comptroller Toronto Railway.

It is customary to hear the layman state that electricity is yet in its infancy. If this is the case, it must be added that the child is precocious and rapidly maturing. Moreover, no part of the child's anatomy shows a hardier muscle, combined with greater vigor and endeavor, than the limb of electric traction. In this country of ours the progress of electric traction has been very marked, and the future holds out vast possibilities to our view—possibilities which will soon, no doubt, become probabilities—and later on—accomplished facts.

Before passing on to any historical details of the pioneer lines of Ontario, and other matters which may be of interest, it will not be amiss to give some figures showing the general growth of railways in the Dominion. In 1895, there were 21 electric railway companies with a capital of $13,035,263, operating 354½ miles of track, carrying 55,348,612 passengers. In 1898, there were 35 companies with a capital of $28,763,328, operating 635 miles of track, carrying 94,616,344 passengers. In 1901, there were 43 companies with a capital of $38,637,495, operating 672 miles of track, with gross earnings of $5,422,539. In 1905, there were 46 companies with a capital of over $50,000,000, operating 793 miles of track with gross earnings of $9,357,126, and net earnings of $3,438,931.

To show, moreover, that the even rapid increase shown above gives every sign of being continued, the following figures are given:

Year	Total Train Mileage	Passengers Carried	Freight Carried	Earnings Gross	Earnings Net
1901.....	31,750,754	120,934,656	287,926	$5,768,283	$2,333,120
1902.....	35,833,841	137,681,402	266,182	6,486,438	2,683,583
1903.....	38,023,529	155,662,812	371,286	7,233,677	2,760,819
1904.....	42,066,124	181,689,998	400,161	8,453,609	3,127,092
1905.....	45,959,101	203,467,317	510,350	9,357,126	3,438,931

Such has been the growth of electric railways in Canada, indicating a remarkable extension of systems, successful and efficient operation, and remunerative business, without disappointments in the way of setbacks.

The figures for Hamilton include—Hamilton St. Ry., Hamilton Radial Ry., Hamilton and Dundas Ry. The passengers carried are exclusive of transfers. The figures given for Halifax cover income from all sources.

Manifestly, it would prove an arduous task to cover the history of all the electric railways in the Dominion, consequently the committee deemed it advisable to limit this paper to a brief history of the growth of electric railways in Ontario. The people of Ontario are indebted to the late Charles Vandepoele for the installation of the first electric line in Canada, which was also the second on the American Continent. Mr. Vandepoele was a Belgian by birth, who came to America in 1869. In 1883, in the United States, he had equipped a small track 400 ft. long with a single car running thereon, operated by a 3 h.p. motor. Later in the year he constructed an overhead line for the Chicago State Fair, which remained in operation for six or seven weeks. It was in Toronto in 1884 that Mr. Vandepoele operated the first electric railway in the Dominion. Toronto had at that time a population of 100,000. In July of that year he installed the exhibition line from the foot of Strachan Avenue along the G.T.R. tracks to the eastern entrance of the Industrial Exhibition—a distance of 3,000 ft. Speaking of this line the Daily Mail of Sept. 11, 1884, described it as follows:

"The electricity, which is generated by two large-sized dynamos in Machinery Hall, run by a 75 h.p. engine, is conveyed into two copper bars which run the whole length of the track between the rails. These bars are partly covered over for protection against shock. Attached to the motor car are two pieces of metal which run along the copper bars, and the electricity is then carried to the dynamo on the cars which, when in motion, drives the car by means of a series of pulleys and belting. The electrician on the car has full control of the movements of this motor just as if he were running a marine engine or locomotive. By means of a handle he immediately reverses the motion of the dynamo on the car. To stop the car he simply breaks the current of electricity, which stops both car and motor. As showing the enormous power which the copper bars between the rails possess, it may be stated that the heavy grade behind the Machinery Hall was mounted with perfect ease by the cars."

There appears to have been a single motor car with three trailers. The car was equipped with a 30 h.p. motor, and 200 people altogether could be carried at a time. Even at this early date the street railway came in for its share of criticism, as the following extract from the Daily Mail of Sept. 10, 1884, will show: "The electric railway did not give satisfaction yesterday afternoon, and numbers of would-be passengers were turned away after having paid their fare. Something went wrong with the machinery, and the train was stopped until the patience of the visitors became exhausted. Towards evening it was again in running order, and made several trips on time."

In 1885 Mr. Vandepoele appears to have experimented with the overhead trolley. A ¼ inch wire was strung and the trolley pole is described as being arranged after the style of an old wire sweep, and was carried on top of the car, the rails being used as a return. During the last five days of that year's fair, 50,000 people were carried to and fro. This was then considered wonderful, but 20 years later the Toronto Railway Co. carried (including transfers) 250,000 passengers in a single day.

The second electric railway was the Windsor Electric Railway, where the underground conduit was used. This line was laid down in 1886 also by Mr. Vandepoele. It had been incorporated as far back as 1873, amended in 1887, and in 1891—it is interesting to note—was made perpetual. In Aug., 1901, the line was acquired by the Detroit United Ry. Co. The first attempt on this railway to operate by electricity was not successful. The breakdowns were so frequent that horses had to be kept in reserve, and in fact, electricity was finally abandoned and horses once more drew the cars. In 1891 the Sandwich, Windsor and Amherstburg Railway was electrified between Windsor and Sandwich, and in 1893 the line between Windsor and Walkerville was purchased.

In 1887 Mr. Vandepoele was able to make the proud boast that "as the matter now stands, we have more miles of electric railway in successful operation than all the electrical railways in the world combined." It only required six roads and 14¾ miles of track to verify this boast.

The third electric railway in the Dominion (also a Vandepoele) was the old Port Dalhousie, St. Catharines, and Thorold Electric St. Railway, originally a horse car line, which was converted to an electric line in 1887, the first car running on Oct. 6 of that year. The road-bed consisted of flat rails laid on longitudinal wooden stringers. The cars were about 18 ft. long—single truck—the motor being placed in the vestibule, and the armature shaft terminating in a gear, which drove a countershaft on which was mounted two large sprocket wheels, which drove corresponding sprocket wheels on the axles by means of an endless sprocket chain. The motor was controlled by a knife switch and box rheostat. The seating capacity of the cars was 12 passengers. Cars had to be turned at each end of the line. The gong instead of being placed under foot, was on top of the car with a rope hanging in a convenient place for the motorman. The trolley consisted of two no. 00 wires on a rigid suspension, the ears being inverted so that the trolley wheel ran on top of the wire. One wire was used as feed wire and the other as a return. The wheels were joined together and current was conveyed to cars through flexible cord, which fitted on a horn at the rear end. In order to pass a car at switches, or to replace the trolley when it jumped (which was often), a spear pole that fitted into the socket was provided and carried on the car. The trolley wheels on cars going in one direction had to be lifted off the wire while a car going in the opposite direction passed. On the open cars the motor was located in the centre of the car with a sprocket chain to either axle. These cars could be run in either direction, and were considered a great improvement on the closed cars. In order to prevent the magnetism of the car from stopping the passengers' watches, the front vestibule which enclosed the motor was sheeted throughout with zinc. The motors were 15 h.p.—one per car—and weighed about three-quarters of a ton.

The St. Catharines and Niagara Central Ry., now known as the Niagara, St. Catharines and Toronto Ry., was opened on July 11, 1888, as a steam road, and continued operation with a more or less frequent service until the fall of 1900, when it was converted to an electric line. The

total earnings as a steam road for their largest year amounted to $25,000, with a net earning of $8, and that year 3,700 passengers were carried. Since its conversion into an electric road, the number of cars has increased from four to 53, and during 1906 over two millions of passengers were carried.

In Jan., 1893, the Niagara Falls Park & River Railway was commenced, the work being carried on during all the rigors of a severe winter. The route was from Queenston, around the falls and rapids to Chippewa—thus forming an electric portage from Lake Ontario to Lake Erie. The trolley wire throughout was no. 00 B.W.G. hard drawn copper supported on iron brackets. The return was by the rails, which were bonded with no. 0 B.W.G. wire, ½ in. copper rivets and cross bars every fourth rail. This road was opened May 24, 1893, and in that week as many as 17,500 passengers were carried in a single day. A correspondent of the American Electrical Engineer, who had visited the road during the first weeks of its operation, wrote: "The first thing that strikes an observer is the British solidity and massiveness of construction. The cars roll over the track as smoothly as billiard balls. A run was made last week from end to end—11½ miles—in just over 29 minutes—a speed of 24 miles per hour. The rolling stock consists of four 18 ft. ordinary box cars, ten open cars measuring 28 ft. over all, and ten observation cars, all equipped with W.P. 50 motors. Besides the above motor cars there were 18 open and closed trailer cars. The cars had 33 in. wheels, weighing 500 lbs. each with 3½ in. tread and 1¼ in. flange. The track was built with 56-lb. C.P.R. rails, with angle fish plates, laid on 8 x 6 in. cedar and tamarack ties spaced about 30 in. apart." It will be readily seen that this railway shows a very rapid development over the three pioneer lines which were previously described. The line was up-to-date, and in connection with it Niagara Falls was harnessed for the first time on the Canadian side. As the correspondent of the Electrical Engineer neatly put it: "When we turn to the roads now in operation, and especially to the magnificent road lately equipped and started by Canadian capital at Niagara Falls, we realize how crude and faulty the early work was."

In 1891 the Ottawa Electric Street Railway system was inaugurated with a capital of $1,000,000, and between 1891 and 1894 twenty-two miles of single track were laid down by Ahearn & Soper. In 1893 2,700,000 passengers were carried, and the number of cars in operation was 65. It was the first line to demonstrate the practicability of giving an uninterrupted service throughout the winter season. A clause had been inserted in the contract with the city, providing for the use of sleighs in the event of its being impossible to run electric cars. Happily the occasion for using them never came, and in 1893 the road amalgamated with the Ottawa City Passenger Ry. Co., which had been operating horse cars since 1870, and electricity was adopted throughout the whole system. To-day the company may be congratulated on having a higher percentage of net earnings than any other in Canada.

The Toronto Railway Co. was incorporated by special act of the Ontario Legislature on April 14, 1892, after the expiration of the original charter for the street railway system granted in 1861. In 1891 the city did not renew the franchise, but bought the property of the retiring company for $1,500,000; the plant and franchise were then sold to the highest bidder, and were purchased at the appraisement of arbitrators, the city making certain reservations which have ever since proved bones of contention. The group of pioneers who in 1892 incorporated the present system comprised Wm. Mackenzie, H. A. Everett, Jas. Ross and others who have since become famous, and have greatly extended their field, until they are interested in street railways from the Atlantic to the Pacific, and from Winnipeg in latitude 49, to San Paulo and Rio de Janeiro in Brazil. The franchise which was obtained consisted in the right to operate a street railway in the City of Toronto for a period of 30 years from Sept. 1, 1891. The syndicate undertook to convert the existing horse lines into electric lines as rapidly as possible, and to pay the city $800 per mile of single track per annum, and the following percentage on gross profits:

From 1 to 1,000,000	8%
From 1,000,000 to 1,500,000	10%
From 1,500,000 to 2,000,000	12%
From 2,000,000 to 3,000,000	15%
From 3,000,000 upwards	20%

This agreement, while the envy of less fortunate municipalities, has ever been the subject of much litigation, but that the city was not always in the right is now shown by the recent decision of the Privy Council, which fully substantiated the Company's interpretation of the agreement on many points at issue. To show the success which has followed the management of the Toronto Railway, it may be mentioned that during the 15 years ended Dec. 31, 1906, the company paid the city $3,440,746.17 on account of taxes, pavement, and percentage charges. During the same period, moreover, the shareholders received $3,396,512.96. It is estimated that during the coming year the company will pay into the city coffers about $500,000, and will distribute to its shareholders about $475,000. The pay roll of the company during 1906 was within $8,000 of $1,000,000.

The foregoing statistics, though they are perhaps somewhat meagre, will serve amply to show the rapid growth and development of electric railways in this country. It will serve to bear witness to the energy, ingenuity, and untiring endeavor of those who have brought the electric railway systems of Canada to their present degree of efficiency. It will also show that not only are the shareholders of the various companies gainers by the successful operation of street railways, but the municipalities along whose streets the trolley cars convey quickly and comfortably their citizens, and also it will remind the citizens themselves that by means of efficient, well-regulated, and consequently successful operation, they are able to accomplish more business, see more sights, call on more friends, and in fact do a thousand and one things which but for the trolley car would be well-nigh impossible.

The Hamilton Board of Works has instructed the city solicitor to take the necessary proceedings before the Ontario Railway and Municipal Board to compel the Hamilton Street Ry. Co. to comply with the terms of the Board's order issued in Jan.

A through electric car now runs between Leeds and Bradford, Eng., although part of the line is 4 ft. 8½ in. gauge and the other part 4 ft. The wheels accommodate themselves to the lines by means of a moving sleeve on the axles; which causes the wheels on one side of the car to slide inwards or outwards as may be desired. This idea is commended to the Toronto City Council in connection with the problem of the entrance of the suburban railways to the city. The Toronto Ry. has a gauge of 4 ft. 10⅞ in., the Toronto Suburban Ry. a gauge of 4 ft 10½ in., while the Toronto and York Radial Ry. is 4 ft. 8½ in., the standard gauge.

Electric Railway Development in Eastern Canada.

By Patrick Dubee, Secretary Montreal Street Railway Co.

The question of the introduction of cars propelled by electricity in Eastern Canada was taken up in the principal cities almost simultaneously with the various systems in the United States. The introduction of the system, however, was regarded as exceedingly doubtful, owing to the general belief that the climatic conditions were such as would prevent the successful operation of the system in the winter months. The writer remembers that when the Montreal St. Ry. Co. accepted the franchise to operate in the City of Montreal, that the majority of the shareholders sold out their holdings in the Company, and predicted that within a few years at the most the company would be bankrupt. In fact, were it not for the strong financial backing of such men as the Hon. L. J. Forget, Jas. Ross, R. B. Angus and others, it is questionable in my mind whether the same would have been carried through successfully. This incident is given in order that the members may more fully appreciate the marked difference in the climatic conditions existing between the different cities in the Dominion.

The first city in Eastern Canada to adopt the electric system was Ottawa, the first car being in operation on June 24, 1891. In the fall of the following year, electric cars were in operation in Montreal; in Sept., 1892, in St. John, N.B.; in 1896 in Halifax, and in 1897 in Quebec; and since then in Cornwall, Levis, Sherbrooke, Yarmouth, etc.

The progress of the electric system in Eastern Canada, when the difficulties and the large expense to be met in operating in the winter months is considered, has been very satisfactory, as can be seen by the following statement:

	1892	1906
Miles of single track	92	351
Passengers carried	28,392,450	103,232,140
Gross earnings	$ 860,000.00	$5,578,494.00
Capital invested	$4,000,000.00	$22,782,133 00

In considering these figures, it is important to bear in mind, that there are practically no suburban lines in Eastern Canada, and that there are only four cities of a population of over the 50,000 mark, and 12 cities in which electric cars are in service.

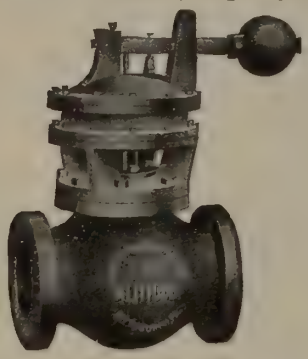
The success of the electric railway system is due to the fact, that the different companies succeeded in keeping in operation and maintaining a good service during the winter months, although the climatic conditions are so adverse to it. During the first two winters, it was doubted whether success would crown their efforts. Much interesting literature could be written describing the serious difficulties, the intense anxiety, and the hardships experienced by the managements of roads and their faithful assistants in their mighty battles with the elements in order to maintain the service. The snow-fighting equipments in the early days were not as competent to do their work as to-day, but now the improved sweeper with its standard equipments, the snow-plough and salt cars, together with the heavier cars in use, materially assist in making the work easier for the men, and it is seldom that the service is affected, no matter how serious the storm. To give the members an idea of the volume of snow which falls during the course of a year, it is only necessary to mention that statistics kept at McGill University show that the average yearly snowfall for the last 15 years was 117 inches. It will also be of interest to know that the average cost of operation in winter for the last 10 years on the Montreal St. Ry. system has been about 70% against about 52% during the summer for the same period. Other factors which have assisted in making the electric system so successful

PATENTS PROTECTED BY THE PATENT TITLE AND GUARANTEE CO. NEW YORK

THE ANDERSON AUTOMATIC VALVES AND WATER COLUMNS FOR RAILROADS

nderson Patent Altitude Valve
Connected to Tank Service
No Waste of Water
No Freezing of Floats

This valve maintains a uniform stage of water in tank or reservoir, doing away with the



annoyance of floats or fixtures in the tanks.
Accessible and protected from frost. Adapted for Buildings regardless of height.

Anderson Patent Float Valve
"Simply Has No Equal."

Cushioned in opening and closing Float swivels to any angle desired.

"Angle or St. Way."

The Valves with an Absolute Guarantee.

For high and low pressure. Absolutely controls the water level in tanks or reservoirs. Instantly adjusted to operate quick or slow, as desired. "No waste of water." The upper portion of body being lined with bronze, also the valve or piston being solid bronze, makes the valve indestructible. Railroad men that use them say, "Their equal is not made."

"Angle or St. Way"

The Anderson Cushioned Non-Return Valves

"Life and Property Insurance Valves"

Why! endanger your power plant by using the regular angle, globe or gate valves at the boilers when you can get the Anderson Cushioned Non-Return Valve, which is an AUTOMATIC STOP VALVE, also a HAND-STOP VALVE, all in one?

The Heaviest Line OF AUTOMATIC VALVES AND TRAPS

For High-Pressure Steam and Water Service ever Presented to Users.

have been the great improvements made in the road-bed and track construction, rolling stock, and supply of electric current, as may be readily seen in the following brief resume:

The rails for the most part as originally laid on the system, when the method of propulsion was changed from horse to electric power, were 72-lb. girder per yard, laid both in macadam and paved streets; on macadam streets the foundation was wooden ties, packed up with 2 in. broken stones; in paved streets the rails were laid on wooden ties and concrete foundations. The present rail is 87 lbs. per yard, T section, and laid in paved streets with tie rods and steel ties, the groove for the flange of the wheels being cut out of the blocks, making less noise in operation than the grooved rail, and a better surface. The rail is well surfaced with concrete stringers. The 87-lb. T rail in macadam is laid on well-spaced wooden ties, and with the tie rods every 6 ft., and well surfaced and packed with good clean macadam. On hills and in some locations 96-lb. girder rail is used, but T rail is used wherever practicable. Intersection work is now made of the best manganese steel, and switches, crosses, diamonds are now all of one piece, instead of built-up work, or insert pieces as formerly.

With the arrival of electric traction, there was an immediate tendency towards larger cars, but progress in this direction was hindered by the necessity of laying a more substantial rail and road-bed. The simple truck car was fully developed in 1897; after that came the double truck car, first with longitudinal seats, and then with cross seats, after the fashion of steam railway coaches. Sizes and weights increased rapidly, until now, in 1907, the average car being built measures 50 ft. over all, and weighs about 40 to 50 tons. A few comparisons showing changes in the last 10 years are interesting:

	1897	1907
Length of body	21	35 ft.
Length over all	30	50 ft.
Motor equipment	60	180 h.p.
Seating capacity	28	50
Weight empty	16,000	50,000 lbs.
Weight per passenger	570	1,000 lbs.
Cost	$2,500.00	$6.000.00

It will be noticed that, 1st, the deadweight of car per passenger seat has almost doubled. This would indicate a very large increase in the amount of power consumed, also in the wear and tear of equipment and road-bed per passenger. To offset these items, there has been a decrease in the amount of platform labor required. The latter influence seems to have overshadowed all others in later developments on account of the great increase in the cost of labor during the last decade. There is no doubt that low cost of power and maintenance have been more or less sacrificed to permanency of construction and limitation of pay-rolls. 2nd, that although there has been a very great advance in the standards of comfort, durability, elegance, and continuity of service, there has not been a very great increase in the cost of cars per seated passenger.

One of the most important developments in the car equipments has been in the method of braking. All modern cars weighing over 30,000 lbs. are equipped with power brakes, operated by air or other means. The severe braking requirements of modern practice, when cars are operated at a high rate of speed, can easily be attested, and the wonderful success attained by these brakes is too well known to be further commented on.

The development of motor equipment has been along the lines of increased efficiency, certainty of operation, and refinement of construction, both electrical and mechanical. The main principles of design have not changed to any extent, but the results obtained have materially added to the comfort of passengers.

With regard to the all-important factor of the supply of electric current it is only necessary to say that to-day it is rather seldom that the service is interrupted for want of power. This has been accomplished at a great expense by the use of improved machinery in power houses and close attention to the overhead work.

Standardization of Electric Railway Equipment.

By C. B. King, Manager London, Ont., Street Ry.

The word "standard," like the word "arbitration," the expression "municipal ownership," and some others, has a very peculiar and subtle effect upon one, especially when an effort is made by a travelling salesman, a labor agitator or a politician to be captivating. When we hear the word "standard," the impression is immediately conveyed that the most nearly perfect has been obtained and that there need be no further argument. But as perfection is impossible, complete standardization is likewise impossible from the fact that about the time we adopt a standard, an improvement is made which we must adopt, and so we lose our standard. There are, however, certain elements, consisting almost entirely of dimensions, in our present electric railway equipments, which can be successfully standardized, for the reason that so many similar parts of so nearly the same sizes have been in use so long that our experience has shown that one set of dimensions can be selected that would suit all. It is to this class of standardizing that my interest inclines, and to which I beg to call your attention. A great deal in this line has already been done by the Master Car Builders' Association, and by the American Society of Civil Engineers, which has been of benefit to electric railways, and which I think we should follow where possible or point out some good reason why we should not. Similar organizations to the Canadian Street Railway Association, such as the American Street and Interurban Railway Association, the New York Street Railway Association, and the Central States Electric Railway Association have also done something, the most thorough and effective work having been done by the latter Association.

The M.C.B. Association was impelled to determine upon its well-known standards because of their interchange of cars and the necessity of one road repairing cars belonging to another. Electric railways hardly need it for this reason now, but they will soon, because of the development of interurban lines and their several connections. But I think we have a reason which is very similar to that which caused the A.S.C.E. to determine upon rail sections, and that is, that we are getting so many motors of different designs which must be kept in repair. Each design has its own particular gear, pinion, bearings, etc., and so we must add to our stock of supplies, and thereby add to our storeroom difficulties. In order to at least reduce these difficulties, I beg to suggest that we classify motors and adopt standard designs for all the wearing parts possible. Electric railways are connecting, to an increasing extent, with steam railways, and so I think electric railway associations should adopt the M.C.B. standards as far as possible. The electric railway associations have enough to do to establish standards for the electric equipment, which, if they do their work well, will in turn be adopted by the M.C.B. Association when the steam railways adopt electric operation.

The Central States Electric Railway Association appointed a committee last September to recommend standards for various parts, and at its meeting last month, it reported upon the subjects of rails, wheels, journals, journal boxes, axles and brake shoes. I believe it is to yet report upon various other parts. As you have no doubt read the reports, as recently published in the journals, I will only review, with perhaps some criticisms, what it has suggested.

Its adoption of the 70-lb. American Society standard rail for interurban work is all right for the present, but I have no doubt that the time will come when it will consider this rail too light, when, of course, it can adopt the next size, or the 80-lb. American Society standard. Its adoption of a 7 in. high T rail for city work suits its local conditions, for most of the cities in that territory permit the use of T rail. However, I think a girder groove rail and a guard rail should be standardized, so that the repairing and replacing of track work will not be so troublesome and expensive as it is at present, when we find it very difficult to get rails of the same section as we may have in use at present. Two other things about track work, which might be standardized to advantage, are the tongue switch pieces and the frogs in the special work. As tongue switch pieces having a radius of either 100 or 150 ft. are suitable for the beginning of curves of almost any radius, it would be a great advantage in the replacing of these parts if the radius of the tongue switch piece and its length were standardized, and so made by the manufacturers. The tongues should also be of the standard length, so that they will be interchangeable. In the frogs, the length of the arms is about the only thing that could be standardized, but even this would be of some advantage, for then we should know that a frog made for a 50 ft. radius curve would fit at any intersection where there is a 50 ft. radius curve, without regard to the length of the arms.

One more thing which I have in mind regarding track work, is that of paving block. Those of you who have had any experience with this kind of paving must have found how troublesome it is to do any patching if the old bricks are broken to any extent when track repairs have to be made, and you find the new block which you have, to be of a different size. I am a believer in large paving blocks, for the reason that these blocks wear at the edges first, and therefore the less number of edges, the less will be the wear. I would suggest that a paving block 4 in. thick, 6 in. wide, and 12⅛ in. long, would be a very good one for track work; the 4 in. in depth being enough to give it body, and being just about the right thickness for paving over ties with a 6 in. rail. The 6 in. in width would give a good broad wearing surface, while the 12⅛ in. in length would be just right for fitting with two blocks laid sideways, if it should at any time be desired to lay them this way.

Coming back, for a moment, to the subject of rails, I have often thought that a good method of standardizing rails might be to adopt such rails as the American Society standards for all work in the country, in unpaved streets or roadways, and then to use this same rail in the paved streets or roadways by making what might be termed a compound rail, consisting of an upper section of the ordinary A. S. standard rail, and of a lower section consisting of a specially rolled eye-beam, very much like the Carnegie steel tie, having an upper flange of 4⅝ ins., which is the same as the base of the 70-lb. rail, a lower flange of about 6 in. wide, and a height of about 5 ins.

These two sections would be held together, at frequent intervals, by rolled steel clamps, bolted through the webs. By laying the two sections so that the joints of the upper section and the joints of the lower section would not come together, a very good form of continuous rail would be obtained, which would yet have sufficient joints to allow for the necessary contraction and expansion. Where a groove section rail is required, a very light guard could be rolled and bolted to the inside of the

HAPPY JACK

This new style Jack for lifting Axle Boxes, to take out Broken or Worn Brasses, is intended for use on the road. It is positive in its action and a great time saver. For particulars and price apply to

ordinary T rail. If it were desired to use a regularly rolled girder groove rail, one very similar to the Loraine Steel Co.'s section 80, No. 337, could be used and clamped to the lower section just as well. This method of construction would save ties, because a less number of ties would be necessary, and as the ties could be buried deeper in the foundation of concrete or otherwise if desired, the road-bed should stand the wear better than when light rail is used and the ties are laid close under the pavement, and then when it became necessary to renew the rails, because of wear, only the upper section would have to be replaced. This would be particularly advantageous in special work at curves and intersections, for the reason that they wear so much more rapidly than rail on straight track. The amount of material used in the replacements would then be reduced to a minimum. The depth of the upper section, 4⅝ in., would still be sufficient to use the hard steel centres or the solid manganese pieces, as might be desired. All of these pieces, for special work, should have a section of a standard design, so that no matter what manufacturer they might be obtained from, the one would fit with the other, using the same kind of fish plates, or splice bars. This kind of track would, of course, cost from 25 to 50% more, but I believe that, in the course of 10 to 15 years' wear and repair, the benefits to be derived would greatly repay this difference.

With regard to the truck parts which might be standardized, I hope you will agree with the suggestion that as far as possible, the M.C.B. standards be adopted to all those parts of the truck not influenced by the electric equipment. We cannot, of course, adopt the M.C.B. wheel, and so I think the one selected by the Central States Association to be the wheel which is about correct, being not too large for city work, and yet plenty large enough for interurban work. It has adopted the M.C.B. journals, making some of them smaller, of course, than those actually used by the Master Car Builders, but yet of the same design. It has adopted a brake shoe very similar to the M.C.B. design, and until I learn the reason for not adopting the regular M.C.B. design, I think the latter should be adopted, but, of course, the M.C.B. design would have to be modified to suit the smaller wheel, and if this is the only difference, the shoe it has adopted will, of course, be all right. The axles which it has adopted seem to be for heavier work than we are accustomed to in ordinary street railway work; however, I believe it might pay to adopt these heavier axles, even for light street car work, for there is no doubt that some breakage would be saved by doing so. I find very little reason for adopting the standard journal box, except in order that it may contain the standard journal, as the journal box itself wears very little, and is therefore not subject to frequent replacing.

When it comes to standardizing certain parts of the electrical equipment of cars, some difficulty may be encountered, for the reason that the two or three large manufacturers of railway equipment may want to maintain their individuality in certain details. However, as it is only the wearing parts which I propose to standardize, and such parts as are now so nearly alike, I do not see that this difficulty should be considered insurmountable. My desire for standardizing these parts, is not so much that we may all use the same thing, as it is to make these wearing parts interchangeable between motors of different design, but of about the same size, and to this end I would suggest that those wearing parts be designed for three different sized motors, of 50, 75 and 100 h.p. sizes respectively. Motors ranging in horse power under 50, would then be designed to use those wearing parts which would be just large enough for a 50 h.p. motor. Those motors rated between 50 and 75 h.p. would use wearing parts just large enough for 75 h.p. motors, but which, I think, would not be too large for anything between 60 and 75. I make the 50 h.p. class the smallest, for the reason that no modern street railway motors are now built of less than 35 h.p., and I take it that the gears, pinions and bearings of a 50 h.p. motor would not be objectionably large for a 35 h.p. motor. Gears and pinions, beside being classed into 50, 75 and 100 h.p. sizes, would have to be also classed according to gear ratio desired. Axle and armature bearings, however, could be simply classed into 50, 75 and 100 h.p. sizes, the motor frames being bored out for these respective sizes, and then if it might be desired to use a 50 h.p. motor in a two motor equipment on a truck having a smaller axle, the only difference would be in the cast iron shell of the babbitt-lined bearing, and the change could be readily made. Standardizing of motor parts might be carried even further to commutators and brushes, which, however, would require the same number of coils in the armature. Commutators of the General Electric and of the Westinghouse motors, of relatively the same size, are now so nearly alike, that I see no reason why the armature shafts might not be turned to a standard size and the commutators likewise made of a standard size, so that one would be interchangeable with the other, and the same might apply to brushes, bearing in mind all the time that they are to be classed into the above-mentioned sizes, or something similar. On our small road we have three kinds of motors all of approximately the same size, viz., G.E. 800, G.E. 1,000, and Westinghouse 92-A, and I think you can readily see what a saving in supplies to be carried on hand, and in the flexibility of repairs would be brought about, were it possible to use the same gears, pinions, bearings, commutators and brushes on any of these motors. And if we would go this far, why might we not go the entire length of the rope and draw up complete specifications for motors of 40, 50, 60, 75 and 100 h.p. sizes so that armature coils, field coils, and, in fact, all parts would be interchangeable? Surely the several master mechanics and electricians who have had many years of experience with the use of motors could get together and sift down their several opinions so that a motor design satisfactory to all would be obtained. Controllers should also be so constructed that the contact fingers, especially that part of the finger which wears the most rapidly, could be standardized so that they also would be interchangeable with any other controller of similar size. Trolley bases should be standardized with regard to pins, and the socket into which the pole is to fit, so that bases and poles would be interchangeable. If the sockets are standardized, of course the poles would naturally become so. Trolley harps and wheels should also be standardized, so that they might be interchangeable.

As before stated, my reason for desiring that these various wearing parts be standardized is to facilitate repairs and the expenses thereof, on any one road or system where it seems we cannot get away from several different designs of motors, and not so much simply for the sake of using the same size or styled parts that other roads do. However, I readily recognize that this state of affairs can never be brought about until such associations as our own, and others of like nature in the United States, get together, establish the standard dimensions necessary, and demand of the several manufacturers that they be produced. Of course, I understand that the manufacturers will object, as they may not then be in such a good position to continue supplying repair parts; however, I believe that if this matter is handled properly, that enough pressure can be brought to bear upon the manufacturers to produce the motors and parts as we want them. I am a little disappointed that the largest organization of the kind, the American Street and Interurban Railway Association, has not already taken hold of this subject more vigorously than it appears to have done, for I believe that the best results are to be obtained through action by the largest organization. However, if the minor organizations, such as our own, the New York State Association, the Central States Association, and others, take hold of the subject themselves, or urge upon the large association to take hold of it, the agitation of the subject and the work that may be put upon it, can hardly fail to bear fruit, and we may ere long have the electric railway standards which will no doubt be commonly known as the E.R. Standards.

Electric Railway Notes.

G. U. G. Holman, formerly of the Levis County Ry., has been appointed manager of H. W. Johns-Manville Co.'s electrical department, Boston, Mass.

The Post Office Department has given a contract to the Sandwich, Windsor and Amherstburg Ry. to carry the mails between Windsor and Amherstburg, Ont.

The "pay-as-you-enter" cars introduced by the Montreal Street Ry. have been adopted by the Detroit United Ry., the International Ry. of Buffalo, and other electric railways in the U.S.

The Montreal Street Ry. during July and Aug. will run a number of cars on its lines for the benefit of the children, as well as the aged and infirm of the public institutions in the city. The cars will make the tour of the city, the ride taking about four hours. In 1906 nearly 50,000 took advantage of these outings.

The Montreal Street Ry. has issued an illustrated folder describing the various points on Montreal Island reached by its lines. A plan of the lines is given, showing the routes of the M.S. Ry., the Montreal Park and Island Ry., the Montreal Terminal Ry., and the Suburban Tramway and Power Co.'s line.

The fourth annual meeting of members of the Montreal St. Ry. Mutual Benefit Association was held June 21, when the report and accounts for the year ended April 30 were presented. The accounts showed a total revenue of $31,968.59, and an expenditure of $24,555.97, leaving a surplus of $7,412.62. A. Gaboury was elected to the vacancy on the committee of management caused by the death of L. Trudeau, and Dr. W. E. Nelson was appointed physician in the room of the late Dr. Cameron.

John S. Metcalf Co., a corporation of the State of Illinois, authorized to plan, engineer, build and construct storage elevators of every kind and nature, and to carry on a general contracting business, has been licensed to do business in Ontario under the act respecting extra-provincial companies. The capital to be employed in the province is not to exceed $50,000; and its attorney is R. S. McFarlane, of Midland, Ont.

Standard passenger tariff 185, signed by A. L. Craig, General Passenger Agent, Great Northern Ry., U.S., St. Paul, Minn., has been filed with the Board of Railway Commissioners, Ottawa. It shows standard passenger fare of 3 cents a mile on the Brandon, Saskatchewan and Hudson's Bay Ry., and of 4 cents a mile on the Bedlington and Nelson Ry., Nelson and Fort Sheppard Ry., Red Mountain Ry., and Vancouver, Victoria and Eastern Ry. and Navigation Co.

SAVING TIME AND LIVES...

(From the British Admiralty Report)

The Submarine Bell increases the range at which the fog signal can be heard by a vessel until it approximates to the range of a light-vessel's light in clear weather, and, moreover, its bearings can be determined with quite sufficient accuracy for safe navigation in fog from distance far beyond the range of aerial fog-signals if the vessel is equipped with receivers.

To double or treble the distance at which fog-signals can be heard is a great advantage to shipping, and the facility of determining the direction of a sound signal is in itself a very valuable discovery. Those who wait longest will incur the greatest loss in the meantime, both in ships and lives, and through delays to shipping which would otherwise be avoided.

Grain Elevator Notes.

The Tupperville Milling and Elevator Co. is being wound up, the liquidator being J. W. Sharpe, Dresden, Ont.

The Branckman-Ker Milling Co. is arranging to erect a number of elevators at different points in Alberta during the summer.

The Belbeck Farmers' Elevator and Trading Co. has been incorporated under the North-West Territories' ordinance relating to joint stock companies at Regina, Sask.

A by-law has been passed at Wolseley Sask., granting a loan of $20,000 and exemption from taxation for eight years to J. Cawthorpe & Son, for the purpose of erecting a 300 barrel flour mill and a grain elevator there.

The shareholders of the Quebec Terminal Co. met at Quebec, June 25, for the purpose of ratifying the sale of the company's elevator and property to the Quebec Harbor Commissioners, and to authorize one of the company's officers to sign a deed of sale.

The Alberta Pacific Elevator Co. has commenced work preparing the site for its sorting and distributing elevator at Calgary, Alta. The company at present has over 30 elevators in Alberta, and proposes making the Calgary elevator a concentrating point for all branch elevators.

The case of Day against the Crown Grain Elevator Co., and Cleveland, has been argued before the Supreme Court, Ottawa, and judgment reserved. The action arose over the installation of a dust collecting system which Cleveland built for the Crown Elevator Co. The trial judge in Manitoba gave judgment for Day against both defendants, but the Court of Appeals amended the judgment by dismissing the action as against the company.

A conference upon the government ownership of grain elevators was held in Winnipeg, Man., in June. The conference, after a lengthened discussion, passed the following resolution: "That this conference, for the reasons advanced in the clause on government ownership of storage facilities in the circular issued by the Manitoba Grain Growers' Association, urgently requests the provincial government to acquire and operate a complete system of storage elevators throughout the province along the lines suggested in the clause referred to above, and that the provincial government request such modifications of the Grain and Inspection Act, and such co-operation of the Dominion Government as will make the system capable of yielding the most benefit possible to the producer."

The elevator which is to be built for the Grand Trunk Pacific Elevator Co. at Tiffin, Ont., will be fire-proof, consisting mainly of reinforced concrete. About 24,000 cub. yds. concrete, using 35,000 barrels of cement, will go into the work. There will also be a considerable quantity of structural steel work, and such machinery as will enable the plant to handle the grain with great rapidity. A 1,000 h.p. electrical power plant, and a concrete wharf are included in the work. The storage capacity of the elevator will be 2,000,000 bush. It will receive from lake vessels by two movable marine legs, capable of unloading 20,000 bush. an hour each. The elevator will be equipped to load 240 railway cars a day of 10 hours. The John S. Metcalf Co., Chicago, will be in charge of construction.

The Governor of the State of New York has vetoed the bill which would have compelled the adoption of a flat passenger rate of 2c. a mile on every railway system more than 150 miles long in the State.

A New York dispatch of June 25 says: "The American Express Co. will, on July 1, take over all local express business between New York and Chicago, which now belongs to the U.S. Express Co. Hitherto the American Ex. Co. has handled only the through express business between this city and Chicago on the New York Central and Lake Shore Railways, while the U.S. Ex. Co. handled the local and through business between here and Chicago on the Lackawanna and the Lake Shore Railways. After July 1 this will be reversed. It is also announced that on Aug. 1, the American Ex. Co. will take over the express business on the Erie Rd., now being conducted by the U.S. Ex. Co.

MARINE DEPARTMENT

Atlantic and Pacific Ocean Marine.

The U.S. schooner Minnie E. Keton, 503 tons, sailed from Montreal, May 27, for San Francisco, Cal.

Capt. Pickering, of the Allan Line S.S. Corinthian, has been appointed commander of the new S.S. Corsican, and is succeeded by Capt. Lindsay, formerly in the White Star Line service.

The steamboat Deerhound, purchased by the Post Office Department, arrived at Sorel, Que., from Penzance, Eng., May 23, and was fitted out for her new duties as a mail tender at Rimouski, Que.

Capt. J. B. Forster, Lieut. R.N.R., commander of the C.P.R. Atlantic S.S. Empress of Ireland, was invested with the fifth-class of the Order of the Rising Sun at Quebec, June 9, and presented with a silver teapot and cigarette case by Prince Fushimi, of Japan, who was a passenger on the steamer.

W. Thomson & Co., Managers of the Battle Line, have decided to transfer the home port of the fleet of 14 steamships, representing a total of about 28,000 tons, from Liverpool, Eng., to St. John, N.B. This is an example which should be followed by other Canadian firms owning steamships which are now borne on the British register.

The Canada Cape, the Elder-Dempster S.S. performing the Canada-South Africa service, reached Montreal, June 4, after a three months' voyage from Delagoa Bay, Portuguese East Africa. The steamer called at Demerara, Trinidad and Barbados en route, making a roundabout trip. The run between Canada and South Africa usually occupies about 50 days.

A report submitted to the St. John, N.B., Board of Trade, June 4, showed that the value of cargoes shipped from that port during the winter season of navigation was $3,413,997 less than in the season of 1905-06. The decrease in wheat shipments was $3,000,000 alone, which was accounted for by the freight congestion in the west. The exports of U.S. canned meat and lard showed a decrease of $300,000 as compared with the figures of 1905-06.

The Quebec Steamship Co.'s S.S. Pretoria has made her last trip between New York and Bermuda, and upon the completion of a special trip to London, Eng., will be sold. Capt. McKenzie, who is in command of the Pretoria, will take over the Guiana, a new vessel for the company and bring her out from England. A cable received at Quebec June 8, announced that the new steamer Guiana had been launched that day at Sir James Laing & Sons' yard, Sunderland, Eng.

BOOK NEWS SERVICE

A New Kind of a Book on Railroad Matters

Built on a new plan, is self-indexing, cross referenced and practically a cyclopedia of railroad matters boiled down into pocket form.

It is chuck full of information such as appears below and covers every phase of railroading from A to Z.

Coal—Bituminous—Average bituminous coal contains about 80 per cent. of carbon, 5 per cent. of hydrogen, 15 per cent. of other substance generally considered as foreign matter or impurities; ignites at about 1,000 degrees and weighs about 52 pounds per cubic foot. One ton of 2,000 pounds occupies 36 to 40 cubic feet. A bushel of 2,500 cubic inches weighs 75 pounds. Specific gravity 1.40.

Coal	B.T.U. per lb. combustible	Ash per cent.	Moisture per cent.
Anthracite	14,700	10 to 20	1 to 5
Semi-anthracite	14,900	10 to 20	1 to 5
Semi-bituminous	15,800	5 to 10	1 to 6
Bituminous—Eastern	15,000	5 to 20	2 to 6
" Western	14,200	8 to 25	6 to 15
Lignitæ	12,200	5 to 20	10 to 30

Coal—Consumption—Varies greatly with different conditions of trains, roads, locomotives, etc. Exact comparisons are impossible unless we know all conditions, which is seldom the case. Tests on several roads running into New York in 1897 give these results: Hard Coal: Average per train mile, 17.3 freight cars, 122 lbs.; average per train mile, 7 passenger cars, 112 lbs.; average per freight car mile, 7.05 lbs.; average per passenger car mile, 16 lbs. Soft Coal—Average per train mile, 18.15 freight cars, 120 lbs.; average per train mile, 7 passenger cars, 110 lbs.; average per freight car mile, 6.06 lbs.; average per passenger car mile, 15.07 lbs.

This is a book for the President, Manager, S. M. P., M.M., Traveling Engineer, Air Brakeman, Foreman of Shop or Roundhouse, Engineer, Fireman or Machinist: And the Price

109 LIBERTY ST., NEW YORK

The first of a series of experimental mail transfer tests occurred off Sydney, N.S., June 9, when the Allan Line S.S. Virginian, from Montreal for Liverpool, outward, took on board mails and passengers. The transfer was made by the Dominion Government str. Montcalm. H. & A. Allan report that the vessel was detained 2½ hours in making the transfer. This was accounted for by the heavy swell which caused the Montcalm to crash against the Virginian, receiving serious damage to her upper works. The transfer was finally accomplished inside the harbor.

The Freight Bureau of North Pacific Asiatic Steamship Lines put in force on July 1 the following rates on flour: To Japanese ports of call, $4.50 a ton; to Hong Kong, $4.50 a ton; Shanghai, $5 a ton. The present rates are $3.50, $4 and $4 respectively. Those present at the meeting when the new rates were made were: B. W. Greer, C.P.R. Pacific Steamship Line; J. H. Dewson, Portland and Asiatic Steamship Co.; F. M. Studley, Nippon Kusen Kaisha Line; F. Waterhouse, Vice-President Boston Steamship Co.; T. Horne (Dodwell & Co., agents for China Mutual Line); H. M. Adams, Assistant Traffic Manager Great Northern Ry., and W. D. Benson, Secretary.

Conflicting reports appear as to the steamship service which it is proposed to establish on the Pacific Coast, and in which F. Waterhouse & Co., Seattle, Wash., and A. Weir & Co., London and Glasgow, are interested. One report states that six steamships varying from 5,500 tons to 12,000 tons are to be put on a route from Seattle, calling at one or more ports in British Columbia, to ports in Corea and North China, whilst another report states that the service will start Aug. 1, and that the route of the steamships will be between Puget Sound ports, via San Francisco, to Auckland, New Zealand; Sydney and Newcastle, New South Wales, Australia. The steamships which will be operated in the Australian Mail Line are said to be Foreric, Aymeric, Boveric, Iveric, Gymeric, and Tymeric, all of which are freight vessels. A New York despatch of June 5 says that this new monthly service is to take the place of the U. S. Oceanic Line which recently went out of operation.

The question of the "All Red" steamship and rail route round the world, via Canada and Australia, which was discussed at the recent Colonial Conference in London, Eng., is being considered by the Imperial authorities in London, Eng. The Premier stated recently that until the investigations had further advanced he was unable to say whether a formal committee would have to be appointed to discuss details or not. It is estimated that a subsidy of about £400,000 a year would be required for the line. The Premier of New Zealand said at the conference that that colony would contribute £100,000 a year for a 21 day service. Press reports state that the Dominion Government would probably be prepared to contribute $1,000,000 a year towards the proposed service. Hon. C. Sifton, on returning to Ottawa from England, May 30, stated that the negotiations now under way between the Imperial and the Colonial Governments would soon result in the establishing of a new independent fast steamship service on the Atlantic, backed by a company of capitalists headed by Lord Strathcona. The firm of Cayzer, Irvine & Co. says that the service can be given as suggested if Great Britain and the colonies are prepared to pay the money it will cost to give the speed required.

Jas. Cormack, a member of Lloyds Committee, speaking at Leith, Scotland, May 29, said there would be a considerable increase in shipbuilding in Canada when an adequate supply of labor could be obtained.

Maritime Provinces and Newfoundland.

Capt. W. Killam, a retired mariner, of Hartford, N.S., died in Yarmouth, N.S., May 29, and Capt. J. Leonard, also retired, died in St. John, N.B., June 2.

The Department of Marine is installing a new dioptric lantern at the light station maintained by the Dominion Government at Cape Race, Nfld.

The St. John River str. Crystal Stream was burned at her moorings near St John, N.B., June 21, three of the crew being burned to death, and a number injured.

The Dominion Dredging Co. has purchased a dredge and two scows from the C. S. Packard Dredging Co., of Boston, Mass., for work on its contract at St. John, N.B.

Capt. G. B. Dunham, who died at Barton, N.B., June 10, aged 78, never lost a man or a ship during his 50 years as a master mariner. He retired from active work 1899.

The brig New Dominion, owned by J. Weatherbee, Louisburg, N.S., was driven ashore in Gaberus Bay, N.S., June 11, during a storm and has become a total wreck. She was uninsured.

The strike of longshoremen at Halifax, N.S., was brought to a close June 4, when the demand of the men for 25c. an hour for day work and 30c. an hour for night work was conceded.

The public harbor of South Grand Manan, N.B., by order-in-council has been divided into three harbors, to be known as Whitehead Harbor, Grand Harbor and Seal Cove respectively.

The Dominion Government has purchased the Cunard wharf property at Halifax, N.S., for $187,000. It is intended to erect extensive warehouses, etc., on the property in connection with the Intercolonial Ry.

The Dominion Government steamboat Gulnare is to be employed during the current season on a survey of the tides and currents of the Bay of Fundy. The work is under the charge of Dr. W. Bell Dawson, Ottawa.

The Ella and Jennie, owned by Capt. Ingalls, Grand Manan, N.B., and engaged in the coasting trade, is a new schooner-rigged vessel, fitted with a 25 h.p. gasolene engine for use when the wind is not favorable for sailing.

Capt. J. A. Farquhar, Halifax, N.S., has purchased in Glasgow, Scotland, a steam yacht, formerly owned by Lord Strathcona. She will be brought out to Halifax and refitted to engage in the coasting freight and passenger trade.

The Glenmount, the first of the steamships built for the Montreal Transportation Co., to carry steel rails from the Dominion Iron and Steel Co.'s plant at Sydney, N.S., to Fort William, Ont., was loaded at the former port June. 5.

The liquidators of the Harbor Grace, Nfld., Whaling Co. have disposed of the steamer and other property of the company, and have issued a notice that the assets will be distributed, July 5, among those who have proved their claims.

A submarine signalling station is being installed by the Department of Marine about two miles off Negro Head, for the purpose of minimizing the dangers of making the entrance to the harbor of St. John, N.B., during foggy weather.

The steamboat Beatrice which stranded at Cranberry Head, N.S., Dec. 24, has been successfully floated by Capt. Larder and taken to North Sydney, N.S. She is not very badly injured, and it is expected that she will be repaired at but little cost.

The Dominion Atlantic Ry. str. Prince George received considerable injury at Yarmouth, N.S., June 8, by being struck by the Norwegian bark Glamis, entering the port. The Prince George had three boats, and a lot of iron work on her deck carried away.

The Bras D'Or Steamboat Co., it is reported, has decided to purchase a steamer in Great Britain to replace the Weymouth for the opening of navigation of 1908. The Weymouth runs between North Sydney and the northern ports of Victoria County, N.S.

The Dominion Atlantic Ry. is running its steamship Prince Arthur between Yarmouth, N.S., and a pier at the foot of East 20th St., New York. The pier is a new one, and as yet is unnumbered, and the company is constructing freight office, baggage rooms, etc., on it.

The Dominion Iron and Steel Co., according to a statement of the General Manager, expects at no distant date to have its own fleet of steamships engaged in carrying steel rails from Sydney, N.S., to Port Arthur, Ont. At present it has some steamships under charter.

The shareholders of the Lucerne S.S. Co. met at the offices of the company, St. John's, Nfld., June 25, when A. J. Harvey, liquidator, laid before them an account of the manner in which the winding up of the company had been conducted and the property disposed of.

Capt. M. Golinsky, of Hamilton, Bermuda, has been interviewing merchants at St. John, N.B., with a view of establishing a line of steamers to run between St. John, N.B., and Jacksonville, Fla., calling at Bermuda, and points in the West Indian Islands, and to carry both freight and passengers

The Norwegian str. Universe, which stranded at White Head, N.S., April 24, while on a voyage from New York to Sydney, N.S., was successfully floated June 13. After being temporarily repaired, the steamer was towed to Halifax, where permanent repairs are being made in the dry dock.

The Newfoundland Legislature has voted $166,250 to provide for steamship service on the coast during the current year. The principal services provided for are: south and west end $36,000, north-east coast $33,250, Labrador $18,000, Placentia Bay $13,000, Channel and St. John's $13,000, Straits of Belle Isle $9,600, Bonavista Bay, Trinity Bay and Notre Dame Bay $9,100 each.

A ferry steamer for the Clifton Steamship Co. was launched from the Flewelling shipyard, Clifton, N.B., June 5. The hull is 65 ft. long, with a breadth from guard to guard of 32 ft., and has a draught of 2 ft. 6 in. The boilers are being supplied from New Glasgow, N.S., and the engine from West St. John. The new ferry which will ply between Rothesay, Clifton and Moss Glen, was named Premier.

The following appointments have been made by the Dominion Government: W. Blair, port warden at Dalhousie, N.B.; A Cheney, harbormaster at Whitehead, N.B.; J. W. Wooster, harbormaster Seal Cove, N.B.; T. Ingals, sr., harbormaster Grand Harbor, N.B.; W. D. Bennett, port warden, Hopewell, N.B., G. A. Allen, harbormaster, Pugwash, N.S.; H. S. Melanson, member of the pilotage commission for Bathurst, N.B

The Clifton Steamship Co., Ltd., has been incorporated under the New Brunswick Company's Act, with a capital of $3,500 and offices at Clifton, N.B., for the carrying on of a general navigation business, and more particularly to operate a ferry for the conveyance of passengers, teams and freight across the Kennebecasis River. The provisional directors are: H. Gilbert, Rothesay, N.B.; O. W. Wetmore, S. S. Wetmore, G. H. Flewelling, Clifton, N.B.; J. L. Flewelling, Gondola Point, N.B.

the Clyde, Scotland, for the construction of a 4,000 ton steamship, to have accommodation for 100 first-class and 40 second-class passengers, and capable of steaming 14 knots an hour. The new vessel, it is expected, will make the trip between Montreal and St. John's, Nfld., calling at Charlottetown, P.E.I., and Sydney, N.S., in ten days. The report states that she is to be completed for the opening of navigation in 1908.

The steel steamboat Sobraon, registered at London, Eng., has been purchased by A. McDougal, St. John's, Nfld., for the whale fishing business. The Sobraon is a steel screw schooner-rigged steamer, with web frames, of the spar deck type, her general dimensions being: length, 286.3 ft.; breadth, 41 ft.; depth, 26.4 ft.; her gross tonnage is 2,385 tons, and her net tonnage 1,541, while she will carry about 3,780 tons dead weight. She is equipped with triple expansion engines of 278 n.h.p., cylinders 23½, 39 and 64 in. diameter with a stroke of 42 in.

The str. Bridgewater, which had been chartered to take the place of the Strathcona, burned in Dec., 1906, went ashore in a fog off Port Beckerton, N.S., June 8, and became a total loss. The passengers and crew were got off safely. The steamer was owned by the Coastal Steam Packet Co., but was under a three months charter to the Canso Steamship Co., G. S. Campbell & Co., agents. She was a steel screw steamer, built at Dumbarton, Scotland, 1889, and was brought out to Bridgewater, N.S. 1905. Her dimensions were: length, 120 ft.; breadth, 20 ft.; depth, 9 ft.; tonnage—208 tons gross, 119 tons register, and she was equipped with engines of 54 n.h.p.

By proclamation under the provisions of the Canada Shipping Act, the harbor of Port Wade, N.S., has been declared to be a public harbor within the jurisdiction of the Parliament of Canada. The harbor of Clementsport, N.S., has been declared to be a public harbor to which the act of 1877 respecting the appointment of harbormasters for certain ports in N.S. and N.B. shall apply. The proclamations declaring St. Ann's Harbor, St. Ann's Bay, Digby, and Bear River, N.S., to be harbors to which the provisions of the act relating to harbormasters shall apply, have been revoked by a recent proclamation, and the same are declared to be harbors subject to the jurisdiction of the Parliament of Canada.

The Meteorological Service is sending time signals from the observatory at St. John, N.B., by telegraph to the wireless station at Camperdown, N.S., where special apparatus has been installed to automatically transmit the signal to ships at sea within the zone of that station. Time signals will be sent each week day morning as follows: Beginning at 9h. 58m., a.m., Atlantic time, dots are made each second up to and including 9h. 58m. 57s., then a pause of two seconds, followed by a dot at 9h. 59m.; then another pause of two seconds follows; the clock then makes dots each second up to and including 9h. 59m. 50s.; a pause is then made, followed by a dot at 10h. a.m., Atlantic or Standard time of the 60th meridian west longitude, equivalent to 2h. p.m., Greenwich mean time.

The regulations made by order-in-council dated Aug. 18, 1898, respecting quarantine have been rescinded, and a new series of regulations substituted therefor by an order-in-council of June 12. The quarantine stations in Canada are: Charlottetown, P.E.I.; Halifax, Sydney and Louisbourg, N.S.; St. John and Chatham, N.B.; Grosse Isle (Rimouski, Louise Embankment, Quebec, and the G.T.R. wharf, Levis, being sub-stations), Que.; Victoria, Vancouver and Prince Rupert, B.C.

Province of Quebec Marine.

The steam collier Business struck a rock in Lake St. Louis and sank on getting into the Lachine Canal recently.

The award of the arbitrators in the longshoremen's strike at Montreal has been sent to the Minister of Labor.

The Quebec Legislature at its recent session voted $1,000 towards the maintenance of a school of navigation at Quebec.

The name of the steamboat Polino, official number 62,598, registered at Quebec, has been changed by order-in-council to Natashquan.

The Department of Marine has under consideration tenders for the supply of steel plates and shapes required for the construction of a vessel at the Sorel dockyard.

An order-in-council has been passed approving of a number of amendments to the by-laws of the Montreal Harbor Commissioners, affecting the wharfage rates to be charged.

The North Shore Transportation and Wrecking Co. has passed a by-law reducing the number of its directors from eight to six, who shall be owners of at least 20 shares each in the capital stock of the company.

We are advised that while F. E. Hall & Co., Montreal, are considering the matter of placing an order for another steamboat with the Grangemouth & Greenock Dock Co., on the Clyde, nothing definite has been decided.

An investigation was opened at Montreal, June 11, before Commander Spain, Wreck Commissioner, and J. J. Riley, Superintendent of Pilots, into the sinking of the steamboat Mary at the Tarte pier on the ice moving out of the river in the spring.

Following are the officers and directors of the Quebec and Levis Ferry Co. for the current year: President, D. C. Thomson; Vice-President, C. H. Shaw; other directors, S. H. Dunn, H. B. Patton, J. S. Thom, G. E. A. Jones, Alph. Gourdeau; Manager, W. J. Thompson.

J. H. Talbot has been appointed President of the Corporation of Pilots, Quebec, succeeding A. Larochelle, appointed Superintendent of Pilots. The latter succeeds E. Larochelle, who has been appointed captain of the Dominion Government mail tender Deerhound, at Rimouski, Que.

The vessel for which the Department of Marine recently asked for tenders for the supply of plates, etc., is intended to be used in the lighthouse construction service below Quebec. Her dimensions will be: length, 206 ft. 6 in. over all; moulded depth, 34 ft 6 in.; depth, 19 ft. 3 in.

The attention of pilots in charge of vessels passing through Quebec harbor is called by the Department of Marine to the fact that complaints have been made of the breach of the by-law prohibiting the use of steam whistles, except for giving such signals as are obligatory for the safe navigation of the waters.

The consolidated actions arising out of the collision in Montreal harbor, July 5, 1906, between the str. Gaspesian and the Montreal Grain Elevating Co.'s floating elevator no. 7, have been decided by the Admiralty Court in favor of the Gaspesian, and condemning the owners of elevator 7 in damages and certain costs. The damages to the Gaspesian are to be ascertained in the usual way by the Registrar.

F. W. Cowie, Superintendent of the construction of the St. Lawrence Channel, stated recently that there are seven dredges at work between Montreal and Quebec, in addition to six elevator dredges at Cap a la Roche. The J. Israel Tarte is working at Lake St. Peter, where it is proposed to widen the channel from 300 ft. to 800 ft. The navigation of the river to Lake St. Peter by night, Mr. Cowie says, is now perfectly safe.

The Kaine & Bird Transportation Co., Quebec, is having six barges built in Quebec—two at Ste. Irenee and four at St. Alphonse—and has purchased two barges in the U.S. for the pulpwood trade between Quebec ports and the U.S. A new barge, the Sarsfield, has been completed for the company at Baie St. Paul for the same trade. The dimensions of this barge, as well as of the six others building are: length, 125 ft.; breadth, 30 ft.; capacity, about 400 cords.

The Ethelwold Steamship Co. has been incorporated under the Dominion Companies' Act to carry on a general navigation business in Canada or elsewhere, and, in particular, to purchase the British steamer Ethelwold, or any share or shares therein. The chief place of business is to be at Montreal, and the company may have one or more offices outside Canada. The capital is fixed at $20,000, and the provisional directors are: A. E. Woodworth, St. Lambert, Que.; A. Charters, H. J. Hague, S. D. Harris, Montreal; W. J. Dubois, New York City.

La Compagnie du Nord has been incorporated under the Quebec Companies' Act, with a capital of $40,000 and offices at Chicoutimi, Que., for the purpose of carrying on a general navigation business, and particularly to establish one or more lines of steamers between the port of Chicoutimi and the different places on the Saguenay river, and on the River St. Lawrence, throughout the Province of Quebec; to construct wharves and all necessary incidental powers. The provisional directors are: E. Boivin, R. H. dit Beaulieu, L. E. Dubee, J. E. A. Dubee, Chicoutimi; T. Simard, Bagotville, Que.

The Battle Island Transportation Co. is the title of the company which has purchased the steamboat Cuba, formerly running out of Toronto. The company was recently granted a charter of incorporation under the Dominion Companies' Act, the provisional directors being: G. L. Wells, R. B. Hunter, T. Hunter, G. C. Webb, Fulton, N.Y.; A. H. Lomer, Montreal, the latter being the manager. The capital of the company is placed at $18,000 and the offices are at Montreal. The company was recently operating a barge handling coal and grain between Ogdensburg, N.Y., and Montreal.

In the Admiralty Court, Montreal, Justice Dunlop gave judgment recently in favor of the defendant in the case of the Canada Atlantic Ry., the Northern Elevator Co., and the Ogilvie Flour Mills Co. against the Richelieu and Ontario Navigation Co. The claim was for $8,351, value of the barge Huron, and $35,684, value of a cargo of grain on board the same. The defendants steamboat Hamilton in passing through the Soulanges Canal, May 8, 1905, it was alleged, caused the barge to strike against the canal bank and founder. The Court found that the barge was too near the bank, and was under the charge of inexperienced hands.

The Lake St. John and Saguenay Navigation Co. is being operated by the Quebec and Lake St. John Ry., which recently was taken over by Mackenzie, Mann & Co. for the Canadian Northern Quebec Ry. The company operated the following lines of steamers: Roberval-St. Felicien line, 20 miles; Roberval-Mistassini line, 46 miles; Roberval-Honfleur line, 33 miles; Roberval-Peribonk Mills line, 32 miles; Roberval-Grande Decharge line, 36 miles; Roberval-St. Jerome line, 21 miles; and Roberval-St. Gideon line, 28 miles. All these lines are on Lake St. John and tributary waters, but the company proposed to put on steamers to operate between Quebec and the Saguenay River.

The question of the cost of the bail bond of the Cape Breton in the Canada-Cape Breton

IDEAL RAILWAY FENCING

MADE TO LAST

Large gauge (No. 9) hard steel wire is used throughout, decreasing cost of maintenance, insuring durability and serviceability.

IDEAL FENCE has been adopted as a standard by all the leading Railways in Canada. More IDEAL is used by Railways this year than all other makes combined.

WALKERVILLE, ONTARIO LIMITED

Underwood

The Underwood is the best typewriter. But even the best typewriter would be of little value without an operator. Underwood operators are always available.

All the commercial schools of any importance teach the Underwood exclusively (and schools are good judges of typewriters). Skill in operation is acquired only under expert instruction. With other machines you are compelled to put up with poorly-trained, incompetent, inefficient typists. With an Underwood you are safe. Through our Employment Department we supply nearly 1,000 stenographers a year. All-round typewriter satisfaction is secured only with the Underwood.

OFFICES THROUGHOUT THE CIVILIZED WORLD

EXECUTIVE OFFICES

NOS. 346 and 348 BROADWAY, N.Y. CITY, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

CORRESPONDENCE INVITED

Calgary, Alta.		Winnipeg, Man.

THOS. C. IRVING,
Gen. Man. Western Canada, Toronto.

collision case came before the Quebec Admiralty Judge May 27. The bill of costs which the Richelieu and Ontario Navigation Co., owning the Canada, was asked to pay as the losing party in the litigation, included a charge of $2,660 paid to the Royal Trust Co. for furnishing and keeping in force the bail bond during the action. The Registrar fixed the remuneration at $1,175, being 1% per annum on the amount of bail, and both sides moved to have this revised. After an exhaustive argument the Court further reduced the amount to $710, on the ground that the High Court rules did not allow the fee for bonds at the rate of 1% per annum, but only at the rate of 1%.

The St. Lawrence Canadian Navigation Co is operating a daily service between Quebec and Montreal with the steamers Colonial and Imperial. The company also operates the str. Prefontaine. The officers and directors are: President, Dr. A. A. Bernard; Vice-President, J. T. Lavery; General Manager, W. Paul, Jr.; other directors, G. R. La Brecque, V. Lemieux, F. Nadeau, and A. Bourgeois. The Imperial is a new steel, side-wheel steamer, built at Sorel, 206 ft. long, with a breadth of 40 ft., fitted for the freight and passenger trade. The Colonial, which does not appear on the Canadian register, is said to have been reconstructed. The dimensions of the Prefontaine were given on pg. 555 of our issue of Sept., 1906, at the time of the organization of the company.

The G.T.R. in a circular issued about fifty years ago announced that arrangements had been made with the proprietors of the Great Eastern Steamship to send her to Portland, Me., on her first voyage to America, the object being to enable passengers to reach Canada and the Western States by a continuous route.

The Industrial Fire Insurance Co. is applying for incorporation under the Ontario Insurance Act, with a capital of $500,000 and offices at Toronto, for the purpose of carrying on the business of fire and inland marine insurance in all its branches. The applicants are: A. H. Garrett, G. F. Beer, J. A. Ready, T. H. Watson, Toronto; W. Krug, Chesley, Ont.

The River Plate Shipping Co. has been incorporated under the Dominion Companies' Act, with a capital of $150,000 and offices at Montreal, to carry on a general navigation business within the Dominion of Canada, and elsewhere. The provisional directors are: G. I. Dewer, Ottawa, Ont.; C. A. McCollogh, New York City; W. A. Taft, Arlington, Mass.; W. McKissock, Boston, Mass.; N. M. Ward, Orange, N.J.

A general notice to mariners issued by the Department of Marine says: "Observations obtained during recent years show that the secular change in the variation of the compass is in some cases greatly different from what was anticipated. The results have been embodied in the Admiralty variation chart for the epoch, 1907, and this chart should be consulted on all occasions before deciding on the variation to be allowed in shaping course, etc. The compasses on the charts may be in some cases as much as 2 degrees in error."

The threatened suspension of the publication of the notices to mariners compiled by the U.S. Hydrographic Office, says Shipping Illustrated, because of the lack of funds specifically appropriated for this purpose, cannot be termed otherwise than an ignoble economy. The paragraph concludes: "It is to be hoped that the Government which even now is doing much less than other powers in the matter of adding to the world's stock of hydrographic information will not inflict such a disgrace upon the whole country at large."

Ontario and the Great Lakes.

The Kirkfield lift lock on the Trent Valley Canal will be opened for navigation early in July.

The G.T.R., it is reported, proposes to erect another large ferry slip at Grand Haven, Wis.

The Great Lakes Dredging Co. has commenced work on its contract for dredging at the mouth of Rainy River, Ont.

The Dominion Government is preparing to buoy and light Scugog River channel between Lindsay and the lake.

The U.S. steamboat General B. Franklin, of Alexandria Bay, N.Y., has been purchased by P. Cavanagh, Perth, Ont.

The Toronto City Council has leased the old dock at the foot of Yonge St. to the Toronto Ferry Co., for freight purposes.

The Department of Marine proposes to erect a lighthouse at Jackfish Bay, and to establish several new lights and signals at other points on Lake Superior.

The marine interests at Toronto have sent a strong protest to the Department of Marine against the proposed removal of the light at Gibraltar Point, Toronto.

The Department of Marine received tenders to June 10 for the charter of a steamer to deliver supplies to the lighthouses above Montreal, commencing at that city.

The Canadian Lakes Transportation Co.'s steamship Morena, which was lost off the Newfoundland coast, was insured for £9,000 and her cargo of pig iron for £12,000.

It has been ascertained that there is 18 ft. of water in the Western gap at Toronto, so that all vessels usually coming into the bay can enter by that channel in safety.

The steamship Turbinia ran aground at Lewiston, N.Y., June 15, as she was leaving for Toronto at 5.30 p.m., and remained fast until 9 p.m. The steamer was uninjured.

The Lemcke Tug Co. has been licensed in Ontario under the act respecting extra-provincial companies, C. Lemcke, Lion's Head, Ont., being appointed its attorney.

Capt. D. Mackay, formerly chief officer of the Canadian Lakes Transportation Co.'s steamship Corunna, attempted to commit suicide by jumping into Toronto bay, June 6.

It has been decided by the U.S. Lighthouse Board for the Great Lakes to replace the fog whistle at the mouth of St. Mary's River, Mich., with an electric submarine bell.

A gasolene buoy has been moored over the sunken dredge Sir Wilfrid, off Newcastle, Ont. The dredge lies in 75 ft. of water, but reaches within 10 ft. of the surface of the lake.

The Upper Ontario Steamboat Co. has been licensed in Ontario under the act respecting extra-provincial corporations, F. L. Smiley, New Liskeard, Ont., being appointed its attorney.

The Great Lakes Register of Cleveland, Ohio, operating a surveying bureau, making classifications and ratings of vessels, is reported to have been taken over by the Lake Marine Underwriters.

The Northern Navigation Co. will, it is reported at Sault Ste. Marie, Ont., make an attempt to recover some of the machinery and equipment of the str. Monarch, which was wrecked on Isle Royale in Dec. 1906.

The longshoremen's strike at Fort William was settled June 11, when the men returned to work. At Port Arthur the Canadian Northern Ry.'s offer was refused, and the company put in an entirely new gang of men.

The Dominion Government has placed two acetylene gas buoys on the east side of the Limekiln crossing, one at the lower entrance of the east channel and the other at the upper end of the channel as the steamers leave it.

A contract is reported to have been let by the Department of Railways and Canals to J. Riley, of St. Catharines, Ont., for the construction of the proposed branch of the Trent Valley Canal from Holland Landing to Newmarket, Ont.

The Richelieu and Ontario Navigation Co.'s str. Kingston, on her first trip of the season from Toronto, ran into the wharf at Kingston, Ont., damaging one of her wheels to such an extent that she was off her route for some days.

The U.S. survey department reports that the water in Lake Ontario during May was as high as in May, 1893, and higher than in any May since, except 1904. It was expected that the water in the lakes would go on rising until the middle of July.

Three whaleback steamers from the Upper Lakes passed through the St. Lawrence canals recently for Boston, Mass. On Lake Erie, 18 ft. of the nose, or bow, was cut off each steamer, to enable them to pass the locks, and was replaced at Levis, Que.

The Department of Marine is arranging with the contractor for the breakwater at Toronto to start work at once. The dredging of the eastern channel is also to be gone on with forthwith, but the western channel matter has not been definitely arranged.

R. Logan, who supervised the construction of the C.P.R. Upper Lake steamships Alberta and Athabasca, in Scotland, and of the Manitoba at Owen Sound, Ont., was in that town recently inspecting these vessels, with a view of preparing plans and estimates for lengthening them.

Capt. G. McDougall, for 15 years in command of the C.P.R. lake steamship Athabasca, died at Owen Sound, Ont., June 6, of cancer. For 43 years he had been engaged in navigating on the Great Lakes, and before entering the C.P.R. service he was master of the United Empire and the Ontario.

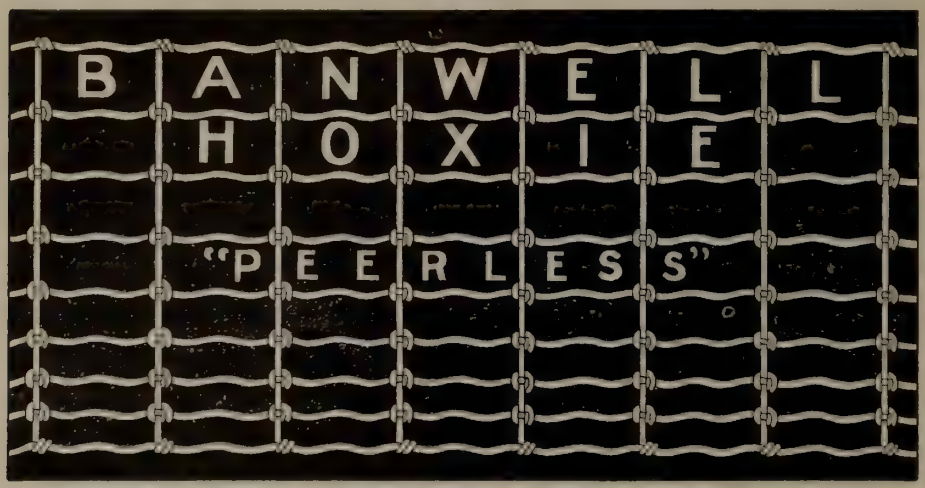
Capt. John Gaskin was presented with a Fenian Raid Medal at Kingston, Ont., June 9, when he related how he ran a cargo of whiskey, peas and pork to Cornwall for the benefit of the Canadian soldiers quartered there. He was then in command of the str. Ranger, trading between Chicago and Montreal.

The Montreal steamboat Salaberry has been purchased by the Belleville Cement Co., for use as a ferry steamer. The Salaberry is a screw steamer and was built at Valleyfield, Que., 1902, her dimensions being: length, 99.5 ft.; breadth, 21.6 ft.; depth, 5.4 ft.; tonnage—gross, 222; register, 142; n.h.p., 13½.

Judgment has been given in the Ontario courts for $13,984.79, with $840 interest, in favor of Johnston and Higgins of New York against Marsh and Marsh, Toronto, and the Canadian-Jamaica Steamship Co., on account of insurance premium of the str. Turbinia, chartered by the defendants during the winter of 1905-6.

R. W. Perks, the British M.P. who is visiting Canada, is connected with the British company which has a charter to construct the Montreal-Georgian Bay ship canal. Mr. Perks has interviewed members of the Government in connection with the project, and has spent some time in going over a portion of the route of the projected canal.

An order-in-council has been issued authorizing the ferry plying across the Ottawa River between Monte Bello, Que., and Alfred, Ont., to operate on Sundays in the same manner as on other days. The order is issued under the provisions of sec. 7 of the Ferries Act, and sub-section n, sec. 12, of the Lord's Day Act, chap. 153, R.S.C.



PEERLESS WOVEN WIRE FENCING

Made from uniformly heavy hard steel wire, well galvanized.
Made in large rolls ready to stretch up.
Requires but few posts; costs very little to erect.
Conforms perfectly to any surface, no matter how rough.
Reduces the cost of fence maintenance to a minimum.

BANWELL HOXIE WIRE FENCE COMPANY LIMITED
HAMILTON, ONTARIO

C.P.R. LANDS

THE CANADIAN PACIFIC RAILWAY COMPANY have 10,000,000 acres of selected lands for sale in Manitoba, Saskatchewan and Alberta.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd Meridian to Range 10 W., 4th Meridian(generally)	8.00 " "
Map No. 5—Calgary District	8.00 to 10.00 per acre.
Map No. 6—Part of Alberta—Edmonton, Battle and Saskatchewan Rivers Districts—Range 11 West, 4th Meridian to Range 7, West 5th Meridian	10.00 to 25.00 per acre.
Map No. 7—Part of Western Saskatchewan and Eastern Alberta, 3rd Meridian to Range 10 West, 4th Meridian	10.00 to 25.00 per acre.

Maps showing these lands in detail will be sent free on application.
All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160 Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$65.28	and nine instalments of	$160.00
"	"	9.00	"	"	215.70	"	"	"	73.46	"	"	180.00
"	"	10.00	"	"	239.70	"	"	"	81.62	"	"	200.00
"	"	11.00	"	"	263.60	"	"	"	89.78	"	"	220.00
"	"	12.00	"	"	287.60	"	"	"	97.96	"	"	240.00
"	"	13.00	"	"	311.55	"	"	"	106.10	"	"	260.00
"	"	14.00	"	"	335.60	"	"	"	114.32	"	"	280.00
"	"	15.00	"	"	359.50	"	"	"	122.44	"	"	300.00

Purchasers who do not undertake to go into residence on the land are required to pay one-sixth of the purchase money down, balance in five equal annual instalments with interest at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

CANADA NORTH-WEST LAND CO.

This Company has 550,000 acres of selected lands in Manitoba and Assiniboia which offer excellent opportunities to settlers and investors who desire to secure good lands in well-settled districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

FULL SUMMER SERVICE

Now in Effect

For Parry Sound and Way Ports

Through 30,000 Islands. Steamer leaves Penetang daily 2.45 p.m.

For Point au Baril, French River and Killarney

Steamer leaves Collingwood Monday and Friday 10.30 p.m.

For North Channel, Sault Ste. Marie and Mackinac

Steamers leave Collingwood 1.30 p.m., Owen Sound 11.30 p.m., Tuesday, Thursday and Saturday (Thursday steamer going far as Soo only).

For Soo, Port Arthur, Fort William and Duluth

Steamers leave Sarnia 3.30 p.m. Monday, Wednesday and Friday (Friday steamer going through to Duluth).

Tickets and Information from all Railway Passenger Agents

The Department of Marine has under consideration plans for the improvement of the harbor at Kingston, Ont. The proposition involves some dredging at the slips, the erection of clearer range lights and the placing of additional gas buoys in the channels. A proposition to increase the depth of water to 17 ft. was not approved on the ground that the trade done did not warrant the estimated cost, $228,750.

The Montreal Transportation Co.'s barge Cornwall, one of four barges being towed by the tug Emmerson from Kingston, Ont., to Montreal, struck on a rock in the Narrows, near Brockville, Ont., June 11, and sank in 16 ft. of water. The tug and the other three barges were uninjured. The Cornwall, which had 1,200 tons of coal, was unloaded, and released by the tug Mary P. Hall, owned by the Donnelly Salvage & Wrecking Co., and taken to Kingston for repairs.

The marine court sitting at St. Johns, Nfld., has decided that no blame can be attached to Capt. McKinnon and officers of the str. Morena, which was lost on the Newfoundland coast, May 18, on a voyage from England to Toronto with a cargo of pig iron. The Corunna, a sister ship, reached Toronto, May 23, and the Nevada, the third of the steamers purchased in Great Britain for the Canadian Lake Transportation Co., Ltd., reached the same port May 29.

The Nipissing Transportation and Trading Co., Ltd., has been incorporated under the Ontario Companies' Act, with a capital of $100,000 and offices at Sturgeon Falls, to take over the business now carried on with the same title by H. E. McKee and C. A. Britton, and to carry on the same; and to purchase or construct and to sell vessels of all descriptions, with various subsidiary powers. The provisional directors are: G. Gordon, H. E. McKee; C. A. Britton, J. W. S. Corley, T. E. McKee, L. E. Bolster and E. D. Low, Sturgeon Falls, Ont.

The O'Connor Steamboat and Hotel Co.'s organization for the current year is: President, D. Fasken; Vice-President, W. G. Gooderham; Secretary-Treasurer, W. H. Gooderham; other directors: C. D. Warren, J. Bourke. Capt. Jno. Malcolmson, for some years identified with the Welland House, St. Catharines, Ont., has been appointed General Manager, D. O'Connor having retired owing to other business interests. The company owns three tourist hotels on Lake Temagami, and several steamboats which connect with the Temiskaming and Northern Ontario Ry. at Temagami Station.

The Sparrow Lake Steamer Line operates between the Canadian Northern Ontario Ry. station at Sparrow Lake and all points on Sparrow Lake and Severn River. The line, which is managed by Capt. Frank Stanton, at present operates one passenger steamboat, the Lakefield, which was built at Sparrow Lake, 1903, and is a screw steamer fitted with engines of two n.h.p., and having the following general dimensions: length, 63 ft.; breadth, 14 ft.; depth, 5 ft.; tonnage—gross, 33 tons; register, 22 tons. She has a speed of about 12 miles an hour, and daily trips are made to all summer resort hotels and boarding houses on the lake and river.

The Canadian Northern Ontario Ry. is operating a freight and passenger service between Parry Sound and Port Arthur, Ont., a round trip being made weekly by the steamboat Seguin, owned by the Parry Sound Transportation Co. The Georgian Bay Navigation Co., of Parry Sound, is operating a bi-weekly service in connection with the C.N.O. Ry. from Parry Sound to Sault Ste. Marie, with calls at a number of intermediate ports. This service is being given by a steamboat which the owners are calling Killarney, but which appears on the Canadian register as Mabel Bradshaw, official no. 117,085. She is a propeller, built at Benton Harbor, Mich., in 1889 and was recorded in the U. S. register as gross tonnage 332, length 135 ft., beam 26 ft., depth 9 ft., class A1½. As will be seen in the list of vessels recently registered in Canada, on another page, she has been registered at Collingwood, Ont., official no. 117,085. Application was made to the Department to change her name to Killarney, but we were officially advised June 14 that the Department had not been able to accede to the request. We understand the reason for the refusal is that there is a Killarney Belle on the Canadian register, which is owned by the Dominion Fish Co., and also registered at Collingwood.

The St. Lawrence and Chicago Steam Navigation Co. is having built at Dundee, Scotland, a bulk freight steamer similar in size and equipment to the Iroquois. The hull is of steel, of the spar deck type, with twin deck beams but no decks laid, and will have a dead weight carrying capacity of 3,500 tons on a draught of 18 ft. Her dimensions are: length over all, 260 ft.; length between perpendiculars, 252 ft. 6 in.; breadth, 43 ft. 6 in.; depth, 26 ft.; height between decks, 9 ft. 6 in. She will be fitted with triple expansion engines, cylinders 18, 29½ and 48 in. diameter, by 36 in. stroke, steam being supplied by two Scotch boilers 11 ft. over ends, and 13 ft. 9 in. diameter, inside measurement, at a working pressure of 180 lbs. The dining-room and engineers' quarters are aft, the stokers' and deckhands' quarters amidships, the cabins and the mates' quarters are forward, and the pilot house is on the captain's texas with parlor underneath. There will also be two staterooms forward with bathrooms, also separate bathrooms for officers and engineers, and a shower bath for the stokers. The vessel will be steered by telemotor connected with the steam steering gear aft. The cargo handling machinery will consist of steam capstan aft, two wire winches placed between hatches, steam windlass, etc. The steamer is intended for the general trade on the Great Lakes, and is expected to be on her route early in Oct. Capt. Crangle, the company's Marine Superintendent, expects to leave for Dundee early in Aug. to superintend the completion of the Steamer, which is to be named G. R. Crow.

Manitoba, Saskatchewan, Alberta, Etc.

Reports from Selkirk, Man., June 10, stated that owing to low water a number of steamers were aground at the mouth of the river.

The stern-wheel steamer City of Medicine Hat has been launched at Medicine Hat, Alta., for the Southern Alberta Navigation Co. The steamer draws two feet of water, is 120 ft. long, with a breadth of 25 ft., and has berth accommodation for 35 passengers, while on excursions she can carry 300. The steamer will be used for taking cement and lumber up the Bow River to the South Alberta Irrigation Co.'s works, and coal to Medicine Hat, Saskatoon and intermediate points. Capt. Ross is principally interested in the company.

The opening of navigation on Lake Winnipeg, May 24, brought about great activity among the marine interests at Selkirk, Man. Capt. Jas. Robinson has announced his retirement from marine life after many years' service. The Dominion Fish Co. will this season run only one steamer—the Premier—to Warren's Landing, and the Wolverine will engage in the fishing and lumber business during the year instead of being on the Norway House supply handling. Capt. Robinson has leased the Mikado and will run her in the lumber trade.

B.C. and Pacific Coast Marine.

The name of the str. Eagle, official number 121,981, registered at Victoria, B.C., has been changed by order-in-council to that of Stetson.

The first steamboat of the season left Whitehorse for Dawson, Yukon, June 4, and the first steamer for the season reached Nome, Alaska, June 5.

The Vancouver-Sechelt, B.C., ferry steamboat New Era went ashore at Roberts Creek, May 26, but was subsequently floated off practically uninjured.

A contract has been let to the British Columbia General Contract Co. for the construction of a wharf at New Westminster, for the Johnson Wharf Co. The estimated cost is about $60,000.

The Vancouver, B.C., longshoremen went on strike May 27, for an increase of 5 cents an hour, making 40 cents an hour for day work and 45 cents an hour for night work. This was granted by the shipping companies after work had been suspended for several hours.

It is suggested that a company be formed to construct a salvage steamer and dock at Seattle, Wash., capable of dealing with large ocean-going vessels. This is in view of the fact that at present such vessels cannot be dealt with there, but have to be sent to Victoria, B.C., for repairs.

The Dominion Government is installing additional lights and establishing life saving stations along the west coast of Vancouver Island. In connection with these works the B.C. provincial government is clearing a road from Carmanah to Cape Beale at a cost of about $40,000.

The Pacific Coast Steamship Co.'s new steamboat President arrived at Seattle, Wash., May 16, from the builder's yard, Camden, N.J. A sister ship named Governor was launched at the same yard May 25. The company operates a service between Seattle and San Francisco, Cal., with connections to ports on Puget Sound.

The New England Fish Co. is arranging to place orders on the B.C. coast for the construction of two steel fishing steamboats for its Pacific fishing station. The new vessels will be similar to the str. New England, built at Camden, N.J., 1897, but will be somewhat larger, having a length of about 150 ft., in place of the New England's 121.8 ft.

The new steamboat for the Dominion Government hydrographic service built in B.C., on her recent trial trip made nine knots an hour against the tide. The new quarantine steamer for the Pacific Coast has also been completed, and on her trial trip made 11 knots an hour. For description of the hydrographic survey steamer see Oct., 1906, pg. 607, and for plans see Nov., 1906, pg. 689.

The steamboat Queen City has been put on a route between Victoria, B.C., and the logging camps and settlements on the northeast coast of Vancouver Island. The boat calls at Sechelt, Bucaneer Bay, Pender Harbor, Van Anda, Lund, Shoal Bay, Rock Bay, Bear River, Salmon River, Port Neville, and Port Harvey. The Union Steamship Co. operates its str. Cassier on much the same route at present.

The C.P.R. steamboat Princess May had among its passengers from Ketchikan, Alaska, on a recent trip, a deserter from the U.S. fort at Fort Seward. The captain refused to allow the U.S. city marshal to use force to arrest the deserter. The commander of the fort has asked the War Department to demand, through the British Government, the return of the deserter, and that the captain of the steamer be punished. The acting Judge Advocate General has, it is stated, refused to take any action.

The Admiralty Court sitting at Vancouver, B.C., has decided in favor of the C.P.R. in

the consolidated suit arising out of the collision between the Princess Victoria and the Union Steamship Co's tug Chehalis. The relatives of the nine persons who were drowned instituted actions for damages aggregating in all $200,000. The Department of Marine investigation resulted in the suspension of the certificate of Capt. Griffin of the Princess Victoria, and in the criminal proceedings in which a charge of manslaughter was laid against Capt. Griffin, who was acquitted.

Notices to Mariners.

The Department of Marine has issued the following notices to mariners:

No. 29. April 25.—Alaska. — 81. Tongrass narrows, Idaho rock, float light established.

No. 30. April 30.—British Columbia—82. Vancouver Island, southeast coast, Victoria harbor, middle rock beacon, Shoal point beacon, lights improved. 83. Vancouver island, east coast, off Kelp bar, bell buoy replaced by gas and bell buoy. 84. Broughton strait, Neill ledge, change in character of buoy. 85. Queen Charlotte sound, Pine island, lighthouse established.

No. 31. April 30.—Nova Scotia—86. Bay of Fundy, Brier island, northwest ledge, bell buoy to be replaced by gas and whistling buoy. 87. Southwest coast, Cape Sable, southwest ledge, gas and whistling buoy established. 88. South coast, Jig rock, bell buoy established. New Brunswick—89. Miramichi river, middle island light, change in illuminating apparatus

No. 32. April 30.—Ontario—90. Georgian Bay, west side, Surprise shoal, gas whistling and bell buoy established.

No. 33. May 2.—New Brunswick—93. South coast, Bay of Fundy, Musquash, Cape Spencer, changes in colors of lighthouses. Nova Scotia—94. South and west coasts, changes in colors of lighthouses.

No. 34. May 4.—Quebec—96. Gulf of St. Lawrence, Gaspe coast, Mont Louis bay, buoy discontinued. 97. River St. Lawrence, Red islet bank, buoy established. 98. River St. Lawrence, ship channel between Quebec and Montreal, Lake St. Peter, curve no. 2, lights not shown from range lighthouses, lightship replaced in position.

No. 35. May 8.—Ontario—99. Detroit river, Limekiln crossing, channel to be used by upward bound vessels.

No. 36. May 8.—New Brunswick—101. Bay of Fundy, change in position of Old Proprietor gas and whistling buoy.

No. 37. May 10.—Nova Scotia—103. Gulf of Canso, ship rock, change in character of buoy.

No. 38. May 10.—British Columbia—105. Chatham sound, shallow depths in the eastern approach to Brown passage.

No. 39. May 13.—Quebec—107. River St. Lawrence, mouth of Saguenay River, Prince shoal lightship, change in sounding of fog alarm.

No. 40. May 17.—Nova Scotia—108. South coast, Tor bay, Cole harbor, light established. Prince Edward Island—109. South coast, Charlottetown harbor, Warren farm range lights established.

No. 41. May 21.—Quebec—Chaleur Bay, north side, lighthouse moved from Point Echouerie to Bonaventure point.

No. 42. May 22.—New Brunswick—111. South coast, Bay of Fundy, St. John harbor entrance, off southeast end of Partridge Island, gas and whistling buoy established. Nova Scotia—112. West coast, off Brier Island, southwest ledge, color of gas and whistling buoy. 113. Halifax harbor, Campperdown, time signals. 114. South coast, off New Harbor Head, bell buoy replaced by whistling buoy.

The following have been issued by the U.S. Hydrographic Department:

No. 20. May 18.—Lake Erie—907. Detroit river, Limekiln crossing lights changed. 908. Detroit River light, characteristic changed.

No. 21. May 25.—Lake Superior—947. Duluth-Superior harbor, rules and regulations changed. St. Mary's river—950. Hay lake channel, buoys moved and established. 951. Mud lake, Pointe aux Frenes gas buoy to be discontinued. Lake Erie—953. Detroit river, Limekiln crossing, temporary channel, buoys and range marks.

No. 24. June 15.—St. Mary's River—1065. Amendment to rules and regulations governing the movement and anchorage of vessels. Detroit River—1066. Belle Isle, wreck to eastward, further information. Lake Erie—1072. Ashtabula harbor entrance, hydrographic information.

The new British Shipping Act, which came in force July 1, makes one important change which will affect the Canadian marine; this is the regulation regarding the signing on and off of crews.

Canadian Fog Signals

Col. Anderson, Chief Engineer of the Department of Marine, wrote recently in regard to fog signals as follows: "We are not establishing any additional explosive signal stations for the reason that the explosive signal is too short in duration and too difficult and expensive to operate frequently. Its only advantages are that it can be quickly installed and requires no machinery nor skilled labor to operate it. However, the cost for explosives is so great that in the long run any other fog alarm becomes more economical and more effective. We have many times made comparative tests of different fog signals, and the results of these tests are embodied in our several annual reports. Probably the most extensive one will be found in our annual report for 1891, when the late Capt. Smith and myself tested guns against whistles, and whistles against horns. Since that time we have developed a modification of the siren called the diaphone, which has given greater sound penetration than any of the sound-producing machines hitherto used. It is operated somewhat in the same way as the siren, with compressed air, and has beaten the siren in penetration at all distances and in all directions. With reference to the question of silent zones I am quite sure that it is impossible to overcome these either by changing a fog signal or by any disposition of trumpets. The silent zones are caused by deflection of sound in consequence of irregularities in the atmosphere, and these irregularities are altogether beyond the control of human agency. If the efficiency of a fog signal at any station is persistently nullified by the existence of silent zones, the only remedy is to move the station.

It has been my experience that we may expect silent zones wherever there is broken ground in front of the fog alarm or great irregularities in the depth of the water between the station and the observer. The proper location of a fog alarm station is, therefore, a matter for close examination and deep study on the part of the locating engineer, but even after all precautions have been taken unfavorable results may be found."—Pacific Marine Review.

Norwegian Vessels in Canada.

The Norwegian Vice-Consul at Quebec, Que., in a recent report to his Government gives some interesting information as to the share taken by Norwegian vessels in the Canadian trade. The trade carried on by Norwegian vessels with Canada has been constantly and considerably increasing of late years. In the year ended June 30, 1906, 1,389 Norwegian vessels cleared inwards at Canadian ports, the tonnage capacity of which vessels amounted to 1,918,349 register tons; in the same year the outward clearances were 1,404 vessels, of 1,910,788 register tons. Out of the total number, 200 were sailers, with an aggregate measurement of 140,000 register tons. Of the 1,389 inward clearances, 663 vessels were engaged in the coasting trade, and 726 in the oversea trade; and, in the outward clearances, 675 and 729 respectively. The Norwegian vessels which make oversea voyages to Canada are engaged partly in the exportation of coal to Newfoundland and the United States, and partly in the exportation of timber to Canadian, American and West Indian ports. The Norwegian ships engaged in the Canadian coasting trade are employed exclusively in the transport of coal from Cape Breton to (for the most part) the ports of Quebec and Montreal. In this traffic 663 Norwegian vessels, measuring 984,121 register tons, were engaged in the year 1905-6.

The Department of Marine has issued an index to the notices to mariners issued in 1906.

International Mercantile Marine Co.

The annual report for 1906 shows total earnings of $37,187,809, and total expenses of $29,155,178. These figures show a gain of gross earnings of $3,824,891, and of net earnings of $2,125,887 over 1905. During the year four steamships which could not be profitably employed were sold and the proceeds invested in new tonnage. The number of steamships now in service, including the subsidiary lines, is 123, representing a gross tonnage of 1,015,761 tons. Arrangements have been made for adding nine new steamships aggregating 127,530 tons as follows: (1) An express, mail, passenger and cargo steamship for the North Atlantic trade which, the report states, in point of luxury and size will far surpass anything hitherto attempted. (2) A passenger and cargo steamship, also for the North Atlantic trade. (3) A passenger and cargo steamship for the Atlantic Transport Line, New York-London service. (4 and 5) Two mail-passenger and cargo steamships for the Dominion Line, Canadian service. (6) A large passenger and cargo steamship designed for the London-Australian trade. (7, 8 and 9) Three steamships for Leyland Line. The steamships were operated during 1906 without any total loss or serious casualty, and the insurance fund shows a profit for the year of $791,959. Passengers carried 473,051, against 418,149 in 1905.

Among the Express Companies.

W. A. Dawes has been appointed Canadian Northern Ex. Co.'s agent at Regina, Sask.

The Canadian Ex. Co. re-issued its transfer tariff to points in Nova Scotia and New Brunswick, under date May 22.

The National Ex. Co., by a new power of attorney, has appointed R. Murphy, 94 McGill St., Montreal, its chief agent in Quebec Province.

The American Ex. Co., by a new power of attorney, has appointed R. Murphy, 94 McGill St., Montreal, its chief agent in the Province of Quebec.

G. J. Bothwell, heretofore depot agent Canadian Northern Ex., Winnipeg, has been appointed route agent of that company with headquarters at Winnipeg.

E. J. Archer heretofore correspondent Dominion Ex. Co., Ottawa, Ont., has been appointed to a similar position with the Canadian Northern Ex. Co. at Winnipeg.

The Canadian Northern Ex. Co. inaugurated an exclusive messenger service on the C.P.R. main line west of Winnipeg, and on the Regina-Prince Albert branch, June 1.

The Northern Ex. Co. has withdrawn from Winnipeg, Man., closing its joint offices with the Canadian Northern Ex. Co. Transfer will take place at the International boundary at Emerson, Man.

L. B. Allan for some years chief clerk to the Superintendent of Tariffs, Dominion Ex. Co., Toronto, has been appointed to take charge of the Canadian Northern Ex. Co.'s tariff department at Winnipeg.

The Dominion Ex. Co. has placed its service on the Nicola, Kamloops and Similkameen Coal and Ry. Co.'s line (leased to the C.P.R.), reaching the following points: Canford, Cartwright, Coutlee, Dot, Merritt, Nicola, B.C.

The Great Northern Ex. Co. has opened a route on the Midland Ry. of Manitoba, from the International boundary near Neche, N.D., to Portage la Prairie, Man. It has opened offices at West Gretna, Plum Coulee, Roland, Carman and Portage la Prairie.

The United States Ex. Co. has entered into an arrangement with the Detroit United Ry. for the operation of an express business on its system. The D. U. Ry. operates the Sandwich, Windsor and Amherstburg Ry., and is constructing the Windsor and Tecumseh Ry. in Canada.

The Canadian Northern Ex. Co. has succeeded the Dominion Ex. Co. on the Qu'Appelle, Long Lake and Saskatchewan Ry. between Regina and Prince Albert, Sask., opening offices at the following points: Bethune, Bladsworth, Chamberlain, Condie, Crail, Davidson, Disley, Duke Lake, Dundurn, Girvin, Hague, Hanley, Osler, Lumsden, Regina, Rosthern, Saskatoon and Prince Albert.

Counsel for the Canadian and Dominion Ex. Companies applied to the Board of Railway Commissioners, May 31, and asked that the examination into their companies' rates, etc., should not begin until after the summer as they were not ready to go on. An order was made adjourning the inquiry until Nov. 1, it being understood that there should be no increase of the rates at present in force in the meantime.

The Canadian Ex. Co., which operated a route on the Midland Ry. of Nova Scotia, has ceased to do so, that line having been acquired by the Dominion Atlantic Ry., and has closed its offices at Brooklyn, Clarksville, Kennetcook, South Maitland and Windsor, N.S. The Maritime Ex. Co., which operates on the Dominion Atlantic Ry., has opened a route on the Midland Division, replacing the Canadian Ex. Co.

The Canadian Northern Ex. Co. has opened offices at the following points on the Muskoka Lakes for the tourist season: Foote's Bay, Gordon Bay, Hamill's Point, Lake Joseph or Barnsdale, Port Cockburn, on Lake Joseph; Bala, Bala Park, Beaumaris, Mortimer's Point, Torrance, on Lake Muskoka; Juddhaven, Mariner's House, Port Sandfield, Rosseau, Royal Muskoka, Windermere, and Woodington, on Lake Rosseau.

The express service which has been established on the Halifax and South-western Ry., is under the charge of P. Mooney, General Freight and Passenger Agent, Halifax, N.S. Offices have been established at Alpena, Arcadia, Argyle, Barrington Passage, Belleville, Bridgetown, Bridgewater, Brookfield Mines, French Village, Granville Ferry Hemford, Hubbard, Central Argyle, Chester, Chester Basin, East Pubnico, Ingram Port, Liverpool, Lockport, Lower Argyle, Lunenburg, Mahone Junction, Midway, Middleton, New Germany, Nictaux, Port Clyde, Pubnico, Shelburne, Springfield, Tusket and Yarmouth, N.S.

The Manitoba Court of Appeal has given a decision in favor of the express company in the case of Cosintino against the Dominion Ex. Co. The plaintiff, a resident of Winnipeg, claimed he had sent by mail to Toronto, currency amounting to $1,010, which he had enclosed in one of the Dominion Ex. Co.'s remittance envelopes. The postal authorities being unable to find the addressee, the letter was sent to the dead letter office, and their records showed that it had been returned to the express company at Winnipeg, because of the envelope used by the sender. This was the last heard of the letter, and the plaintiff brought suit against the express company to recover. The latter denied its liability, contending that there was no duty as between it and the plaintiff to become responsible for the money, which it denied ever having received. The trial judge found for the plaintiff for $1,000, but the decision of the Court of Appeal reverses this decision and finds the express company not liable.

The coal section of the Retail Merchants' Association meeting at Toronto June 13, decided to ask the Board of Railway Commissioners to make the railway companies responsible for the shortage of weight on cars of coal on arrival at their destination.

Telegraph and Cable Matters.

The C.P.R. Telegraph Department has opened an office at Ebor, Man.

The C.P.R. Telegraph Department has opened an office at the military camp at Petawawa, Ont.

The Dominion Government telegraph line is being extended from Aberdeen, on the Skeena River, to Prince Rupert, B.C., about 30 miles.

The Newfoundland Government is being asked to extend the local telegraph system along the north-east coast to Cape Norman, or along the north-west shore from Bonne Bay.

The G.N.W. Telegraph Co. has opened offices at Bannerman, Desford, Boissevain, Minto, Brandon, West Gretna, Bergman, Plum Coulee, Roland and Portage la Prairie, Man.

The G.N.W. Telegraph Co. and the C.P.R. Telegraph Department put in force a new tariff June 13, on messages to the U.S., the new rates showing an increase of from 25 to 60 %.

F. B. Rushworth who has been in charge of the Marconi Wireless Telegraph station at Cape Bear, P.E.I., during the winter, has been transferred to the station at Sable Island, N.S.

At the 26th annual session of the Association of Railway Telegraph Superintendents, held at Atlantic City, N.J., June 19 and 20, a paper on the "Visible Supply of Telegraph Poles," was read by W. W. Ashald, Superintendent Telegraphs G.T.R., Montreal.

R. Peake was presented with a travelling bag by the Western Union Telegraph Co.'s employes at St. John, N.B., June 1, on leaving that company after 23 years' service to join the C.P.R. telegraph service at North Bay, Ont.

The Marconi Wireless Telegraph Co. is arranging to establish a station at some point on Queen Charlotte Islands, as well as other points in B.C. The C.P.R. steamboats Princess May, Princess Royal and Anne, will also be equipped with wireless apparatus.

The Newfoundland Legislature at its recent session voted $12,472 for the telegraphic central department at St. Johns, $25,376 for the operators at 99 different points in the colony, $8,328 for the repairing staff at 24 points, $12,000 for contingencies, $14,000 for telegraphic construction, and $372 for some extra services not previously provided for.

The Marconi Wireless Telegraph Co. has completed the erection of a wireless station at North Sydney, N.S. The station is for use in connection with the mail steamers entering Sydney during the summer months. The contract also provides for the operation of a station at Pictou, N.S., during the winter in connection with the Prince Edward Island traffic.

C. H. Reynolds, General Manager of the Pacific Cable Board, in an interview in London, recently, said the deficiency on the year's account will show a large reduction on the previous year, giving the hope that in the course of a few years it will be wiped out altogether. This deficiency includes an annuity of nearly £50,000 towards the repayment of capital.

The city of Winnipeg will receive tenders for the equipment of its power generating plant at Point du Bois, and the transmission line, including a telephone line, to Sept. 4.

The St. Maurice Valley Ry. has filed its local standard passenger tariff no. 1, for stations between Three Rivers and Shawinigan Falls, Que., at the rate of 3c. per mile. The tariff is signed by R. Kerr, Passenger Traffic Manager, who is also C.P.R. Passenger Traffic Manager.

General Telephone Matters.

The Bell Telephone Co. has opened a local exchange at Qu'Appelle, Sask.

The Coquitlam-Burnaby Telephone Co. is applying for a franchise in New Westminster, B.C.

The East Toronto, Ont., village council has granted a 25 year franchise to the Independent Telephone Co.

The Temiskaming Telephone Co. declared a dividend of 5% at the annual meeting recently held at New Liskeard, Ont.

The Warman Telephone, Light and Power Co. has been incorporated under the North-West Territories' ordinance respecting companies, at Regina, Sask.

A private telephone line connecting Bamberg and Crosshill with Wellesley, Ont., has been completed and is in operation. Dr. Glaister, Wellesley, is the principal promoter.

The St. Mary's, Kirkton and Exeter Telephone Co. is preparing to extend its line from Farquhar to Exeter, Ont. It is expected to have the line in operation during the summer.

The Premier of Manitoba denies that there is any truth in the press reports that the Government will acquire the Bell Telephone lines in the Province. The Government, he says, will positively construct an independent system.

The Manitoba Government has purchased a site at the corner of McDermot and Charlotte streets, Winnipeg, on which it is proposed to erect a central exchange for the city, and a terminal station for its projected long distance lines.

The Brantford, Ont., City Council has voted $5,000 in aid of the Bell memorial project. Including this grant, $32,000 has been provided out of the $40,000 required to purchase and lay out the old Bell homestead as a public park.

It was stated in Brandon, Man., June 7, that the Provincial Government proposed to proceed at once with the construction of a telephone system in that city, and of a long-distance line from Brandon to Virden, Hamiota and Birtle, connecting up the systems of the various local municipalities en route.

The Ontario Government by order-in-council has approved of the Ottawa City Council's by-law granting a five years' franchise to the Bell Telephone Co. This approval is required under the Ontario Act of 1907, where an agreement is proposed to be made between a municipality and a company operating under a Dominion charter, and outside of Provincial control.

The St. Martin's Telephone Co. has decided to extend its lines to Ten Mile Creek, N.B., and is considering a proposal to replace the instruments at present in use with more modern ones. Following are the officers and directors for the current year: President, C. M. Bostwick; Vice-President, W. E. Skillen; Secretary and Manager, A. D. McMackin; other directors, W. M. Jarvis, R. O. Stockton, C. E. Trueman.

EVERY KIND——————EVERY CAPACITY

MILLER BROS. & TOMS, MONTREAL, CANADA

The Bell Telephone Co. has notified the Lindsay, Ont., Board of Trade that it is considering the proposal to extend its lines to Grass Hill in order to reach Woodvale and points in the vicinity. The company could not, it was also stated, consider the extension of its lines to Burnt River, Kinmount, Gelert, Minden and Haliburton, except on the plan recently adopted in connection with the line between Lindsay and Dunsford.

The Central Telephone Co. closed its transfer books May 25, and has transferred them to the New Brunswick Telephone Co., with which it has been amalgamated. A dividend of 2% has been paid to the shareholders of the C. T. Co., whose shares had been fully paid up before Oct. 31, 1906. Stock certificates of the new company will be issued at once, and a meeting of the shareholders of both companies will be held early in July to complete the amalgamation.

The St. Mary's-Medina Telephone Co. has been incorporated under the Ontario Companies' Act, with a capital of $40,000 and offices at St. Mary's, Ont., for the purpose of carrying on a general telephone business in the counties of Perth, Oxford and Middlesex. The provisional directors are: W. J. Atkinson, E. McKim, J. W. Stewart, J. Kirk, of East Nissouri tp., Oxford county; W. F. Brown, J. Pool, J. B. Thompson, W. A. McIntyre, of St. Mary's, Ont.

The Byron Telephone Co-operative Association held its annual meeting at Byron, Ont., June 3. The report showed 35 miles of line, 850 poles, about five tons of wire, and 60 instruments installed; 113 shares sold at $30 a share to 51 shareholders. The auditors' report showed $3,117.49 cash receipts and $2,996.30 expenditures. Following are the officers and directors for the current year: President, Col. McEwen; Vice-President, H. Wickerson; Secretary-Treasurer and Manager, A. J. Rollins; these, with A. Kains and W. Merriam, form the Committee of Trustees. It is expected to extend the lines to Lambeth, Tempo, White Oak and Komoka during the current year.

The routes of the long distance telephone lines which the Manitoba Government proposes to construct in the province have not been finally approved. There are to be three trunk wires strung, one in the southwest part of the province, one in the northwest part, and the third through the centre. The Government proposes to furnish the municipalities with the material for the construction of the local lines, and the equipment of the exchanges. Already the local municipalities have arranged for the construction of something like 3,000 miles of line. The local systems at present arranged for are: Wordsworth, with three exchanges; Brandon, three exchanges; Wallace, three exchanges; Victoria, Maniota and Blanchard, one exchange each. The Winnipeg system, it is expected, will have a capacity of 15,000 instruments, and will be constructed by the Government. A number of the local lines are expected to be completed Nov. 1.

The Belleville-Prince Edward Bridge Co. will apply next session of the Dominion Parliament, for an act authorizing a new maximum schedule of rates and tolls to be charged persons using the bridge.

Arrangements are being made between the Department of Railways and the Department of Marine, by which through tickets will be issued from the mainland to points in P. E. I. during the winter. Heretofore passengers to the Island could only obtain tickets to Pictou, N. S., on the Intercolonial Ry.; buy a steamship ticket there for the Government S.S. Stanley, and a ticket for the P.E.I. Ry., on arriving at the Island port.

Nova Scotia Telephone Co. Ltd.

Following is the annual report for the year ended Jan. 31, 1907. The policy of the company has been to meet the telephone requirements of the Province, and to give an up-to-date and efficient service at the lowest rates possible. During the past year the growth of the company's business was phenomenal, and all indications point to a continued development. On Feb. 1, 1906, the company had in use in connection with its system 4,009 telephones, while on Feb. 1, 1907, the number had reached 5,016, a gain of over 25%. A fine stone building has been erected in Amherst to provide for rapidly growing business. The increase in the number of Amherst subscribers during the year was over 43%. The company has recently purchased a building and lot of

deemed in the interest of shareholders of this company, and of those of the Eastern Telephone Co., and the Valley Co., that the business of these companies should be merged, the directors of the N.S.T.Co., with the consent of the shareholders of all three companies, have effected an exchange of stock with the respective companies, and the telephone business of the territories previously served by the two last named companies is now being carried on by the N.S.T. Co. The business of the past year has been most satisfactory. The directors have every reason to believe that the outlook for the coming year is bright and encouraging, and they feel confident that a progressive policy under conservative management will be in the best interests of the shareholders, and of the public in general.

"PAGE FENCES WEAR BEST"

PAGE WIRE FENCES stretch tighter—posts can be set farther apart. That saves money—fewer posts, less labor digging post-holes, quicker erecting. **PAGE FENCES last longer**—made of No. 9 wire. **PAGE FENCES** are heavily **galvanized,** and for a small extra charge are supplied coated **WITH PERMANENT PAINT. PAGE FENCES** stand wear better, give longer service, keep your maintenance account down. The **PAGE KNOT LOCK** cannot slip and positively does not injure the wire. **PAGE FENCES do not sag.**

50 THOUSAND MILES OF RAILWAYS USE PAGE FENCES

There must be a dollars-and-cents reason for the standing **PAGE FENCES** have with railway men the world over. It will pay your road to hear that reason before you spend another cent on fences.

The Page Wire Fence Co., Limited, Walkerville, Ont. Branches in Montreal—Toronto—St. John

STEAM SHOVELS

The New Model Vulcan Heavy Duty Steam Shovels are substantially built throughout, with every part of sufficient strength to withstand the heaviest strains. All gears, pinions and racking have cut teeth. Built in sizes from 22 to 110 tons and ⅝ to 5 cubic yards dipper. Ask for catalog.

Westinghouse

Friction Draft Gear

The failure of spring draft-gear apparatus to adequately meet modern traffic conditions brought about by heavy cars, long trains and powerful locomotives, is well known to every railway manager. These conditions have been fully met by Westinghouse Friction Draft Gear, which supplements the spring resistance of the ordinary draft gear by vastly greater frictional yielding resistance, both in buffing and pulling.

Westinghouse Friction Draft Gear by absorbing and dissipating shocks and strains due to coupling, switching, brake applications and starting and stopping of long heavy trains, practically eliminates break-in-twos on the road, breakage of couplings and draft-gear attachments, and injury to car bodies. Its use will repay the original investment many times during the life of a car.

STEEL RAIL FAILURES.

At a recent meeting of the Canadian Society of Civil Engineers in Montreal there was a topical discussion on steel rail failures, which, in view of the great importance of the subject at present, we think it well to give very fully.

J. G. G. KERRY, who presided, said that a number of persons with great experience in the use and manufacture of steel had in the past few years taken up the problem of the betterment of steel rails, but the results had not been very definite. Following is a report of the main features of the discussion:

F. P. GUTELIUS, Assistant Chief Engineer C.P.R.: The rail failures on the C.P.R. during the last few years, more particularly during 1901-1902, seem to have been due to flattened ends and pipes in the rails. The investigations showed that flattened ends occurred either in rails that were soft or contained a pipe. As a result the rail widened out at the head to as much as ½ in. in excess of the width of the original rail. It became necessary to renew rails that otherwise appeared to be sound, on account of this flattening and the subsequent reduction in the height of the rail. The next important cause of rail failures was due to the pipes, open cavities, or seams in the rails produced in the original ingot during the process of rolling. These pipes are caused by the rolling out of a gas bubble, and sometimes they extend through the entire length of the rail. The bubble may have been globular in the original ingot, which was 6 or 8 ft. in height. When the ingot is rolled into rails it is increased in length to 180 or 200 ft., and in some cases where small rails are being rolled from the larger ingots this increase is doubled. The failure of a pipe rail is caused by the detachment of a piece of rail on one side or other of the head. These piped rails, however, if carefully inspected, could be detected and removed before anything more than a receding had taken place. To the trained eye a pipe becomes apparent as a black streak on the surface of a rail which otherwise would be bright. The more recent rail failures consist of a breakage in the base of the rail. A typical break during the past two years has been a break parallel to the axis of the rail, causing a piece from 8 to 24 ins. long to jump out of the side of the flange. When the fracture is examined along the base of the rail there is a smooth surface or corner, which appears to have been caused by a fold in the rolling of the rail. This fold in many cases is simply skin thick, that is, only of sufficient depth to give a smooth surface like the edge of a knife at the point fractured. The piece breaking out from this line of weakness started possibly by this little fold, to which reference has been made, and will work its way through following the line of least resistance. A very small amount of traffic will then cause it to break. Now this character of break covers rails which the C.P.R. have been using during the past two years, that are rolled in conformance with their recent specifications, which require in Bessemer steel a carbon content of from .53 to .63%, with an average for the lot of rails between .57 and .59% of carbon. The amount of carbon was increased from .45 to .50%, which is considered the commercial specification to this higher rate on account of the original experience with soft rails. This increase in the carbon has, so far as can be judged, stopped the original difficulty with flattened ends. Whether this additional carbon and the rearrangement of the other chemical contents, viz., the reduction of phosphorus to .085% in Bessemer and .06% in open hearth, and the sulphur manganese, being in accordance with the standard specifications, have any influence upon the structure of the steel, it is difficult to say. It would seem that the difficulties in connection with rail breaks are not caused by their chemical content, but are rather due to the mechanical defects. Lack of homogeneity in the mass of the steel seems to be the cause. Ninety per cent., speaking generally, of the breakages not traced to track or rolling stock causes, have been on account of what appear on examination to be mechanical defects similar to the defects that were spoken of in connection with the typical breaks.

P161

H. R. CHARLTON,
Advertising Agent, Grand Trunk Railway.

Speaking of the chemical contents of rails generally, some years ago when soft rails seemed to be inevitable, and the outlook for better steel was discouraging, the C.P.R. had some hundred chemical analyses made of rails that were known to be good, of those that had proved bad, and of ordinary rails. These analyses were made by reputable chemists, one Canadian and two United States, from drillings taken by the C.P.R. expert. The results obtained were tabulated. The best lot of rails gave the poorest chemical results, whereas the best chemical composition belonged to the rails that had been considered the worst. This indicated that good chemical composition is not the only requirement for good rails. It would appear from ordinary experience that the difficulties to be overcome are mechanical ones. Whether they are caused by too much carbon, too infrequent rolling, or by poor mixture or millp ractice, is not known. It has been intimated that there is a tremendous epidemic of rail breaks. The breaks on the C.P.R. tracks, which cover from 8,000 to 10,000 miles, have in the last 12 months not exceeded those of the previous year. A great many of the rails being used by the C.P.R. are made in Canada, and one brand in particular is giving very good results. These rails have been given 19 or 20 passes during the process of rolling them, and the extra amount of work thus done on the steel seems to be beneficial to the final product. This is supported by the fact that the poorest rails are those made in large United States mills, which have been produced after 10 or 11 passes. If the rails could be produced entirely homogeneous, rail breaks would be minimized.

J. G. G. KERRY: To sum up, it would appear that the change in chemical contents has had a beneficial influence upon the hardness of the rail in the matter of flattening. At the same time, if the C.P.R. had changed the chemical content and had the rails manufactured by the same mills, it is not certain that the results would have been so satisfactory, that is, the individuality of the mill must be added to the chemical content. The improvement is the result of the two, the manufacture and the specification.

F. P. GUTELIUS: One or the other, or both, might be the reason. From a large number of analyses that have been made of broken rails, sufficient information has never been obtained to enable one to say that any

Galena-Signal Oil Company,

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY.

GALENA RAILWAY SAFETY OIL

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT.

rail was broken because the carbon was too high or the phosphorus too high, or the sulphur too high, but the results were generally what would indicate fair chemical composition. One speaks of segregation, which is understood as being a collection of one or more of the chemical constituents, as a possible cause, but one does not usually find it.

J. G. G. KERRY: Have you had any success in your experience in reducing the number of failures from pipes, and what special steps have you taken to meet that difficulty?

F. P. GUTELIUS: Our specification calls for the end of the bloom to be cut off at a point where the last of the broom-like structure is noticed, and then to cut off another foot into seemingly solid steel. The number of failures from pipes during the past two years has been very low.

J. G. G. KERRY: You would attribute that to the specification requiring the additional foot to be cut off?

F. P. GUTELIUS: Yes, that means that the only bubbles remaining are those that are well down in the ingot, and these would be exceedingly small on account of the pressure.

J. G. G. KERRY: Does there seem to be any relation between temperature and failures?

F. P. GUTELIUS: There does. Ninety per cent. of the rail failures occur in the months of Jan., Feb., and Mar., i.e., during the winter season.

J. G. G. KERRY: Are these failures due to the rigid support under the rails, or to the peculiar characteristics of the steel at low temperatures?

F. P. GUTELIUS: So far as can be ascertained, the rail is not perceptibly more brittle when it is cold than when it is warm. It would be interesting to have a series of tests made to show the difference in the brittleness of the rail or steel of any kind at various temperatures, particularly temperatures below 20° below zero. Then, too, experiments should be made with the rail itself where the temperature during a period of 24 hours, we will say, varied 60°.

J. G. G. KERRY: Does the frequency of failures coincide with the incoming of low temperatures or great change of temperature?

F. P. GUTELIUS: That can scarcely be positively affirmed. In the case of a recent epidemic of breaks that have occurred in two or three days' time in a locality not covering more than 20 miles, there was considerable variation in the temperature during the preceding three or four days, but nothing greater than these same rails had probably undergone in previous winters.

J. G. G. KERRY: While the question of rail breaks is a very serious one, is it anything like as serious as it is generally considered, or as would appear from press discussions?

F. P. GUTELIUS: No, it happens that this evening we read about a very serious accident. That is the only accident of any consequence that has occurred on the C.P.R. on account of broken rails.

J. G. G. KERRY: As a matter of fact, though a rail does break occasionally, the percentage is exceedingly small, is it not?

F. P. GUTELIUS: The C.P.R. give a section foreman two rails to the mile for his winter supply, and that is expected to cover all of the breaks or failures from any cause which would occur in that mile during the year. Of course there are many rail racks that never need to be refilled. There are others where rail racks require new rails once a year, and occasionally an epidemic of breaks occurs in which half-a-dozen rails go into the same mile, but three or four such epidemics would cover any experience on the C.P.R. in the last four or five years.

J. G. G. KERRY: Are these accidents not attributable to some difficulty of the road or with the rolling stock?

F. P. GUTELIUS: Yes, they frequently are. It is often difficult to attribute them to the rail directly. It is possible that the punishment which the rail receives on account of the rigid track, heavy traffic, and variation of temperature, will prove too much for a weak rail to withstand. The weak rails in a lot are probably those that have had pipes or little folds in them. These rails might hold if the temperature were not too severe, if the frost had not penetrated too deeply into the ground, or if the tracks were not so rigid. Under lighter traffic they might hold.

J. G. G. KERRY: Does the C.P.R. contemplate any change in its specification or testing?

F. P. GUTELIUS: No, the C.P.R. believes that it has the best rail laid on the American Continent. The breaks on this road are very much less numerous than those of other railways, and, generally speaking, the outlook for rails is not nearly as alarming as it was five years ago.

J. G. G. KERRY: In case of accident, is it a difficult matter to prove whether the break in the rail occurred before or after the accident? Do the broken surfaces offer clear indications?

F. P. GUTELIUS: After the location has been examined by the track department, the locomotive department, and the car department, it is very seldom that the cause of the accident is not ascertained. The first newspaper telegraphic reports are usually wrong. They are usually written by somebody who does not know, and who, in order to make a good story, must attribute it to some cause or another The broken rail or spread track is the simplest explanation for the average newspaper writer to offer

T. C. BURPEE, Engineer Maintenance of Way and Works I.C.R.: Judging from personal observations and experience during the past winter and during previous winters, generally speaking, there have not been more broken rails than previously, except on two roadmasters' divisions, which included the road between St. John and Truro. On these two divisions a great many more rails have been broken than is usual. As the rails were of a great many different brands, some from the U.S., from Sydney, from Germany, and some from Sault Ste. Marie, there does not seem to be a greater percentage of rails broken of one kind than of another. The German rails that are in the tracks are considered much softer than the other rails. That has been demonstrated by the flattening of the rails at the joints and otherwise; but the number of rails of harder quality that have been broken is equally great. During the winter a number have broken on one side of the track, the majority of the breaks, that is, in that district between St. John and Truro, occurred on the south side of the track. It would lead one to think that it was a broken wheel that punished the rail at some period. Of course that is something that has not been found out, but on the other parts of the road it is not apparent that there have been more broken rails this winter than previously. On the road between Montreal and Moncton, and between St. John and Moncton, there are a lot of 67-lb. rails lying alongside of 80-lb. rails. Nothing seems to point to the fact that the 67-lb. rails break any more readily than the 80-lb. rails. One would think that the rolling stock, the engine, which is used to-day, and which is double the weight of what was used a few years ago, would require heavier rails even than the 80-lb. rails, which are the present standard. A few years ago the 56-lb. rail was considered a good rail for the rolling stock at that time. The heavier rolling stock is, to a certain extent, being used on the 56-lb. rails to-day, and it is a question whether the skin of the rail has not something to do with the breakage.

J. G. G. KERRY: What was the weight of the rail on the track you mentioned?

T. C. BURPEE: The greater part of it consisted of 80-lb. rails. It was comparatively new rail that had not been in service more than a couple of years. Some had been in service since 1899. Of course, it is well known the 80-lb. rail remains better than the 56 or 67-lb. rails. It creeps less and separates less, or spreads less, and the 100-lb. and 110-lb. rails are still better in that respect.

J. G. G. KERRY: How much 110-lb. rail is there on your lines?

T. C. BURPEE: About 35 miles of it. However, the rails have not proved as satisfactory as one should like them to have done. There was probably something wrong in the manufacture. The rail surface was very bad, and as a result the tops of the rails flattened and smashed.

J. G. G. KERRY: The interior would be fairly soft?

T. C. BURPEE: Yes, and brittle. One cannot explain why some of the rails break on some sections any more than on others, unless it is that they are frozen in, that there is more ice, and that the track is more rigid.

J. G. G. KERRY: Is there anything typical in the break?

T. C. BURPEE: No, nothing. Some of them are square, clean breaks, others break through the bolt holes. What is required is an investigation of the rails without defects, which break, and to find out why it is that they break, but the probability is that breaks and broken rails, as well as railway accidents, will exist while there are railways. The I.C.R. only had two railway accidents caused by or due to broken rails, and these were with freight trains. No passenger train accidents occurred at all, and, as elsewhere, these accidents all took place in the midwinter months.

J. G. G. KERRY: So that in reality rail breaks all occur in winter?

T. C. BURPEE: Yes, the greatest proportion of breakages occur in March, during the time when the track is frozen into the ice, very rigidly. That is the time one looks more particularly for broken rails, more so than in the colder months.

J. G. G. KERRY: Is there trouble when a good deal of ice holds down the rails firmly, underneath the rails?

T. C. BURPEE: Yes, there is then no chance for the track to give.

J. G. G. KERRY: Are you fairly well satisfied with your present specification?

T. C. BURPEE: Yes. The rails which the I.C.R. have received from the Sydney mills have been rolled on what is called the sanitary specification. The silica is taken out of the middle of the rail and then added afterwards, and the head of the rail is sprinkled with a water jet during the process of rolling. It is hoped that the benefit of that specification will be realized. Mr. Sandberg says that a great number of roads in England are adopting that specification. The purpose of that treatment is to give a harder rail and to retain the toughness of the steel. The combination of the ingredients causes this toughness, and will make the rail much harder.

J. G. G. KERRY: Up to the present has the rail been long enough in the track, that is, a sufficient length of time to be able to form any marked opinions as to its wearing qualities?

T. C. BURPEE: Some of them have been in about a year or over a year.

J. G. G. KERRY: Do they show about the same percentage of breaks?

T. C. BURPEE: Yes, but the wear is not so great. The joints are standing up better than the other rails did, and this in spite of the fact that the first year is the hardest on rails as far as flattening goes.

J. G. G. KERRY: Will soft rails show inside of a year?

T. C. BURPEE: Yes, and the rolling of the wheels will harden the surface of the rail.

J. G. G. KERRY: Would you consider that the average rail at present is an overloaded rail, having in view both the increase of the rolling stock and the increase in the speed of traffic?

T. C. BURPEE: It might be. However, until the present the rails were so soft that the ends of the heavier sections were soft enough to mash. This so diminished the life of the rails that it almost prohibited the use of heavier sections by the companies. If specifications for heavier sections will give as good results as the 56-lb. rails, there is no reason why the former should not be introduced. As the 67-lb. rails have not broken to any greater extent than the 80-lb. ones, it would go to show that the section is really strong enough to stand the load. The advantage of the 80-lb. rails is that they are not so apt to spread under the movement of traffic.

H. HOLGATE: Mr. Gutelius considers the manipulation of the rail to be more important than the constituents. This seems probable, for, although the British committee on standards has adopted a rail specification in which the carbon is 30% less than in our specifications, they are not free from broken rails. The carbon content is .35% to .50%. According to recent figures English railways have had a lot of trouble with rail breakages, and all could not be attributed to the chemical constituents of the rail.

J. G. G. KERRY: That would be a specification for a lighter grade of rolling stock.

H. HOLGATE: There are very heavy loads on some of the railways. Rolling stock conditions are, of course, different from those in America, but the condition of rails breaking generally has been a serious one in the last year or two, according to American engineers. Reports of the Maintenance of Way Association show that a large number of breakages occurred.

J. G. G. KERRY: There has been a great deal of attention given to rail breakages by the various technical societies in the last year or two. Yet it is questionable whether the whole number of breakages is greater than it has been for some years past. However, no figures seem to have been published that would either prove or disprove this statement.

H. HOLGATE: I do not know whether the figures published by the Maintenance of Way Association show that or not. The breaks have been serious, and the general conclusion reached was that it is a mechanical defect in the rail and not a chemical one that is responsible for most of the trouble. At the last meeting held on this subject by the Canadian Society of Civil Engineers, some one remarked about the heavy demand made on the rolling mills lately, but those in direct touch with railway matters would have figures to compare year by year the increase in consumption of rails during the last few years. Although such figures are usually confidential, it would not do any harm to get figures on the question. Whether the Maintenance of Way Association made any effort to get comparative time breakages or not, whether they went into the question of date or time at all, has escaped my memory. There is a memorandum in the last report which gives the number of rail breakages on three railways, but the names of the railways are not given. In one year 537 rails broke; out of these rails 1 was in service for 17 years, 4 for 9 years, 43 for 8 years, 22 for 7 years, 3 for 3 years, 22 for 2 years, and 439 for 1 year, showing that weak spots were found in the first year of service. However, that would not necessarily apply to every batch of rails. Only one of these rails was rolled in 1888, one in '95, 31 in '96, 17 in '97, 24 in '98, four in '02, 21 in '03, and 438 in '04. Of these 224 had flaws. They were 85, 80, and 75-lb. rails. There were 304 flaws in 537 rails.

F. P. GUTELIUS: How many miles of track does that represent?

H. HOLGATE: That is not given.

F. P. GUTELIUS: It might have been miles of rail.

H. HOLGATE: It does not mention the mileage.

F. P. GUTELIUS: There is just one point in connection with the size of rails and their liability to break under a given traffic. The additional stiffness in heavy rails is liable to be so great that they will break rather than conform to the irregular surface caused by the heaving of the frost, whereas rails of lighter section will bend to suit this uneven surface. It is probable that for Canadian gravel ballast track rails of 80 or 85 lbs. per yard are less liable to break than rails of heavier section.

J. G. G. KERRY: In your experience does the 100-lb. rail show any marked superiority in the matter of breakages over other lighter rails similar in quality?

F. P. GUTELIUS: The C.P.R. has about 50 miles of 100-lb. rails. In the same month of the same year there were as many broken 100-lb. rails as of the 80-lb. ones. The 100-lb. rails are probably better taken care of since they lie in a district where there is better surface than in that where the 80-lb. rails are laid. In one portion of the line, from Montreal Jct. to Windsor St. Station, only passenger traffic is handled. There are 100-lb. rails on both tracks, and the proportion of failures does not vary in proportion to the traffic on this line as compared with the line between Vaudreuil and Western Jct., over which there is a heavy freight traffic. There are more square breaks in apparently solid steel in the 100-lb. rails than in any of the lighter rails, taking the average per year, per mile.

J. G. G. KERRY: It would seem to be a fair conclusion to this section of the discussion to say that the majority of rail failures are caused by mechanical defects, such as folds or pipes; and that they cannot be said to be due to the fact that the rails used are too light for the traffic put upon them.

F. P. GUTELIUS: In connection with the low carbon rails spoken of by Mr. Holgate, the probability is that the carbon was compensated for by a greater amount of silicon. In the Sandberg specification, referred to by Mr. Burpee, the carbon is kept lower and the silicon is introduced to secure hardness and toughness. The claim is that a better rail is secured on that account. Sandberg introduces not less than 2% of silicon. In rails rolled for the C.P.R., under his specification, the silicon did not exceed 2%, and the carbon was kept fairly high.

J. G. G. KERRY: Information is necessary, it would seem, first of all on the actual effect of temperature on the characteristics of steel; secondly, on the question of improving the treatment of the steel in the mills so as not to develop flaws, and thirdly, on the use of better ballast to prevent the freezing in the rail and the subsequent breakages.

F. P. GUTELIUS: The punishment that a rail receives in the track as compared with the drop test of 2,000 lbs., tup fall 20 ft., is a mere bagatelle. That drop test bends a 5 to 8 ft. rail so that its middle ordinate for 4 ft. is from 2 to 3¼ ins. If all the rails were equal to stand that test there is no traffic or track condition that would compare with it.

DR. A. STANSFIELD: There are some points to be mentioned in regard to the chemical composition of rails. During recent years the effect of the increase in weight of rolling stock has been to oblige the steel makers to increase the carbon in the steel in order to obtain a harder and stiffer rail, and the result of this increase in carbon has been to make it more difficult to get a rail which shall not be brittle. Admitting that the specifications as generally put forward are approximately correct, in some cases rails are not absolutely rejected even when they have more than the ordinary maximum limit for carbon and for phosphorus, and in this connection it should be recognized that the combined effect of somewhat large quantities of both of these constituents is likely to be more dangerous than a somewhat high percentage of one alone. For instance, if the maximum carbon allowed is .65% and the limit of the phosphorus is .07%, then, if the carbon and phosphorus are both high, there will be more danger of brittleness than if one of these elements were high and the other low. The effect of phosphorus on steel is a very difficult one to determine, and very conflicting results have been obtained. Phosphorus is found to be more objectionable in high carbon steel than in low carbon steel, and in the steel used in modern rails phosphorus is a very dangerous constituent. Another reason why the effect of phosphorus on the rail is uncertain, is that phosphorus not only has a direct effect in causing brittleness, but it appears to render the rails more easily spoilt by overheating or other unsuitable heat treatment in the operation of rolling.

BARON G. DE CORIOLIS: With regard to the percentage of carbon and phosphorus given by Dr. Stansfield, the phosphorus can be brought down to .04% and the carbon can then safely be raised to .75%. That is the composition of the cheapest rail that can nowadays be made in England.

DR. STANSFIELD: The carbon can, of course, be brought as low as .04%, and it can be kept without difficulty as low as .07% in the basic open hearth furnace. Another point in connection with the percentage of carbon and phosphorus is that on account of segregation the analysis does not always show the maximum amount of these elements in the rail. It is well known that when the steel is being poured into the moulds, it begins to solidify from the bottom and the sides of the ingot, and the last fluid portion of the steel, which is near the top of the ingot and in the middle of its cross section, will contain a somewhat larger amount of carbon and phosphorus than the ingot as a whole. A. A. Stevenson and R. Kent have investigated the distribution of carbon in the steel ingot and found it to vary in one case from .53% to .70%. This possible variation should not be forgotten, and it should be the object of the specifications and methods of inspection of the rails to prevent any considerable part of any rail containing larger proportions of carbon, phosphorus, and manganese than has been found to be perfectly safe, having regard to the usual method of manufacture.

J. G. G. KERRY: Does the segregation all lie in one rail?

DR. STANSFIELD: The most impure portion of the ingot would probably all go into one rail, the rail from the top portion of the ingot. There might also be considerable variation in parts of the same rail. The middle of the rail, or that part of the rail which comes from the middle of the cross section of the original ingot, would probably be more impure than the outer portions of the rail.

J. G. G. KERRY: Would not the part last to solidify be a comparatively large part of the ingot, something like 25%, and sufficient in itself to make several rails?

DR. STANSFIELD: The part which contains the largest amount of impurities is somewhat irregularly disposed in the ingot, and it would be difficult to give any reliable figures with regard to its amount. With regard to the matter of piping in ingots, the members may have read a recent and very instructive paper by Prof. Howe, of New York, in which

The Locomotive and Machine Company of Montreal, Limited

Westminster, S.W.

he deals very generally with the piping of ingots. He shows what happens in casting ingots, and gives an enormous amount of information showing why pipes are actually formed. He suggests certain methods for reducing the amount of piping in ingots. One of the suggestions is that the ingots should be poured in moulds of which the top is larger than the bottom, instead of the reverse, as is generally the case. The effect of casting in moulds that are larger above than below, would be to cause the bottom of the ingot to solidify more rapidly, while the top would remain molten longer than usual, and in this way the formation of a pipe in the ingot would be very largely prevented. Professor Howe suggests methods of stripping ingots of this type.

One other point in connection with the chemical composition is to be noted. It has recently been found that nitrogen is an important constituent of steel. This fact was discovered some years ago in connection with some pig iron produced in Sweden. It was found that the wrought iron produced from it was brittle at an orange heat. A Swedish chemist, H. Braune, investigated this case very thoroughly, and found that the unsatisfactory pig iron was made in the blast furnace when the slag was basic and the temperature unusually high. Under these conditions he was led to believe that nitrogen probably entered into the pig iron being derived from the cyanides present in the furnace. Nitrogen is of the same chemical group as phosphorus, and it might therefore be expected to have a similar bad effect on steel. In 1903, Braune began to investigate the matter experimentally, and found that iron absorbs nitrogen not only in the blast furnace, but in other processes in which the metal is exposed to nitrogen and carbon at a high temperature, and in the presence of basic slags, and that the nitrogen had a profound effect on the mechanical properties of the iron. These researches were carried out in the University Laboratory at Basel, in the Testing Bureau at Zurich, and at the College Des Mines in Paris. Like phosphorus, nitrogen makes iron and steel brittle, and this effect is more pronounced in high carbon steel than in wrought iron or low carbon steel. Braune examined commercial iron and steel from all over the world, and found that it contained from .002% to .062% of nitrogen, and specifies the following as the maximum allowable percentage of nitrogen:

For beams and ship plates of wrought iron or soft steel	.030%
For rails of medium hard steel	.025%
For railway springs and hard steel tools	.012%
For cannon and parts of rifles	.008%

Braune says that the nitrogen in steel can, with care, be kept down to these figures by the present methods of manufacture. According to this, nitrogen is an important factor in the steel, and it may be that when this is looked into we shall find some of the breakages and the brittleness which previously puzzled chemists to be due to nitrogen. This specification is very recent. The investigation began in 1900 or 1901, and most of the work has been done since 1903. It was found that after the nitrogen had reached .04%, brittleness was produced, and that the nitrogen could then be detected microscopically, producing a ring-like structure in the steel. With regard to heat treatment in rolling, one special point has been referred to, that of the spraying of steel rails during rolling. This was worked out about three years ago by J. B. Stead, of Middlesbrough, who found that if a piece of steel rail were quenched from a red heat, and then tempered by heating to 400 or 500° C., it became very much harder without any accompanying brittleness, and when tested on a grindstone the hardened rail lost less than one-third as much steel by rubbing for a given time as a similar rail which had not been treated in this way. Microscopically examined, the hardened steel is said to be sorbitic in structure, while the slowly cooled rail consists largely of pearlite. This means that the carbon in the slowly cooled rail has had time to separate out in minute bands of carbide of iron, while in the quickly cooled rail, this separation has not taken place, the constituents of the steel are more intimately mixed, and the rail is consequently harder. Quenching a rail, unless this were followed by suitable reheating, would, of course, produce brittleness. In practice, the sorbitic structure is produced in rails by spraying the head of the rail during the process of rolling, and while this treatment undoubtedly improved the low carbon steels (.29% to .48%) on which Stead worked it may not always be so desirable in the case of the modern high carbon rails with their greater tendency to brittleness. Modern steel rails contain about .60% of carbon, which is a higher percentage than was contained in those on which Stead was working. Another point is that the spraying of the head should be done carefully to avoid undue cooling of the thinner portions of the rail. If the web or the flange of the rail were cooled too quickly by water getting on them, there would be danger that they might be made brittle.

With regard to the effect of low temperatures on the brittleness of steel rails, the only information I have been able to obtain has reference not to the direct effect of low temperatures on the brittleness of steel, but to the effect of low temperatures in preventing the recovery of steel from overstrain. Dr. E. G. Coker worked on this at McGill about 1900-1901, and E. J. McCaustland, of Ithaca, N.Y., published a paper last year. It was found that steel, which had been subjected to tensile or other stresses until the elastic limit had been passed, recovered from the overstrain after an interval of rest, and that the recovery is far more rapid at high than at low temperatures. Mild steel was found to recover perfectly in about a fortnight at the ordinary temperature, while there was practically no recovery in three months at the freezing temperature. This appears to be one way in which the winter conditions in Canada may have a bad effect upon rails. It may be, for instance, that at ordinary temperatures, if the rail is overstrained by the passage of the train, it will have had time to recover itself, in part at least, and have become elastic again before the passage of the next train, but in winter this recovery scarcely takes place at all, and therefore the repeated passage of the train may have a worse effect than it would in the summer.

With regard to the use of the microscope in testing steel rails, while the chemical analysis is most important for determining the composition of the rails, and the mechanical tests show whether the rail is good or bad, the microscope will give evidence as to the heat treatment to which the rail has been subjected, and in the case of a bad rail which has a good chemical composition, the microscope may be able to throw light upon the cause of the bad character of the rail. The indications of the microscope, however, require considerable experience and skill before they can be reliably interpreted. Two specific points in the history of a rail which can be made out by the aid of a microscope are these: Whether the rail has been cooled quickly or slowly, and whether the rolling has been finished at a high or low temperature.

J. G. G. KERRY: There is one point about which I should like to enquire, and that is in regard to the skinning on the rail during its early passage through the rolls which folds over and makes a flaw in the rail during the final passage. Is there any treatment to meet this difficulty?

DR. STANSFIELD: That is a matter for the engineer who designs the rolls. The difficulty could probably be met by a proper adjustment of the rolls.

F. P. GUTELIUS: Dr. Stansfield's remarks suggest one or two comments in regard to micro-photographs and the spraying of rails. The fact is, that to get the rails cool in the ordinary modern mill they do spray the rolls with water more than the Sandberg process would put on the head of the rail. If the Sandberg process does any good, it is simply to increase the quantity of water that is carried on the web of the rail, and the probability is that the quantity of water that gets on the head, added to the quantity of water naturally put on the rail while it is rolling, gives a double dose to the thinner portions of the rail, and possibly introduces an element of hardness or brittleness in thinner portions of the rail that is injurious. We had 5,000 tons of Sandberg rails rolled, and have half of them in the track. We are not spraying any more. Some years ago the C.P.R. were of the opinion that by adding the micro-photograph to their specifications they would get more homogeneous rails. This was done, and although the rail obtained was fairly good, the variation in the granular structure was so great in the same rail that the confidence placed in the micro-photograph, as a source of valuable information, was lessened, and it is no longer one of the requirements of the specification.

T. C. BURPEE: In justice to Mr. Sandberg, it is only right to say that during the process of rolling the water jet was not played on the thinner portion of the rail but on its head. The jet was turned on the head of the rail only, and the water did not drop upon the web. The experience on the I.C.R. is that the rails made according to his specification are doing as well as any in the track. Engineers here have the choice between acid Bessemer rails, made at Sault Ste. Marie, and Bessemer open hearth rails, made at Sydney.

BARON DE CORIOLIS: Mr. Gutelius has pointed out that rail failures are chiefly due to mechanical defects in the rails, which may be due to the defective chemical composition. He has no doubt given the real cause. Canadian manufacturers are laboring under great difficulties. It is a well-known fact that both in Great Britain and in the U.S. the manufacture of Bessemer steel is giving way before the open hearth process. The U.S. Steel Corporation is now building extensive steel factories for the open hearth process and is not making extensions for the Bessemer process. This is because the ores for the Bessemer process are becoming scarcer every year and, consequently, make the cost of production of that steel much higher. Now the manufacturer is limited by the price he gets from the railway companies for his rails. Since it now costs more than it formerly did to manufacture the steel in a Bessemer plant, it follows that to make a profit out of the bargain he has struck, he cannot be expected to make rails without defects. There is no doubt about this, and it has been pointed out by the best steel makers in England. The manufacturer who is making open hearth steel in Canada also labors under difficulties. He has to deal with highly silicious ores. It is a well-known fact that the more silicon there is to eliminate, the slower, and consequently the more expensive, is the making of steel in the open hearth furnace.

The main reason of your rail failures must, therefore, be ascribed to the difficulties Canadian manufacturers experience in making rails out of poor ores with their process of manufacture. If in Canada the system existed which is being introduced in some parts of Great Britain, and even in the U.S.—if Canadian manufacturers were adopting the improved method of the open hearth process then one would find that all difficul-

"HART" CONVERTIBLE CARS

Our Cars are not an Experiment. **Over 25,000 in actual service.**

Hart Convertible Cars have been in successful operation for the last four years on many of the leading railroads and during that time have been working under exceptionally hard conditions. This year we offer a car stronger in every way than heretofore produced, and guaranteed to stand up under the hardest steam shovel work and general road service.

ties would disappear. Manufacturers would then be able to turn out here steel rails at a much cheaper price than they can do now. For instance, it is possible to install in Montreal a mill that would turn out a first-class rail with carbon .75% and phosphorus so low as .04% for $26.00 per short ton, the flange rail according to the specifications which are adopted by the railway companies here. This is the result of the enquiry made in England, and that is the figure arrived at. As this meeting is composed of men of vast experience, it would be advisable for them to enquire into the facts just put forward. They will see that the safety of railway companies here is in the adoption of a rail made after the new process, with carbon as high as that mentioned, and phosphorus as low as that mentioned. When Canadian engineers have tested that rail, they will come to the conclusion that it is the best that can be adopted in this country. The C.P.R. engineer has pointed out that formerly they used the American standard specification, which allows carbon percentage of from about .45 to .50%, and a phosphorus percentage of .10%, and that he has found that in altering these figures and in increasing the carbon from .53 to .63%, and reducing the phosphorus to .085% for Bessemer and 0.06% for open hearth, he has obtained better results. That is conclusive evidence that the American standard specification no longer serves the purpose, and that the higher the carbon is the lower the phosphorus is, in the open hearth process, the better is the rail.

J. A. JAMIESON: One point seems to have been left out in to-night's discussion, one that is possibly of great importance, namely, the question of internal stresses in the rail section due to overheating. A short time ago a beam about 20 ft. long and 10 ins. thick was dropped accidentally. It split right through the centre of the web for at least 75% of its length, and opened out at the end, indicating very serious stresses due to uneven cooling or some similar cause. There were no flaws along the line of fracture. It would be interesting to know whether this was really due to uneven cooling, and such information might possibly lead to interesting results with regard to steel rail failures.

The following contributions to the discussion were sent in writing:

F. P. SHEARWOOD, Dominion Bridge Co.: In the discussions and investigations which are now being made into the reasons which cause the great number of breakages of the heavy modern rails, interest is so engrossed in the composition and treatment of the metal that other possible defects have received comparatively little consideration, and a few criticisms of the shape of the heavier section of rails may lead to useful investigation. In the discussions on this subject it has been often stated that the new 80-lb. rails do not show as long a life or as reliable a strength as the rails rolled 10 to 20 years ago, even in the case where the two sections have been subjected to the same traffic. In view of these statements it seems probable that the increase of metal has not been utilized to the best advantage. The modern 80 or 100-lb. rail has over twice the vertical section modulus of a 60-lb. rail, which means that it should be able to span more than twice the distance without injury, or that over a similar span the fibre strains would be less than one-half. This great difference in the vertical bending value should more than compensate for even great flaws or other defects in the metal, and it would seem to point out that the stresses from direct vertical bending do not produce the most destructive strains which a rail should be able to withstand. Rails which are located on the curved portion of the track are said to have more breakages than those on the tangents. This indicates that horizontal forces are doing the injury, for the vertical loads are inappreciably greater than on the straight line. The winter and spring months are said to be the worst time for broken rails, especially during frosts which have followed a warm spell, and when ice is formed on the track. It is probable that during these times a film of ice is formed between the rail and the tie, thereby reducing very considerably the friction between them, and if at some of the ties the spikes are not fitting closely to the rails, the horizontal forces will produce increased horizontal bending and torsional strains (the latter due to the flange being so much stiffer than the head in a horizontal plane). The web is the weak part of a tee rail when called upon to resist horizontal loads which are applied at the upper side of head and supported at the bottom of the flange. When comparing a heavy modern section with an old light one, it is first seen that the increased depth produces greatly increased stresses, and then that the thickness of webs has not been increased to anything like the extent that the other dimensions have, in fact the heavy rail is a weaker section to resist these loads than the lighter ones. Another stress which strains the web of the rail is that caused by the eccentric application of the vertical load. Owing to the bevel on the wheels of the rolling stock, or to the rail becoming slightly canted through the support of the tie being defective, the load will often be applied on the extreme edge of the head, thereby reducing the vertical strength by little or nothing, but impairing the horizontal strength anywhere from 75% downwards. The English bulb rails, with their thicker webs, symmetrical section, and relatively smaller vertical section modulus, seem in a great many ways a far better design than the deeper tee rails. The chair supports also eliminate to a very great extent the horizontal and torsional strains to which reference has been made.

W. H. WOODCOCK (of Buffalo): In the past few months there has been a great deal of discussion in the various technical papers about the manufacture of steel rails, and at the same time numerous discussions by various railway officials as to why steel rails wear out more quickly now than they did 25 years ago. During 25 years' practical experience in the manufacture of steel of all descriptions, and more especially with that of steel rails, the writer has had the opportunity of following the same carefully. In this period the greatest increase in weight of rails has been made, and also the greatest increase in the weight of railway rolling stock. It is only a few years since the 50-lb. rail was the standard rail throughout the country, and at the time a 5-ton Bessemer converter was considered to be the standard size which could be operated with favorable results. This conclusion was fairly demonstrated by the fact that the rails were guaranteed for a period of time, and their wearing quality justified the guarantee. It occurs to me that in the recent increase in the size of rail two important features have been overlooked by the manufacturers. Twenty-two passes in the rolls were considered sufficient to produce an excellent quality of 50-lb. rail, and 19 to 24 minutes sufficient time to produce a first quality steel from which to roll the same. In progressing from the manufacture of a 50-lb. rail to a 100-lb. rail, and from the use of a 5-ton converter to a 12½ or 15-ton converter, two erroneous suppositions seem to have been made by the steel men of the country. First, because when the 5-ton converter was in use, 19 to 24 minutes were given to the blowing, and good steel was produced, that with 12½ or 15-ton converters from 9 to 11 minutes are sufficient. This is the first cause of bad results. It does not follow that because the blast pressure is increased and the metal blown more quickly that the same quality of metal is secured as when the 5-ton converter was blown for from 19 to 24 minutes; on the contrary, the blowing is too rapid in the latter case to properly purify the metal and, furthermore, the heat is so rapidly generated, in order to produce large tonnage results, that it burns out to a great extent the vitality of the metal. Secondly, that in rolling a 100-lb. rail it is sufficient to give only 15 passes, 9 in the breaking down, and 6 in the finishing. This reduces the mechanical work and, consequently, reduces the life of the rail, for the finishing of these rails with such a small amount of mechanical work only forms a hard film over the surface of the rail and leaves the remainder of the metal spongy. To produce the same results that was obtained with the 50-lb. rail, the bloom for the 100-lb. rail should be increased in proportion to the increased weight of the rail, and the passes, instead of being reduced from 22 to 15, should be increased from 22 to 25. By thus increasing the size of the bloom and the number of passes, the cooling of the rail is made slower during the period in which the mechanical work is being done, consequently the molecular construction of the rail can adjust itself to practically the condition that was obtained in the 50-lb. rail, with the 22 passes. The above statements have been shown to be correct by microscopical observations which I have made on material finished with varied amounts of mechanical work. It is a wrong impression that the same amount of mechanical work and results can be secured from a fewer number of passes that are of a greater draught as are obtained with more passes of smaller draught; a moment's consideration will show that the cooling process cannot be the same with a large draught as it is with one half its size.

Having blown Bessemer steel for some months, I found that by blowing the metal slowly the air is made to penetrate through the mass of metal more uniformly, eliminating the impurities, and allowing of the elements contained to atomically adjust themselves in a more uniform manner. To produce the results desired by the railway companies, it is absolutely necessary that temperature, chemistry, and mechanical work act in harmony with each other to produce a certain metal, and if these three factors are studied as they should be, then a good wearing rail and a fine quality of steel will be obtained. I have heard it stated on many occasions that the cause of rails wearing out so much more rapidly than they did years ago is the fact that motive power and rolling stock are too heavy for the size of rail used now. But has not the weight of the rail increased in proportion to the increased weight of rolling stock? Rails have increased 100%, while cars have increased approximately 50%, so that the above argument does not stand. It is not the fault of the increased weight of the rolling stock, but it is entirely the result of the manufacturers being desirous of securing quantity at the expense of quality, and in this way they have succeeded to a very marked degree.

A practical suggestion as regards the manufacture of rails, would be to have a series of rails rolled specifying that 15, 20 and 25 passes should be given the same, and that the bloom from which they are rolled should be increased in proportion to the increased weight of the rail to admit of these different degrees of mechanical work being done. Then these rails might be placed on the roads having the hardest travel and next to those which are being manufactured to-day in the usual manner. I would not hesitate in predicting that the conclusion, after this test was properly made and carefully watched, would be that the railway companies would say "more mechanical work, if you please, and less

tonnage." The same argument applies to all classes of steel manufacture. Comparing steel castings of the present day with those which were made even 10 years ago, the verdict certainly is in favor of the castings made a few years ago. In testing the physical quality of castings the first thing one remarks is that the ultimate strength is as good as it was years ago, but there are such divers methods of taking pieces for physical testing that practically any results can be obtained that are specified for. It is not uncommon to go into the various testing rooms and to see the machine operator gauge the test piece, and so secure the approximate area of the same so that he can figure in his mind the load that will be necessary to produce the results required by the specification. It does not materially matter whether the machine is run at 1 or 3 inches a minute after the elastic limit has been reached, the results can not be radically interfered with. From a large number of tests that I made in looking into this matter, I have found that between the slower and higher speeds an increase in ultimate strength of about 500 lbs. per sq. in. was obtained. This would mean that any test-piece within reasonable limits could be made to pass the specification tests. The physical value of steel is determined by two things, the proportion of carbon which it contains, and the rate of cooling. The quality of steel depends upon three things, the material selected, the nature of the working to which it is subjected, and the care taken by the manufacturers. These three things apply to all descriptions of steel having soft to medium qualities. Better results would be obtained by the use of reheated ingots, instead of rolling direct from the initial heat. This would admit of the proper amount of mechanical work being given before the temperature in the rolls became too low. No better rails will be obtained from open hearth steel than from Bessemer, unless more attention is given to the time required for fusing and working in the furnace, and, in fact, the results are more likely to be worse than better.

It was decided to renew the discussion at the beginning of next session and to invite correspondence from all interested in the question.

The foregoing is extracted from the Can. Soc. of C. E.'s bulletin.

Railway Subsidy Contracts.

Under the provisions of the acts relating to granting of aid to certain railways the Dominion Government has entered into the following contracts:

CENTRAL ONTARIO RY.—From near Bancroft, Ont., to the Ottawa Division G.T.R. (Canada Atlantic Ry.) near Whitney, Ont., about 40 miles. (June 10).

COLCHESTER COAL AND RY. CO.—From Debert station, on the Intercolonial Ry., to Debert coal mine, or from Debert coal mine to the northern terminus of Londonderry Iron and Mining Co.'s railway near East Mines, N.S., 4½ miles. (May 20).

KETTLE RIVER VALLEY RY.—From Grand Forks to a point 50 miles up the north fork and west fork of the north fork of Kettle River, B.C., 50 miles. (June 6.)

MARGAREE COAL AND RY. CO.—FROM St. Rose and from a point on the Intercolonial Ry., 38 miles. (June 14).

OTTAWA, NORTHERN AND WESTERN RY.—From Aylmer to Hull, Que., nine miles, (June 12); from the Ottawa and Gatineau Ry. to Hull city boundary, ¼ mile. (June 13).

TILLSONBURG, LAKE ERIE AND PACIFIC RY.—From Woodstock northerly to the G.T.R. at Berlin, or from Ingersoll to Stratford, Ont., 35 miles. June 10).

Quebec and Lake St. John Railway.

Following are facts and figures relating to the operation for the year 1906, in addition to those published, in our June issue:

The total mileage operated by the company's trains during the year was 240 miles, viz., Main line, Quebec to Roberval, 189 miles; Eastern Extension, Chambord to Chicoutimi, 51 miles; and the mileage under construction and approaching completion is: From Jeannotte to La Tuque, 40 miles; from Valcartier towards Gosford, 5½ miles; from Roberval to the Government Wharf, 1 mile; total, 286½ miles. The traffic accounts show net earnings of $198,300, against $175,796 in the previous year. The gross earnings and expenditures are as follows:

	1906	1905
Passenger earnings	$179,067	$167,555
Freight earnings	369,843	340,711
Mails	13,417	13,328
Express, telegraph, parlor and sleeping cars	15,156	13,063
Car rental, etc.	24,593	25,714
Canadian Northern Ry. rental of offices	398	460
Canadian Northern Ry. share of maintenance, Riviere a Pierre Junction	1,065	974
Quebec dock receipts	4,210	2,053
	$607,749	$563,858
Expenditure	409,449	388,062
Net earnings	$198,300	$175,796

The pay lists for the year were $177,172, as against $167,320 in 1905. The cost of fuel consumed during the year was $84,280, against $83,702 in 1905. The average earnings per passenger were 57 6-10 cents, as compared with 57 8-10 cents in 1905, and per ton of freight $1.01½ as compared with $1.01 in 1905. The train mileage for the year 1906 was 379,469 miles, as compared with 370,347 in 1905.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Central Ry.—Reports state that the first 50 miles of this line, which is being constructed from Seward, north via Sushitna Valley, to the Tanana River, has been completed, and is being operated. It is stated that by the end of the current year this mileage will be increased to 75 miles. It is expected the road will be completed to the Matunska coal fields by Jan., 1909, the total distance being 183 miles from Seward. The main line of the road, as projected, is to extend through to Fairbanks, a distance of 463 miles. The most costly work involved on the entire route has been done. Seven tunnels have been bored, one of which is in use. The Sushitna Valley to be traversed by the road is 160 miles long and from 60 to 70 wide. Within 100 miles of Fairbanks the line crosses the Alaska range, a low pass affording a 1% gradient. The heaviest gradient on the entire system will not exceed 2%. In addition to the Sushitna Valley and Klatnuska coal fields, the A.C. Ry. will open the Yetna mining district, as well as the Kuskowin or Mount McKinley region, which show rich prospects, but are now without transportation. (Feb., pg. 87).

Atlantic, Quebec and Western Ry.—The Court of Exchequer at Ottawa has confirmed the sale of the Baie des Chaleurs Ry., which has been operated as the Atlantic and Lake Superior Ry., to the A., Q. and W. Ry. This company completed during 1906 about 20 miles of line from New Carlisle, Que., the terminus of the B. des C. Ry., to Port Daniel, and is going on with the construction of its line to Gaspe, a further distance of 80 miles, which it is expected to have completed within a year. The existing line between New Carlisle and Metapedia, where a junction is effected with the Intercolonial Ry., is to be overhauled, gradients reduced and curves taken out, stronger bridges built and heavier rails laid. The company has power to extend its line from Metapedia, Que., to Edmundston, N.B., and the approval of the Dominion Government is being asked for the location plans. (July, pg. 479.)

The Central Ontario Ry. Co. has completed the contract with the Dominion Government by which it will become entitled to the usual subsidy allowances upon the construction of 10 mile sections of the extension of its line from near Bancroft, to the Ottawa Division of the G.T.R. (the old Canada Atlantic Ry.) near Whitney, Ont. (June, pg. 407.)

Colchester Coal and Ry. Co.—A contract has been entered into with the Dominion Government for a subsidy in aid of the construction of 4½ miles of line either from Debert station on the Intercolonial Ry., to Debert Coal Mine, or from the Debert Coal Mine to the northern terminus of the Londonderry Iron and Mining Co.'s railway near East Mines, N.S. The line has been inspected by E. V. Johnson, Inspecting Engineer of the Department of Railways, and opened for traffic. S. Winter, Moncton, is President of the company; J. Hayes, Parrsboro, N.S., Secretary, and A. and W. D. Wheaton were the contractors. (May, pg. 323.)

Duluth, Rainy River and Winnipeg Ry.—It is expected that track will have been laid to the southern shore of Rainy River, opposite Fort Frances, Ont., early in Aug. (July, pg. 479.)

Fort William Union Station.—J. Mills, one of the Board of Railway Commissioners, was quoted July 11 as stating that a union passenger station was practically assured.

Gaspesian Ry.—The Quebec Legislature by an act passed last session incorporated a company with this title for the purpose of constructing a railway from Paspebiac through the county of Bonaventure, not further north than Causapscal, or further south than Cross Point, in the direction of Edmundston or Grand Falls, or to the boundary of the province of Quebec, in a direction between these two places, or to the boundary of the province of Quebec in the direction of the St. John River, N.B. The section extending from Metapedia to Edmundston or Grand Falls, or the St. John River, must be constructed and in operation before the company shall be allowed to run its trains between Metapedia and New Carlisle, and even afterwards the company shall not have power to stop its trains between these two points except for the taking of coal and water.

The company is given various incidental powers respecting wharves, docks, telephone and telegraph lines, steam and other vessels, the development of water powers, etc. It was given power to issue $1,000,000 of common stock and bonds to the extent of $45,000 per mile of railway constructed. The provisional directors are: J. X. Lavoie, Perce, Que.; W. Moffatt, A. W. Carpenter, E. B. Read, J. Mellowes, London, Eng. (Feb., pg. 87.)

Great Northern Ry. United States Lines in Canada.—We have been advised that the company has under construction a line from Walhalla, N.D., to Morden, Man., a distance of about 24 miles. Walhalla is the present terminus of a branch of the G.N.R. extending from Grafton on the Grand Forks-Neche line. This latter line has been extended to Portage la Prairie, Man., about 78 miles, under the charter of the Midland Ry. of Manitoba. The company's other line in Manitoba extends from St. John, N.D., to Brandon, 73 miles, and was constructed under the charter of the Brandon, Saskatchewan and Hudson's Bay Ry. P. E. Thian is Chief Engineer, and A. Guthrie & Co., St. Paul, Minn., constructed the two lines already completed, and are now grading the Walhalla-Morden line. The houses on Ross Ave., Winnipeg, part of which has been acquired by the G.N.R. for terminal purposes, are being moved.

A survey party under B. E. Segar, of the G.N.R. staff, has been working along the Elk River to Michel, B.C. P. E. Thian, the company's engineer at Winnipeg, was recently over a portion of the route, in conjunction with Mr. Segar. The party expected to complete its work early in Aug. The G.N.R. is interested in the Crow's Nest Southern Ry., which extends from Fernie to the International boundary, and to a junction with the G.N.R. line at Rexford, Mont. The Crow's Nest Pass Coal Co., which is also interested in the C.N.S. Ry., owns the Morrissey, Michel and Fernie Ry., which serves a part of the territory at any rate, through which the survey is being made. (July, pg. 479.)

Track is reported laid on the branch from Berthold to Lignite, N.D., 66 miles, and progress is being made with the construction between Lignite and Crosby, a further distance of 33 miles. Berthold is 23 miles west of Minot, the point at which the Minneapolis, St. Paul and Sault Ste. Marie Ry. from St. Paul, Minn., to the C.P.R. main line in Saskatchewan, crosses the G.N.R., and the branch parallels this line until near the International boundary, when it takes a westerly direction to Crosby, just south of the boundary.

Halifax and Southwestern Ry.—The substructure of the permanent bridge across the river at Liverpool, N.S., was expected to be completed by the end of July, when the steel superstructure would be erected. The bridge will consist of six spans of 66 ft. each, and one draw span of 132 ft., and the substructure consists of five concrete piers and abutments. The foundations of the piers and abutments are on solid rock, about 2,000 yards of concrete being used in their construction. As soon as the new bridge is completed the temporary bridge which has been in use during the past two years will be removed. The substructure was erected by the Lindsay Construction Co. (July, pg. 479.)

Intercolonial Ry.—The second-track work between Moncton and Painsec Junction, N.B., about eight miles, for which a contract has been let to J. B. McManus, Ltd., Memramcook, N.B., is being gone on with, and will be pushed through as fast as possible. (July, pg. 479.)

International Ry. of New Brunswick.—T. Malcolm, contractor for this line, brought out from Great Britain 270 men, advancing their passage money. Up to July 6 about 100 of them had run away after having complained of the camp accommodation. The men had signed contracts to work for six months, and several of them have been placed under arrest for breach of contract.

Kettle Valley Lines.—Work on the extension of the company's line has been so far completed as to enable trains from Republic, Wash., to be run into Grand Forks, B.C., at Third and Bridge streets, where a station is being erected. Heretofore the trains had to stop about 500 yards short of this point. The extension under construction extends from Grand Forks, up the north fork and up the west fork of the north fork of the Kettle River, for 50 miles. The company has entered into the usual agreement with the Dominion Government, under which a subsidy of not more than $6,400 a mile will be paid towards the construction of the line. (May, pg. 325.)

Kingston, Smith's Falls and Ottawa Ry.—Surveys for this line show a route leaving the G.T.R. main line about six miles east of Kingston, and going practically direct to Ottawa, about 70 miles. One hundred men started grading at the Ottawa end July 2. R. S. Logan, assistant to the Second Vice-President and General Manager G.T.R., stated recently in Montreal that the people engaged in promoting the construction of the line contemplated giving the G.T.R. an interest in it, and establishing friendly connections with the larger line. "We will interchange passengers," he said, "and probably run through cars. On account of these friendly relations it is the desire of the G.T.R. to encourage the new road and support it as much as possible." (July, pg. 479.)

Little Nation Ry.—By an act passed last session of the Quebec Legislature a company with this title, and the provisional directors already mentioned, was incorporated, the head office being fixed at Cheneville, Que., and the capital at $400,000, with power to increase to $1,000,000. The company is authorized to construct a line from between Thurso and Montebello, on the left bank of the Ottawa River, to Cheneville, and northerly to Lake Nomininguè, near the C.P.R., with branch lines, not to exceed in any one case 15 miles in length. It is also provided that "the railway shall be operated by means of trains, as on steam lines, or of separate cars, as on tramways; and the traction shall be effected by electricity, steam, gasolene, or in any other manner that may seem more advantageous to the company. Passengers and freight may be carried by the same trains or by separate trains." (Feb., pg. 89.)

Liverpool and Milton Ry.—This short line, which will shortly be absorbed by the Hali-

TWO OIL ROOMS

WHICH DO YOU PREFER?

The one, expensive, dirty, dangerous and inconvenient.
The other—The Bowser—paying for itself in actual saving—clean, perfectly safe and the most convenient possible to devise.
The contrast in appearance as shown here is no greater than the contrast the Bowser System of Oil Storage effects in expense, protection and adaptability as compared with other arrangements.

Designed for railroad use and adapted as standard by over 20 railroad systems.

fax and Southwestern Ry., and operated as a branch line, is being regarded and generally overhauled. It is being extended to the head of the wharves and a connection is being made with the H. and S.W. Ry. The addition to the line involves the construction of 1,400 ft. of trestle. The work is being done by the Lindsay Construction Co. (See Milton and Liverpool Ry., Jan., pg. 3.)

London and Port Stanley Ry.—The bridge being constructed over the Thames at London, Ont., by the Pere Marquette Rd., lessees of the L. and P.S.R., will be capable of carrying the heaviest traffic. The abutments are being extended to double their present width, and a pier is being erected in the center of the river. As soon as the erection of this bridge is completed a similar one will be built over the Kettle Creek, near St. Thomas, to replace the present bridge. (July, pg. 479.)

Lotbiniere and Megantic Ry.—By an act passed at the recent session of the Quebec Legislature this company is vested with all the rights and privileges required to construct and operate a railway from its existing line across the counties of Wolfe, Richmond, and Sherbrooke to Sherbrooke city, with power to construct branch lines, not exceeding 15 miles in length in any one case, except for the purpose of connecting with other railways. (Feb., pg. 89.)

Magdalen River Valley Ry.—C. W. Mullen, S. W. Boardman, Bangor, Me.; C. D. Laning, Boston, Mass.; J. O. Drouin, E. Brassard, Montreal, were last session of the Quebec Legislature given an act incorporating a company with this title, with office at Quebec, and power to construct a railway from Denone tp. to the east of Cap a la Ours, Gaspe county, along the Magdalen River valley, to connect with the proposed inland section of the Atlantic, Quebec and Western Ry. (Mar., pg. 161.)

Margaree Coal and Ry. Co.—The Dominion Government and the company have completed the agreement under which a minimum subsidy of $3,200 a mile will be paid to the company towards the cost of the construction of a line from St. Rose, and from a point on the Intercolonial Ry., altogether not exceeding 38 miles. (May, pg. 325.)

Maritime Coal, Ry. and Power Co.—The railway line operated by the company, prior to its absorption of the Canada Coal and Rd. Co., extended from Chignecto to Maccan, N.S., about three miles. The additional line acquired extends from Maccan to the Bay of Fundy. The company is building new bridges across the rivers Maccan and Hebert. A survey is being made for a branch from the main line at Fundy to the new slope which is being opened up there, a distance of about one mile. The company has charter powers to construct a line to a port on Northumberland Strait, and we are advised that the port which will probably be used is Tidnish. (July, pg. 479.)

Metabouchouan Pulp Co.—By an act passed last session of the Quebec Legislature the agreement between the shareholders and a syndicate for the reorganization of the company was confirmed, and its name was changed to that of the Metabouchouan Co. The capital was reduced to $158,000. but the shareholders have power to increase it to $1,000,000. The schedules attached to the act set out the property affected by the arrangement. This includes all rights and interests of the Pulp Co. in a railway to connect its works at St. Andre de l'Epouvante to its point of intersection with the Quebec and Lake St. John Ry., near Lake Bouchette, about 11½ miles, all the rights and interests of the Pulp Co. under the Dominion Act 3 Edward VII, chap. 47, sec. 57, to a subsidy for a railway of 13 miles at the most, running from Lake Bouchette station on the Q. and L. St. J. R. to St. Andre; all the right and interest of the Pulp Co. in any claim against the Quebec Government to a land subsidy in respect of the line; one locomotive and some logging rolling stock.

Minnesota and International Ry.—Track has been laid as far as Little Fork, Minn., and it was expected that an accommodation train would be put on by the end of Aug. The President and Chief Engineer recently visited Fort Frances, Ont., with a view of completing arrangements for the entrance of the line, and the securing of terminals in that place. (Jan., pg. 3.)

Northern Empire Ry.—The route of this projected railway, which the Dominion Parliament will be asked next session to authorize, will pass through the wheat lands of Southern Alberta, the coal lands, and the partially opened territory of the north of the province where explorations for oil and gas are being made. From the International boundary near Cardston to Fort McMurray, on the Athabasca River, the points mentioned in the application to Parliament is about 600 miles, and branch lines are projected, giving in all a mileage of about 2,000 miles. It is stated in Cardston, Alta., from which point exploratory surveys have been made northwards, that interests connected with the Northern Pacific Rd. are engaged in the promotion of the new line. (June, pg. 409.)

The Pontiac Central Ry. Co. was incorporated by an act passed at the recent session of the Quebec Legislature for the purpose of constructing a railway from Bryson or Portage du Fort, following when practicable the valley of the Colonge River to a junction with the National Transcontinental Ry., together with branch lines. The provisional directors of the company are: R. Bickerdike, M.P.; T. Gauthier, D. A. Campbell, J. M. R. Trudeau, J. G. A. Gendreau, R. S. Weir, A. Hudon, Montreal. (Feb., pg. 89.)

Prince Edward Island Ry.—Tenders are under consideration for the erection of a brick freight shed at Charlottetown, P.E.I. The building is to be 179 ft. long and 35 ft. wide, walls of brick on reinforced concrete beams and piers. The roof is to be of wood with a special covering. There is to be erected adjoining an office building about 50 ft. in length, and two stories in height. It is expected to have the building completed in the fall. An extension of similar dimensions will be constructed at some future period. (May, pg. 327).

Quebec Eastern Ry.—By an act passed last session of the Quebec Legislature a company was incorporated with this title and having as its provisional directors F. N. McCrea, Sherbrooke, Que.; E. W. Tobin, M.P., Bromptonville, Que.; J. A. Begin, M.P., B. Quinn, J. W. Quinn, Windsor Mills, Que.; with the object of constructing the following lines of railway: From Sherbrooke by any practicable route through the counties of Sherbrooke, Richmond, Wolfe, Megantic, Lotbiniere and Levis to the southern end of the Quebec Bridge; from the above line to Lyster station, and with power to acquire and operate the existing line between Lyster station and St. Jean des Chaillons (the Lotbiniere and Megantic Ry.); from the first mentioned line to Lime Ridge, with other branch lines not exceeding in any one case, 15 miles. Power is also given to make agreements with the Quebec Bridge and Ry. Co., and other railway companies for running rights, etc., and to acquire the property, powers, rights, franchises, etc., of the Lotbiniere and Megantic Ry., and the Wolfe, Megantic and Lotbiniere Ry., or for leasing the same. The company may use electricity for the operation of its railway or any part of it. The company may issue $1,000,000 of common stock and bonds not exceeding $30,000 per mile of railway constructed. See also Lotbiniere and Megantic Ry. (April, pg. 245.)

Quebec, Montreal and Southern Ry.—Among the sums voted at the last session of the Quebec Legislature was $8,900 for the South Shore Ry., for the construction of bridges over the St. Francis and Yamaska rivers, being the third of ten equal payments. The S.S.R. is now part of the Quebec, Montreal and Southern Ry. (April, pg. 245.)

St. Maurice Valley Ry.—An inspection of this line, now being operated by the C.P.R. from Three Rivers to Shawinigan Falls, Que., 22 miles, was made July 3, by Hon. W. A. Weir, Minister of Public Works, Quebec; L. A. Vallee, Chief Engineer of the Department; F. P. Gutelius, Assistant Chief Engineer C.P.R., and others interested in the line. It was stated that the company proposed to extend its line from the present junction with the C.P.R. to the wharves at Three Rivers, so as to give the manufacturing interests along the St. Maurice connection with the ocean-going steamers. It is also intended at some future date to extend the line a few miles beyond Shawinigan Falls, to Grande Piles, at which point the St. Maurice River becomes navigable. (Feb., pg. 89).

Temiscamingue, Chibougamon and James Bay Ry.—The Quebec Legislature at its last session passed an act incorporating Hon. E. B. Garneau, Quebec; G. DeSerres, J. M. Wilson, G. Marlett, Montreal; J. A. Kelly, New York City, as a company with this title for the purpose of constructing a railway from the east side of Lake Temiskaming northeasterly to the Harricanaw River, thence along the Sand River valley to James Bay, with a branch to Lake Manouan; also a line commencing at Lake Manouan northeasterly to Lake Wattagami, and following the Nottaway River to James Bay, with a branch to Chibougamon and Lake Mistassini. The company is given power to construct telegraph and telephone lines, wharves, and docks, and to own and operate steam and other vessels. It is also given power to make agreements for various purposes with other similar companies, is authorized to issue $1,000,000 of capital stock, and bonds to the extent of $45,000 a mile of railway constructed. It is also given power to acquire lands and water powers, to develop electrical energy, and to transmit the same for use in any factory it may erect or acquire for manufacturing purposes, or to sell the power generally. (Feb., pg. 87.)

J. R. Booth has arranged with the commission to construct a private siding from Latchford, Ont., for the accommodation of cars carrying supplies for the working of his pulpwood concessions on the Montreal River.

Theodosia Arm.—Arrangements have been completed for the construction of a logging railway, 16 miles long, along Theodosia Arm, B.C. T. Merrill, Duluth, Minn., is the lumberman leasing the limits which the proposed railway is to open up.

Toronto Union Station.—Very little appears to have been done in the way of advancing the project for the erection of a new union station at Toronto. The following letter dated Ottawa, July 9, from the Secretary of the Board of Railway Commissioners, was read at a meeting of the Toronto Board of Control, July 10: "I am directed by the Board to state that the Board thinks there should not be any further considerable delay in settling the plans of the Union

station in Toronto and matters connected therewith, and in settling the question whether railway tracks in Toronto are to be raised or depressed in different parts of the city, and whether any or what further bridges should be built for carrying streets over railways along the waterfront in Toronto, or other measures taken for the protection of such crossings, and whether any change is to be made in the location or height of the railway tracks, which would affect the construction of the bridge at the Sunnyside crossing. I am directed to say, therefore, that the Board requires that the railway companies interested submit to the Board on or before Sept. 1 next, the plans of the proposed new union passenger station in Toronto, and that the railway companies and the city of Toronto, or either of them, shall, on or before Sept. 1 next, submit to the Board any proposition that they, or any of them, may desire to make on the above subject, and that on or before that date the G.T.R. shall submit any proposition that it may have for any change in regard to its tracks which will affect the location or plans of the bridge at the Sunnyside crossing, the construction of which the Board has already announced that it will require."

Victoria Terminal Ry. and Ferry Co.—Plans have been deposited with the Minister of Public Works, Ottawa, and in the Land Registry office, New Westminster, B.C., for bridges to be constructed by the V.T.R. and F. Co., over the Nicomekl and Serpentine rivers on the company's railway between Blaine and Olivers, B.C. The approval of the Government is being asked for the construction of the bridge.

Winnipeg City Power Line.—The Winnipeg City Council has authorized the purchase of steel rails for the section of the tramway between Lac du Bonnet and the site of the proposed bridge, 2¼ miles. The bridge is to be built by day labor, of wooden crib with plate girders. Grading of the line to the bridge was expected to be completed by Aug. 1. (July, pg. 481.)

New Brunswick Southern Ry.—Reports from St. John, N.B., state 15 cars of ties have been delivered by the C.P.R. at St. Stephen, N.B., and they are being put in on the N.B.S. Ry.; and that two C.P.R. steam shovels are working on the line, one at the St. John end, and the other at the St. Stephen end. These facts, together with the additional one that the N.B.S. Ry. trains run over a portion of the C.P.R. line, and use that company's station in St. John, have given rise to local reports that the C.P.R. has purchased the line.

Orford Mountain Ry.—A regular train service was inaugurated to Mansonville, Que., July 12, to which point the line has recently been extended. The railway now extends from Eastman, on the C.P.R. line, to Mansonville, and from Eastman to the G.T.R. at Windsor Mills, a total distance of 60 miles. It is stated that the line will be extended from Windsor Mills to Brompton Falls and thence to Sherbrooke. S. W. Foster, President of the O.M. Ry., is also interested in the construction of the Midland Ry. of Vermont, with which the O.M. Ry. will connect. (May, pg. 327).

The following are members of the board of management of the Provident Fund of the Intercolonial Ry., and Prince Edward Island Ry., to be administered under the act passed last session of the Dominion Parliament: D. Pottinger, General Manager, who is chairman under the act; T. C. Burpee, Engineer of Maintenance of Way, Moncton, N.B.; and W. A. Dube, Superintendent, Levis, Que., appointed by the management; J. Stewart, Moncton; and J. W. Nairn, Truro, N.S., elected by the men.

Regulations Respecting Wooden Trestles.

The Board of Railway Commissioners passed the following order, No. 3239, July 3: In pursuance of the powers conferred upon it by the Railway Act, secs. 30 and 269, and of all other powers possessed by the Board in that behalf, the Board orders as follows:

1. Every railway company subject to the legislative authority of the Parliament of Canada, operating by steam power any railway or railways, any part or parts of which is or are constructed of or upon wooden trestles, shall, during the months of May, June, July, Aug., and Sept., in each year, for the purpose of protecting such trestles from fire, place and keep upon every portion of its said railway or railways, where such trestles exist, watchmen to the extent hereinafter required, and cause such watchmen to inspect every such trestle as soon as possible after the passage of a train or locomotive over the same; provided, that this clause shall not require any such watchman to discontinue the following of one train to and over any other wooden trestle on his division in the direction in which such train is going.

2. Where a track bicycle is provided for his use, one watchman may be appointed for and have charge of a distance of five miles along the railway for the purposes aforesaid; but where no such bicycle is provided, a watchman shall not be appointed for or have charge of more than 2½ miles along the railway.

3. Every such company shall supply each of such watchmen and keep him supplied with two pails, and keep the same in good condition and fit for holding water.

4. Each such company shall place and maintain at each end of every such trestle a barrel of the capacity of not less than 45 gallons; and that, on every trestle of over 200 ft. long, every such company shall place and maintain barrels of similar capacity at distances of not more than 100 ft. apart, provided that pile trestles crossing waterways shall not be required to be furnished with any such barrels.

5. Every such company shall maintain and keep every such barrel in good repair and in good condition for holding water, and cause such barrels to be kept full of water except so far as the water shall be reasonably and properly used for the protection of the trestle, or as it may be lowered by natural causes; provided, that as often as the surface of the water shall be lowered in any such barrel to the extent of 15 ins. from the top of the barrel, such company shall cause the barrel to be forthwth refilled with water.

6. Every such company shall remove and keep clear from dead grass and brush the whole width of its right of way under and along every such trestle.

7. Every such watchman shall, from time to time, when any such trestle is injured by fire, as soon as possible report the same to the roadmaster on whose division he is working; in the event of any such barrel or pail not being in good and efficient condition for the holding of water, every such watchman having charge of the same shall, as soon as possible, report such condition to the said roadmaster; that whenever the height of the water in any such barrel is lowered to the extent of 15 ins. from the top of the barrel, every such watchman shall, as soon as possible, report the same to the said road-master.

8. Every such company failing or neglecting to comply with any of the foregoing regulations shall be subject to a penalty of $50. Every watchman failing or neglecting to make inspection of any trestle in accordance with the foregoing regulations, or failing or neglecting to make any of the reports hereinbefore required of him when and as so required, shall be subject to a penalty of $20 for each such failure or neglect.

Salary-Raising Training For Railroad Men

There is no profession in which promotion depends in any higher degree upon a man's real ability and technical knowledge than in railroading. Quick promotion then for the railroader is the result of quick and also thorough acquirement of that technical training which will qualify him to hold a higher position. In no way can the ambitious railroad employe secure this technical knowledge so quickly and yet so simply as through the I. C. S. Courses of home training. These Courses have been written by the best railroad experts on this Continent and are taught after a manner that 15 years' experience in training hundreds of thousands of ambitious men for promotion and better earnings has proved to be the most practical and efficient. These Courses include instruction in LOCOMOTIVE MANAGEMENT, LOCOMOTIVE BOILERS, STEAM CYLINDERS, and VALVE GEARS, BREAKDOWNS, COMPOUND LOCOMOTIVES, TRAIN RULES, WESTINGHOUSE and NEW YORK AIR BRAKES, CAR LIGHTING and HEATING, and ELECTRIC HEADLIGHTS.

If **YOU** wish to secure the training in your own home, in your spare time, and at an insignificant cost, that will qualify you for promotion to the highest positions in your profession, simply mark and mail this coupon and we will tell you how you can do so. The fact that we have enabled hundreds of other railroad men to secure promotion in itself warrants your careful investigation of our plan if you really wish to better yourself. Don't let a postage stamp stand between you and a better position. **Mark and mail this coupon NOW.**

The International and Toronto Board of Trade Freight Rate Cases.

The Board of Railway Commissioners issued order 3258, July 6, as follows: In the matter of the applications of the Canadian Manufacturers' Association and the shippers who were heard and represented at the hearings held by the Board in Windsor and Chatham, Ont., in May, 1906; and of the Toronto Board of Trade of the City of Toronto, upon hearing what was alleged on behalf of the applicants and counsel for the railway companies, the evidence adduced, and upon the report and recommendation of its Chief Traffic Officer, the Board orders:

(a) That the special local class tariffs (known as "town tariffs") of the G.T.R. Co., the C.P.R. Co., the Michigan Central Rd. Co., the Pere Marquette Rd. Co., the Wabash Rd. Co., the Toronto, Hamilton and Buffalo Ry. Co., and the Canadian Northern Ontario Ry. Co., east of the Detroit and St. Clair rivers, Lake Huron, and the Georgian Bay, and North Bay (east and south bound), and south of the Ottawa River, be reduced so as to place them all on the same mileage scale; and that for this purpose the table of mileage rates, particularly set forth in the schedule hereto annexed, marked A, which is hereby made part of this order, be adopted as the bases by the said companies, subject to such reductions from the said mileage table between common or competitive points as may be considered necessary under the authority contained in the Railway Act, secs. 315 and 329, the rates in all cases to be based on the shortest workable mileage; subject also to Toronto rates on the basis of 36c. 1st class as the maxima from points on the Canadian side of the Detroit and St. Clair rivers to points intermediate to Toronto; and to the present rates as the maxima from Hamilton to points north of Beeton Jct. and Allandale.

(b) That, subject to clause d of this order, for the purpose of compiling through special winter and summer class freight tariffs from points west of Toronto to points east thereof, the territory south of and including the G.T.R. Co.'s main line Toronto to Point Edward, via Stratford, be divided into groups on the principle now existing, but modified by the mileage table referred to in clause a of this order; all points on the Welland Canal to be included in the Fort Erie-Stoney Creek group, and the rates to Montreal to be as outlined in the memorandum of the Toronto conference of May 23, 1907, as follows:

1st Class From—	
Windsor, Amherstburg, Courtright, Sarnia, Newbury, Alvinston, and Forrest	58c.
From Intermediate points east to and including Hyde Park	56c.
London, St. Thomas, St. Marys, Thamesford, Port Burwell, and Port Rowan	54c.
Woodstock, Ingersoll, Stratford, Waterford, and Port Dover	52c.
Berlin, Galt, Brantford	50c.
Guelph	48c.
Fort Erie, Suspension Bridge, Port Colborne, Welland St. Catharines, Grimsby	48c.
Hamilton, Dundas, Oakville, and Georgetown	46c.
Toronto	44c.

(c) That the territory north of that covered by clause b and west of and including the G.T.R. Co.'s line between Toronto and Barrie, be similarly grouped and the rate table referred to in clause a applied, but with the rates for equal distances in the territory covered by clause b as minima.

(d) That from points competitive with the lake and river lines, the companies may publish from and to such competitive points, during the season of navigation, such commodity rates as may be necessary to meet the competition of the water carriers, and shall also publish from Toronto and Hamilton to Ottawa and Montreal, and intermediate points, competitive class tariffs on the basis now existing, but not to exceed the mileage rates referred to in the said clause a.

(e) That the through rates from the aforesaid groups be reasonably graduated to points east of Toronto on the basis outlined for the G.T.R. Co.'s main line at the Toronto conference of May 23, 1907; with corresponding scaling along the C.P.R. Co.'s line.

(f) That the east bound rates from the territory east of Toronto and Orillia, and east of and including Depot Harbor, Parry Sound and North Bay, be in accordance with the mileage table referred to in clause a, having regard to the adjoining group rates under clause c.

(g) That to points in Quebec west and east of Hull, and east and south of Montreal, on the G.T.R. and C.P.R. companies, the through rates from the grouped territory as defined in clauses b and c, be arrived at in accordance with the following scale, namely:

First-Class To—	
Aylmer	4c. over Hull
Gatineau to Buckingham, inclusive	6c. over Hull
East of Buckingham Junction to and including St. Augustine; north and south of Ste. Therese Junction to and including St. Jerome and St. Eustache	8c. over Montreal.
Ste. Therese Junction to Ste. Rose, inclusive	4c. " "
St. Vincent de Paul to Joliette, inclusive	4c. " "
Lanorais to Three Rivers, inclusive including Berthier	8c. " "
East of Three Rivers to Quebec, inclusive	10c. " "
East and south of Montreal to and including Ste. Rosalie, St. Johns, St. Isidore, Howick Junction and Ste. Cecile Junction	4c. " "
Doucet's Landing, Victoriaville, Dixville, and east of Ste. Rosalie, also south of points named in preceding group (C.P.R. group to correspond)	8c. " "
East of Victoriaville to Point Levis	10c. " "

(h) That no special commodity rates now existing, which may be lower than the corresponding class tariff rates herein prescribed, shall be advanced by reason of the changes herein ordered, or without the sanction of the Board.

(i) That the said railway companies and their connections in the United States be permitted to substitute the Canadian Freight Classification for the Official Classification from Detroit and Port Huron, and from points west thereof via the Detroit and St. Clair River crossings; also from Buffalo and Suspension Bridge, N.Y.; and, where necessary, from points south and west thereof via the Niagara frontier; and to scale the lower classes on the first-class rates now existing.

(j) That the rates from Canadian points on the Detroit and St. Clair river frontier to all points east to the Atlantic and north to the Ottawa River shall in no case exceed the rates from Detroit and Port Huron.

(k) That in the adjustment of the international rates referred to in clause i, the rates on raw materials from points in the United States to points in Canada shall not be advanced at the instance, direct or indirect, of the companies operating in Canada, by reason of the changes in the rate basis herein permitted or prescribed.

(l) That no change shall be made in the west bound rates from Montreal to the grouped territory west of and including Toronto and intermediate points, as a consequence of this order of the Board.

CHIEF TRAFFIC OFFICER'S REPORT.

Following is the Report of the Chief Traffic Officer, J. Hardwell:

The so-called international rate case refers to discrepancies between the east and north bound freight rates from Canadian points on the St. Clair, Detroit and Niagara River frontiers, as compared with those from U.S. frontier points, viz., Port Huron, Detroit and Buffalo; the Canadian rates being the higher, in contravention, so it is complained to the Board, of the long and short haul provisions of sec. 315 of the Railway Act. This has been a burning question for many years past, but it was not formally brought before the Board until its hearings at Windsor and Chatham in May, 1906. The application of the Toronto Board of Trade, heard by the Board of Railway Commissioners at Toronto May 29, 1906, is, in effect, that the freight rates from Toronto to Montreal and other points east shall not exceed (as they do) the west bound rates from the same eastern points to Toronto; also, that certain discrepancies which exist between the Toronto local tariff and the local tariffs at Hamilton and London, to the disadvantage of Toronto, be removed. As to this latter application of the Toronto Board of Trade, I reported to the Board on July 30, 1906, making certain recommendations, which, if adopted, would have the desired effect; but in that report I pointed out that "the true solution was to be found in a general re-arrangement of all the class rates between all points, and not merely as they affected Toronto, or Toronto, Hamilton, and London." It became evident at the outset of the investigation following the hearings that the two cases would have to be considered together, to which course the Canadian Manufacturers' Association, who had adopted the international rate case, consented; the Toronto Board of Trade demurred, but withdrew its objections after I had explained the situation to its transportation committee at a conference in Toronto on March 19 last. Any reductions in rates from the frontier points in the manufacturers' case would necessarily affect the east bound rates from Toronto, for the intermediate rates from Chatham, London, Brantford, Hamilton and Toronto would have to be scaled down on the Windsor basis, so that the two cases would become dovetailed; then again, the revision of the general mileage scale, which would be a factor in the adjustment of the manufacturers' case, would have a direct bearing on the discrepancies between the local tariffs of which the Toronto Board complained, and would probably remove them; and finally, were that Board's application for the west bound rates east bound to be granted, any adjustment of the international rates which may have been worked out would be destroyed, for the bases would be entirely different. Briefly, the Toronto applications were included in the broader application of the manufacturers.

In discussing the international rates I propose, for the sake of brevity, to mention more particularly the rates to Toronto and

Montreal as being the most important points —the key points in fact—but it will be understood, generally speaking, that all other points east of the lakes are affected under the scaling system. The following are the present class rates from the frontier points. More detailed figures will be found in the appendices to this report:

TO TORONTO

FROM	1	2	3	4	5	6	7	8	9	10
Detroit	36	31	23	16	13	10	Official Classification			
Windsor	40	35	30	25	20	18	16	16	16	14
Port Huron	36	31	23	16	13	10	Official Classification			
Sarnia	38	33	29	24	19	17	15	15	15	13
Buffalo	30	26	20	15	12	10	Official Classification			
Fort Erie	30	26	23	19	15	13	11	11	12	10

TO MONTREAL

FROM	1	2	3	4	5	6	7	8	9	10
Detroit	58½	50½	39	27½	23½	19½	Official Classification			
Windsor (winter)	70	61	53	44	35	33	24	25	27	23
" (summer)	60	53	45	38	30	30	21	—	—	20
Port Huron	58½	50½	39	27½	23½	19½	Official Classification			
Sarnia (winter)	70	61	53	44	35	33	24	25	27	23
" (summer)	60	53	45	38	30	30	21	—	—	20
Buffalo	44	38	30½	21½	18½	15	Official Classification			
Fort Erie (winter)	60	53	45	38	30	28	21	22	24	20
" (summer)	56	49	42	35	28	28	20	—	—	19

On July 4, 1906, the Secretary of the Board, by direction, wrote the G.T.R. Freight Traffic Manager, as chairman of the advisory committee of the Canadian Freight Association, reciting the nature of the complaint with respect to the international rates, and concluding as follows: "The Board recognizes that the conditions of this traffic are affected by the existence of companies in the U.S. independent of those operating in Canada, and by the operation of the corresponding clause (the long and short haul) in the U.S. statute law, and that the harmonizing of interests in making the changes necessary to apply the rule to traffic originating in the U.S. destined for points in Canada is a work of difficulty, and it thinks the Canadian railway companies should be given an opportunity to lay a scheme before the Board for its consideration, after negotiating with companies operating in the U.S., and for that purpose the Board will defer further consideration of this complaint for a period of 90 days."

It was clear that no attempt at harmonizing the rates would be satisfactory under two classifications, namely, the "official" from Port Huron, Detroit and Buffalo, as in effect throughout the northern states east of Chicago and the Mississippi, and the Canadian classification from Sarnia, Detroit, and Fort Erie, as in effect throughout the Dominion; one or the other would have to be adopted; and rather than change the classification throughout the Dominion it was obvious that the U.S. companies might reasonably be asked to adopt the Canadian classification for international shipments coming into Canada, for only a small proportion of their entire traffic would be affected; and particularly as in the reverse direction the Canadian companies apply the official classification on international shipments from Canada to the U.S. The tariff bases also, and not the classifications alone, are different on the two sides of the frontier. The Canadian tariffs are built up on the 5th class; the 4th class being 25%; 3rd, 50%; 2nd, 75%; and the 1st class, 100% higher than the 5th. There appears to be no such established basis in Central Freight Association territory. From Detroit the present proportions are as follows, the figures given being per cent.:

	1	2	3	4	5	6	
To Toronto	260	210	130	60	30	—	per cent.
To Montreal	200	159	105	41	20	—	"

Officials of Canadian railway companies, representing the Canadian Freight Association, met those of the interested U.S. companies, representing the Central Freight Association of Chicago, at a number of conferences, with the result that the U.S. companies consented to adopt the Canadian classification and the Canadian tariff basis for their international traffic; and within the time allowed by the Board, the Canadian Freight Association submitted a scheme of rates which it hoped would be acceptable to all parties. This scheme comprised over 80 foolscap pages of printed tables.

An examination of the percentage tariff bases given above will show that if the rates from U.S. points were to be scaled up from 5th class as is done in Canada, a great reduction in the international joint rates would result. Thus, Detroit to Toronto instead of running from 5th, 13c., to 1st, 36c., as at present, would run from 13c. to 26c.; from Detroit to Montreal it would be from 23½c. 5th, to 47c. 1st, instead of from 23½ to 58½c. as now; and similarly with all points in the U.S. west to the Mississippi; and this would be an impossible adjustment from the standpoint of the U.S. railways. The alternative was to accept the present 1st class rates and scale down; and so far as Port Huron, Detroit and Buffalo are concerned this is what has finally been done. With the rates from the western states we need not be so much concerned, provided, the commodity rates on raw materials are not interfered with. That a re-arrangement of the rates from Port Huron, Detroit, and Buffalo, even on the current 1st class basis, would carry with it a corresponding re-arrangement from western points is evident from a comparison of the Canadian percentage scale with those in the U.S., the Canadian scale producing higher rates in the lower classes; so that in order to avoid infringement of their own interstate commerce law by having higher rates from Detroit, etc., the U.S. companies would have to go farther back and practically re-arrange their entire international tariffs. To Montreal the present and proposed rates from Detroit, scaling, as explained above, on the 1st class, and dropping the fractions, are as follows:

	1	2	3	4	5	6
Present	58½	50½	39	27½	23½	19½
Proposed	58	51	44	36	29	27

	7	8	9	10
Present	Official Classification			
Proposed	26	24	—	21

This was the Detroit-Montreal schedule suggested in the scheme submitted to the Board. To Toronto, however, the companies proposed, in addition to the advance in the lower classes resulting from scaling on the existing 1st class on the Canadian basis, an advance in the 1st class rate itself; thus:

	1	2	3	4	5	6	7	8	9	10
Present	36	31	23	16	13	10	Official Classific'n			
Proposed	42	37	32	26	21	19	18	17	—	15

This would practically have meant a double advance and pointed to an effort to keep up the Canadian rates from Windsor (and, of course, from intermediate points such as Chatham and London) even beyond the advanced basis which would naturally follow from the substitution of the Canadian classification and scaling for the official.

The companies' draft scheme of the proposed revision of rates was presented to the Board by representatives of the G.T.R., C.P.R., and Michigan Central Rd. companies at a hearing in Montreal on Nov. 8, 1906, and it was then arranged that the scheme should be examined by J. R. Marlow, Manager of the Manufacturers' Association's Transportation Department, and by the Chief Traffic Officer of the Board, and that later those two officers should arrange an informal meeting with the advisory committee of the companies for the purpose of comparing notes, and enabling the companies to complete their scheme should the basis have proved satisfactory. This meeting was held in Montreal Dec. 19, 1906, and the result was reported by me on Dec. 21, in report 2. To quote from the secretary's minutes of the meeting, attached to the file, "Mr. Marlow considered the basis as a whole unsatisfactory," and it was finally agreed that new trial tables should be prepared on the basis of 54 instead of 58c., 1st class, Detroit to Montreal, and 36 instead of 42c., Detroit to Toronto; and I explained to the railway people that I could not recommend any advance in the rates from the U.S. frontier points beyond what would follow from the Canadian scaling on the present 1st class rates.

As a result of this meeting a new set of tables was prepared by the companies, and on Jan. 18 last I attended a meeting in Montreal to have these gone into and explained to me, and on Jan. 24 they were officially submitted under cover of the G.T.R. Freight Traffic Manager's letter of that date. In that letter he stated that the committee had endeavored to evolve a plan which would conform to my recommendation that whatever scheme of adjustment was finally adopted should take care of the Toronto Board of Trade complaint, as well as that of the manufacturers. He also pointed out that the elaboration of the bases suggested at the Montreal conference Dec. 19, 1906, had proved the impossibility of their voluntary adoption by the companies. To quote from his letter; even assuming that only 10% of the total tonnage would be affected by the revision, "the results would be so disastrous, and as explained to you at our conference by the C.P.R. Fourth Vice-President and myself, and confirmed to you for the G.T.R., by its Second Vice-President and General Manager, neither the officers of the G.T. nor C.P. Railways feel that they can assume the responsibility for the loss of such a large amount of net revenue; hence cannot agree to make the reduction which would follow the adoption of your suggested figures. At the same time they fully recognize the authority of the Board's orders, but in that case, the Board, of course, assumes the responsibility of the results."

The tables submitted included four mileage scales, as follows:

Scale A, based on 38c., Windsor to Toronto; 56c. to Montreal, 1st class.

Scale B, based on 36c., Windsor to Toronto; 54c. to Montreal, 1st class.

Scale C, based on 36c., Windsor to Toronto; 52c. to Montreal, 1st class.

Scale D, based on 38c., Windsor to Toronto; 54c. to Montreal, 1st class.

Elaborate statements were submitted to show the estimated effect that the suggested reductions would have on the G.T.R. Co.'s revenues; thus: Assuming that only 10% of the company's tonnage would be affected, class 1, 5%; class 2, 5%; class 3, 20%; class 4, 20%; class 5, 50%, the company would annually lose under scale D $535,349.00; under scale C, $782,876.00. If 15% were affected, $879,270.00 under scale D; $1,229,289 under scale C. If 20% were affected, $1,223,189.00 under scale D; $1,695,700.00 under scale C. Assuming that the reduction on classes would be class 1, 2%; class 2, 3%; class 3, 15%; class 4, 20%; class 5, 60%, the annual loss would be: If 10% of the total tonnage were affected, $496,463.00 under scale D; $707,913.00 under scale C. If 15% were affected, $830,068.00 under scale D; $1,159,945.00 under scale C. If 20% affected, $1,154,672.00 under scale D; $1,599,972.00 under scale C. The companies estimated that the C.P.R. Co's loss would equal about two-thirds that of the G.T.R.

Works: TURCOT

Although it was conceded that these figures merely represented approximations (there had been no time for an audit) it was felt that in justice to the railway companies the Board could not ignore these statistics; but it was also manifest that the verification of the results by an expert investigation of the company's books would consume so much time that the Board's decision would have to be indefinitely postponed. It was, therefore, considered that progress should be reported, and a frank exposition placed before the transportation committees of the Manufacturers' Association and the Toronto Board of Trade, and this I did on March 18 and 19 last, under instructions from the Board. The committees appreciated the difficulties encountered and were indisposed to be unfair to the railway companies; they took a reasonable view of the situation, and rather than advise the accounting and its inevitable delays, they decided to accept tentatively any adjustment which the Board might decide upon, with the hope that it would recommend itself as a permanency.

Other tables were then drawn up by the companies, having for their object the satisfactory solution of the two cases combined, with a minimum loss to the companies. The principal difficulty was to evolve a mileage scheme which would be reasonably graded as to distances and rates, and which would, at the same time, produce a maximum rate of 36c. 1st class from Windsor to Toronto, and 58c. from Windsor to Montreal. Mileage scale K had been reached when I advised the companies' advisory committee that, in my opinion, the attempt to adjust all the rates—not the local rates west of Toronto alone, but the through rates from points west of Toronto to points east—on a strict mileage basis was impracticable; and I recommended to the committee that the mileage rates be confined to the local tariffs, and that the grouping system, which has always governed what may be regarded as the through rates from points west of Toronto to points east, should be continued, but modified; the said group rates not to exceed the mileage basis adopted for the local rates. This idea has been adopted, and alternative mileage scales L and M were next submitted. Scale L successfully gave the Buffalo 1st class rate of 30c., Fort Erie to Toronto, the Detroit 1st class rate of 36c. from Windsor to Toronto, and the Detroit 1st class rate of 58c. from Windsor to Montreal; but the mileage blocks were irregular and unsatisfactory. Scale M showed better mileage groupings, but gave a 38c. rate for the Windsor-Toronto distance; the companies suggesting that Toronto itself might be covered by a competitive tariff on the 36c. basis; in other words, the neighboring intermediate stations in the Toronto group would be held up to 38c. Further than this, many of the discrepancies between the Toronto and Hamilton tariffs which the Toronto Board of Trade had complained of (Hamilton having been given the Toronto rates to points north of Beeton and Allandale by the old Hamilton and North-Western Ry. Co.) would have been removed by advancing the Hamilton rates. As these defects seemed to me to foreshadow difficulties, I undertook myself the preparation of scale N (the last), which I do not intend to say is perfect—the necessity for keeping to the Detroit rates from Windsor to Toronto and Montreal making an ideal tariff impossible; but I do consider that it is an improvement in the mileage groupings; the grading being less objectionable than in scales L and M. It gives the proper rates from Windsor to Toronto and Montreal; the rate aimed at by the companies, namely 50c. 1st class, Windsor to North Bay; and reasonable mileage arbitraries to Sherbrooke, Quebec, and other points east and south of Montreal. One defect is that instead of giving the full Buffalo rate of 30c. from Fort Erie to Toronto, it gives 28c.; but this is unavoidable, and is on the safe side, being the lower. In the absence of the members of the advisory committee, I left a copy of this scale with the committee's rate clerk in Montreal, on June 19, 1906; but although they were again in the city by the end of the week, I have not heard from them.

In appendix A to this report, I have placed the three scales L, M, and N, side by side, showing in each the mileage groups and the 1st class rates; also the lengths of the various groups. Appendix B shows the rates from Toronto and Hamilton to about 40 of the principal points north and west of Toronto; appendix C the rates to the same points from London and Windsor; as they are at present in the column headed "now" and as they would be under scale L, M, or N. The figures designated by an asterisk indicate advances; under scale N there are none. The reductions in the 1st class rates under scale N run from 2 to 8c. per 100 lbs.; and, of course, the lower classes will be scaled as usual, 5th class being 50% of 1st class. Although I have limited the exhibits to Toronto, Hamilton, London, and Windsor, as sufficient for my purpose, it will be understood that the same scale will be used in revising the tariffs at the other common and distributing points; for example, Guelph, Galt, Brantford, St. Catharines, Chatham, etc. It is also understood that the scale will be departed from in those cases where the longer route has to make reductions to meet the shorter, without necessarily reducing the intermediate rates; in other words, mileage equalizations may be made by reducing the scale rates under the authority of sec. 315, sub-sec. 5, and sec. 329 of the Railway Act.

Coming now to the east bound group rates, the scheme proposes the continuation, with some changes necessitated by mileage, of the existing groups in the territory between the G.T.R. Toronto-Point Edward main line and Lake Erie; except that in consequence of the controlling rates from Buffalo, and the changed conditions along the Welland Canal, the entire section between the Canal and the Niagara River is to be incorporated in the lower Merritton-Grimsby group. From this territory the present and proposed 1st class rates to Montreal are as follows:

FROM	Present Winter	Present Summer	Proposed Winter & Sum'r
Windsor, Chatham, Newbury, Petrolia, Sarnia, etc	70	60	58 (Detroit rate)
Strathroy	68	60	56
Glencoe, Komoka, Park Hill,	68	68	56
London, St. Thomas, St. Mary's	66	55	54
Woodstock, Ingersoll, Tillsonburg, Stratford, Simcoe	64	56	52
Berlin, Galt, Paris, Brantford	60	50	50
Guelph	58	50	48
Welland	60	44	48
St. Catharines, Merritton, Grimsby	58	44	48
Hamilton, Dundas, Oakville, Port Credit, Brampton	54	42	46, with 42 summer from Hamilton.
Toronto	50	40	W. 44 S. 40

North of the G.T.R. Toronto-Point Edward main line the territory will be similarly grouped on the basis of the mileage scale, but with the rates for equal distances from the southern territory, as described above, as minima. The following are a few of the present and proposed 1st class rates to Montreal, viz.:

FROM	Present Winter	Present Summer	Proposed Winter & Sum'r
Goderich	68	60	56
Kincardine, Southampton	70	60	58
Owen Sound	70	60	56
Collingwood	68	60	56
Mount Forest, Harriston, Palmerston	68	60	52
Fergus, Elora	60	50	50
Orangeville	64	64	48
Barrie	64	50	52

It is necessary to bear in mind in making these comparisons that in the past summer rates (they apply only to points east of and including Peterboro and Trenton) have been conceded from only comparatively few of the shipping points west of Toronto—competitive points mostly; by far the greater number have never had lower rates in summer than in winter. It is understood that the companies will continue, if necessary, to meet the competition of the lake lines at actual competitive water points, even if lower than the proposed rates of the groups to which such points belong; but these competitive rates, which are authorized by the Railway Act, will probably be confined at such points as St. Catharines, Merritton, Welland, Windsor, etc., to commodity rates. The companies consider that they should be permitted to do the same at Toronto; but I am strongly in favor of continuing also the summer class rates from Toronto on the basis of 40c. 1st class, and have so advised the railway people; and I think the same principle should prevail at Hamilton—both these points being large shippers of general merchandise, while the other water points are not. I am strengthened in this opinion by the fact that although the winter rates from Toronto to Montreal will be reduced to the west bound basis, as contended for by the Board of Trade, the east bound summer rates will still be higher than the west bound by 4c. per 100 lbs. on 1st class freight—40c. east bound, as against 36c. west bound.

Some explanation is necessary with regard to the Buffalo rates which have not been made the maxima from the Canadian side, as the Detroit rates have from Windsor, and the Port Huron rates from Sarnia. The 1st class rate from Buffalo to Montreal is 44c., the suggested rate from Fort Erie and intermediate points in the same group is 48c.—4c. higher than Buffalo. To apply the Buffalo rates from Fort Erie and Suspension Bridge would, however, destroy the whole structure; for the Buffalo rate is the proposed winter rate from Toronto; consequently if the Buffalo rate were applied from Canadian frontier points, Hamilton and Toronto could not be higher—to preserve the scheme of grouping they would have to be lower. But if the winter rate Toronto to Montreal were made less than 44c., the west bound rates from Montreal would undoubtedly be reduced to the same level, and so further difficulties would be created. It seemed, therefore, to be reasonable, under the circumstances, to advance the Buffalo rates on paper to 48c. 1st class, to be followed by a competitive tariff on its present basis, namely 44c. The alternative is for the New York Central Rd. to advance its Buffalo-Montreal rates to the 48c. basis, and thus make the suggested competitive tariff unnecessary; but it is doubtful if the N.Y.C.R. will do this, as it would interfere seriously with its rates from such points as Dunkirk and Erie on the lake shore. Efforts were made to avoid this discrepancy at the Niagara frontier, but unsuccessfully. I do not consider the discrimination a serious one, especially as its removal would create more serious difficulties elsewhere. The territory between Toronto and Montreal has been regrouped so as to secure reasonable gradation of mileages and rates. The following are

BROWNHOIST LOCOMOTIVE CRANE

FUELING A LOCOMOTIVE TENDER

For which purpose they are in much demand.

They can of course be equipped with hook, and used for making lifts of any material.

examples of present and proposed 1st class rates from Windsor, viz.:

To	Present	Proposed
Whitby, Oshawa	44c.	40c.
Bowmanville, Newcastle	46c.	40c.
Port Hope, Cobourg	46c.	42c.
Trenton, Belleville	48c.	44c.
Napanee	54c.	46c.
Kingston	54c.	48c.
Brockville	60c.	50c.
Prescott	60c.	52c.
Cornwall	66c.	54c.
Montreal	70c.	58c.

From stations east of Toronto—from what is known as the Midland Division—to Montreal, etc., the straight mileage scale will apply. To points west and east of Hull, and east and south of Montreal, I propose the following groups and rate bases, in which the companies concur, namely:

To—	Proposed Bases	Present Bases
Aylmer	4c. over Hull	6c.
Gatineau to Buckingham, inclusive	6c. " "	6 to 10c.
East of Buckingham Jct., to and including St. Augustine and St. Eustache	8c. " Montreal	10c.
Ste. Therese Jct. to Ste. Rose, inclusive	4c. " "	10c.
St. Vincent de Paul to Joliette Jct., inclusive	4c. " "	6 to 10c.
Lanoraie to Three Rivers, including Berthier	8c. " "	10 to 12c.
East of Three Rivers to Quebec, inclusive	10c. " "	14c.
East and south of Montreal to and including St. Rosalie, St. John's, St. Isidore, Howick Jct., and Cecile Jct.	4c. " "	6 to 10c.
Doucet's Landing, Victoriaville, Dixville, and east of St. Rosalie; also south of points named in preceding group (C.P.R. group to correspond)	8c. " "	10 to 16c.
East of Victoriaville to Point Levis	10c. " "	14c.

I have endeavored to give a general outline of the underlying principles of the proposed scheme and of the reductions which it is expected to produce, but in making up the tariffs it may be found that some slight changes may have to be made here and there. My recommendations are as follows:

(a) That the special local class tariffs of the Grand Trunk, Canadian Pacific, Michigan Central, Pere Marquette, Wabash, Toronto, Hamilton and Buffalo, and Canadian Northern Ontario railway companies, east of Lake Huron and Sudbury, and south of the Ottawa River, be revised so as to place them all on the same mileage scale; and for this purpose the table of mileage rates lettered N, and shown in appendix A to this report, be adopted as the basis by the said companies, subject to such reductions from the said mileage table between common or competitive points, as may be considered necessary under the authority contained in sec. 315, sub-sec. 5, and sec. 329 of the Railway Act; the rates in all cases to be based on the shortest practicable mileage.

(b) That, subject to clause d, for the purpose of compiling through special winter and autumn class freight tariffs from points west of Toronto to points east thereof, the territory south of and including the G.T.R. main line, Toronto to Point Edward, via Stratford, be divided into groups on the principle now existing, but modified by the mileage table referred to in clause a, all points on the Welland Canal to be included in the Fort Erie-Stoney Creek group, and the rates to Montreal 1st class to be as outlined in the memorandum of the Toronto conference of May 23, 1907, as follows:

From—	
Windsor, Amherstburg, Courtright, Sarnia, Newbury, Alvinston, and Forest	58c
From intermediate points east to and including Hyde Park	56c.
London, St. Thomas, St. Mary's, Thamesford, Port Burwell, and Port Rowan	54c.
Woodstock, Ingersoll, Stratford, Waterford, and Port Dover	52c.
Berlin, Galt, Brantford	50c.
Guelph	48c.
Fort Erie, Suspension Bridge, Port Colborne, Welland, St. Catharines, Grimsby	48c.
Hamilton, Dundas, Oakville, and Georgetown	46c.
Toronto	44c.

(c) That the territory north of that covered by clause b and west of and including the G.T.R. line between Toronto and Barrie be similarly grouped and the rate table referred to in clause a applied, but with the rates for equal distances in the territory covered by clause b as minima.

(d) That from points competitive with the lake and river lines the companies may publish from and to such competitive points, during the season of navigation, such commodity rates as may be necessary to meet the competition of the water carriers, and shall also publish from Toronto and Hamilton to Ottawa and Montreal, and intermediate points, competitive class tariffs on the basis now existing, but not to exceed the mileage rates referred to in clause a.

(e) That the through rates from the aforesaid groups be reasonably graduated to points east of Toronto on the basis outlined for the G.T.R. main line at the Toronto conference of May 23, 1907; with corresponding scaling along the C.P.R. line.

(f) That the east bound rates from the territory east of Toronto and Orillia, and east of and including Depot Harbor, Parry Sound, and North Bay, be in accordance with the mileage table referred to in clause a, having regard to the adjoining group rates under clause c.

(g) That to points in Quebec, west and east of Hull, and east and south of Montreal, on the G.T.R. and C.P.R. lines, the through rates from the grouped territory as defined in clauses b and c, be arrived at in accordance with the scale shown on page 11 of this report.

(h) That the companies and their U.S. connections be permitted to substitute the Canadian Freight Classification for the official classification from Detroit and Port Huron and from points west thereof via the Detroit and St. Clair River crossings; and to scale the lower classes on the 1st class rates now current. The Canadian Classification to be substituted for the official from Central Freight Association points via the Niagara frontier. (Re Buffalo proper, see footnote).

(j) That the rates from Canadian points on the Detroit and St. Clair river frontier to all points east to the Atlantic and north to the Ottawa River, shall in no case exceed the rates from Detroit and Port Huron as fixed by clause h.

(k) That in the adjustment of the international rates referred to in clause h, the rates on raw materials from points in the U.S. to points in Canada shall not be advanced at the instance, direct or indirect, of the companies operating in Canada, by reason of the changes in the rate basis herein permitted or prescribed.

(l) That no change shall be made in the west bound rates from Montreal to the grouped territory west of and including Toronto and intermediate points, as a consequence of this order of the Board.

NOTE, referred to in clause h.—In clause b, with respect to the rates from Fort Erie, etc., I have made no reference to the proposed re-adjustment of the Buffalo rates to Montreal, which is referred to in my report. The raising of the Buffalo rates on paper to the 48c. basis, and the substitution of the present 44c. basis by competitive tariff, would simply be a means to an end; and having regard to the explanation I have given I am of the opinion that a departure from the long and short haul clause might reasonably be authorized by the Board in this case.

The Chief Traffic Officer submitted the following supplementary report on July 5:

The Board accorded an informal hearing to-day to the Advisory Committee of the Canadian Freight Association, who desired to express their objections to the proposed mileage scale N, which I left with the committee's rate clerk in Montreal on June 19. That scale, as explained in my report, was intended to overcome the proposed competitive tariff between Windsor and Toronto, and the advance in the Hamilton rates to points north of Beeton Jct., and Allandale. The working of this scale, however, obviously reduced the committee's scale M rates for mileages other than those affected by the Toronto and Hamilton rates, to the extent that the rates for distances over 100 miles would be so reduced as virtually to give a scale lower than D, which was the one the companies objected to at the outset, and which their statements submitted were intended to prove would result in so great a loss of revenue. Recognizing the force of these objections, I have arranged with the advisory committee to make the 36c. basis Windsor to Toronto the maximum to intermediate points, so as to avoid the necessity for a separate competitive tariff to Toronto proper; also to avoid any increases which scale M would make from Hamilton to points north of Beeton and Allandale, by repeating the present rates where these are lower than scale M. With these modifications I am prepared tentatively to recommend the adoption of the committee's scale M, and for clause a of the recommendations in my report to substitute the following, viz:

(a) That the special local class tariffs (known as "town tariffs") of the Grand Trunk, Canadian Pacific, Michigan Central,

Pere Marquette, Wabash, Toronto, Hamilton and Buffalo, and Canadian Northern Ontario Ry. companies, east of the Detroit and St. Clair rivers, Lake Huron, Georgian Bay, and North Bay, and south of the Ottawa River, be reduced so as to place them all on the same mileage scale; and that for this purpose the table of mileage rates lettered M, and shown in appendix A to this report, be adopted as the bases by the said companies, subject to such reductions from the said mileage table between common or competitive points as may be considered necessary under the authority contained in sec. 315, sub-sec. 5, and sec. 329 of the Railway Act, the rates in all cases to be based on the shortest workable mileage, subject also to Toronto rates on the basis of 36c. 1st class as the maxima from points on the Canadian side of the Detroit and St. Clair rivers to points intermediate to Toronto; and to the present rates as the maxima from Hamilton to points north of Beeton Jct., and Allandale.

I should add that the companies' scale M referred to above, was accepted by the Manager of the Transportation Department of the Canadian Manufacturers' Association as satisfactory to his Association; also, that in removing the discrimination between the distributing towns, which forms part of the complaint of the Toronto Board of Trade, general reductions have been made at such points as London, Brantford, Chatham, St. Catharines, etc., which were really not applied for.

The Nova Scotia Government has passed an Order-in-Council approving by-law 1, of the Canada Coal and Rd. Co., fixing a tariff of tolls to be charged for the conveyance of freight on the company's railway.

S. E. Dewey, Travelling Freight Agent, G.T.R., New York City, in remitting his annual subscription writes: "I appreciate your paper very much, as it keeps me fully conversant with Canadian railway events."

The C. P. R. passenger department has issued its initial folder descriptive of the points in the Muskoka country reached by its Toronto-Sudbury line, of which the section from the junction with the Toronto-Owen Sound line at Bolton, to Bala, was opened for passenger traffic June 22.

The Council of the Canadian Society of Civil Engineers has appointed M. J. Butler, Deputy Minister of Railways and Canals; F. P. Gutelius, Assistant Chief Engineer C.P.R.; H. Holgate, J. Kennedy, H. D. Lumsden, Chief Engineer National Transcontinental Ry.; W. McNab, Principal Assistant Engineer G.T.R.; D. McPherson, Assistant Chief Engineer National Transcontinental Ry., and G. Mountain, Chief Engineer, Board of Railway Commissioners, as a committee to consider problems in relation to railway maintenance and transportation.

August Birthdays.

Many happy returns of the day to—

H. H. Adams, Superintendent Canadian Division, Michigan Central Rd., St. Thomas, Ont., born at Detroit, Mich., Aug. 13, 1876.

W. E. Bishop, Manager Hamilton Steamboat Co., Hamilton, Ont., born at Brantford, Ont., Aug. 10, 1868.

J. F. Chapman, General Freight and Passenger Agent, Bay of Quinte Ry., Thousand Islands Ry., Oshawa Ry., and Deseronto Navigation Co., Deseronto, Ont., born at Frankford, Hastings Co., Ont., Aug. 25, 1863.

J. J. Connelly, Trainmaster G.T.R., Island Pond, Vt., born at Granby, Que., Aug. 13, 1873.

Barlow Cumberland, Vice-President Niagara Navigation Co., born at Portsmouth, Eng., Aug. 5, 1846.

Hon. W. Gibson, railway contractor, Beamsville, Ont., born at Peterhead, Scotland, Aug. 7, 1849.

G. H. Ham, head office staff C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. P. Hinton, Assistant General Passenger and Ticket Agent G.T.R., Montreal, born at Hintonburg, Ont., Aug. 30, 1871.

R. Kerr, Passenger Traffic Manager C.P.R., Montreal, born at Toronto, Aug., 1845.

J. D. McDonald, District Passenger Agent G.T.R., Toronto, born there Aug. 27, 1855.

T. McHattie, Master Mechanic, G.T.R., Montreal, born Dufftown, Banffshire, Scotland, Aug. 8, 1854.

J. E. Matthews, soliciting passenger agent C.P.R., Charlottetown, P.E.I., born at Albany, P.E.I., Aug. 17, 1869.

C. Montgomery, Assistant Master Mechanic Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug 29, 1860.

W. E. Mullens, General Manager Costa Rica Rd., and Northern Rd. of Costa Rica, San Jose, born at Stratford, Ont., Aug. 13, 1870.

W. S. Nevins, City Freight Agent, C.P.R. and Minneapolis, St. Paul and Sault Ste. Marie Ry., Buffalo, N.Y., born at Towanda, Pa., Aug. 13, 1850.

W. M. Porteous, Freight Agent C.P.R., St. Louis, Mo., born at Edinburgh, Scotland, Aug. 3, 1857.

J. F. Richardson, Superintendent Eastern Division C.P.R. Telegraphs, Montreal, born at Granby, Que., Aug. 23, 1861.

W. LeB. Ross, Local Treasurer G. T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

C. R. Scoles, General Manager Atlantic and Lake Superior Ry., New Carlisle, Que., born at Grantham, Lincoln, Eng., Aug. 27, 1856.

W. Stitt, General Passenger Agent C.P.R. Eastern Lines, Montreal, born in Kirkcudbrightshire, Scotland, Aug. 3, 1855.

W. F. Taylor, General Storekeeper I.C.R., Moncton, N.B., born at Hillsboro, N.B., Aug. 20, 1855.

W. N. Warburton, General Manager Chatham, Wallaceburg and Lake Erie Ry., Chatham, Ont., born there Aug. 24, 1851.

W. B. Way, Trainmaster C.P.R., White River, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

W. H. H. Willis, acting Canadian Freight Agent Pennsylvania Rd., Toronto, born at St. Michaels, Maryland, Aug. 22, 1872.

The Dominion Car and Foundry Co. is being proceeded against at Montreal, under the Alien Labor Act, for importing certain skilled employes from the U.S. The company states in defence that the manufacture of steel cars is an entirely new industry in Canada, and that it is impossible for it to obtain skilled help to do the work.

Regulations re Locomotives, Fireguards, Etc.

The Board of Railway Commissioners passed the following order, No. 3245, July 4: In pursuance of the powers conferred upon it by the Railway Act, secs. 30 and 269, and of all other powers possessed by the Board in that behalf, the Board orders as follows:

Every railway company subject to the legislative authority of the Parliament of Canada operating any railway by steam power shall cause every locomotive used on the railway, or portion of railway operated by it, to be fitted and kept fitted with netting mesh as hereinafter mentioned, viz., on every engine equipped with an extension smoke-box, the mesh to be not larger than 2½ x 2½ per inch of no. 10 Birmingham wire gauge, and to be placed in the smoke-box so as to extend completely over the aperture through which the smoke ascends—the openings of the mesh not to exceed ¼ in. and 1-64 in. to the sq. in. On every engine equipped with a diamond stack the mesh to be not more than 3 x 3 per inch of no. 10 Birmingham wire gauge, and to be placed across the top of the stack so as completely to cover the same, the openings of the said mesh not to exceed 3-16 in., and 1-64 in. to the sq. in.

Every such company operating any railway by steam power shall cause the openings at the back of the ashpans on every locomotive used on the railway, or portion of railway operated by it, to be covered, when practicable, with heavy sheet iron dampers, or if not practicable, with screen netting dampers 2½ x 2½ per in. of no. 10 Birmingham wire gauge—such dampers to be fastened either by a heavy spring or a split cotter and pins; overflow pipes from the injectors to be put into the front and back part of the ashpans and used during the months of April, May, June, July, August, Sept., and Oct.

Every such company shall provide inspectors at terminals where its locomotives are housed and repaired, and cause them, in addition to the duties to which they may be assigned by the officials of the railway companies in charge of such terminals, to examine, at least once in every week, the nettings, dead plates, ashpans, dampers, slides, and any other fire protective appliance or appliances used on any and all engines running into the said terminals. To keep a record of every such inspection in a book to be furnished by the company for the purpose, showing the number of the engines inspected, the date of such inspection, and the condition of the said fire protective arrangements and appliances.

No employe of any such railway company shall do, or in any way cause, damage to the netting on the engine smoke stack, or to the netting in the front end of such engine; open the back dampers of the engine while running ahead; or otherwise do or cause damage or injury to any of the protective appliances used on the said engines.

Every such company allowing or permitting the violation of, or in any other respect contravening or failing to obey the foregoing regulations, shall be subject to a penalty of $25 for every such offence. Every such employe contravening or failing to obey the said regulations, or any of them, shall be subject to a penalty of $15 for every such offence.

No such company shall burn lignite coal on its locomotives as fuel for transportation purposes until such times as the Board shall otherwise order or direct. Lignite coal includes all varieties of coal, the properties of which are intermediate between wood and coal of the older formations. Every such railway company burning, or permitting to be burned, lignite coal on its locomotives in contravention of the regulation herein in this behalf, shall be subject to a penalty of $25 for each offence.

Every such company operating a railway by steam power in the provinces of Saskatchewan and Alberta, shall establish and maintain along the line of railway where the same passes through prairie country in the said provinces on each side of such line, and of not less than 300 ft. in width from the center of the railway, a good and sufficient fireguard, to be made by plowing the land to the extent of not less than 16 ft. in width on the side of the fireguard farthest from the railway, and by burning or otherwise freeing from inflammable materials the spaces between such plowing and such line of railway.

Every such company shall, at all times, keep such fireguards free from weeds and other inflammable material and in such condition as not to allow fire to spread thereon and therefrom through coals, cinders, or sparks falling from or emitted by engines upon its railway, provided, that no such company shall be bound to enter upon the lands of another for any of the purposes aforesaid without the consent of the owner of the said lands, unless such company can lawfully do so without being liable to make compensation therefor; provided, also, that the said company shall not be required to establish and maintain such fireguards where the nature of the country renders it impossible to do so, or where the doing so would involve serious loss and damage to property, all such places and portions of line or lines to be specifically described and reported to the Board.

The fireguards herein provided for to be completed on or before Sept. 1, 1907, and after this year, on or before the 1st day of Aug. in each year; and, in other respects, these regulations shall take effect and be operative on and from Sept. 1, 1907. These regulations shall not have effect during the months of Dec., Jan., Feb., or Mar., in any year.

Every such company disobeying or failing to comply with the provisions of these regulations shall be liable to a penalty of $100 for every such disobedience or failure to comply with the provisions of these regulations respecting fireguards.

Edmonton to Fort McMurray.—J. K. Cornwall returned to Edmonton, Alta., July 16, from a two months' trip along the route of a projected railway from Edmonton to Fort McMurray. He says there are no engineering difficulties to contend with, and that timber for ties and gravel for ballasting can be had at convenient distances and at readily accessible points along the entire route. The route projected is from Edmonton to Athabasca Landing, thence to Lac la Biche, and then to Fort McMurray.

Ottawa Union Station.—Plans were filed with the Department of Railways by the G.T.R., July 13, for the proposed union station at Ottawa. The plans contemplate a terminal station on the site of the present Central Station. The new building will be oblong in shape and will be surmounted by a large dome. The estimated cost is $250,000 The hotel, which is to be erected in connection with the union station, will be placed to the north, abutting the east bank of the canal and Rideau st. The building is planned in semi-Gothic style and will overlook Major's Hill Park and Sapper's bridge. A single track under an archway of the hotel leads out to the C.P.R. running over the Interprovincial bridge. A full description of the station appeared in our April issue.

During the ten months ended June 30, shipments of grain over the C.P.R. and the Canadian Northern Ry., totalled 56,169 cars against 54,098 in the corresponding period 1905-06. Of this total 49,957 cars were wheat.

Railway Finance, Meetings, etc.

Alberta Ry. and Irrigation Co.—Gross earnings for year ended June 30, $190,975, against $192,958 for same period 1905-06.

Atlantic and Lake Superior Ry.—By an order of the Court of Exchequer, June 24, unsecured creditors of the Baie des Chaleurs Ry. were given 30 days in which to file their accounts against the company.

Another decision of the Court of Exchequer confirms the agreement of sale of the line to the Atlantic, Quebec and Western Ry. Co. This decision clears up the legal fight which has been going on for the past 10 years between the shareholders, bondholders and creditors of the A. and L.S. Ry., and enables the A.Q. and W. Ry. to obtain a clear title to the Baie des Chaleurs Ry., which is the only portion of the lines proposed to be amalgamated as the A. and L.S. Ry., which was actually operated as such. The other lines which it was proposed to amalgamate were the Great Eastern Ry., and the Ottawa Valley Ry., neither of which are being operated.

Columbia and Western Ry.—F. A. Heinze has been examined by commission in New York in the suit brought by the C.P.R. against him to accept partition of the 500,000 acres of the British Columbia land grant to the Columbia and Western Ry. By the terms of the subsidy act the lands are exempt from taxation until 1911, provided there is no change in title. The suit is being tried in the British Columbia courts.

Dominion Atlantic Ry.—Gross earnings for June, $94,400, against $87,075, for June, 1906, making for six months ended June 30, $457,100 against $433,693 for corresponding period of 1906.

Joliette and Brandon Ry.—Application is being made to the Board of Railway Commissioners for an order recommending the sanction of a lease of the company's line to the C.P.R. for 94 years, from Jan. 1, 1906.

Mabou and Gulf Ry.—The property and assets of the Mabou Coal Mining Co. were offered for sale at the court house, Halifax, July 16, under an order for foreclosure and sale obtained by the bondholders. The sale was postponed on the objection of shareholders that it had not been advertised according to the order of the court. The collieries are situated in Inverness county, and the property and assets include a shipping pier and a railway from the collieries to the pier, having a length of about 4.50 miles. Some construction was also done on a line from the shipping pier to a junction with the Inverness Ry. and Coal Co.'s line, and surveys were made for a line to Orangedale on the Intercolonial Ry.; and for another from Hawkesbury to Port Malcolm, N.S. The Dominion Parliament in 1903 voted subsidies in aid of certain of these lines.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—It was officially announced at Montreal July 14, that the directors had decided to increase the capital to $42,000,000, of which one-third will be preferred stock and the remainder common. The outstanding issues are $7,000,000 preferred and $14,000,000 common stock. It is proposed to issue at present $4,000,000 of the new stock to present shareholders at par. The C.P.R. holds $3,533,400 preferred stock, and $7,066,600 common stock of the present issue, and $3,993,000 of the company's 4½% bonds. The object of the increase is to enable the company to make improvements which the increase of its business demands.

Pere Marquette Rd.—The reorganization will involve the creation of a new corporation chartered under Indiana laws, which will issue its securities in exchange for the outstanding securities of the present Michigan corporation. In addition to the proposed

arrangement with preferred shareholders, common stockholders will be given the right to subscribe to an issue of five-year 6% debentures to the extent of 20% of their present holdings, receiving an amount of new common stock equal at par to their holdings in the old company, and, as a bonus, an amount of new common stock equal to the face value of the debentures subscribed for. The following figures, which the receiver and various committees believe to be conservative, have been furnished by W. Cotter, General Manager, showing results for the fiscal year ended June 30, 1907: Gross earnings (June estimated), $14,000,000; net earnings, $4,045,000; taxes, rentals, and interest, $3,900,000; surplus, $145,000. The estimated gross earnings for the fiscal year ended June 30, 1908, are $14,500,000. Allowing for operating expenses at the same rate as during the current fiscal year, it is estimated that this should leave a balance after the payment of fixed charges sufficient to meet a dividend of 4% on the new preferred stock. The differences between the Cincinnati, Hamilton & Dayton and the Pere Marquette will be settled by arbitration with the ending of the receivership. The future board of directors will include important Michigan interests and representatives of the preferred stockholders.—Railway Age.

Quebec and Lake St. John Ry.—Gross receipts for April, $47,664 against $42,474 for April, 1906, making for four months ended April 30, $164,626, against $133,077 for same period, 1906.

Quebec Bridge and Ry. Co.—A special meeting of shareholders has been called to be held at Quebec, Aug. 5, for the purpose of sanctioning the following resolution: "Resolved, that the Governor-in-Council in pursuance of Chap. 35 of 6-7 Edward VII, entitled An Act to authorize a loan to the Quebec Bridge and Ry. Co., be requested to advance by way of loan to the company, $6,678,200, and that the bonds of the company now issued, pledged or hypothecated with the Bank of Montreal for advances for the purposes of the company, be redeemed from pledge or hypothecation with part of said loan, and that arrangements be made with the Bank of Montreal to have the said bonds deposited with the Minister of Finance and Receiver-General, as security for the loan to the company by the Governor-in-Council of the said sum of $6,678,200."

Quebec, Montreal and Southern Ry.—The purchase of this line by the Delaware and Hudson Co. has been completed according to an announcement made July 19 by Vice-President Sims. The Q. M. and S. Ry. includes the old Quebec Southern Ry., and the South Shore Ry., which had previously absorbed the East Richelieu Valley Ry., the Montreal and Sorel Ry., and United Counties Ry.

Shuswap and Okanagan Ry.—Net earnings for three months ended Mar. 31, $7,749, against $6,130 for same period 1906. Net earnings for nine months ended Mar. 31, $23,800, against $20,609 for same period 1905-06.

Toronto, Hamilton and Buffalo Ry.—Estimated earnings for June, $78,329.77, against actual earnings of $65,296.64 for June, 1906.

Wellington, Grey and Bruce Ry.—The estimated earnings for the half-year ended June 30 applicable to meet interest on the bonds, will admit of the payment of £2 13s. 1d. per £100 bond, payable as to £1 6s. 3d. in final discharge of coupon no. 49, due Jan., 1895, and £1 6s. 10d. on account of coupon due July 1, 1895. A year ago £2 8s. 6d. per bond was paid.

White Pass and Yukon Ry.—Gross earnings for five months ended June 30, $486,342.

Master Mechanics' Convention.

In reviewing the proceedings at the 40th annual convention of the Association of American Master Mechanics held recently at Atlantic City, N.J., the Railroad Gazette says: "Other examples of improved practice appeared, which may be made the subject of investigation in the future, while still others are coming to be accepted as a standard of good if not of common usage. The superheater stands pre-eminent as an example of the latter. The story of the successful introduction of this device on the C.P.R. is of more than passing interest, resting on belief in the theoretical accuracy of a system followed by forcing it to a successful consummation through almost insuperable mechanical difficulties. It is a finer story of persistence in the pursuit of an object than appears in the simple statements of the paper that was presented. And, to those who read between the lines, it has a significance far beyond the mere statement of the fact that the superheater can be applied to a locomotive and be made to show an economy of operation when considered as a whole. It shows a tendency on the part of at least one railway to take the initiative in the introduction of an improvement. Up to the present time it must be admitted by even the most ardent admirer of American railways that the great majority of the improvements that have been made have been introduced as the result of the persistent efforts of the supply man, and not because the railway official has been convinced of the scientific soundness of an improvement, and then has proceeded to make it a working practical success on his own initiative. Perhaps this experience on the C.P.R. will mark the opening of a new era in this respect."

This question of superheating was brought up at the closing session, when H. H. Vaughan, Assistant to the Vice-President C.P.R., presented the report of the committee of which he was chairman. The results of detailed observations as to the efficiency of locomotives with and without superheating apparatus on the C.P.R., as well as experiments conducted by other roads, show that superheating saves 10 to 15% of coal in freight service, and 15 to 20% in passenger service. There is also a marked saving in the water consumption. He said: Since writing the report I have come to the conclusion, from some facts we have learned about overheating of return bends, that the neglect of dampers has a good deal to do with the stopping up on the pipes. I do not believe the cinders will attach themselves to a cool return bend, and they do attach themselves very readily to a very hot one. * * * There is a drop of pressure of from 5 to 7 lbs. under ordinary working conditions in the steam passing through the superheater. That makes the sight-feed lubricator a better lubricator on a superheater than it is on a saturated steam engine. As a matter of fact, on account of our always having 7 lbs. or more difference between the boiler and steam chest in the superheater than in the ordinary simple engine, the sight-feed lubricator worked just that much better instead of worse, and there is less trouble with it than there is on the ordinary engine. * * * Superheating came to this country with no experience except the European practice, and what does for European practice will not always do for us. That may be illustrated by a thing we have had driven on to us, and that is, that whatever superheater you use you have to use one that can be fixed up in an hour or two, and the engine put back into business. * * * Several roads in the U.S. have tried a superheater that has given trouble, and they have said, to a certain extent, that the superheater would not do, that it gave too much trouble. Now, if the superheater can be properly handled it will not give too much trouble. I believe inside of another year's experience we can say definitely and reliably that you can equip your engines with superheaters, and if you will give them attention—not expense but attention—you can run without any more trouble than you have with the ordinary simple engine. I would like to emphasize the difference between attention and expense. If we are going to give up a device that will save from 10 to 20% on coal just because we cannot get roundhouse machinists and foremen to pay attention to things, we are going on the wrong track. It is a question of attention with your superheaters, and not of expense. We have the records from passenger service of the number of failures, and of these failures a large number came from the use of bronze nuts. There are only three failures that are serious in 198,000 miles. That shows definitely that you do not have enough engine failures with superheaters to condemn them. Our repair costs show that we do not have enough additional cost of repairs to condemn them. The road records show that they do make a satisfactory saving in coal. Therefore, I think this superheating is a thing that is worthy of careful attention and should be taken up properly. We frequently hear it stated that coal costs only $1.50 or so, and it is hardly worth while to superheat, almost always forgetting that coal which costs $1.50 originally may not cost that where it is burned. It costs money to haul coal to the place where it is burned. There are many roads showing coal at $1.50 on the performance sheets that are hauling it 300 and 400 miles before it is used. You cannot haul it much under one-half a cent per ton mile, and that runs up fast, and there are few roads that cannot afford to spend $800 or $1,000 on a new engine to save that. We have been using superheated steam in an ordinary engine of the regular design, but we have used rather smaller piston valves than most people. We use an 11-in. piston valve for a 21-in. cylinder, and we have since enlarged that cylinder to 22½ in., and still use the 11-in. valve, with results entirely satisfactory. I feel, though, that we have gone about as far as is necessary in putting an 11-in. valve on a 22½-in. cylinder. Of course, that is a considerably smaller valve than you would use in general practice with saturated steam. Forced lubrication I do not believe to be necessary at all. I think the sight-feed lubricator, as I said, works better on a superheated engine than on a saturated engine.

The committee was continued for another year.

At the opening session of the convention J. F. Deems, New York Central Lines, delivered an address, the important point emphasized being the necessity of raising the standard of man in the profession of railway master mechanic. The report of the Secretary showed two members transferred to the honorary roll, 10 deaths, 12 resignations, and six dropped during the year. There were 66 new members added, and two reinstatements, making a total of 876 members, divided as follows: 819 active members; 67 associate members, and 40 honorary members. The balance in the hands of the Treasurer was $2,739.

The committee on mechanical stokers presented a progress report, being followed by reports of the committee on shrinkage allowance for tires and locomotive lubrication. The apprentice system of the New York Central Lines, originally intended as a subject for topical discussion, was dealt with in a paper by C. W. Cross and W. B. Russell, and gave rise to a general and interesting discussion.

In the discussion of the Proper Spacing of Boiler Tubes, with which the second session

N.J., U.S.A.

commenced, H. H. Vaughan voiced the consensus of opinion in saying that the spacing was largely dependent on the character of the water, that 5/8 bridges were satisfactory and permitted a large extent of heating surface on a line which had good water, while on a line where the water was bad, heating surface must be sacrificed by 13-16 bridges. In the latter case, however, he condemned processing. W. Forsyth lost a motion to have a series of tests made at Purdue on the subject. The committee was continued for another year.

Shop Costs Systems was then discussed after the reading of a paper by A. Lovell. H. H. Vaughan did not agree with the author on the necessity of the surcharge accounts, but commended the system in some respects, one of which concerned the matter of the investment and operating cost of machine tools. The other subjects dealt with were: Result of use of different valve gear; blanks for reporting work on engines undergoing repairs; development of motor cars for light passenger traffic; the abolition of the use of water glasses; the relative merits of outside and inside injector delivery pipes entering the backheads as in P.R.R. practice. F. M. Whyte explained that the committee on the proper width of track gauge on curves had no report to make as yet, because of the lack of adjustment thus far in conference with the Maintenance of Way Association.

At the closing session, in addition to the question of superheating, already referred to, the convention dealt with the following subjects:

The causes of leaks in boiler tubes; blanks for the history of locomotive movements. Following are the subjects to be taken up at the 1908 convention:

1. Laboratory test of various valve gears being used—Stephenson, Walschaert, Alfree-Hubbell and Young—at Purdue or Altoona, to determine their relative efficiency: R. D. Smith, F. H. Clark, W. F. M. Goss.

2. Best system of washing out and refilling locomotive boilers, including blow-off lines, flushing tanks, hot wells, and other similar methods and data pretaining to benefits in the way of reducing defects in firebox sheets, staybolts and tubes: H. T. Bentley, L. H. Turner, W. R. McKeen.

3. Organization of large railroad shop forces: H. H. Vaughan, Jas. Milliken, W. H. Lewis, T. S. Lloyd, A. E. Manchester.

4. A system of accounting for labor and material for railway repair shops: H. Emerson, T. H. Curtis, Le Grand Parish.

5. Handling scrap: H. D. Taylor, D. J. Redding, A. Forsyth.

6. The use of castellated nuts for machinery of locomotives with a view of having some standard dimensions established. Committee to be appointed by the Executive Committee.

Is it desirable to have uniform specifications and drawings of locomotives covering the most common types and sizes? To be presented by G. M. Basford.

Standard definition of the term "engine failure," with a list of locomotive characteristics and the numerous varied conditions of operation on which any definition would need to be predicated, in order to enable comparison to be made. To be presented by M. K. Barnum.

Design and strength of crank axles for balanced compound locomotives. To be presented by F. J. Cole.

The officers for the current year are: President, W. McIntosh, Central Rd. of New Jersey; First Vice-President, H. H. Vaughan, C.P.R.; Second Vice-President, F. H. Clark, Chicago, Burlington and Quincy Rd.; Third Vice-President, G. Wilden, Lehigh Valley Rd.; Members of Executive, C. A. Seley, Chicago, Rock Island and Pacific Rd.; F. M. Whyte, New York Central Lines; J. Howard, New York Central Lines; A. E. Mitchell, New York, New Haven and Hartford Rd.; C. E. Fuller, Chicago and Alton Rd.; T. H. Curtis, Louisville and Nashville Rd.

Railway Commissioners' Traffic Orders.

3148. May 22.—Granting leave to the St. John Ice Company, Ltd., to institute proceedings under sections 399, 401 or 402 of the Railway Act against the New Brunswick Southern Ry. Co., for suffering or permitting W. E. Scully to obtain transportation for goods at less than the required tolls then authorized and in force on the company's railway, and for transporting goods for Scully, and for permitting him to obtain transportation for such goods at less than the regular tolls then authorized and in force on the railway in violation of the provisions of the Railway Act.

GREAT NORTHERN RY. (U.S.) LINES IN CANADA.

3204. June 20.—Granting application of B., S. & H. B. Ry. Co., Bedlington & Nelson Ry. Co., Nelson & Fort Sheppard Ry. Co., Red Mountain Ry. Co., and Vancouver, Victoria and Eastern Ry. and Navigation Co., under sec. 331 of the Railway Act, for approval of their standard passenger tariff C.R.C. 240, showing a rate of 3c. per mile on the B., S. & H.B. Ry., and 4c. per mile on the Bedlington & Nelson, Nelson & Fort Sheppard, Red Mountain, and Vancouver, Victoria and Eastern railways, said tariff to become effective July 1, 1907.

3209. June 20.—Granting application of W. P. Kenney, Assistant Traffic Manager Great Northern Ry., under section 328 of the Railway Act, for authority to restore a commodity rate on sandstone, c.l., from Sandstone, Minn., or eastern terminals, to Winnipeg, Man., upon one day's notice.

ACCEPTANCE OF SHIPMENTS BY G.T.R.

3213. June 25.—In the matter of the complaint of Watson Jack & Co., Montreal, alleging that the G.T.R. Co. refuses to receive at Montreal shipments from the complainants or the Dominion Car and Foundry Co., delivered by the Shedden Forwarding Company. Upon reading what has been alleged in support of the complaint and on behalf of the G.T.R., the Board orders that the G.T.R. is directed to furnish cars and all proper facilities for receiving, loading, and transporting, when and as required, traffic offered by the complainants or the Dominion Car and Foundry Co., irrespective of the carters through whom the traffic is offered.

CANADIAN FREIGHT CLASSIFICATION 12.

3241. July 3.—Approving the Canadian Freight Association's supplement 9 to Canadian Freight Classification 12, subject to the following conditions: That the proposed changes with respect to automobiles and brushes be struck out; that electrical storage batteries and parts, crated, be classified the same as if boxed; and that center, or extension tables, knocked down, legs off, wrapped, be classified as if crated.

CANADIAN FREIGHT CLASSIFICATION 13.

3249. June 29.—Approving Canadian Freight Classification 13, as submitted by the Canadian Freight Association, with the following alterations:

1. That the proposed change in the minimum weight of mixed carload shipments between points east of Port Arthur, as provided for in rule 2, sec. b, be disallowed.

2. That rule 7 be amended by adding to sec. a the following provision: "These conditions are intended to cover risks necessarily incidental to transportation, but no such limitation, expressed or otherwise, shall relieve the carrier from liability for any loss or damage which may result from any negligence or omission of the company, its agents, or employes."

3. That the proposed omission of the reduced rating of stoves that are returned to the shipper after having served their purpose for the protection from frost of perishable shipments, as provided by rule 14, be disallowed.

4. That the proposed increase in the minimum weight of matches, in carloads, from 20,000 to 24,000 lbs. per car, as provided in the classification, be allowed, subject to the condition that the companies provide by commodity tariffs for the shipment of mixed carloads of matches and woodenware at the minimum weight of 20,000 lbs. per carload, as heretofore.

5. That rule 20 describing the minimum charge, or "smalls" rate, be amended to read as follows: "The minimum charge for any complete shipment of one or more classes between any two stations of one carrier will be 100 lbs. at 1st class rates, but not less than 35c."

It is further ordered that any person or company violating the provisions of sec. 400, sub-sec. 1, of the Railway Act, shall, in addition to the regular toll, be liable to pay to the company a further toll not exceeding 50 % of the regular charge.

That the said classification become effective not later than Sept. 1, 1907.

THROUGH FREIGHT RATES TO VICINITY OF MONTREAL

3251, July 2. In the matter of the complaint of Watson Jack & Co., of Montreal, alleging that in consequence of the action of the railway companies, importers are unable to obtain through bills of lading, as formerly, from European ports to rail points between Montreal and Dorval; and that the railway companies will receive goods from the steamship companies at Montreal, when destined to Blue Bonnets, on the G.T.R., only at "shipper's load and count." Upon reading what has been alleged on behalf of the complainants and the G.T.R., and upon the report of its Chief Traffic Officer, and the consent of the G.T.R, the Board orders that the rate on imported iron or steel, Montreal, in carloads, from the Montreal wharves to the company's siding, serving the Simplex Railway Appliance Co., be 2½c. per 100 lbs., including the service of checking the goods from the steamship to the car, the said rate, however, to be exclusive of cartage, handling, and wharfage.

The Intercolonial Ry. has received 39 hopper cars, 30,000 lbs. capacity, from Rhodes, Curry & Co., Amherst, N.S.

The schooner Laura D., in making Swift's wharf, Kingston, Ont., recently, collided with and sank the gasoline launch What Next, owned by J. B. Crouse, Clayton, N.Y.

The U.S. survey steamboat Visitor is making an inspection of the improvements being made at the various harbors, etc., along the Canadian shore of Lake Erie.

The Northern Navigation Co., we are advised, has been making enquiries as to the price of a vessel as an addition to its fleet, but nothing has been decided upon as to whether it will be purchased or not.

The Dominion Government Telegraph line on the north shore of the Gulf of St. Lawrence was reported broken in several places, July 16, and this, with the delay in manning the Marconi stations, has given cause for considerable complaint by the marine interests, as the Atlantic steamships have been coming through the Straits of Belle Isle, and could not get into communication with any station, or get reported at the other points.

Master Car Builders' Association.

The 41st annual convention of the Master Car Builders was held at Atlantic City, N.J., following that of the Master Mechanics'. W. E. Fowler, C.P.R., Montreal, the President, in the course of his inaugural address said: This Association need fear no criticism on its work of the past; its history is stamped indelibly on the traffic of this country, for its rules for interchange of cars and its standards of construction have made it possible to load a railway car in far-off Edmonton, in the Canadian Northwest, and to deliver it, with its load undisturbed and unbroken, at Mobile, New Orleans, or the City of Mexico. This continent is in full possession of these benefits, and it is hardly possible to realize to what extent progress and civilization would have been retarded if these benefits had been absent. But, our work is not done. Never before in the history of railroading has there been so much attention given by the Government, by the public, and by the thinkers of this continent to the railroads and their operation. The railways have become a vital part of national progress, and the most rapid, the most safe, the most convenient and the most economical is the kind of service that is required, and our part in the development of such service is so plain, so unmistakable, that we must more than ever give our best thoughts, our most earnest consideration to the problems thus set before us. It is a matter of congratulation that the relations of this Association and the Interstate Commerce Commission have always been of the most cordial character. Your committees have under consideration, this year, matters extremely important, made so very largely by the larger carrying capacity of the freight car and the increased power of the locomotive, intensified by the immense growth of the business of the country, and these have made demands upon the railways which have at times been impossible to satisfy. The report of the Arbitration Committee is indicative of these changed conditions, and embodies a number of suggested changes to the rules of interchange, which, coming from so conservative a body, indicates that operating conditions are changing very rapidly.

As stated in the report of the committee on "Cast Iron Wheels," the wheel-makers make an earnest request that the wheel recommended in this report as standard be generally accepted and adopted by the railways represented in this convention, and your President is pleased to heartily recommend that this be done. It was stated by the wheel-makers, in the joint committee meeting, that one of the most serious difficulties they had to contend with was the great variety in design of wheels they were asked to make, entailing the expenditure of a large amount of money in making so many patterns, and making it impossible for them to carry a stock of standard wheels, which, if carried by them, would enable them to fill orders promptly and satisfactorily. As the general use of a standard wheel would result in great economy, I think this would appeal to you.

The reports of the committee on Stresses to which Wheels for 100,000-pound Capacity Cars are Subjected, on Brakeshoe Tests, on M.C.B. Couplers, and on Airbrake Hose, indicate the necessity for a somewhat radical departure in the policy of this Association. The problems which confront us as master car builders are becoming daily more complicated. In early days car construction was crude, and the relation of various parts of cars to each other were such as could be readily understood by men without scientific education. The means of improvement, made use of from time to time, were then not necessarily complex, but it appears quite evident that the future will not yield great improvements except as they may be reached by painstaking, laborious and continuous study and investigation. While, therefore, this Association may well look with pride upon its work of the past in the development of better designs, in the arranging of standards, in the unification of practice, and in making possible the rapid interchange of cars, we must not forget that the problems of the future will necessarily be more complicated, will require greater care in investigation, and increasing assistance from science. The work performed by the committees of this Association has been productive of splendid results, and this Association will necessarily, for a long time to come, depend upon its individual members to serve upon such committees as faithfully as many have done in the past. There are, however, some committees, the work of which has fallen very largely, and in some cases, entirely upon its chairman, and your President deprecates this, believing that in a great many cases the members could, by the exercise of a little self-denial, have attended one or more meetings of the committee to which they belong, and have thus added very much to the value of the report made by the committee.

Some of the railways of this continent have, in times past, generously contributed not only the time of officials, but, in many cases, materials and equipment toward the advancement of committee research, and I believe that there will always be a spirit of this kind manifested by progressive railroads. But, the problems confronting the M.C.B. Association, which were in the past solved by the exercise of good judgment, by careful observation, or by averaging the experience of all interested parties, must in the future, in my opinion, be supplemented by the precise methods of science and materials which were unknown to our fathers, but which promise valuable assistance, must, in many cases, have their physical properties and chemical composition made known before they can be used in practical railroading. Considerations such as these suggest to me the desirability of the organization by the M.C.B. Association of an expert staff, which would be qualified by education and training to handle problems either mechanical, chemical or physical. Such an organization should have its home in a laboratory befitting the dignity of the great interests represented by this Association, such as would be possible at Purdue University, or a similar institution. Not only would the members of such a staff be able to give their undivided attention to the problems of this Association, but the sustained character of their efforts would make their work cumulative. Bringing to bear upon the problems with which they were confronted minds trained for scientific research and habituated to the study of railroad problems, the work of such investigators should be invaluable. Operated under the direction of the Executive Committee of the M.C.B. Association, and sustained by all the railways of the country, such a laboratory and staff, actually in co-operation with the working committees of this Association, would return many times its cost to the railways of the country. I am aware that this organization cannot be arranged for in a day, it must have a small and inconspicuous beginning; but, as that has been the history of the Association I do not think that should deter us from entering, at any early date, upon a plan which will permit an early organization of a small staff of this kind, upon a permanent basis, and I would recommend that this convention request its Executive Committee to consider and act upon this idea if it deems it advisable.

Your President is pleased to note, in the report of the committee on subjects for discussion at the convention of 1908, that the comprehensive problems of better and more economical service of freight cars seem to have been uppermost in the minds of the committee. Your President is of the opinion that the most important factor in this problem is the question of economical maintenance. Too little consideration has been given this matter in the past; freight car repair yards have been located in inconvenient, out-of-the-way places, repair tracks have been set too close together for convenience, the equipment for repairs, both animate and inanimate, has not been of the best, and the consequence has been that cars which should have been returned to service promptly, and with repairs properly made, have been held out of service longer than necessary and were not properly repaired. Never before has there been such pressing necessity for intelligent work, for proper tool equipment and for shelter for the men employed than at the present time. Railways all over this continent have, during the past year, been confronted with a demand for cars which it has been impossible to satisfy, and it would have been still impossible if all of the cars held out of service on account of being in bad order had been repaired promptly and put into service. The held out cars would, however, have helped very materially and would have stopped criticisms made by persons without any real understanding of the situation. It is a reflection on good judgment when vehicles are held out of service for which there is a paying demand at the time, and it would appear that with the attention now concentrated upon the railways that your best efforts are not desirable, but are absolutely necessary for a betterment of the conditions I have referred to.

The other subjects recommended by the committee for reports and topical discussions are all important, more particularly those relating to freight car pooling and the effect of hump yards on freight car damage. Some problems in steel car construction are also recommended by your committee for investigation during the coming year, both with regard to freight car and passenger car design, and as there is no greater foe to the steel car than rust, the subject of protective coatings must necessarily be of great interest, as it would appear that a coating which would be both elastic and tenacious would add very much to the value of our steel cars to-day. The ventilation and heating of passenger cars being a matter under consideration by state and national governments, should also receive the consideration it deserves, and I hope that the committee appointed will arrange to furnish the convention next year some valuable data on this subject.

Although your former presidents have called your attention to the same fact, I must again call your attention to the increasing varieties of M.C.B. couplers, which entails the tying up of an enormous sum in repair parts carried in stock by railway companies, and I believe that some restriction should be placed upon the introduction of new and untried couplers, and a limit be placed on the number of couplers for which railway companies must carry their parts, the listed couplers to be specified by name, railways being permitted in case of failure to scrap couplers not on the list, or to return them to the owners at the owner's expense. This plan may not meet with the approval of some members of this Association, but if this recommendation results in a restriction of some kind being placed on the flood of couplers, a much needed relief will be secured.

The reports of the proceedings of the recent convention of the Airbrake Association at Columbus, Ohio, are now in circulation, and I would strongly recommend their perusal

to the members of this Association. I may say, however, in passing, that the essence of their conclusions appears to me to be better maintenance, and I am strongly of the opinion that we must have better maintenance of airbrakes if we are to meet demands for increasing rapidity in operation of our freight trains.

Your Executive Committee of this year in making up committees adopted a rule which I would much commend—namely, that of appointing no member on more than one committee, endeavoring also to so arrange committees that all members could be assembled with the least loss of time, and I would suggest that this precedent be followed as closely as possible.

To other associations, such as the Master Painters' and Master Blacksmiths' Associations, we, as master car builders, are much indebted; the associations in their conventions, by discussing their specialties, relieve this Association of much detail work and add very much to the general efficiency of the mechanical department of our railways.

And the railway clubs—who can estimate the benefits received by this Association and by the railways of this country from the work of the railway clubs? Their periodical meetings, which are preparatory and supplementary to these conventions, permit more detail discussion of many subjects than is practicable on the floor of this convention, and the continued growth of these clubs is a strong evidence of the value placed upon club membership by our practical men and they deserve our heartiest support.

The report of the Secretary showed a total membership of 614, divided as follows: Active, 377; representative, 249; associate, 14; life members, 15. The number of cars represented in the Association is 2,254,397, against 2,047,327 in 1906. Thirty-three railways and owners of private cars have signified their desire to become subscribers to the rules of interchange. The expenses for the year were $13,072, and the balance in the treasury was $6,641. The annual dues for the ensuring year were fixed at $4 by the Executive Committee. E. A. Moseley, Secretary of the Interstate Commerce Commission, having addressed the convention, the various subjects for discussion were taken up. Revision of standards and recommended practice, was taken up at the first session; Triple valve tests; Brakeshoes; Rules for loading long materials; Cast iron wheels; Archbars for 80,000-lb. trucks; Airbrake hose specifications; Chemical tests of airbrake hose; Up-to-date car cleaning; Passenger car ventilation; Steel wheels for passenger cars; Means of increasing utilization of the freight car, were discussed at the second session. While at the closing session there were discussions on High speed brake and height of brake staff; Stresses to which wheel for 100,000-lbs. capacity cars are subjected; Coupler clearance; and Truck springs on journal boxes rather than under bolster.

The election of officers resulted as follows: President, S. N. Dow, Lake Shore and Michigan Southern Rd.; First Vice-President, R. F. McKenna, Delaware, Lackawanna and Western Rd.; Second Vice-President, R. W. Burnett, C.P.R., Montreal; Third Vice-President, T. M. Ramsdell, Chesapeake and Ohio Rd.; Treasurer, J. Kirby, Adrian, Mich.; Secretary, J. W. Taylor, Chicago, Ill. D. F. Crawford and F. H. Clarke were elected to the Executive Committee to fill vacancies.

The scholarships at McGill University offered by the C.P.R. to employes or sons of employes have been awarded as follows: L. Johnson, son of J. C. J. Johnson, conductor, St. John, N.B.; D. K. Linach, son of T. Linach, boilermaker, Angus shops, Montreal.

Railway Rolling Stock Notes.

The G.T.R. is reported to be in the market for 25 locomotives.

The Canadian Northern Quebec Ry. has received a new second-class passenger car, and a new express car.

The Temiskaming and Northern Ontario Ry. has received 30 out of an order for 100 flat cars, which are being built in Ontario.

The Canadian Northern Ry. has placed an order with the Locomotive and Machine Co. of Montreal for 20 consolidation locomotives.

The G.T.R. is building at its London, Ont., shops, a mail car similar to the two completed in 1906, and running between Toronto and North Bay.

The Ontario Portland Cement Co., Blue Lake, Ont., is reported to have placed orders for two large motor flat cars and for 10 ordinary flat cars.

The Canadian Locomotive Co., Kingston, Ont., has completed delivery of the 10-wheel locomotives it had on order for the Canadian Northern Ry., and is now delivering consolidation locomotives to the same company.

The 22 consolidation locomotives and the three switching locomotives which the Intercolonial Ry. has ordered from the Canadian Locomotive Co., Kingston, Ont., for delivery during 1908, are the same in every respect as the consolidations and switchers recently built by the company for the I.C.R., which have already been described.

The following rolling stock was added to the G.T.R. equipment between Mar. 24 and June 15: 30 Richmond compound consolidation freight engines, 1 ten-wheel passenger engine, 11 first-class cars, 785 box cars, 135 furniture cars, 2 refrigerator cars, 582 flat cars, 531 stock cars, 977 steel coal cars, 184 side-dump ballast cars, 4 cabooses, 2 snow plows.

The Intercolonial Ry. management expected to have the first of its steam motor cars in service by Aug. 1. The locomotive portion of three of the cars had been completed July 8, at the locomotive shops at Moncton, N.B., and the first of the passenger portion of the cars was received from Rhodes, Curry & Co., Amherst, N.S., a few days afterwards. The two parts were joined at the Moncton shops, and trial runs made to Shediac.

The Canadian Northern Ry. between May 15 and June 15 received the following rolling stock for distribution among its various lines: Five 10-wheel locomotives from the Canadian Locomotive Co., Kingston, Ont.; two switching locomotives from the American Locomotive Co.'s Pittsburg shops; 75 flat cars, four 2nd class cars from the Crossen Car Manufacturing Co., Cobourg, Ont.; 230 box cars, one mail and express car from Rhodes, Curry & Co., Amherst, N.S.; three sleeping cars from the United States.

The Intercolonial Ry. has placed orders for the following rolling stock: 10 consolidation locomotives with the Locomotive and Machine Co. of Montreal; 260 flat cars 80,000 lbs. capacity, 400 box cars 80,000 lbs. capacity, and 25 refrigerator cars 60,000 lbs. capacity, for delivery during Nov. and Dec. of the current year and Jan., 1908, with Rhodes, Curry & Co., Amherst, N.S. 4 vans, and 400 box cars 60,000 lbs. capacity from Crossen Car Manufacturing Co., Cobourg, Ont. Another order has been placed for 50 flat cars, 80,000 lbs. capacity.

During the three months ended June 30, the Locomotive and Machine Co. of Montreal delivered the following: April—10 Richmond compound consolidation locomotives and one steam shovel to the G.T.R.; four steam shovels to the C.P.R. May—One 6-wheel switching locomotive to the B.C. Mines, Timber and Trading Co.; six 10-wheel locomotives to the Canadian Northern Ry.; one 6-wheel switching locomotive to the Dominion Coal Co.; three steam shovels to the C.P.R. June—One consolidation locomotive to the Crow's Nest Pass Coal Co.; 10 consolidation locomotives and two steam shovels to the C.P.R.

Sir Thos. G. Shaughnessy stated during his recent visit to Winnipeg, that the C.P.R. was considering the introduction of electric engines in the Rocky Mountain district. The estimates, he said, from the tests so far made, show very little difference between electric and steam traction with the present volume of traffic. The electric locomotive was slightly more expensive, but with an increase of traffic the difference would be in favor of the electric locomotive. There was a sufficient water supply to generate all the power required in the event of its being decided to inaugurate a system of electric traction.

The G.T.R. has recently completed at its Point St. Charles, Montreal, shops five passenger cars for its Montreal-Chicago service. They are 75½ ft. long, and weigh 106,000 lbs.; they have standard wide vestibules with steel platforms, are mounted on six-wheel trucks, and are equipped with apparatus for steam heating, air-signals and high-speed, quick-action brakes. The seats are of the high swing-back pattern, upholstered in green plush; the centre of the floor is covered with Wilton carpet, and linoleum is used in the passages and smoking-room. The interior finish of the cars is mahogany, and the light is provided by seven four-burner Pintsch gas lamps.

The Canadian Northern Ry. has recently received from the American Locomotive Co.'s Pittsburg works, two heavy 6-wheel switching locomotives. In working order they have an estimated total weight of 145,000 lbs., all of which, of course, is on the driving wheels. The cylinders are 20 ins. in diameter, by 26 ins. stroke, and the driving-wheels are 50 ins. in diameter. With a boiler pressure of 200 lbs. these engines will develop a maximum tractive power of 35,360 lbs. The boiler is of the straight top type, the outside diameter of the first course being 72 ins. The fire-box, which is of the narrow type, is 96 ins. long by 32 ins. wide, which gives a grate area of 21.4 sq. ft. The boiler is fitted with 331 tubes 2 ins. in diameter, and 11 ft. long, having a heating surface of 1,892 sq. ft., which, with 156 sq. ft. of fire-box heating surface, gives a total heating surface of 2,048 sq. ft. The cylinders are equipped with balanced slide valves actuated by link gear. The frames are of heavy section with single rails and cast steel front bumper. Each of these engines is provided with an 8-wheel tender with a water capacity of 5,000 gals. The tender frame is of wood, and the wheels are 33 ins. in diameter, cast iron chilled plate. All the material used in the construction of the engines is to the American Locomotive Co.'s standard specifications. The special equipment includes Westinghouse American combined automatic air-brakes on all driving and tender wheels, operated by 9½ in. air pump; and pneumatic sanders on each sand box.

The C.P.R. has received 25 freight locomotives from the United States recently. The engines are of the consolidation type, and were built to the company's designs and specifications. The equipment includes the Vaughan-Horsey superheater, with 382 sq. ft. of superheating surface, which has been successfully applied to a large number of locomotives on this road. The tractive power is 37,400 lbs. The boilers are of the wagon top type, with three rings in the barrel. The superheater is accommodated in 24 steel tubes 5 ins. in diameter, and 3-16

The Company has General Stores at Winnipeg, Vancouver, Calgary, Edmonton, and other places where purchasers will find the best of goods at moderate prices.

Transportation by the Company's Steamers, brigades of boats and canoes throughout the Territories not traversed by railways.

Full information at the Company's Offices, Winnipeg, or 1 Lime St , London, E.C.

ins. thick. Each 5-in. tube contains 4 superheater pipes, which are of weldless steel, 1¼ ins. in diameter. These pipes extend to within 30 ins. of the back tube sheet, where they are connected in pairs by steel return bands. The headers in the smoke-box are of cast iron. The boiler is designed for a pressure of 200 lbs. per square inch, while the safety valves are set for 180 lbs. The longitudinal seams in the barrel are butt-jointed and welded at the ends. On the dome course the seam is placed on the top center line, and is welded throughout, with a liner ¾ in. thick placed inside. The distance between the centers of the 2 in. tubes is 2⅞ ins. at the fire-box end, and 2¾ ins. at the smoke-box end. Removable lagging panels are provided over the staybolts in the throat, sides and back head. The injectors are placed right and left, with a check valve on the under side of the boiler barrel. The cylinders are bushed with liners of hard cast iron, ½ in. thick. They are equipped with inside admission piston valves, 11 ins. in diameter, and working in bushings 1 in. in thickness. The valve motion is direct acting. The links are provided with double suspension hangers, thus reducing twisting strains. The rock shafts are of cast steel, and the rock shaft boxes are provided with hard bronze bushings. All parts of the motion work subject to wear are casehardened. The frames are of steel, with wrought iron double front rails. The cross braces include two steel castings, which are placed back of the first and third pairs of pedestals. The equalization system is broken between the second and third pairs of driving wheels. The tender frame is of steel, with 13 in. channels for the center sills and 10 in. channels for the side sills. The trucks are of the arch bar type, with triple elliptic springs. The tank has a water bottom, with sloping sides and floor in the fuel space. Following are the general dimensions, etc.:

CYLINDERS.—22½ x 28 in.; valves, balanced piston.
BOILER.—Diameter, 70⅜ in.; thickness of sheets, 11/16, ¾ and 13/16 in.; fuel, soft coal; staying, radial.
FIRE-BOX.—Material, steel; length, 96⅜ in.; width, 65¼ in.; depth, front, 77⅝ in.; depth, back, 62⅛ in.; thickness sheets, sides, ⅜ in.; thickness sheets, back, ⅜ in.; thickness sheets, crown, ⅜ in.; thickness sheets, tube, ½ in.;
WATER SPACE.—Front, 5 in.; sides, 4½ in.; back, 3½ in.
TUBES.—Diameter, 5 and 2 in.; material, 5 in. steel, 2 in. iron; thickness, 5, 7/16, 2 in., no. 11 W.G.; number, 5 in., 24; 2 in., 240; length, 14 ft. 2½ in.
HEATING SURFACE.—Fire-box, 165 sq. ft.; tubes, 2,217 sq. ft.; total, 2,382 sq. ft.; grate area, 43 sq. ft.
DRIVING WHEELS.—Diameter, outside, 58 in.; diameter, center, 51 in.; journals, main, 9½ x 12 in.; others, 9 x 12 in.
ENGINE TRUCK WHEELS.—Diameter, 31 in.; journals, 6 x 11 in.
WHEEL BASE.—Driving, 15 ft. 10 in.; rigid, 15 ft. 10 in.; total engine, 24 ft. 4½ in.; total engine and tender, 53 ft. 9½ in.
WEIGHT.—On driving wheels, 167,950 lbs.; on truck, front, 22,250 lbs.; total engine, 190,200 lbs.; total engine and tender about 310,000 lbs.
TENDER.—Wheels, number, 8; wheels, diameter, 33 in.; journals, 5½ x 10 in.; tank capacity, 6,000 gals.; fuel capacity, 10 tons; service, freight.

International Railroad Master Blacksmiths' Association.—The 15th annual convention will be held at Montreal, Aug. 20 to 22 inclusive. The list of subjects and the chairmen of the committees to report concerning them are as follows: Flue welding.—John Conners; Tools and formers for bulldozers and steam hammers.—G. M. Stewart; Piece work.—G. Bollinger; Discipline and classification of work.—S. Uren; Case-hardening methods, time taken and samples.—G. Masser; Best fuel for use in smith shop.—J. Jordan; Frame making, either steel or iron; also repairing frames.—G. Bollinger; Thermit welding.—G. Kelly; What can each member do to increase the usefulness of the association.—G. F. Hinkens.

The Ontario Railway and Municipal Board will during Aug. make a complete inspection of all the steam and electric railways under its jurisdiction.

C.P.R. Betterments, Construction, Etc.

Ottawa, Northern and Western Ry.—We are advised that the subsidy contract entered into between the Dominion Government and the O.N. and W. Ry., in respect to the construction of about nine miles of railway, between Aylmer and Hull, Que., is a matter that altogether deals with the line before it was taken over by the C.P.R. The mileage in question was constructed some years ago and the delay in getting the subsidy put through was owing to some difference between the Department of Railways and H. J. Beemer, relative to the non-deposit of plans. This has now been rectified and the contract was formally entered into so as to enable the subsidy to be paid over.

Belly River Bridge.—The bridge which the C.P.R. is erecting over the Belly River at Lethbridge, Alta., consists of 67 spans in all, comprising 44 spans of 67 ft. 3 in. each; 22 spans of 100 ft. each, and one span of 167 ft., totalling 5,327 ft. in all from fore to fore of masonry ballast walls. The superstructure of the bridge will be a steel trestle with a height for about two-thirds of its total length of approximately 290 to 325 ft. from ground line to base of rail. The tower of the viaduct will be supported on a concrete pedestal. Concrete piles are to be used in foundations excepting under piers in the river where wooden piles will be used. The steel work will weigh, approximately, 10,000 tons, and will be manufactured and erected by the Canadian Bridge Co., Walkerville, Ont. About 14,000 cubic yards of concrete, 1,400 concrete piles, and 1,200 lineal feet of wooden piles will be required in the substructure. Tenders for the substructure were received to July 15 by J. Callaghan, Division Engineer of Construction, Winnipeg.

Field-Hector Grade Reduction.—It is expected, we are advised, that work in connection with the reduction of the gradient between Field and Hector, B.C., will be started some time during the current season.

Bridge at Revelstoke.—We are advised that construction work will be started during the current season on the new bridge over the Columbia River at Revelstoke, B.C.

Kitsalano Beach Hotel.—The proposal to erect a tourist hotel at Kitsalano Beach, Vancouver, B.C., has been considered by the C.P.R., and it has been decided not to take any steps towards the erection of such a structure, at any rate for the present.

Nominingue to Maniwaki.—Construction is being gone on with on a line from Nominingue, the present terminus of the Northern Colonization Ry., and Maniwaki, the terminus of the old Ottawa and Gatineau Ry., now the Ottawa, Northern and Western Ry. It is expected that about one-half of the grading will be completed this season.

Eastern Cattle Market, Montreal.—By an arrangement with the Montreal City Council the C.P.R. has secured possession of the eastern cattle market in exchange for some land in St. Henri Ward. The company agrees to expend $180,000 as required to equip the yards for the trade.

Merrickville Trestle.—The Board of Railway Commissioners has authorized the C.P.R. to replace the present trestle over the Rideau near Merrickville, Ont., with a permanent steel bridge on stone abutments, with a subway which will have an opening of 24 ft.

Guelph and Goderich Ry.—The portion of this line from Milverton to Blyth, Ont., was opened for traffic July 8. The additional mileage into Goderich is expected to be opened in the fall.

The plans for the construction of a line from St. Mary's through Stratford and Listowel to a junction with the Guelph and Goderich Ry., are in preparation, according to a Stratford report.

Tillsonburg, Lake Erie and Pacific Ry.—A subsidy contract has been entered into between the T.L.E. and P. Ry. Co., which is leased to the C.P.R. for 999 years, for the construction of a line from Woodstock northerly to the G.T.R., or from Ingersoll to Stratford, Ont., 35 miles. The T.L.E. and P. Ry. is extending its line from Ingersoll to Embro, where it is to effect a junction with the St. Mary's and Western Ontario Ry., which line will be operated by the C.P.R. when completed.

Fort William-Winnipeg Second Track.—It is expected to have about 250 miles of the second track between Fort William, Ont., and Winnipeg, in operation by the end of the current season.

Winnipeg-Brandon Second Track.—A press report from Winnipeg states that it has been decided to construct a second track between that point and Brandon, 133 miles, and that the work between Winnipeg and Portage la Prairie will be put in hand at once. The matter was casually mentioned during the sittings of the Board of Railway Commissioners at Winnipeg, and W. Whyte, Second Vice-President, stated July 16, on his return from British Columbia, that the second track work would be gone on with, as the transportation needs of the country had sufficiently developed to warrant it.

Estevan Improvements.—Plans have been completed for a new station and a 21-stall roundhouse at Estevan, Sask.

Weyburn-Stoughton Line.—Tracklaying is in progress on the line between these two points, five miles being reported laid July 11. Work is being gone on with from the Stoughton end.

Strasburg, Northerly.—A press report states that a contract has been let to W. F. Braden for the construction of 40 miles of track from Strasburg, Sask., northerly. Strasburg is the present terminus of the Kirkella branch, and the 40 miles referred to would extend it to a junction with the line now under construction from Sheho to Saskatoon.

Bridge at Saskatoon.—By an arrangement between the town council of Saskatoon, Sask., and the company, the new bridge which is to be erected across the Saskatchewan River at this point, will provide for vehicle and foot traffic. The town will provide $20,000 towards the cost.

Saskatoon Station and Yard.—The plans for the station, freight shed and yards at Saskatoon, Sask., have been received and tenders have been invited. The plans call for a building of stone, brick and steel, about 160 ft. long, by 50 ft. deep from the platform. It will be two storeys high, and there will be a tower 40 ft. high at the west end. The platform will be about 500 ft. long. The accommodation for the public will be entirely on the ground floor, and the upstairs will be devoted to the operating and other officials. The freight sheds are east of Avenue A, and will be 325 ft. long. The yard accommodation at this point is not very extensive, owing to the fact that the company could not purchase all the land it desired. A section and a half of land has been bought at the east end of the town upon which the principal freight yard, the roundhouse, and shops will be located.

Crow's Nest Pass.—Work is in progress on what is practically a new line between Pincher Creek and Crow's Nest Pass, in order to secure a shorter line and a better gradient. The line originally constructed was abandoned about seven years ago for the present line. Residents along this line are asking that the line at present in use be not abandoned when the new one is completed.

Kootenay Central Ry.—W. Whyte, Second Vice-President, returned to Winnipeg, July 15, after having traversed the route of this projected line from Golden to Fort Steele, B.C., about 176 miles. Upon his report will depend when the construction of the line will be gone on with.

Fire Protection for Passenger Cars.

The Board of Railway Commissioners passed the following order, No. 3238, July 3: In pursuance of the powers conferred upon it by the Railway Act secs. 30, and 269, and of all other powers possessed by the Board in that behalf, the Board orders that every railway company subject to the legislative authority of the Parliament of Canada operating a railway by steam power, equip, within the times hereinafter mentioned, each of its passenger coaches with two fire extinguishers, to be placed one at each end of the car—at the end of the hallways, with framed and printed notices of instruction as to the proper method of using the same in case of fire, as follows: In cars to be constructed in the future for use on their said railways, before they are so used; in cars under construction or in shops undergoing repairs, within six months from the date of this order; in cars at present in use on their respective railways, within 18 months from the date of this order. The said fire extinguishers to be such as shall be approved by the Board, diagrams and descriptions of which shall be furnished by the railway companies respectively. That every railway company have the said fire extinguishers inspected and recharged once in every three months; cause records of such inspections to be kept by the foremen in charge of the passenger coaches at the different terminals where inspections are made; and see that copies of such records, certified by such foremen, are regularly forwarded to the Board. That every such railway company be liable to a penalty not exceeding $25 for every failure to comply with the foregoing regulations within the time for their coming into force, and thereafter.

Fort William Terminal Ry. and Bridge Co.—A meeting of shareholders has been called to be held at Fort William, Ont., Aug. 20, for the organization of the company, the election of directors, the making of contracts for the construction of the bridge and railway, and for the issue of stock, bonds and debentures in connection therewith. Dowler & Sinclair, Tillsonburg, Ont., are solicitors for the provisional directors.

Wages Disputes and Arbitration.—Under the act, known as the Lemieux Act, passed by the Dominion Parliament last session, the following arbitration proceedings are now in progress: Inverness Ry. and Coal Co., J. D. Mathieson, men's representative; others not appointed. G.T.R. and locomotive engineers, Wallace Nesbitt represents the railway; J. Cardill, C.P.R., Calgary, Alta., represents the men, and Professor Adam Shortt, Kingston, Ont., is third arbitrator. An arbitration is also in progress under another act between the Intercolonial Ry. and its freight handlers at Halifax, N.S., the arbitrators being: H. Holgate, C.E., Montreal, representing the railway; R. E. Finn, representing the men, and Professor W. Murray, McGill University, Montreal, third arbitrator.

D. A. Starr, General Manager Clyde Valley Electric Power Co., Glasgow, Scotland, writes: "I have found THE RAILWAY AND MARINE WORLD very interesting."

The plans for new engineering buildings at McGill University, Montreal, have been prepared. The new buildings will be larger than those destroyed by fire in April, and are estimated to cost $275,000.

TRANSPORTATION APPOINTMENTS.

Canadian Northern Ry.—In our June issue we stated that F. Shaw had been appointed commercial agent, and A. Macdonald contracting freight agent Canadian Northern Quebec Ry., at Montreal. It should have been stated that they had been appointed by the Canadian Northern Ry., and a correction to this effect was written for our July issue, but C.P.R. was erroneously printed instead of C.N.R.

M. H. McLeod, Chief Engineer, has been appointed General Manager and will for the present, at least, also act as Chief Engineer. Since the retirement of E. A. James, who was Manager, the duties of General Manager, a new position, have been temporarily performed by D. B. Hanna, Third Vice-President.

W. A. Brown, General Superintendent, has resigned and it is probable that the position will be abolished. It is said that a Superintendent of Transportation may be appointed, and that the position of Assistant to the General Manager may be created.

Canadian Pacific Ry.—C. E. De Rouville, heretofore chief clerk Chateau Frontenac, Quebec, has been appointed manager, succeeding J. H. Phillips, deceased.

W. H. Sleep, heretofore foreman blacksmith G.T.R., Point St. Charles, Que., has been appointed master blacksmith C.P.R. Angus shops, Montreal.

W. H. MacCallum, heretofore chief clerk to the General Passenger Agent C.P.R. Atlantic Steamships, has been appointed Travelling Passenger Agent for the C.P.R. Atlantic Steamship Lines. Office, Winnipeg, Man. This is a new position.

W. G. Preston has been appointed Chief Train Dispatcher, District 3, Central Division, C.P.R., at Brandon, Man., vice C. D. Fisher, resigned to enter the G. T. Pacific Ry. service.

F. H. Sproule has been appointed contracting freight agent at Saskatoon, Sask. He will look after business routed via Regina for points on Canadian Northern Ry. line, Saskatoon and south.

W. C. S. Newmarch, heretofore locomotive foreman, Calgary, Alta., is reported to have been appointed general foreman there.

J. O. Moe has been appointed District Passenger Agent at Nelson, B.C.

E. P. Allen, heretofore travelling passenger agent at Syracuse, N.Y., is reported to have been appointed city passenger and freight agent at Washington, D.C.

Delaware and Hudson Co.—C. E. McKim, heretofore General Inspector of Transportation Louisville and Nashville Rd., has been appointed Superintendent of Car Service, D. and H. Rd. Office, Albany, N.Y.

Grand Trunk Pacific Ry.—Geo. Gregory has been appointed Trainmaster and Locomotive Foreman at Fort William, Ont.

C. D. Fisher, heretofore Chief Train Dispatcher C.P.R., District 3, Central Division, Brandon, Man., has been appointed Trainmaster and Chief Dispatcher, G.T.P. Ry. Office, Portage la Prairie, Man.

Grand Trunk Ry.—W. Wainwright, heretofore General Assistant and Comptroller, has been appointed Fourth Vice-President. The position of General Assistant and Comptroller has been abolished. Office, Montreal.

Jos. Hobson, heretofore Chief Engineer, has been appointed Consulting Engineer. Office, Montreal.

H. G. Kelley, heretofore Chief Engineer, Iowa Central Ry., Minneapolis, Minn., has been appointed Chief Engineer G.T.R., succeeding Jos. Hobson, assigned to other duties. Office, Montreal.

W. McNab, heretofore Assistant Engineer, has been appointed Principal Assistant Engineer. Office, Montreal.

C. E. Dewey, heretofore Division Freight Agent, Toronto, has been appointed Assistant General Freight Agent. Office, Montreal.

R. W. Scott, heretofore agent at Portland, Me., has been appointed freight agent, Montreal terminals, succeeding J. M. Riddell, who goes to Portland, Me., as agent.

L. Macdonald, heretofore Division Freight Agent, Hamilton, Ont., has been appointed Division Freight Agent, Toronto.

R. W. Long, heretofore Division Freight Agent, Stratford, Ont., has been appointed Division Freight Agent, Hamilton, Ont.

G. T. Pettigrew, heretofore chief clerk, to Foreign Freight Agent, Montreal, has been appointed Division Freight Agent, Stratford, Ont.

J. A. Sheedy has been appointed Master of Bridges and Buildings, Western Division, with charge of all matters pertaining to the Bridge and Building Department. Office, Durand, Mich.

Great Northern Ry., U.S.—C. L. Mayne, heretofore Superintendent Terminals G.T.R., Montreal, has been appointed Division Superintendent G.N.R., succeeding J. E. Hood, resigned. Office, Spokane, Wash.

C. E. Leverick, heretofore Assistant Division Superintendent at Melrose, Minn., has been appointed Superintendent of the Minot Division, at Minot, N.D., succeeding G. S. Stewart, transferred to the Breckenridge, Minn., Division.

F. S. Elliott has been appointed Assistant Superintendent Kalispell Division, succeeding M. Sawyer, resigned. Office, Whitefish, Minot.

Intercolonial Ry.—Press reports state that the Dominion Government railways' management has decided to open an office and have an official representation in London, Eng. E. Tiffin, General Traffic Manager, went to England July 6, and it is said he is making the necessary arrangements.

Merchants' Dispatch Transportation Co.—Following are the officers for the current year: President, W. H. Newman; Vice-President and General Manager, W. B. Pollock; Treasurer, E. L. Rossiter; Secretary, D. W. Pardee; Auditor, R. A. White.

New Brunswick Southern Ry.—A press despatch from St. John, N.B., July 17, contains the following: J. Beckwith, engineer, has arrived from the head offices of the C.P.R., in Montreal, and is now practically rebuilding the N.B.S. Ry. He will take full control of the maintenance of way of the line, and will, it is understood, work under instructions from W. Downie, General Superintendent Atlantic Division, C.P.R. Thomas Sterns, trackmaster C.P.R., has been appointed trackmaster N.B.S. Ry.

New York Central Lines.—W. J. Wilgus, Vice-President in charge of maintenance and construction, has resigned, and will vacate his position Oct. 1.

Northern Pacific Ry.—J. C. Roth has been appointed Assistant Superintendent of Transportation. Office, Tacoma, Wash.

P. H. McCauley has been appointed Car Accountant. Office, St. Paul, Minn.

Pennsylvania Rd.—W. H. H. Willis, heretofore special agent Traffic Department at Pittsburg, Pa., has been appointed acting Canadian Freight Agent, vice E. D. MacKenzie, furloughed. Office, Traders Bank Building, Toronto.

Richelieu and Ontario Navigation Co.—J. V. O'Donahoe has been appointed Manager's Assistant. Office, Montreal.

Toronto, Hamilton and Buffalo Ry.—C. M. Sinclair has been appointed local freight agent at Hamilton, Ont., succeeding C. Donovan.

D. W. Pardee, Secretary New York Central and Hudson River Ry., has been elected also Secretary T.H. and B. Ry.

(Continued on page 593.)

TRANSPORTATION APPOINTMENTS.

(*Continued from page 589*)

Transcontinental Ry. Commission.—Gordon Grant, C.E., has been appointed Inspecting Engineer for the Commission, and not Inspector of Construction as previously reported. Headquarters, Ottawa.

Trunk Line Association.—C. C. McCain, heretofore in charge of the Lake Lines office at Buffalo, N.Y., has been appointed chairman of the Trunk Lines Association, with office at New York.

Wabash Rd.—C. H. Newton, heretofore freight agent at Toledo, Ohio, has been appointed General Agent Freight Department. Office, St. Louis, Mo.

Canadian Ticket Agents' Association.

A meeting of the Executive Committee was held in Toronto, July 11; present, W. McIlroy, President; W. Bunton, R. J. Craig, C. E. Horning, and E. de la Hooke, Secretary. After a conference with C. B. Foster, District Passenger Agent C.P.R., and J. D. McDonald, District Passenger Agent G.T.R., the following arrangements were decided on for the Winnipeg trip: Toronto will be left on a special train of sleeping cars, with a dining and a baggage car on Thursday, Oct. 10, at about 10 p.m. Should the number of passengers warrant it a sleeping car will leave Montreal on C.P.R. train 97 for North Bay, where it will be attached to the special from Toronto, which will then run from North Bay as the second section of train 97 to Port Arthur, arriving there Saturday, Oct. 12, about 10 a.m. The day will be spent in Port Arthur and Fort William, leaving the latter place about 6.30 p.m., and arriving in Winnipeg, Sunday, Oct. 13, about 9 a.m. The annual meeting will be held in Winnipeg on Monday, Oct. 14, and a dinner the same evening. The special train will leave Winnipeg for the return journey Wednesday, Oct. 16, about 4 p.m., arriving at North Bay, Friday, Oct. 18, about 6 a.m., and proceeding to Toronto.

Breakfast and supper will be served on the dining car a la carte, and dinner at $1. The Canadian Pacific and Canadian Northern Railways will supply individual transportation to members and their wives who may wish to go west of Winnipeg. The number availing themselves of this privilege and their destinations will regulate any special car arrangements which may be made. United States lines will grant individual transportation for the return trip via Chicago to such members of the Association and their wives as may be entitled to it under the Interstate Commerce Commission's ruling, which bars from free transportation any who are not wholly employed in railway work, with its adjuncts of express and telegraph service.

The Maritime Coal, Ry. and Power Co. has completed the installation of its plant to supply power from the collieries to the industries of Amherst, N.S. N. Curry, President of Rhodes, Curry & Co., Ltd., has been appointed a member of the local committee to arrange for the proper celebration of the starting of operations of the plant.

J. V. O'Donahoe, who has been appointed Manager's Assistant Richelieu and Ontario Navigation Co., was born at Brockville, Ont., May 27, 1881; entered transportation service with the Canada Atlantic Ry. and Canada Atlantic Transport Co., at Depot Harbor, Ont., since his record has been: Jan., 1899, to Jan., 1905, in same companies' audit department at Ottawa; Jan., 1905, to July, 1907, private secretary and chief clerk to General Manager, R. & O. N. Co.

TRADE AND SUPPLY NOTES.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Toronto Bolt and Forging Co. is erecting a $30,000 building at Swansea, Ont. It is to be 70 ft. by 100 ft. and will be of stone, iron and steel.

The Goold-Shapley and Muir Co., Ltd., are erecting a new warehouse, blacksmith and galvanizing shops at Brantford, Ont., at a cost of $27,000.

H. H. Hewitt, President Magnus Metal Co., has announced the following appointments: Managing Director, D. W. Ross; Manager Sales Department, W. H. Croft; General Manager, W. S. Bostwick.

The Safety Car Heating and Lighting Co., New York, has increased its capital stock from $5,000,000 to $10,000,000, the new stock to be issued to present holders as a 100% stock dividend. The regular dividend of the company for the past two years has been at the rate of 18%.

Robt. W. Hunt & Co., whose general offices are in Chicago, and who have a branch office in Montreal, have been given the inspection of the material for the Southern Pacific Co.'s rifled pipe line. This embraces 256 miles of 8 in. rifled pipe, and the machinery for 24 pumping stations, covering 46 duplicate pumps, and 72 boilers.

The Washburn Steel Castings and Coupler Co., Minneapolis, Minn., has issued an illustrated catalogue descriptive of its complete line of couplers for traction service. The descriptions and illustrations show couplers for all classes of service and special attention is drawn to those specially designed for electric car service, where connection is made with steam railways and there is an interchange of cars.

The McConway & Torley Co., manufacturers of the Janney, Kelso and Pitt couplers, and the Buhoup 3-stem equipment, Pittsburg, Pa., have issued the "Car Repairman's Guide." It is an unpretentious little book, but contains a lot of useful information for the car repairmen who make the repairs to the cars in the yard, and will be of great assistance in making requisitions for repair material. The introduction calls attention to the desirability of ordering repair parts from the manufacturer of the coupling device. There has been a great deal of discussion upon this question, and it is well known that a great deal of trouble in making repairs, and delay to cars while waiting for such repairs to be made, has been occasioned by the attempt to use repair parts in couplers that were not made by the manufacturers of the couplers, and that were either inferior in material or workmanship or made to incorrect patterns, and for this reason could not be readily applied in making the repairs, and when applied do not operate properly. The object of the pamphlet is to place definite information in the hands of the men so that proper repairs may be secured and these needless troubles obviated. A copy of the pamphlet will be sent to any railway man to whom it might be useful, and who will write for it.

The Department of Railways and Canals is receiving tenders to Aug 5, for works connected with the construction of section 5, Ontario-Rice Lake division, Trent Canal.

Orders for Establishment of Shelters.

The Board of Railway Commissioners has passed the following orders:

3226. June 26.—Upon the application of the Fort Erie, Ont., Board of Trade. That the G.T.R. Co. do forthwith erect and maintain at or near the former site of its Fort Erie station at Amigari, a small building or shelter for the accommodation of passengers getting on or off G.T.R. trains at this point, a plan of such building to be submitted to the Engineer of the Board for his approval. That the company stop a morning and an evening train in each direction (four trains in all) to accommodate passengers desiring to get on or off said trains at said point.

3253. June 25.—Upon the application of the municipal corporation of St. Omer parish. That the Atlantic and Lake Superior Ry. Co. be directed to erect on its line of railway between Nouvelle and Carleton stations in the parish of St. Omer, Que., a shelter, enclosed on all sides, with a door and an outside platform, the passenger compartment to be not less than 16 by 12 ft., floored and weatherproof, with seating accommodation for at least 10 persons; such shelter to be properly lighted by glazed windows, and at train time, after dark, by lamp; and sufficiently heated at train times during the winter, the building to be kept clean at all times, and the platform reasonably clear of snow. It is further ordered that the station be shown on the company's timetables and tariffs, and be placed in charge of a caretaker who shall reside near enough to perform properly the duties required by this order. The passenger fares to be those for the correct St. Omer mileage.

Meetings at Lake St. Joseph.

The Eastern Canadian Passenger Association held a meeting at Lake St. Joseph, Que., July 9, and enjoyed a luncheon at the hotel and a sail on the lake. The Quebec Transportation Club had prepared for entertaining the members in Quebec, but owing to lack of time they were unable to accept. A special vote of thanks was tendered A. Hardy, G.P.A. Quebec and Lake St. John Ry., for his hospitality and his untiring and successful efforts to make the visit a pleasant one.

On the following two days the Canadian Freight Association met at the same place and the members expressed themselves as greatly pleased with the hotel and its surroundings. A dance was held the first evening, and shortly after noon on the second day the party returned to Quebec by special train on the Q. and L. St. J. Ry., and were taken in hand by the Quebec Transportation Club. They were conveyed on the Quebec and Levis Ferry Co.'s steamboat Pilot for a sail round the harbor, running alongside the Italian cruiser Varese and then proceeded to Point Levis, whence they were taken on a special train to the Quebec bridge, on which they went out as far as possible on the portion under construction on the south side, the train being the first passenger one to go on the bridge. On returning to Point Levis the party again embarked on the Pilot, which went down the river past Indian Cove, where the wrecked S.S. Bavarian was viewed. The Pilot then crossed the river to afford the visitors a view of Montmorency Falls. On nearing the breakwater the Pilot was stopped alongside the C.P.R. steamship Empress of Ireland, and at 6 p.m. most of the party proceeded west by the R. and O.N. steamboat. The whole outing was a most enjoyable one. The Quebec Transportation Club had made excellent arrangements for entertaining the visitors and the party were much indebted to the members of the club in general and particularly to its Secretary-Treasurer, A. H. Davis, who had direct charge of the arrangements.

MAINLY ABOUT PEOPLE.

Sir Sandford Fleming, K.C.M.G., has retired from the directorate of the Hudson's Bay Co.

Sir H. Montague Allan, and Lady Allan, left Montreal, July 9, for a trip to Vancouver, B.C.

E. Carruthers, G.T.R. freight agent, Quebec, left for England July 20, on a holiday trip.

P. Larson, of Foley, Lock & Larson, railway contractors, died at Helena, Mont., July 12, aged 57.

R. J. Gould, G.T.R. yardmaster at the London, Ont., car shops, was run over and killed June 22.

Jos. Hobson, Consulting Engineer, G.T.R., sailed from Montreal, July 5, for a holiday trip to Europe.

M. E. McIntosh, C.P.R. train dispatcher, Kenora, Ont., was married there, July 3, to Miss E. H. Belyea.

W. G. Ross, Managing Director Montreal Street Ry., has been elected a director of the Dominion Iron and Steel Co.

H. R. MacCormick, C.P.R. station agent at Letellier, Man., was drowned while bathing in a pond at that place July 10.

Mrs. C. H. Hubbell, only daughter of G. N. Asselstine, C.P.R. ticket agent, Gananoque, Ont., died at Edmonton, Alta., June 29.

J. A. Armstrong, who resigned his position as C.P.R. roadmaster at Medicine Hat, Alta., recently, is now ranching in that district.

Miss B. M. Conmee, daughter of J. Conmee, M.P., railway contractor, Port Arthur, Ont., was married there, June 25, to M. G. Kelly.

B. Van Horne, of the Cuba Co., and Mrs. Van Horne, are spending the summer with Sir Wm. and Lady Van Horne at St. Andrews, N.B.

J. I. Cote, a sub-contractor on the Canadian Northern Ontario Ry., was drowned by the upsetting of a canoe at Key Harbor, Ont., July 11.

D. Mackenzie, eldest brother of W. Mackenzie, President Canadian Northern Ry., died at his home, Kirkfield, Ont., July 2, aged 74.

Mrs. H. D. Lumsden, wife of the Chief Engineer, National Transcontinental Ry. Commission, has gone to Orillia, Ont., for the summer.

Lord Mount Stephen has subscribed £10 towards the fund which is being raised to send a British rifle team to Canada and Australia.

G. C. Jones, General Manager Central Vermont Ry., Mrs. Jones, and two nieces, spent some days in July at Niagara-on-the-Lake, Ont.

A. C. Dennis, formerly Division Engineer Grand Trunk Pacific Ry., with headquarters at Winnipeg, is now with the Western Pacific Ry. at Amedee, Cal.

E. Tiffin, General Traffic Manager, Intercolonial Ry., and Mrs. Tiffin, sailed on the Allan Line S.S. Virginian, from Quebec, July 5, for Great Britain.

Mrs. Mann, wife of A. R. Mann, President Northern Construction Co., died of cancer at Preston Springs, Ont., July 2, and was buried at Acton, Ont.

Miss C. M. Cross, daughter of W. Cross, Assistant to the Second Vice-President, C.P.R., Winnipeg, was married there June 26, to R. L. Denison, Winnipeg.

Francis King, M.A., of Kingston, Ont., Secretary of the Dominion Marine Association, has been elected Secretary of the Anglican Diocese of Ontario.

D. A. McCaskill, who founded the firm of McCaskill, Dougal & Co., Montreal, from which he retired in 1902, died at Lausanne, Switzerland, July 14, aged 62.

A. D. MacTier, Assistant to the Vice-President, C.P.R., accompanied by Mrs. MacTier and family, sailed on the Empress of Britain, June 28, for a trip to Great Britain.

Barlow Cumberland, Vice-President Niagara Navigation Co., was elected President of the Ontario Historical Society, at the annual meeting held at Kingston, Ont., July 19.

A. N. Stonegrave, who died at Jamaica Plain, Mass., recently, was the only son of A. C. Stonegrave, Montreal, Canadian Freight and Passenger Agent, Central Vermont Ry.

Jno. Hunter, who died at Huntingdon, Que., June 23, aged 59, was actively engaged in the promotion of the Montreal and Champlain Junction Ry., now part of the G.T.R. system.

J. S. Dennis, C.E., Calgary, Alta., assistant to the Second Vice-President C.P.R., has been elected Second Vice-President of the Canadian Irrigation Association, organized at Calgary.

Mary, the 13-year-old daughter of G. Trites, Intercolonial Ry. section foreman, Painsec Junction, N.B., was killed by a flash of lightning while closing a window in the house, July 9.

Mrs. Wanklyn, wife of F. L. Wanklyn, Vice-President and Manager Dominion Coal Co., and daughter of R. B. Angus, Director C.P.R., died in Montreal July 14, following an operation for appendicitis.

G. C. Allen, General Baggage Agent Intercolonial Ry., has returned to Moncton, N.B., from Portland, Me., where he attended the American Association of General Baggage Agents' annual meeting.

S. W. Foster, President Orford Mountain Ry., was entertained at dinner at Mansonville, Que., by the residents, July 12, upon the opening of the recently completed extension of the line to that place.

Admiral Yamamoto of the Japanese navy, who returned to Japan via Canada, was the guest of Sir Thos. G. Shaughnessy, President C.P.R., at Montreal, July 16. He travelled to Vancouver, B.C., in a C.P.R. private car.

P. S. Archibald, C.E., Moncton, N.B., General Manager Elgin and Havelock Ry., is one of the provisional directors of the New Brunswick Publishing Co., which has just been incorporated, with offices at St. John, N.B.

W. H. Sleep was presented with a travelling case by the employes of the G.T.R. shops, Point St. Charles, Montreal, recently, on leaving to take up the position of master blacksmith at the C.P.R. Angus shops, Montreal.

Jas. Barnes, who has been sworn in Minister without portfolio in the New Brunswick Government, is President of the James Barnes Construction Co., and was the contractor for building the New Brunswick Coal and Ry. Co.'s line.

Thos. Tait, Chairman of the Railway Commission of Victoria, Australia, after an absence from Canada of four years has been visiting relatives in Montreal and Toronto, recently. He sails from Vancouver, B.C., for Melbourne, Aug. 16.

Jas. Hardwell, Chief Traffic Officer Board of Railway Commissioners, underwent a somewhat serious operation at the Protestant General Hospital, Ottawa, early in July. He has suffered a good deal of pain since, but at our last advice he was making progress towards recovery.

F. M. Hamel, City Engineer of Hull, Que., died at Ottawa, July 4. For a number of years he was engaged in the Dominion Government service in connection with the Intercolonial Ry., and in later years in connection with the harbors of the St. Lawrence and the Great Lakes.

B. C. Gesner, one of the Galena-Signal Oil Co.'s experts, who has his headquarters at Moncton, N.B., was admitted to the Royal Victoria Hospital, Montreal, on June 8, and early in July underwent an operation. It is hoped that he will be able to leave the hospital early in Aug.

W. R. Baker, assistant to the President, C.P.R., was presented with a silver and gold bowl by Prince Fushimi, on the latter leaving Vancouver for Japan. Mr. Baker was in charge of the Prince's party when it was travelling on the C.P.R. lines, as representative of the company.

Application has been made in the Surrogate Court at Ottawa for letters of administration of the estate of the late Hon. A. G. Blair. The inventory shows an estate of the gross value of $375,652, made up of personalty, $355,062; realty, $10,601; against which there are liabilities of $198,288.

Jas. MacBeth, Master Car Builder, New York Central Rd., died at Buffalo, N.Y., after an operation, July 6. He was apprenticed in the shops of the old Great Western Ry., Hamilton, Ont., in 1855, and left that company's service in 1864 to become foreman of the N.Y.C. shops at Syracuse, N.Y.

J. M. Graham, Vice-President of the Erie Rd., who has been given the honorary degree of Doctor of Engineering by the Kentucky State College, is a former resident of Winnipeg. During his residence there (1888-1890) he was General Manager and Chief Engineer Northern Pacific and Manitoba Ry.

J. H. Thompson, the G.T.R. conductor who was sentenced to three years' imprisonment for a violation of the railway rules, resulting in the wrecking of his train, has been granted a pardon, and was released from the penitentiary, Kingston, Ont., July 13, after having served one month of his sentence.

Sir H. Montague Allan, H. A. Allan, C. M. Hays, C. R. Hosmer, Montreal; T. Long, Toronto, and J. B. Allan, Boston, Mass., have been elected directors of the Merchants' Bank of Canada. J. B. Allan, who is a brother of Sir H. M. Allan (re-elected President) is a new director, taking the place of the late J. P. Dawes, of Montreal.

E. D. MacKenzie, who was Canadian Freight Agent of the Pennsylvania Rd. in Toronto, from June 1, 1901, was presented with a loving cup by the transportation men with whom he was associated, June 28, on the occasion of his removal to Oil City, Pa. M. H. Brown, General Freight Agent, C.P.R., presided and the presentation was made by D. D'E. Cooper, Canadian Freight Agent, Lehigh Valley Rd. Mr. MacKenzie is now proprietor of the Arlington Hotel, Oil City, Pa.

R. W. Bishop, resident engineer, C.P.R., Ottawa, Ont., was born at Owen Sound, Ont., March 18, 1884, graduated from Royal Military College, Kingston, Ont., June 24, 1903. Entered C.P.R. service July 8, 1903, as rodman. Served as rodman on location, construction and maintenance of way to Aug., 1904. as transitman and Assistant Resident Engineer, Sept. 1, 1904, until Aug. 31, 1906, at Ottawa. Appointed Resident Engineer at Ottawa for district 4, Eastern Division, Sept. 1, 1906.

D. Pottinger, General Manager Canadian Government railways was married at Moncton, N.B., July 17, to Mrs. M. L. Reed. In connection with Mr. Pottinger's marriage the officials and employes of the road had arranged to present a testimonial to him as a token of the esteem of the whole service. Subscriptions were to have been entirely voluntary and the testimonial promised to be a very valuable one. But the proposition came to Mr. Pottinger's knowledge, and he intimated that though he appreciated very highly the feeling prompting the presentation, he felt

that in his position it would not be right to accept it, and he desired that the proposition be dropped.

H. R. Charlton, whose portrait appears on the first page of this issue, was born Feb. 6, 1866, and after some three years' newspaper work at St. John's, Que., was engaged on railway survey work in 1883 and 1884 on the Waterloo and Magog Ry.; he was engaged in commercial pursuits in St. John's, Que., until 1887, when from Feb. to June he was engaged with the C.P.R. travelling exhibition car, and after four years' newspaper work was given charge of the C.P.R. advertising department in April, 1891, remaining there until April, 1896, when he again went into private employ. In Jan., 1898, he was appointed to his present position as advertising agent of the G.T.R.

O. F. French, who has been appointed Chief Engineer, Railways, Telephone and Telegraph Department, Manitoba Government, Winnipeg, is a native of Ohio, and is the son of a Canadian, born in the Eastern Townships of Quebec. After completing his course as an electrical engineer in 1898, he entered private employ in Cleveland and was engaged in the construction of telephone lines in Ohio, Eastern Indiana and Michigan; in 1890 he was appointed Superintendent of Equipment and Assistant General Manager of the Federal Telephone Co., and from 1903 to July, 1906, he was General Manager of the Cuyahoga Telephone Co., Ohio. Latterly he has been engaged with a construction company in the U.S.

W. H. H. Willis, who has been appointed acting Canadian Freight Agent, Pennsylvania Rd., at Toronto, was born at St. Michaels, Talbot County, Maryland, Aug. 22, 1872. Entered Pennsylvania Rd. service, transportation department, Bolton freight station, Baltimore, Md., Nov. 1, 1894; transferred to district freight solicitor's office, Washington, D.C., June 1, 1895; transferred to general freight department, Philadelphia Pa., May 8, 1898; appointed freight solicitor Pennsylvania Rd. and Star Union Line, Philadelphia, Dec. 1, 1901; appointed agent Pennsylvania Rd., Anchor Line, Baltimore, Md., Feb. 1, 1903; appointed special agent freight department, Pittsburg, Pa., Feb. 15, 1905; appointed acting Canadian Freight Agent, Toronto, July 1, 1907; entire service with Pennsylvania Rd.

W. Wainwright, who has been appointed Fourth Vice-President G.T.R., was born in Manchester, Eng., April 30, 1840, and entered railway service Jan., 1858, with the Manchester, Sheffield and Lincoln Ry. (now the Great Central Ry.), Manchester, serving successively as junior clerk Chief Accountant's office, senior clerk in same office, and secretary to Assistant General Manager and General Manager. In 1862 he joined the staff of the G.T.R., serving one year as senior clerk in Accountant's office; three years as Managing Director's Secretary; six years as senior clerk to Managing Director and in charge of the car mileage department; eight years and five months General Passenger Agent; May, 1881, to Jan., 1891, Assistant Manager; Jan., 1891, to May, 1896, Assistant General Manager; April, 1883, to Sept., 1895, also General Manager North Shore Ry.; May, 1896, to date of present appointment, General Assistant; Dec., 1900, to date, also Comptroller.

H. G. Kelley, who has been appointed Chief Engineer G.T.R., was born in Philadelphia, Pa., Jan. 12, 1858, and entered railway service 1881, since which he has been consecutively: 1881 to 1884, Assistant Engineer on location, construction and bridge construction Northern Pacific Rd., Western and Pacific Divisions; 1884 to 1887, engaged in mining; 1887 to Jan., 1890, Resident Engineer and Superintendent of Bridges and Buildings, St. Louis Southwestern Ry. System, including the St. Louis Southwestern Ry. of Texas; Jan., 1890, to Mar., 1898, Chief Engineer same road; Mar., 1898, to date of present appointment, Chief Engineer Minneapolis and St. Louis Rd.; July, 1900, to date of present appointment, also Chief Engineer Iowa Central Rd.; Mar., 1898, to Mar., 1899, also Consulting Engineer St. Louis Southwestern Rd. He is a member of the Institute of Civil Engineers of Great Britain, and of the American Society of Civil Engineers, and has served for two terms as President of the American Railway Engineering and Maintenance of Way Association.

Joseph Hobson, who has been appointed Consulting Engineer G.T.R., was born at Guelph, Ont., 1834, and entered railway service in 1858, since which he has been consecutively to June, 1860, assistant engineer G.T.R. construction west of Toronto, and subsequently assistant engineer on various lines in Nova Scotia, Ontario, and Michigan; June, 1869, to April, 1870, engineer construction Wellington, Grey and Bruce Ry.; April, 1870, to Nov., 1873, resident engineer International Bridge, Buffalo, N.Y.; Nov., 1873, to June, 1875, chief assistant engineer Great Western Ry.; June, 1875, to Feb., 1896, Chief Engineer same road; (during this period the G.W.R. was absorbed by the G.T.R.); Feb., 1896, to date of present appointment, Chief Engineer G.T.R. System. He was the Chief Engineer in charge of the construction of the St. Clair Tunnel between Sarnia, Ont., and Port Huron, Mich.; is a member of the Institute of Civil Engineers, London, Eng.; of the American Society of Civil Engineers, of the Canadian Society of Civil Engineers, and is an Ontario and Dominion Land Surveyor.

Orders by the Railway Commissioners.

The following orders have been issued by the Railway Commissioners:

3190. June 11.—Extending time for approval of tariffs of tolls of express companies to Nov. 1, 1907.

3191 to 3193. June 14.—Bell Telephone Co.'s crossings over various railways.

3194. June 18.—Approving location of Grand Trunk Pacific Ry. mileage 52.998 to 83, Alberta.

3195. June 6.—Approving reconstruction of Port Hope viaduct, G.T.R.

3196. June 18.—Authorizing C.P.R. to construct spur to Canada West Coal and Coke Co.'s premises, Taber, Alta.

3197. June 18.—Authorizing C.P.R. to construct spur to King lumber mills, Yahk, B.C.

3198. June 18.—Authorizing C.P.R. to construct spur to Dominion Bridge Co.'s premises, Toronto.

3199. June 18.—Authorizing C.P.R. to construct spur to Kimberley Milling and Manufacturing Co.'s premises, East Kootenay, B.C.

3200. June 18.—Approving location of C.P.R. Bulyea branch.

3201. June 14.—Ordering G.T.R. to furnish by Oct. 1, plans and profiles of all highway crossings by its railway in each city, town and village in Canada, together with particulars of the nature of the crossings and the nature of the protection, if any, afforded at level crossings.

3202. June 19.—Authorizing C.P.R. to construct additional spur from the spur already constructed to McCulloch & Herriott's mill, Souris, Man.

3203. June 14.—Bell Telephone Co.'s crossing over G.T.R. near Glassford.

3204. See page 581.

3205. June 20.—Authorizing Brandon, Saskatchewan and Hudson's Bay Ry. Co. to appoint W. P. Kenny, St. Paul, Assistant Traffic Manager, to prepare and issue tariff of tolls, etc.

3206. June 20.—Approving revised location of Vancouver, Victoria and Eastern Ry. between Hedley, B.C., and lot 2680.

3207. June 19.—Authorizing Grand Trunk Pacific Ry. to cross Canadian Northern Ry. in parish lot 120, Portage la Prairie, Man.

3208. June 20.—Bell Telephone Co.'s crossing over C.P.R. at George St., Peterboro, Ont.

3209. See page 581.

3209a. to 3215a. June 20 and 25.—Bell Telephone Co.'s crossings over various railways.

3216. May 22.—Authorizing C.P.R. to cross by overhead bridge the James Bay Ry. spur in Parry Sound, Ont.

3216a. June 25.—Bell Telephone Co.'s crossing over G.T.R. near Carp, Ont.

3217. June 19.—Ordering G.T.R. to keep day and night watchmen at Kent and Lindsay St. crossings, Lindsay, Ont.

3217a, 3218a. June 25.—Bell Telephone Co.'s crossings over various railways.

3218. May 22.—Ordering Michigan Central Ry. Co. to construct and maintain its portion of level highway crossing from its rails to the G.T.R. rails, Bertie tp., Ont.

3219, 3220. June 25.—Bell Telephone Co.'s crossings over various railways.

3221. June 21.—Authorizing Grand Trunk Pacific Telegraph Co. to erect its wires across the C.P.R. Brookdale branch at G.T.P. mile post 62.75.

3222. June 27.—Authorizing G.T.R. to construct and operate a service track between Queen St. and Carlaw Ave., Toronto.

3223. June 24.—Ordering G.T.R. to raise overhead bridge at Hyde Park, Ont. to the statutory height of 22½ ft.

3224. June 27.—Authorizing Walkerton and Lucknow Ry. to construct its railway across certain streets in Walkerton, Ont.

3225. June 27.—Approving location of Central Ontario Ry. station at Bird's Creek, Ont.

3226. June 26.—Ordering G.T.R. to reopen and maintain its Fort Erie station at Amigari, Ont.

3227. June 24.—Authorizing C.P.R. to open for carriage or traffic portion of Sudbury-Kleinburg Branch, from Craighurst to Bala, Ont.

3228. May 20.—Bell Telephone Co.'s crossing over C.P.R. at siding leading to Ogilvie's flour mill, Winnipeg, Man.

3229. June 21.—Authorizing town of Berlin, Ont., to lay a water main under G.T.R. tracks at Wilmot St.

3230. May 23.—Authorizing village of Beaverton, Ont., to construct King St. and Victoria St. across the G.T.R. Lake Simcoe spur at Beaverton, Ont.

3231. June 27.—Authorizing Toronto, Hamilton and Buffalo Ry. to construct a branch line in Hamilton to Canadian Westinghouse Manufacturing Co.'s premises.

3232. June 27.—Amending order of railway committee re providing of gates and watchmen at Bay St. crossing, Toronto, by G.T.R. and C.P.R.

3233. June 29.—Authorizing C.P.R. to construct spur to Empire Brewing Co.'s premises, Brandon, Man.

3234. May 7.—Authorizing Grand Trunk Pacific Telegraph Co.'s crossing over C.P.R., Miniota branch, tracks between Forrest and Varcoe, Man.

N. J. HOLDEN & CO., Agents, 66 McGill St., MONTREAL

3235. May 7.—Authorizing Grand Trunk Pacific Telegraph Co.'s crossing over C.P.R. tracks at West Fort William, Ont.

3236. July 3.—Ordering adoption and use at crossing of G.T.R. by C.P.R. in Yarmouth tp., of an interlocking and derailing plant, signal system and all necessary appliances, one-half cost to be borne by each company.

3237. June 29.—Authorizing Great Northern Ry. (U.S.A.) to restore a commodity rate on vegetables from St. Paul and Duluth to Winnipeg, Man., upon one day's notice.

3238 and 3239. See pages 589 and 565.

3240. July 2.—Ordering Michigan Central Railroad Co. to construct a suitable farm crossing on the east half of lot 11, con. 5, tp. of Brooke, Co. of Lambton, for George White, of Inwood, Ont.

3241. See page 581.

3242. July 3.—Authorizing National Transcontinental Ry. Commissioners to cross C.P.R. tracks near St. Basile, Que.

3243. June 4.—Authorizing Grand Trunk Pacific Ry. to take certain lands owned by J. K. Richardson.

3244. July 4.—Authorizing Department of Public Works to cross at rail level with a proposed wharf C.P.R. tracks opposite Pembroke, Ont.

3245. See page 577.

3246. May 1.—Approving of alterations in grade and other changes in connection with the G.T.R. second track between Brantford station and one mile east of Alford station, Ont.

3247. July 3.—Bell Telephone Co.'s crossing of G.T.R. at Cherry St., Toronto.

3248. July 5.—Authorizing Canadian Northern Ontatio Ry. to take portions of lots 23 and 24, on plan 64, Parry Sound, Ont., for diverting Great North Road to avoid crossing by the right of way of the highway.

3249. See page 581.

3249a. July 5.—Authorizing St. Mary's and Western Ontario Ry. to cross the G.T.R. right of way by a subway about 3,500 feet south of the G.T.R. station at St. Mary's, Ont.

3250. June 22.—Approving general certificate of concurrence in joint tariffs of international express freight rates.

3251. See page 581.

3252. July 3.—Sanctioning agreement by which C.P.R. leases Walkerton and Lucknow Ry.

3253. June 25.—Ordering Atlantic and Lake Superior Ry. Co. to construct a station at St. Omer, Que., on its line between Nouvelle and Carleton.

3254. July 5.—Authorizing Georgian Bay and Seaboard Ry. Co. to join its track near Coldwater, Ont., with the C.P.R. Sudbury-Kleinburg Branch.

3255. July 3.—Authorizing Canadian Northern Ontario Ry. to cross the C.P.R. near Wahnapitae station, Ont.

3256. July 3.—Authorizing Walkerton and Lucknow Ry. to cross certain streets in Durham, Ont.

3257. July 5.—Authorizing C.P.R. to replace trestle over highway on east side of Rideau River near Merrickville, Ont., with permanent steel bridge.

3258. July 6.—See page 567.

3259 to 3261. July 9.—Bell Telephone Co.'s crossings over various railways.

3262 to 3268. July 9.—Authorizing Vancouver, Victoria and Eastern Ry. to cross Mt. Lehman Road near mile post 55. Autier's Road, near mile post 52. Yale Wagon Road, mile post 54. Clearbrooke Road, near mile post 53. Aberdeen Highway, near mile post 58. Ross Road, near mile post 56, and Nascoe Road, near mile post 59.

3269. July 9.—Authorizing Brantford and Hamilton Electric Ry. Co. to cross G.T.R. right of way and tracks near Cainsville, Ont., by a subway.

3270. July 9.—Authorizing C.P.R. to construct spur line to Superior Portland Cement Co.'s premises, Orangeville, Ont.

3271. July 9.—Authorizing Central Ontario Ry. to construct bridge across Papineau River between Bancroft and Whitney.

3272. June 15. Authorizing Chatham, Wallaceburg and Lake Erie Ry. Co., to carry its line upon, along and across certain highways in Chatham, Ont.

3273. July 8.—Approving location of Orford Mountain Ry. from Potton Line to Mansonville, Que.

3274, July 9.—Authorizing Orford Mountain Ry. to open for traffic its line from Potton Line to Mansonville, Que.

G.T.R. Betterments, Construction, Etc.

Montreal Track Elevation.—Plans have been submitted by the G.T.R. to the Montreal City Council Committee, for the abolition of level crossings in the city, by the elevation of its lines. The cost of the project is estimat- at $5,000,000, of which it is proposed that one-half shall be borne by the city. The closing of several streets is desired by the company, and to this the committee is opposed. Negotiations are in progress with a view of some modification being agreed upon.

Ottawa Division.—The new roundhouse, coal chutes and turntable at Madawaska have been completed. Extensive dock improvements have been authorized at Depot Harbor, where a new coal plant will also be installed, and the trestle east of the terminus will be filled in. New trestles and bridges are to be put in on the Pembroke Southern Ry. (a leased line), and other improvements made.

Toronto Junction Station.—A permit has been issued for the erection of a new station, to cost $2,500, at Toronto Junction, Ont. It is to be of brick, 65 by 28 ft.

Hamilton.—The officials at Hamilton, Ont., have been informed that the company has options on three sites in the city, in connection with the proposals to erect an improved passenger station there. The sites are: on the main line between Bay and Hughson streets; on Ferguson Ave., near the jail; and the site of the present King St. station.

St. Mary's Station.—The plans for the new station to be built at St. Mary's, Ont., provide for a structure 92 ft. in length; to be built of brick, with a cement platform. The general waiting room will be 50 by 20 ft., and the building will provide all modern arrangements for the convenience of the company's officials and the public.

London Improvements.—A train service over the new elevated tracks between London and Hyde Park, Ont., was put on June 28. This work, which has been in progress for over two years, cost about $1,000,000. By its completion one of the steepest gradients on the line has been removed. At one point the new track is 30 ft. above the level of the old, while at another point, near Hyde Park, five miles west of the city, the tracks had to be lowered 20 ft. The question of the elevation of the tracks in London city is still in abeyance, but it is expected that some further action will be taken in a short time with a view of resuming the negotiations broken off a few months ago.

St. Clair Tunnel.—Satisfactory progress is reported as being made upon the installation of the machinery for the operation of the trains through the tunnel between Sarnia, Ont., and Port Huron, Mich., by electricity.

St. Lambert-St. Antoine.—Application is being made to the Board of Railway Commissioners for an order authorizing the construction of a branch line from near St. Lambert on the line to Rouse's Point, to a point on lot 246, St. Antoine de Longueuil, Que., on the line to Portland, Me.

Canadian Northern Ry. Construction, Etc.

St. John Valley Ry.—Ex-Premier Pugsley, of New Brunswick is quoted as having stated that Mackenzie, Mann & Co. have received a report from their engineer as to the route of this projected line along the St. John River valley, to St. John, N.B. The route suggested will cross a corner of Maine, but Mr. Pugsley says it will be the shortest route between Quebec and a winter port.

Canadian Northern Quebec Ry.—Construction is being progressed with at a satisfactory rate on the line between Garneau Jct. and Quebec, and tracklaying is in progress. It is expected that much of the tracklaying will have been completed by the end of the year, and that the line will be fully completed and ready for operation by June, 1908. Work is being pushed between Lorette and Cap Rouge, where the road connects with the National Transcontinental Ry. The greater portion of the right of way between Quebec and the bridge terminals has been secured, most of the proprietors having come to terms with the company, while the rest will have their claims settled by arbitration.

Z. A. Lash, K.C., wrote recently to the Mayor of Quebec, stating that D. D. Mann, Vice-President, authorized him to state that the report that the company proposed to erect locomotive and car shops at Montreal, had its foundation in the fact that the company had decided to erect divisional repair shops there. Further, as soon as the direct line from Garneau Jct. was completed into Quebec it was the intention of the company to establish new shops in or near the city for the C.N.Q. Ry. and the Quebec and Lake St. John Ry., closing this latter company's present shops, and using the site for terminal purposes. The details of the plans had not yet been considered.

Canadian Northern Ontario Ry.—Some trouble is being experienced at different points of the line between Hawkesbury and Ottawa, in the way of getting the right of way. The track between Hawkesbury and Rockland was expected to be laid by June 30, and the contractor stated that if possession of the right of way could be obtained there would be no difficulty in having track laid to Ottawa by Sept. No formal decision has been announced regarding the entrance of the company's line into Ottawa, but it is thought that a junction will be made with the G.T.R.

H. J. Wicksteed, C.E., and J. B. Tyrrell, mining engineer, have been for some time in the Larder Lake mining district of Ontario on behalf of Mackenzie, Mann & Co. There has been some talk of the construction of a branch of the C.N.O. Ry. into the Cobalt and Larder Lake district; and the Quebec and Lake St. John Ry., controlled by Mackenzie, Mann & Co., is interested in the development of the mineral district of Quebec, of which the Larder Lake field forms a part.

The company's line from Sudbury has been completed to the Moose Mountain mines in Hutton tp., about 30 miles northerly. The mines are being developed and the ore will be taken by rail to Key Inlet and shipped to Midland, Hamilton and U.S. points.

Canadian Northern Ry.—A contract was reported let, July 18, for the construction of the erecting shop at the new shops at Fort Rouge, Winnipeg. The main building will be 600 by 160 ft., and there will be several annexes. The contract, which has been given to Kelly Bros. & Mitchell, calls for the completion of the work by Dec.

The Premier of Manitoba informed a deputation July 9, that W. Mackenzie, President C.N.R., authorized him to say that the company would build a station at Oak Point, prepare roadbed and construct an extension from Oak Point at least to Lundar, Man., this year. On July 15, Mr. Mackenzie

THE ANDERSON AUTOMATIC VALVES AND WATER COLUMNS FOR RAILROADS

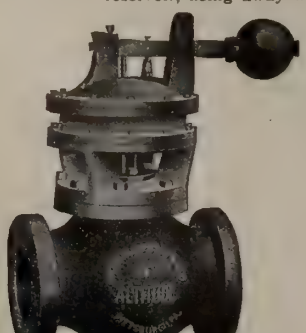
Anderson Patent Altitude Valve

Connected to Tank Service

No Waste of Water
No Freezing of Floats

This valve maintains a uniform stage of water in tank or reservoir, doing away with the annoyance of floats or fixtures in the tanks.

Accessible and protected from frost. Adapted for Buildings regardless of height.



Anderson Patent Float Valve "Simply Has No Equal."

Cushioned in opening and closing. Float swivels to any angle desired.

"Angle or St Way."

The Valves with an Absolute Guarantee.

For high and low pressure. Absolutely controls the water level in tanks or reservoirs. Instantly adjusted to operate quick or slow, as desired. "No waste of water." The upper portion of body being lined with bronze, also the valve or piston being solid bronze, makes the valve indestructible. Railroad men that use them say, "Their equal is not made."

"Angle or St. Way"

The Anderson Cushioned Non-Return Valves

"Life and Property Insurance Valves"

Why! endanger your power plant by using the regular angle, globe or gate valves at the boilers when you can get the Anderson Cushioned Non-Return Valve, which is an AUTOMATIC STOP VALVE, also a HAND-STOP VALVE, all in one?

The Heaviest Line OF AUTOMATIC VALVES AND TRAPS

For High-Pressure Steam and Water Service ever Presented to Users.

GOLDEN-ANDERSON VALVE SPECIALTY CO.

Offices: 1001 Fulton Bldg., Pittsburg, Pa.

arrived in Winnipeg on a trip of inspection, and in an interview stated that the company did not at present contemplate any further extension in the west.

W. Mackenzie had a consultation with the Premier of Saskatchewan at Regina, July 18. It was subsequently announced that an effort would be made to have the line between Brandon, Man., and Regina, completed this fall. The arrangements for securing the route into Regina were expected to be completed within a few days.

The President also visited Saskatoon, on the Prince Albert line. The company at this point purposes to build a passenger station on First Avenue, to cost $40,000. The freight shed will be located on First Avenue, north of Twentieth Street. A roundhouse will also be built. Large extensions will be made in trackages. Tracks will be laid close to and parallel with Avenue A, and First Avenue, extending farther north than any of the present switches. Switches and side tracks will be laid to important warehouse locations.

The extension of the line from Stoney Plain to White Whale Lake, Alta., 18 miles, was expected to be completed by July 20.

President Mackenzie returned to Winnipeg July 21, after having completed an inspection of the line. He said: "We are putting in additional roundhouse accommodation at Portage la Prairie and Dauphin. We are making quite large improvements at Dauphin. We are putting up freight sheds at Humboldt, Vermilion and Vegreville, and new stations at Dalmeny, Borden, Lachburn and Lamont. On the main line we are doing a lot of ballasting and roadbed improvements of all kinds. We are erecting a new station and making yard improvements at Brandon. We are building the main line very rapidly between Brandon and Regina, and have 60 miles of track laid already. On the Prince Albert line we are putting up a new station, roundhouse and shops at Saskatoon, and rearranging the yards there. We are enlarging our freight-shed accommodation, having them in separate places. We are putting together the facilities of our Regina and Prince Albert line, and our old line running from the east, instead for having them in separate places. We are putting in roundhouse facilities at the junction for the Hudson Bay line. On the Regina-Prince Albert line we are taking out heavy grades of one and one-quarter, and reducing them to six-tenths. We are putting in a new station at the junction of the Prince Albert line and the Hudson Bay line. We are doing a lot of work on the line between here and Port Arthur. We are replacing with a new station the one burned at Beaudette. I find the road better every time I pass over it. Gangs of men are engaged in ballasting, filling, etc. In Fort Rouge the roundhouse is about completed, and the shops are well under way."

Press reports state that the G.T.R. is to buy 100 locomotives within the next two months; that the G.T. Pacific Ry. is about to buy 50 eight-wheel locomotives, and that the Central Vermont Ry. is figuring on ten locomotives.

G. Marconi returned to England, sailing by the Allan Line S.S. Victorian, July 19. He stated that the experiments he had been conducting at Glace Bay, N.S., had been even more successful than he had anticipated. He expected to return in a few weeks to complete the work at the station, when he said the problem of speedy and uninterrupted communication across the Atlantic Ocean will have been solved. He also spoke of establishing communication between Glace Bay and Vancouver, B.C., by way of the Arctic Ocean.

National Transcontinental Railway.

The Commissioners have awarded a contract for 44,000 tons of steel rails to the Dominion Iron and Steel Co., and for 21,371 tons to the Algoma Steel Co.; delivery to commence in Nov., and be completed in 1908. The Commissioners have let a contract to the Dominion Bridge Co. for five steel bridges for the line in Eastern Quebec. The Commissioners have under consideration four tenders for the construction of the line from Chipman eastwards to Moncton, N.B. The contractors tendering are: M. J. O'Brien and Q. J. Fowler, Ottawa; Grand Trunk Pacific Ry. Co., Montreal; Willard Kitchen Co., Fredericton, N.B.; J. W. McManus Co., Memramcook, N.B.

Press reports state that M. P. and J. Davis have sublet the greater part of the 150-mile section between Quebec Bridge and the New Brunswick boundary, the sub-contractors being: Pocock and Lemay, Cameron and Perrego, Johnston and Sabiston, Beauregard and Dufour, McDougall Bros., Murdoch Bros., R. Ryan and A. McGougan. The latter will construct bridges over the Etchemin and Abenaquis rivers. The G. T. Pacific Ry. Co. has sublet the clearing of the right of way on the Abitibi section to Rogers and O'Brien, of Montreal. With respect to the 275-mile section from Winnipeg easterly to Lake Superior Junction, H. D. Lumsden, Chief Engineer, stated recently that the contractors had 4,000 men at work, and very poor progress was being made. He thought that a great deal of work could be done during next winter, but he would not care to say that this section of the line would be completed by the spring.

Owing to forest fires in Ontario east of the Manitoba boundary, J. D. McArthur, contractor on the Winnipeg-Superior Junction section, has suffered considerable damage. The loss at the Vermillion Bay storehouse is estimated at nearly $30,000. Camps at other points have been damaged to some extent.

GRAND TRUNK PACIFIC RAILWAY.

The Board of Railway Commissioners held a sitting at Fort William, Ont., July 8, when a considerable amount of evidence was submitted with respect to the proposed route into that place. Tracklaying has been in progress for some time on the Lake Superior branch, and construction trains have been operated out of Fort William for several miles. It is expected the track will have been laid for about 100 miles by the end of the season

After a sitting extending over several days, at Winnipeg, the Chief Commissioner announced, July 13, that the board would approve of the present location of the G.T.P. to Cambridge St. from the city terminal, southeastward along Woodward Ave., and then passing across Cambridge St. diagonally through Cowper Ave. and the lots projected to the north of the Canadian Northern Ry. track, to the Oak Point Junction of the C.N.R. and C.P.R., then the track would parallel the C.N.R. past the Agricultural College Farm, missing it, and the Tuxedo Park estate, and thence as located to the westward. Their opinions for that decision would be put in writing, but the main point which determined them to make that ruling was that their Chief Engineer, who was supported by other engineers who had been heard, thought the crossing at the Oak Point Junction the most desirable operation from the point of view of railway construction. With regard to the crossing of Main St. at the triangular spot made by the street and rivers, the order would be subject to an order requiring a level crossing at the point. With regard to the crossing of highways by the railway they were not satisfied that all the streets shown on the plan before them were dedicated highways, or merely paper streets, but he had no doubt arrangements could be made for the closing of some of the streets and crossings at others.

Grading was started at Portage la Prairie, Man., July 16, on the section of the line into Winnipeg. The contractors are Trent and Johnson, Winnipeg, and the work is to be completed by Nov. F. A. Connor has a subcontract for grading at Portage la Prairie.

West of Portage la Prairie the company has a considerable mileage of track laid, and, June 28, hauled three cars of grain from Sydney to Portage la Prairie.

C. Schreiber, Consulting Engineer to the Dominion Government, returned to Edmonton, Alta., July 2, from a trip of inspection over the projected route to Yellowhead Pass, 230 miles. On reaching Winnipeg, he went out to Portage la Prairie and inspected the work in progress to Saskatoon, from which point he returned to Ottawa, July 19. He states that the trail from Edmonton to the Yellowhead Pass was the worst he had ever travelled over, owing to the weather; the mountain torrents made the travelling exceedingly difficult and dangerous. An excellent line, however, is being located through the Pass. In regard to construction, he said: "The grading will be completed to Edmonton before the snow flies. It is expected that the tracks will be laid westward from Portage la Prairie for 400 miles, and also from Portage la Prairie into Winnipeg. Much more than this could be accomplished but for the scarcity of ties."

The G. T. Pacific Ry. Co. has paid out $50,000 to the Indians at Metlakahtla, B.C., who have lands surrounding Prince Rupert, as part payment for their interest. The work of laying out the subsidiary terminals at Kitamaat, B.C., are being proceeded with These terminals and this branch line are being constructed, J. H. Bacon, the company's engineer at Prince Rupert, says, in order to comply with the agreement with the B.C. Government.

A Victoria, B.C., despatch states that 3,000 Japanese are being brought to B.C. by the G.T. Pacific Ry. Co. for construction work in B.C.

W. H. Black, heretofore secretary to the President of the Bell Telephone Co., has been appointed Secretary of the Company, and W. G. Slack, heretofore accountant, has been appointed Treasurer.

The Bell Telephone Co. has purchased a block of land at the corner of St. Joseph Boulevard and Cadieux St., Montreal, at a cost of $50,000. This will be used for the erection of a north end exchange at a cost of about $200,000. The new exchange will relieve the present eastern exchange of a portion of its territory.

The C.P.R. placed the following orders for rolling stock, between June 14 and July 12, at its Angus shops, Montreal: 3 switching locomotives, 3 first-class cars, 2 colonial cars, 1 mail and express car, 143 box cars, 74 flat cars, 21 stock cars, 22 fifty-ton steel ore cars, 3 Hart ballast cars, 2 freight refrigerator cars, 1 business car for Superintendent, 4 double-track snow plows, 6 wing snowplows; at its Farnham, Que., shops, 60 vans.

L. B. McFarland, General Manager Bell Telephone Co., returned to Montreal from Winnipeg July 17. He stated that labor troubles are preventing the going on with improvement work at Winnipeg. Plans are in course of preparation for new exchanges in the northern and western districts of Winnipeg, which will give four exchanges in the city, and provide for a total of 40,000 subscribers. The company was also planning to open a large number of new exchanges throughout Manitoba, Saskatchewan and Alberta.

THE BAKER HOT WATER FIRE-PROOF CAR HEATERS

Attention is especially called to the only Fire-proof and Break-proof Heaters on the market, made of ¼ in. jointless steel casings. Single and double coils. Steam Attachments to circulate the water of the Baker Heater by steam from the locomotive ; or will circulate hot water independently of any Heater. Pipe and pipe fitting for Baker Heater work. Avoid infringements by ordering direct from the makers.

Too Late for Classification.

Atlantic and Pacific Ocean Marine.

The Allan Line S.S. Corsican arrived in Quebec on her first voyage from Liverpool, July 20.

A. Piers, Manager C.P.R. steamships, stated on his return to Montreal, July 19, that the company had decided to build a new Empress steamship for the Pacific ocean service. The plans were in preparation and construction will be started at an early date. The new steamship, which will be built on the Clyde, Scotland, will be larger and faster than the three Empress steamers which the company is now running between Vancouver and Hong Kong.

The Department of Marine has had the following lightships supplied with submarine bell signals: Lurcher, Anticosti, Red Island, White Island, Prince Shoal, and at the Chebucto Head shore station, N.S. The signalling apparatus has also been installed at Yarmouth, Louisburg, N.S., and Negro Head, N.B. This work has been done by the Submarine Signal Co., Boston, Mass., which will also instal submarine bells in a number of automatic buoys for the Department as soon as it can supply a suitable bell attachment for the same.

Capt. Walsh, Marine Superintendent of the C.P.R., recently paid a visit to Three Rivers, Que., and has reported on the accommodation there for ocean-going steamers, which at present consists of a wharf 2,018 ft. long, and from 200 to 300 ft. wide, with a depth of 30 ft. of water alongside at low tide. The C.P.R. has a spur line connecting with the wharf. The city has offered the company 145 acres for a stockyard, etc. A. Piers, Manager of the C.P.R. steamships, is quoted as stating that the conditions at Montreal and Quebec are not satisfactory, but a thorough investigation of the possibilities at Three Rivers would have to be made before any change could be decided upon.

Sir Wilfrid Laurier, in an interview on his return to Canada, July 19, referred to the all-red line proposal. He said: "This means that the different parts of the Empire wish to share the advantages Providence has given them, in which Canada plays no small part. We occupy a unique position as the gateway between Europe and the Orient. My proposition, which was adopted by the conference, was the establishment at once of fast boats on the Atlantic and Pacific, which would bring the east and west of the Empire into close connection through Canada. This prospect is a vast one, which demanded much thought. A Montreal newspaper announced that the English Premier had decided to oppose it. I do not believe that Sir H. Campbell-Bannerman had moved either way as yet, or will until the matter had been thoroughly discussed." He added that judgment on this matter should be withheld by all until, after full discussion, its value had been determined. He, however, was thoroughly convinced that his ideas were in the interest of Canada and the Empire. This plan would mean great development for the whole of Canada, and for Quebec city in particular.

Province of Quebec Marine.

The barge Havana, which was sunk by the Richelieu and Ontario Navigation Co.'s steamboat Prescott in Lachine Canal, has been raised and is being repaired at the Quebec and Levis Ferry Co.'s dock.

The Standard Coal and Shipping Co. has been incorporated under the Dominion Companies' Act, with a capital of $150,000 and offices at Montreal, to carry on the business of coal factors and merchants, and in connection therewith to acquire steam and other vessels, barges, wharves, docks, etc., and to act as forwarding and receiving agents for all kinds of goods. It is proposed to take over the business at present carried on by the Standard Coal Co. The provisional directors are: F. M. Dixon, A. Ross, A. Darling, R. E. Fyfe, A. W. Greenshields, Montreal.

Satisfactory progress is being made with the construction of the extension to the breakwater at Quebec, and the contractors, Dussault & Co., expect to have their work on the extension completed by the fall. The freight shed on the breakwater is being extended 200 ft. further northward. This addition will enable three steamships to be berthed at the breakwater and to discharge their cargoes into the shed.

Maritime Provinces and Newfoundland Marine.

The burned steamboat Crystal Stream has been offered for sale as she lies at Cole's Island, in St. John River.

R. Clint, who died at St. John, N.B., July 15, aged 80, had been engaged as a pilot for nearly 60 years, and was in active work to the time of his death.

An investigation was opened before J. F. L. Parsons, agent of the Department of Marine, at Halifax, N.S., July 15, into the circumstances attending the collision between the Rosalind and Senlac, July 1, by which the latter sustained serious injury.

B.C. and Pacific Coast Marine.

Several sites have been inspected in the vicinity of Prince Rupert, B.C., with a view of the selection of one upon which to erect a quarantine station.

The Upper Columbia Navigation and Tramway Co.'s steamboat Ptarmigan ran on a rock or other obstruction in the Columbia River between Golden and Windermere, B.C., in the fourth week in July, tearing a hole in her hull. She was beached, but fire broke out and she was sunk. The passengers, about 100, were saved. The Ptarmigan was built at Golden, B.C., in 1903, was driven by paddles, her dimensions being: length 110 ft., breadth 20½ ft., depth 4 ft.; gross tonnage, 246 tons; registered, 155 tons.

Ontario and Great Lakes Marine.

The steamboat City of New York, Kingston to Montreal, ran aground on Sparrow Hawk point, Cardinal, Ont., July 14.

The Huntsville, Lake of Bays, and Lake Simcoe Navigation Co.'s steamboat Iroquois was launched at Huntsville, Ont., July 23. She is expected to be running early in August.

The Montreal Steamship Co. has secured supplementary letters patent under the Dominion Companies' Act, by which its capital has been increased from $90,000 to $250,000.

The Richelieu and Ontario Navigation Co.'s steamboat Toronto has been fined $40 for a breach of the U.S. coasting law, by carrying four passengers from Charlotte to Alexandria Bay, N.Y.

Capt. Firby, of the G.T.R. car ferry Lansdowne on the Detroit River, has been given command of Ontario No. 1, the new car ferry steamship which is nearing completion in Toronto, and which will run between Cobourg, Ont., and Charlotte, N.Y. —. Forrest is to be chief engineer.

Elevators.

At a meeting in Winnipeg July 17, a resolution was passed favoring the establishment of an association of farmers' elevators throughout the west. A. Morrison, Carman, Man.; A. Shephard, and Dr. Wright, were appointed an organization committee.

The Ogilvie Flour Mills Co. expects to have its new 600,000 bush. elevator at Fort William, Ont., completed in time for handling this season's crop. The elevator is to be operated by electricity supplied by the Kaministikwia Power Co., from its Kakabeka Falls plant.

ELECTRIC RAILWAYS.

Projects, Construction and Betterments.

British Columbia Electric Ry.—The grading on the projected electric railway from New Westminster to Eburne, B.C., will be commenced as soon as all the right of way has been secured. It is reported at New Westminster that the contract for grading has been let to J. Bright. (July, pg. 505).

Edmonton Street Ry.—Commissioner Pace, who has charge of construction of the electric railway at Edmonton, Alta., stated that he expected it would be in running order early in Sept., 1908. The work at present in progress is the construction of 3,500 ft. of double track on Jasper Ave., which it is expected to have completed by Aug. 30. (July, pg. 505).

Hamilton, Waterloo and Guelph Ry.—Civil Engineer McCallum, who was engaged by the Hamilton City Council to make a survey for a route into the city for this projected railway, reported upon six possible routes. His instructions were to suggest the best possible route from Rock Chapel, with gradients and curvature that would permit the operation of the heaviest cars at a rate of 35 miles an hour. After detailing the various routes, with reasons for and against them, he recommends the adoption of route two. This passes along the edge of Dundurn and Harvey parks, principally on G.T.R. property, and in such a manner as not to damage the parks in any way. He estimates that this route would cost less than that proposed by the company. The report is still under consideration. J. Patterson, the promoter of the line, said even if the route were granted he would not do any construction this year on account of the state of the money market. He had all the necessary arrangements made to go on last year, but the council would not give the right of way desired. (June, pg. 427).

Montreal and Southern Counties Ry.—The Montreal City Council, July 8, passed a portion of the by-law allowing the M. and S.C. Ry. to establish a line of street cars on certain thoroughfares in the city. Notice has, however, been given asking for the reconsideration of the matter. (July, pg. 505).

Montreal Park and Island Ry.—The company has secured all the land necessary for the extension of its line from Lachine to Ste. Anne de Belleville, Que., and arbitrators are being appointed to fix the price for the land to be taken.

Niagara, St. Catharines and Toronto Ry.—In connection with the filling in of the trestle at Merritton, Ont., the company has constructed a large concrete arch bridge over Main St. The bridge consists of a large main arch with smaller arches on either side to allow the waste water of the old Welland Canal to pass through. The main arch has a 20 ft. rise, and is capable of sustaining a weight of 35,000 lbs. There are 1,500 cubic yards of cement in the structure and 58 steel rods, 1¼ in. in thickness, were used for reinforcing the cement. (Mar., pg. 191.)

Quebec and Saguenay Ry.—The location for this projected line has been completed from the terminus of the Quebec Ry., Light and Power Co.'s line at Cap Tourmente, to Murray Bay, Que., 56 miles. The line will follow the north shore of the St. Lawrence River all the way; the steepest gradient is 18 feet to the mile, and the sharpest curve will have a radius of 1,146 ft. There will be one bridge of 125 ft. span and three of a 50 ft. span each. The work will be gone on with during the current year. J. F. Guay is Chief Engineer. (July, pg. 505).

South-Western Traction Co.—We are advised that the company expects to have its

line between St. Thomas and Port Stanley completed at an early date, so that a through service from London to the lake shore may be given. (Mar., pg. 191).

Vancouver and Tacoma.—Press reports from Bellingham, Wash., state that Stone & Webster, Boston, Mass., who control the Cape Breton Electric Co., have secured the complete holdings and franchises of the Everett Electric Co., and adds: "This transfer carries with it the 24 miles of road already built, with its power and suburban franchises, and assures the new long-talked of Tacoma-Vancouver line," Stone & Webster are the financial agents for the following electric power and traction companies in the state of Washington: Tacoma Ry. and Power Co.; Puget Sound Electric Rd., connecting Tacoma and Seattle; Seattle Electric Co.; Puget Sound Power Co., delivering power to Seattle and Tacoma; Whatcom County Ry. and Light Co., Bellingham; Nooksack Ry. Development, delivering power to Bellingham.

Windsor and Tecumseh Ry.—This line, which extends from Walkerville to Tecumseh, Ont., has been completed and is being regularly operated as a part of the Sandwich, Windsor, and Amherstburg Ry. (July, pg. 505).

Electric Railway Notes.

The Halifax Electric Tramway has received four new open cars.

Jas. McDonald, business agent for the Street Railway Men's Union, Toronto, has died there from pneumonia.

Mrs. A. Fraser, who died at Ottawa, June 25, aged 80, was mother of J. D. Fraser, Secretary-Treasurer Ottawa Electric Ry. Co.

Jas. Gunn, Superintendent of the Toronto Ry., returned to Toronto, July 9, after having spent some time in Great Britain, after an absence of 29 years.

The Manitoba Government has directed that an enquiry be made by a commission as to the most suitable and reliable fender to be adopted by electric railways.

The Montreal Street Ry. is asking the City Council for permission to conduct a freight service on certain lines in the city between midnight and 6 a.m. The subject will be discussed in the fall.

A by-law has been passed at Port Arthur, Ont., authorizing the purchase of additional cars for the municipal electric railway; and the construction of a second track for the same for a distance of seven miles.

J. F. Keys has been appointed General Passenger Agent, Detroit United Ry. This company owns the Sandwich, Windsor and Amherstburg Ry., and the Windsor and Tecumseh Electric Ry. in Canada.

The Hamilton city solicitor has been instructed to ask the Ontario Railway and Municipal Board to compel the Hamilton Street Ry. Co. to put more cars in operation, and to appeal against the Board's order that the city supply material in making repairs between the tracks.

The Thorold, Ont., Town Council proposes to apply to the Board of Railway Commissioners for an order respecting the issue of return tickets on the Niagara, St. Catharines and Toronto Ry. According to the statements made the company requires that return tickets be bought at the station, and as this is not always convenient, passengers between Thorold and St. Catharines have to pay 10c. each way. The town's agreement with the company provided for a return fare of 15c.

Electric Ry. Finance Meetings, Etc.

Grand Valley Ry.—The Board of Railway Commissioners, July 3, granted an order approving the amalgamation of the Brantford Street Ry., the Woodstock, Thames Valley and Ingersoll Ry., and the Grand Valley Ry., under the latter title. The order to issue upon proof being given that two-thirds of the shareholders of the companies have approved of the sale. The Brantford Street Ry. operates seven miles of line in the city of Brantford; the Woodstock, Thames Valley and Ingersoll Ry., 11.50 miles in Woodstock and Ingersoll, and connecting these towns, and the Grand Valley Ry. extends from Brantford to Galt via Paris, 23.25 miles.

Halifax Electric Tramway Co.—Car earnings for June $15,604.83, against $15,225.27 for June, 1906.

London St. Ry.—The gross receipts for 6 months to June 30 were $107,432.36, against $91,490.08 for the same period of 1906, an increase of 17.42%.

Montreal Street Ry.—Passenger earnings for June, $318,047.72; total earnings, $325,252.26; against $281,211.41 passenger, and $287,594.93 total earnings for June, 1906. Operating expenses, $175,030.77; rent leased lines, $339.96; city percentage on earnings, $27,638.33; interest on bonds and loans, $11,904.88; contingent for renewals, $15,902.39; surplus, $94,435.93; against $152,834.52, operating expenses; $22,214.61 city percentage on earnings; $15,366.32 interest on bonds and loans; $14,452.86 contingent for renewals; and $82,726.62 surplus for June, 1906. Rental of leased lines is an extra charge in the current year's accounts. Gross earnings for nine months ended June 30, $2,494,887.90; operating expenses, $1,585,598.32; fixed charges, $389,614.22; surplus, $519,675.36; against $2,193,784.97 gross earnings; $1,367,193.06 operating expenses; $319,008,36 fixed charges; and $507,583.55 surplus for the same period 1905-06.

South-Western Traction Co.—Following are the officers and directors for the current year: President, F. G. Rumball, London, Ont.; Vice-President, Dr. A. McKay, Ingersoll, Ont.; Secretary, A. E. Welch, London; other directors, Lieut.-Col. R. McEwen, Byron, Ont.; Capt. T. E. Robson, H. M. Rumball, London; General Manager, S. W. Mower, London.

Toronto Ry.—Car earnings for June $285,622.43, against $254,898.59 for June, 1906.

Telegraph operators on the Intercolonial Ry. are asking for an increase of 25% in their salaries, and a reduction of hours from 12 to 10 per day. The operators claim they have not had an increase for four years.

There have been deposited with the Secretary of State at Ottawa agreements of sale and other documents in connection with the purchase of rolling stock by the Canadian Northern Ry. as follows: With Canada Rolling Stock Co., and Rhodes, Curry & Co., Amherst, N.S.; eleven with the Imperial Rolling Stock Co.; Bristol and South Wales Railway Wagon Co. and the Imperial Rolling Stock Co.; British Wagon Co., and the Imperial Rolling Stock Co. The National Trust Co. is interested in 12 of these transactions.

The C.P.R. received the following rolling stock, between June 14 and July 12, from its Angus, Montreal, shops, 4 passenger locomotives, Pacific type; 10 sleeping cars, 12 first-class cars, 369 box cars, 133 flat cars, 88 steel coal cars, 35 Hart ballast cars, 14 fifty-ton coal cars, 2 ballast trimmers; from its Farnham, Que., shops, 10 vans; from the American Locomotive Co., Richmond, Va., 5 freight locomotives; from other U.S. points, 10 freight locomotives, 2 observation cars, 1 ditching machine; from the Locomotive and Machine Co. of Montreal, 10 freight locomotives, Pacific type.

River St. Lawrence
The Atlantic Coast
The Gulf of Mexico
The Pacific Coast
The Great Lakes

Signals are also in operation in Germany, England, France, and Denmark.

Vessels equipped to receive submarine signals by the

Submarine Signal COMPANY

BOSTON, MASS.

Toronto Railway Co.'s Employes.

After considerable negotiation the following agreement has been entered into between the Toronto Ry. Co. and its employes, and signed by R. J. Fleming, General Manager, for the company, and by four of the employes on behalf of the others:

This agreement made July 13, 1907, between the Toronto Ry. Co. and the committee representing the employes of the company. Whereas the parties above have met and adjusted all differences, and have recommended that the following agreement be executed. It is further agreed as follows:

That all matters in dispute between the company and the employes are hereby settled.

For the term of three years, from June 16, 1907, the following wage schedule shall be in force: Motormen and conductors for the first year, 20c. an hour; for the second year, 22c. an hour; for the third year and thereafter, 23½c. an hour. Shed men (foremen), 23½c. an hour; assistant shed men, 21c. an hour; carmakers, 20c. an hour; motor and truck repair men, for the first year, 20c. an hour; for the second year, 22c. an hour; for the third year and thereafter, 23½c. an hour.

The company will pay half the cost of uniforms of motormen and conductors who have been in the company's service for one year, and will provide free uniforms for motormen and conductors who have been in the company's service for longer than two years.

The following regulations agreed upon as to discipline: Any employe against whom charges may be brought will be required to report when off duty to the Superintendent. His case will then be considered by the proper officials of the company, and will be dealt with upon the following principle: For minor offences he is to be warned, and after a second warning for the same offence may be suspended. For serious cases, including drunkenness, drinking in uniform, or drinking on cars, destruction of property, accidents through carelessness or neglect, missing fares through neglect, or carrying friends free, using stools on portions of the route not allowed by the company, incivility to passengers and profanity upon cars, he may be suspended or dismissed at the discretion of the proper officials.

Any employe against whom any charge may be brought shall have the right of appeal in person to the General Manager, and except as to a charge of dishonesty may bring with him in his interest a committee of employes. Attendance in such capacity shall not operate to any employe's disadvantage. Any employe attending on such committee shall give due notice to his car starter or foreman, and if he be a motorman or conductor, shall take his car upon reporting to his car starter and shall not be required to report in the usual course to the head roadmaster.

The company will provide seats for motormen upon the cars, motormen to have the right to use such seats upon certain portions of the line.

Having due regard to all the conditions of the service, the manager undertakes that the schedule shall be so arranged that the hours worked on the cars will be put in within the least number of hours practicable and consistent with the service performed by the company.

It is agreed that regular and relief men as heretofore shall be paid for Sunday runs on the time schedule to them on the board for their week-day runs.

The company will on application to the car starter or foreman give leave of absence to employes for a reasonable period of time when their services can be spared, and in the event of refusal of the car starter or foreman the matter to be settled by the superintendent.

The company will not discriminate against employes by reason of their being members of any organization.

On the lines where no office of the company is passed or adjacent an official of the company will collect and exchange fare boxes at points appointed for the purpose.

It is understood that only the men in the shops required for the necessities of the service shall be compelled to work on Saturday afternoons, excepting when in the opinion of the management the services of all the men or any of them are required on Saturday afternoon to meet the necessities of the business.

Tools necessary for work in the motor shops will be supplied to employes. The men shall not take away tools from the shops and shall be responsible for breakages or loss occasioned by negligence. Men must return said tools in good condition. In default of doing so they must pay for the same.

The men in the motor shops and its branches shall be given five minutes in which to wash before leaving work, and any employe abusing his privilege shall be subject to suspension or dismissal.

The foregoing provisions shall be in force for a period of three years from June 16, 1907.

The following provisions of the agreement of May 22, 1903, are hereby reaffirmed and shall continue in force: To prevent loss to the company and its employes, and to preserve the interests and convenience of the public, the company and the employes agree not to resort to lockouts or strikes, but in the event of the parties being unable to satisfactorily adjust any differences or grievances which may arise from time to time, and which if not adjusted might cause a lockout or strike, a conciliation committee shall be appointed from time to time as such differences or grievances arise, to consist of three officers of the company named by the company and three of the employes to be named by the employes, and such committee shall investigate and consider such differences and make their report thereon. If such committee shall be unable to agree the differences or grievances shall be submitted to a board of arbitration consisting of one disinterested citizen of Ontario to be appointed by the company and one disinterested citizen of Ontario to be appointed by the employes, and a third arbitrator to be appointed by these two, who shall also be a disinterested citizen of Ontario; and such board shall investigate and determine all such differences or grievances and make their award, and the award of the said board of arbitration so constituted or majority thereof, shall be final and binding as to such differences or grievances for the period fixed by such award.

It is said that this agreement will increase the company's pay list over $80,000 a year.

Board of Railway Commissioners.—Chief Commissioner Killam and Commissioner Mills, with a staff of officials, left Montreal, July 6, for a tour in Western Canada. After a short sitting at Fort William, Ont., when the question of the entry of the G. T. Pacific Ry. into that place was discussed, the Commissioners proceeded to Winnipeg, and for several days from July 9 were engaged in hearing the objections to the route by which the G.T. Pacific Ry. proposed to enter that city from Portage la Prairie, and a decision was announced July 13. Several other cases were heard and the Winnipeg sittings were concluded July 16. Sittings of the Commission were announced to be held at Regina, Sask.; Calgary, Alta, as well as other points, which were not specifically named.

A portrait of M. H. McLeod, who has been appointed General Manager Canadian Northern Railway, with biographical data, was published in our June issue.

Grain Elevator Notes.

Elevators, each having a capacity of 40,000 bush., are under construction at Claresholm, Stavely, Parkland, Cayley and Carstairs, Alta.

Plans have been completed for the erection of flour mills at Macleod and High River, Alta. Elevators are also to be built in connection with these mills.

The Empress Transportation Co., of Midland, which has been incorporated with offices at Midland, Ont., is authorized to own and operate elevators in connection with its navigation business.

The Canadian Distilleries, Ltd., which has been incorporated under the Dominion Companies' Act, with a capital of $1,000,000 and offices at Winnipeg, is given power among other things to erect and operate storage warehouses and elevators for the storage or shipment of grain. The provisional directors are: W. A. Faulkner, F. A. Emerson, H. A. Wise, W. R. Lewis, and G. Cooper, Winnipeg.

The Grain Commission appointed by the Dominion Government to investigate the whole question of the marketing of the grain crop of Western Canada, visited Great Britain during July, and inspected the elevator and other facilities for handling grain cargoes there. The commissioners also investigated the method of distribution throughout the country, and the market conditions prevailing.

The Deloraine Milling Co. has been incorporated under the Manitoba Companies' Act, with a capital of $40,000 and offices at Deloraine, for the carrying on of a general milling and elevator business, as well as other incidental business operations. The provisional directors are: J. Steedsman, Bera Pinch, Man.; W. S. Barker, G. N. Stewart, W. Perry, G. Whitlaw, J. Kirkwood, W. E. Cowan, G. Paterson, Deloraine; J. Johnson, Goodlands, Man.

The Port Arthur Elevator Co. has been incorporated under the Dominion Companies' Act, with a capital of $100,000 and offices at Winnipeg, to lease or otherwise acquire a terminal elevator, or elevators or warehouses, at Port Arthur, Ont., and to construct and maintain railway tracks in connection with the same; and to carry on the business of elevator owners generally throughout Canada. The provisional directors are: L. O. Downing, R. H. Moore, R. T. Evans, L. M. Pugh, W. E. Kneeland, Winnipeg, Man.

W. Askin, formerly of the Montreal and Lake Superior Line, and Mrs. Askin are spending the summer at Sylvan Lake, Mich.

Underwood

The increase in Underwood sales this year has been over 100 machines a month. For any other typewriter this increase would be considered exceedingly satisfactory as total sales.

The Underwood Billing Typewriter has been sized up by business men as the greatest economizer and systematizer of office work ever produced. A large financial institution recently placed an order for forty, and in a few days duplicated the order.

Let us send you the book about the Biller.

MARINE DEPARTMENT

The C.P.R. Co.'s Steamship Assiniboia.

The screw S.S. Assiniboia for the C.P.R. Co.'s service on the Great Lakes, was launched at Glasgow, Scotland, June 25. Her principal dimensions are: length, 348 ft.; breadth, 43½ ft.; depth, 26¾ ft. to awning deck, and she is divided into seven watertight compartments. There are four decks, viz., main, awning, promenade, and hurricane.

The fore part is divided into three compartments for carrying grain or cargo, the former being put on board through trunked hatches from the hurricane deck, and the working of the cargo accomplished by means of an overhead revolving shaft 140 ft. long, driven by a double cylinder steam hoisting engine with two revolving drums, with clutches to each of the five hatches, which arrangement ensures very rapid manipulation. The entrance to the passenger accommodation is on the main deck amidships, where there is a large spacious hall with two staircases. The entrance hall is panelled in teak with ornamental balustrade to the stairs, and the floor is laid with interlooking rubber tiles. Forward of the main entrance is the package freight deck, access to which is obtained by large double doors through ship's side. The awning deck is arranged for the accommodation of 195 first-class passengers in two and three-berth rooms, fitted up in the latest style with patent folding berths, sofa berth, washbasin with running water, etc. Aft of main staircase there are five cabins-de-luxe, panelled in mahogany and oak, with large brass bedstead, folding lavatory and sofa, and a private bathroom. The chief feature of the awning deck is a large central hall, about 140 ft. long, which is tastefully furnished with handsomely upholstered settees to match the surrounding framing. On the promenade deck there is another spacious hall in a large deckhouse, with a well in the centre which gives light to the central hall below. On either side there is accommodation for 70 first-class passengers, in three-berth staterooms, furnished similarly to the staterooms on the awning deck, and as the rooms on the promenade deck look out to the open, the large windows fitted with venetian blinds and curtains can be left open in any weather. The drawing room is at the fore end of this deckhouse and is tastefully finished in white enamel and gold. The main feature of this room is the formation of the sofa seats, which are arranged in bays forming cosy corners, with seats upholstered in frieze velvet. Writing tables, easy and arm chairs, also, are fitted, which gives the room a very handsome appearance. Amidships, immediately abaft the hall, is the dining saloon capable of seating 116 persons. The framing is finished in American walnut with Italian walnut panels, and the large rectangular bevelled glass horizontal sliding windows, together with a large dome skylight overhead, give efficient light and ventilation. The floor is laid with polished oak parquetry with walnut border. Handsome sideboards are fitted to match the framing. The smoking room is at the after end of the deckhouse and is tastefully designed and framed in light fumed oak with carved panels. Chairs and tables are in oak to match, and the sofa seats are upholstered in morocco leather. The floor is laid with terracotta, and white interlocking rubber tiles. The old gold spring blinds over the large bevelled glass windows and the tones of the skylight overhead complete a harmonious and refreshing color scheme. Between the smoking room and the dining saloon are the pantry, galley, and cold chambers, with all the latest facilities for catering for a large complement of passengers. The public rooms and the accommodation throughout the vessel are fitted with ornamental vertical radiators, each of which can be independently regulated. The hurricane dock is 275 ft. long, and forms a spacious promenade, access to same being by stairways at fore and aft ends. At the forward end of this deck there are the captain's and officers' rooms, and wheelhouse, with flying bridge over. Eight steel lifeboats are fitted under davits to comply with the Steamboat Inspection Act.

Powerful appliances are fitted for working the vessel, including a large windlass and capstan forward and two warping capstans aft. The propelling machinery consists of a set of quadruple expansion engines, having four cylinders working on four cranks balanced on the Yarrow Schlick and Tweedy system. The high pressure and first intermediate pressure cylinders are fitted with piston valves, and flat valves of the double ported type are fitted to the second intermediate and low pressure cylinders, all worked by the usual double eccentric valve gear, controlled by steam gear of the all-round reversing description. The crank shaft is of the built type, and together with the thrust and propeller shafting is of forged mild ingot steel. The propeller has four blades of cast steel secured to a boss of the same material. Water is circulated through the condenser by an independent centrifugal pump having also a suction to the engine room bilge to enable a large quantity of water to be pumped out of the ship in case of need. Independent air bilge and sanitary pumps are fitted for boiler feed as ejectors, ballast and general service purposes and in the engine room there is feed heater and a feed filter.

The four boilers are of the cylindrical return tube type, arranged to work with natural draught. They are constructed entirely of steel for a working pressure of 220 lbs. per square inch. An ash ejector is fitted in each stokehold. The vessel when completed will be equipped in a most handsome manner and with every requirement of the Lake Service. She is being built by the Fairfield Shipbuilding and Engineering Co., Ltd.

The Dominion Government has chartered the Midland Navigation Co.'s steamboat Midland Queen for the season as a lighthouse supply boat for the district above Montreal.

Marine Notes From the Twin Ports.

Our Port Arthur, Ont., correspondent wrote, July 16: Following is a statement showing shipments by vessels from Fort William and Port Arthur from opening of navigation, April 29 to June 30, with ports of destination:

* Freight vessels.

Shipments for the month of July, to date, have been particularly active. On July 11 there was a shipment of 900,210 bush.; on July 12, 897,000; on July 13, 607,000, and at present there is a large tonnage in port loading and to be loaded. All the elevators in Port Arthur and Fort William are practically full. There is estimated to be about 15,000,000 bush. in transit and in store in the interior elevators, and about 10,000,000 bush. of the crop of 1906 still in farmers' hands to come forward. This season is likely to exceed anything in the grain carrying trade at the head of the Canadian Lakes.

Freight rates have ruled high all summer. Present rates are to Georgian Bay ports 2c., Buffalo 2½c., Kingston 5⅛c., and Montreal 7c. on wheat.

Coal receipts are particularly heavy at both the Canadian Pacific and Pittsburg docks. The latter is now in splendid working condition, and is giving better despatch than any dock around the lakes.

LAUNCHING OF THE S.S. ASSINIBOIA, AT GOVAN, SCOTLAND.

The Lake Freight Situation.

Our Winnipeg correspondent wrote July 15: The bulk freight season so far has been the most prosperous in the history of the Great Lakes for both Canadian and U.S. vessel owners. An exceptionally heavy ore movement on the U.S. side of the line keeping U.S. vessels pretty much out of the Fort William grain trade, has resulted in the entire movement being left in the hands of Canadian vessels, and even at this late date Canadian tonnage is chartered in the grain trade to the end of July, and as the stocks of grain at Port Arthur and Fort William show no signs of material decrease the prospects are very bright indeed for the Canadian fleet being kept profitably employed in the grain trade until the new crop commences moving. In addition to the unusual prospects in the grain carrying business there has been an exceptional movement of coal to the Canadian head of the lakes and the steel rail trade has also provided steady employment for a number of vessels, and new boats are being quickly snapped up by the rail shippers as fast as they make their appearance on the lakes. The high price of wheat has had a tendency to retard the movement from eastern elevators, and it begins to look as though a blockade will take place at that end of the route very early in the fall, unless the foreign demand becomes a great deal more active than it has been during the past six weeks. Rates on grain are holding steady at 2c. Georgian Bay, 2¼c. Buffalo, 5½c. Kingston, and 7c. Montreal, without insurance in all cases.

A letter has been received by the Secretary of the Canadian Peace and Arbitration Society from the American Peace Society in reference to the report, that training ships of war are to be placed on the Great Lakes, in which it is stated that "Direct information from the State Department at Washington assures us that the report has no real foundation."

The steamboat Kawartha of Fenelon Falls, Ont., arrived at Orillia, July 17, via the Trent Valley Canal, being the first steamer to go through from the Kawartha Lakes with passengers. On the same day the Islay took an excursion from Barrie, but the shaft broke while in lock 3 of the canal, and the 200 passengers had to remain on board all night until repairs were made.

Beeson's Marine Directory.—The issue of this directory of the vessels trading on the Great Lakes for the season of 1907, being the 21st year of issue, has been published by H. C. Beeson, Chicago, Ill., who announces that while the publication offices will continue to be in Chicago, the general office, where he will in future reside, will be at Niles, Mich. In addition to the standard features of the work, corrected up to June 1, 1907, there is given a list of all vessels that are rated in Inland Lloyds, with the ratings given, as corrected to June 1. This separate list of classified vessels includes everything rated by Lloyds, as they no longer rate steel vessels or tugs. The illustrations, which have always been a feature of the work, show vessels launched, salvage operations or other notable occurrences in the marine world during the year. The following of special interest to Canadian marine men are given: New ore carrying steamboat Sir Thomas Shaughnessy; Niagara Navigation Co.'s steamboat Corona; diagram showing locks of the Canadian canals; view of music room C.P.R. S.S. Empress of Britain; turbine steamboat Governor Cobb of the Eastern Steamship Co.'s Boston-St. John line; C.P.R. S.S. Empress of Ireland at sea; map of the Great Lakes showing location of all lake ports; frame and engines of Hudson's Bay Co.'s new steamboat Mackenzie River; salvage of S.S. G. W. Elder at New Westminster, B.C.

Atlantic and Pacific Ocean Marine.

N. Dunlop, Chairman of the Allan Steamship Co., Glasgow, Scotland, was given a Knighthood in the list of King's birthday honors.

The C.P.R. S.S. Empress of Britain arrived in Quebec July 18, at 9 p.m., having made the run from land to land in 5 days, 3 hours, the record trip.

P. J. Smith, for the past 20 years wharf superintendent of the Allan Line at Boston, Mass., and prior to that, assistant wharf superintendent Allan Line at Montreal, died at Boston, June 5.

A. Piers, Manager C.P.R. Steamship Lines, is reported to have said on arriving in Montreal recently from England, that the headquarters of the lines would in future be in Liverpool, Eng., and that he would remove there.

The Allan Line S.S. Victorian, which reached Montreal June 15, was 60 hours overdue, the delay being occasioned by a dense fog during which the steamer drifted. So dense was the fog that the run for one day was only 15 miles.

Capt. Pickering, heretofore commander of the Allan Line S.S. Corinthian, has been appointed commander, and M. Freer, heretofore chief officer of the Allan Line S.S. Ionian, has been appointed chief officer of the new Allan Line S.S. Corsican.

The Thomson Line S.S. Devona, outward bound from Montreal, struck an iceberg in the Atlantic during a fog, and sprang a leak. On reaching Quebec, June 15, it was found that several plates had been sprung, and that the forehold was full of water.

The Dominion S.S. Montcalm, which was engaged at Sydney, N.S., in connection with the transfer of the mails to the trans-Atlantic liners at that port, ran on a sandbar below the breakwater at North Sydney, July 4, but was floated off the same day without serious injury.

The new Allan Line S.S. Corsican maintained an average speed of 17.56 knots an hour on her trial trip on the Clyde. She sailed from Liverpool on her first trip to Montreal, July 11, and has taken the place of the S.S. Ionian, which will be put on the Glasgow-Montreal run.

It has been announced in Montreal that, according to present arrangements, the C.P.R. Atlantic steamships will again make St. John, N.B., their winter quarters, and as in 1906, Halifax will be utilized only as a port of call to embark and disembark mails. The Allan Line, it is understood, will follow as far as possible the arrangements for 1906-07.

At a meeting of the Shipping Federation of Canada at Montreal, July 10, the question of the application signed by the longshore, men, under the terms of the recent award,

for the bonus at the end of the season was considered. It was stated that 550 men had then signed. A later report states that 1200 men have signed.

The Allan Line S.S. Virginian sailed through the Straits of Belle Isle on her outward voyage July 9, and the Allan Line S.S. Corinthian passed inwards through the straits July 10. Thomson and Donaldson Line freight steamers have passed through the straits, so that the northern route was clear for navigation July 9.

An Ottawa dispatch of July 11 stated that the Government officials were of opinion that the recent experiments had not proved that Sydney, N.S., was a suitable port for the landing and despatch of mails. The Postmaster-General is quoted as saying that the most suitable and convenient national mail port on the Atlantic coast is Halifax, N.S.

Commander Spain, Dominion Wreck Commissioner, held an investigation at Montreal, July 6, into the circumstances attending the stranding of the C.P.R. S.S. Montrose on Red Island Reef, July 2. The Montrose, coming up the river in charge of Pilot Talbot, ran on the reef during a thick fog, while going at a high rate of speed. The finding of the court will be announced later.

The S.S. Olenda, which has been under charter to the Pickford & Black Co., Halifax, N.S., for the West Indies passenger trade, sailed for England, July 15, with passengers and cargo, her charter having run out. She is replaced on the service by the Elder-Dempster S.S. Sobo, heretofore on the run between Liverpool and West African (Gold Coast) ports.

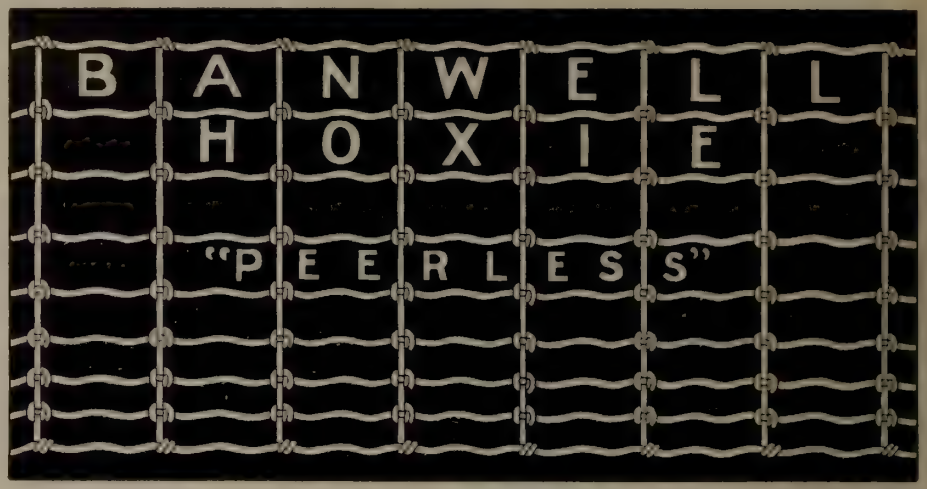
An order has been placed with British shipyards for the construction of four freight steamships for the Blue Funnel Line, trading between Liverpool, Eng., and Victoria, B.C., via China and Japan. The new vessels are to be similar in design to the Bellerophon and four other steamships added to the fleet in 1905-06, but will be 50 ft. longer. The dimensions of the Bellerophon were given in our issue of April, 1906, pg. 225.

The question of the future of the port of Quebec as the terminus for trans-Atlantic steamship business is, according to the steamship companies, largely in the hands of the ship laborers. It was stated that the C.P.R. is considering the desirability of making the Empress of Britain and the Empress of Ireland run on to Montreal owing to the action of the Ship Laborers' Society in increasing the cost of night and Sunday work.

A member of the firm of H. and A. Allan, Montreal, was quoted July 14 as saying that the S.S. Bavarian was doomed, and would never sail again. The steamer struck on Wye Rock near Grosse Isle, in the fall of 1905, and remained there until the fall of 1906, when she was raised and beached. Pumping operations are being carried on at the stranded vessel, and the more sanguine of those engaged in the salvage operations stated July 13, that they had not abandoned all hope of making a success of the operations.

Lieut.-Col. W. A. Anderson, Chief Engineer of the Department of Marine, sailed recently from Montreal on a trip down the St. Lawrence River and Gulf as far as Belle Isle, Nfld., to inspect the new aids to navigation erected and in course of erection. It is expected that the trip may result in the conclusion of some agreement with the Newfoundland Government by which Canada will replace some of the less distinct lights on the Newfoundland coast by improved lights so as to facilitate the navigation of the Gulf.

The contract which has been given the Canadian-Australian Line for the renewal of



PEERLESS WOVEN WIRE FENCING

Made from uniformly heavy hard steel wire, well galvanized.
Made in large rolls ready to stretch up.
Requires but few posts; costs very little to erect.
Conforms perfectly to any surface, no matter how rough.
Reduces the cost of fence maintenance to a minimum.

BANWELL HOXIE WIRE FENCE COMPANY LIMITED
HAMILTON, ONTARIO

C.P.R. LANDS

THE CANADIAN PACIFIC RAILWAY COMPANY have 10,000,000 acres of selected lands for sale in Manitoba, Saskatchewan and Alberta.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd Meridian to Range 10 W., 4th Meridian (generally)	8.00 " "
Map No. 5—Calgary District	8.00 to 10.00 per acre.
Map No. 6—Part of Alberta—Edmonton, Battle and Saskatchewan Rivers Districts—Range 11 West, 4th Meridian to Range 7, West 5th Meridian	10.00 to 25.00 per acre.
Map No. 7—Part of Western Saskatchewan and Eastern Alberta, 3rd Meridian to Range 10 West, 4th Meridian	10.00 to 25.00 per acre.

Maps showing these lands in detail will be sent free on application.
All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160 Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$65.28	and nine instalments of	$160.00
"	"	9.00	"	"	215.70	"	"	"	73.46	"	"	180.00

"	"	15.00	"	"	359.50	"	"	"	122.44	"	"	300.00

Purchasers who do not undertake to go into residence on the land are required to pay one-sixth of the purchase money down, balance in five equal annual instalments with interest at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

CANADA NORTH-WEST LAND CO.

This Company has 550,000 acres of selected lands in Manitoba and Assiniboia which offer excellent opportunities to settlers and investors who desire to secure good lands in well-settled districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

F. T. GRIFFIN, Land Commissioner, Winnipeg.

the steamship service between Vancouver, B.C., and Sydney, Australia, for two years from July 31, carries with it, press reports state, certain conditions for the improvement of the service. The steamships at present on the route take 24 days to make the trip, and it is desired to cut this down to 18 or 19 days, so that it may be possible to have the mails landed in Great Britain in 29 or 30 days. The C.P.R. will give the mails a fast run across the continent, and will carry them across the Atlantic on its Empress steamships.

The Allan Line of steamships, during the six months ended June 30, carried 54,018 passengers into Canada, and 7,106 passengers from Canada to Great Britain. The figures of the different classes of passengers carried, compared with those for the same period of 1906, are:

INWARD	1907	1906
First Class	1,337	1,498
Second Class	13,759	12,634
Third Class	38,922	29,402
Total	54,018	43,534
OUTWARD	1907	1906
First Class	1,227	1,331
Second Class	3,203	2,392
Third Class	3,916	3,386
Total	8,346	7,109

The C.P.R., the Dominion Line, and the Donaldson Line, also report a considerable increase in the number of passengers carried into Canada during the same period, but they do not publish the figures

In connection with the project to establish fast steamship lines on the Atlantic and the Pacific, subsidized by the British, Canadian and Australian Governments, the Yorkshire Post (Leeds, Eng.,) said July 10: "Lord Strathcona, however, is striving to attain success in a manner which seems to indicate he intends the scheme to be his ultimate work for the Empire". So far as the trans-Atlantic service is concerned it is proposed to employ 25-knot steamships, for which a subsidy of £450,000 a year, for 10 years, to be borne equally by the British and Canadian Governments would be required. The amount of the subsidy for the trans-Pacific line has not been specifically mentioned, but a Melbourne cable of July 7 states that it is understood that the Federal Government declines to entertain the scheme of an 'All-Red' mail route, on the ground that it would be impossible to provide an annual subsidy of $2,000,000. The Imperial Government appointed a committee to consider the proposals for a subsidized steamship line between Great Britain and Canada, which reported adversely to the project and it is understood that the Government has decided not to do anything in the matter.

Pending other arrangements the steamboat Hazelton, chartered by the Hudson's Bay Co., has replaced this company's steamboat Mount Royal, recently wrecked in Kitsalas Canyon, Skeena River, and there will be no interruption to the traffic.

During the season of 1906, according to Beeson's Marine Directory, the following 15 U.S. vessels were sold to Canadian owners: Aberdeen, schooner, 1,045 tons; Alaska, propeller, 340 tons; Frank C. Barnes, tug, 46 tons; Cuba, propeller, 1,526 tons; Estelle, tug, 34 tons; Fashion, tug, 29 tons; Edward Fiske, tug, 43 tons; C. Hickox, propeller, 208 tons; Jean, tug, 12 tons; Kate, tug, 47 tons; Nordkin, schooner, 23 tons; John Owen, tug, 323 tons; Thos. R. Scott, propeller, 268 tons; Eliza Williams, tug, 37 tons; Wissahickon, propeller, 1,619 tons. These vessels represent a gross tonnage of 4,079 tons. In 1905, Canadian owners purchased 20 vessels from the U.S.—seven propellers, three tugs, three steam yachts, six schooners and one barge—having a combined gross tonnage of 8,948 tons.

Maritime Provinces and Newfoundland.

The keel of a 500 ton steel schooner is being laid at New Glasgow, N.S.

Claims aggregating $42,000 have been filed against the str. Oscar II, for salvage services.

Capt. D. Hunter, for the past 30 years port warden at Halifax, N.S., has, it is understood, resigned.

Capt. E. Perley has been appointed commander of the St. John River steamboat Victoria, succeeding Capt. C. Taylor, resigned.

Capt. J. C. Hopkins, formerly master of the West India S.S. Beta, died in Halifax, N.S., July 11, after an illness of several months.

Capt. W. S. McLeod, of Liverpool, N.S., died on the brigantine Blenheim while on a voyage from Madeira to Barbados, W.I., recently.

The Dominion Government steamship Stanley arrived at Glasgow, Scotland, June 25, where new boilers will be put in by the builders.

S. M. Brookfield, Halifax, N.S., has entered into a contract to float the steamship Turret Bell, which stranded in St. Peter's Bay, P.E.I., in Nov., 1906.

D. J. Seely, for many years engaged in shipbroking business at St. John, N.B., and Mrs. Seely, celebrated the 50th anniversary of their wedding July 13.

The Upper Lake steamboat Carthagenia, bound from Michigan for Boston, Mass., ran on the Half-Moon rocks, near Barrington, N.S., July 2, and has become a total loss.

The Newfoundland Government has appointed J. Carter to be Wreck Commissioner from La Manche to Fermeuse, District of Ferryland, succeeding W. T. S. Carter, retired.

The Insular Steamship Co. has been granted supplementary letters patent under the Nova Scotia Companies' Act, whereby its total capital stock has been increased from $7,000 to $25,000.

C. Way has been appointed Surveyor of Shipping at Harbor Breton, and Wreck Commissioner for the district of Fortune Bay, by the Newfoundland Government, succeeding P. Hubert, retired.

Two life-saving stations are to be established on the Prince Edward Island coast, by the Department of Marine, but we are advised that their location has not been definitely decided upon.

The steamboat Senlac, on her arrival at St. John, N.B., June 27, reported having been struck by lightning the previous night. The electrical machinery was burned out and woodwork and finish of the interior was badly damaged.

The freight and passenger steamboat Enterprise, built in Nova Scotia for the Three Rivers Steamship Co., has been completed and taken over by her owners. She will be put on a route between Montague, P.E.I., and Pictou, N.S.

The Swedish steamship Oscar II, from Wabana, Nfld., for Sydney, N.S., with iron ore for the Nova Scotia Steel Co., ran ashore in a fog, June 27, at Flint Island, N.S. She was floated the following day, without having sustained any serious damage.

We have been advised that arrangements for the building of a third winter steamer for the route between Prince Edward Island and the mainland are still pending, and no definite instructions as to its construction have been issued by the Department of Marine.

We are advised that the Bras d'Or Steamboat Co. has decided to place a steamboat larger than the Weymouth on the route in the spring of 1908. It has not yet been decided whether the vessel will be purchased or whether the company will have one built.

Negotiations are reported in progress for the purchase of the steamboat Champlain to replace the burned steamboat Crystal Stream, on the Washademoak route, St. John River, N.B. In the event of these proving fruitless, it is thought that a boat will be purchased in New York.

The Dominion Iron and Steel Co.'s pier at Bell Island iron mines, Newfoundland, was burned out July 5. The structure was 200 ft. from the shore, with which it was connected by a trestle. A temporary structure is being erected to enable the company to continue shipping ore.

The coroner's jury which investigated the circumstances attending the deaths of the four members of the crew of the St. John River steamboat Crystal Stream, which was burned June 21, returned a verdict, July 10, that the men came to their death by the burning of the steamer, the cause of the fire being unknown.

The treasury board of the St. John, N.B., City Council has decided to have a new schedule of port dues prepared on the same basis as the one now in force at Montreal. It was stated at the meeting that the rates would have to be doubled to put the business on a paying basis. The total revenue for 1906-07 was $28,000, and the deficit $22,436.

The Submarine Signal Co., of Boston, Mass., is installing stations along the coast of New Brunswick and Nova Scotia, to send submarine signals to vessels, for the Department of Marine. The company has already equipped the lightships stationed in the St. Lawrence River and the Bay of Fundy with the apparatus. It is also equipping the Nova Scotia Steel and Coal Co.'s steamers Wobun and Wasis with the apparatus to receive submarine signals.

The S.S. Senlac was run into and seriously damaged by the Red Cross Line S.S. Rosalind, near George's Island, off Halifax, N.S., July 1. The collision took place in a fog. The Rosalind was slightly damaged, but the Senlac was so seriously injured that she had to be beached. A survey July 5 recommended that the Senlac be floated for further examination. She is owned by the Senlac Steamship Co., and is managed by Wm. Thomson & Co., St. John, N.B. She is valued at $100,000.

A steamboat named Scotia was launched at Mahone Bay, N.S., June 26. Her dimensions are: length, 152 ft. over all, 143 ft. keel; breadth, 27 ft.; depth of hold, 9 ft. 8 in.; and she will measure 350 tons gross. The hull is iron-kneed, and galvanized fastenings with copper fastenings on the bottom. The deckhouses and topsides are of hard pine. The engines are being fitted at Halifax. The boat is expected to be completed early in Aug., and will be put on a route between Halifax and eastern shore points.

For the purpose of securing information as to the currents around Nova Scotia's southern coast, the Department of Marine, through the tidal and current survey section, is having a survey made during the current season under the charge of Dr. W. B. Dawson. The steamboat Gulnare is being employed for the purposes of the survey and a notification has been issued to mariners to the effect that the vessel will be anchored in deep water in the approaches to the Bay of Fundy, and on the steamship routes in the bay. She may be anchored in the entrance to the bay between Grand Manan and Digby Neck, in the offing of Yarmouth, or in the vicinity of Cape Sable, at points from 5 to 20 miles from shore. Mariners are requested to keep a

lookout for the Gulnare on the several steamship routes and to give her a safe berth in passing, as she will be unable to manœuvre.

The Steamship Cabot Co. has been incorporated with a capital of $55,000 and offices at Sydney, N.S., to purchase the steamer Cabot, now under construction by the Grangemouth and Greenock Dockyard Co., Grangemouth, Scotland, and to pay for the same either in cash or fully paid-up shares; in the event of the loss or sale of the Cabot to replace her by any other steamer; and to carry on a general navigation business throughout the Dominion. The provisional directors are: F. W. Gray, W. H. Covert, J. K. L. Ross, H. J. McCann, Sydney, N.S.; and E. H. Russell, Glace Bay, N.S. This company has been formed in connection with the Dominion Coal Co., and the steamer will be registered at the port of Montreal. Her dimensions are: length, between perpendiculars, 155 ft.; breadth, moulded, 25 ft.; depth, moulded, 12 ft.; and she will have a deadweight capacity of 500 tons, her net register tonnage being 230 tons. The steamer is being built on the raised quarter deck principle, with engines aft, under Lloyds special survey for class 100 A1. She will be propelled by a screw, the power being furnished by a triple expansion surface condensing engine, having cylinders of 13, 22 and 35 in. diameter, by 25 in. stroke. Steam will be supplied by a return tubular boiler at a working pressure of 180 lbs.; and her estimated speed is 9½ knots an hour. Delivery is expected to be made by the end of Aug.

Province of Quebec Marine.

E. Dufresne has been appointed Harbor Commissioner for Three Rivers, Que., succeeding the late H. Hart.

Capt. Creighton, a former port warden of Montreal, has been appointed to the command of the Egyptian Mail Steamship Co.'s new S.S. Heliopolis.

The Richelieu and Ontario Navigation Co.'s rebuilt steamboat Quebec was given a trial trip July 2, and was put on the Montreal-Quebec run, in conjunction with the Montreal.

The Department of Marine has issued chart 13 of the River St. Lawrence, between Champlain and Pointe Citrouelle, Que., and chart 14, of the River St. Lawrence, between Batiscan and Cap Levrard, Que.

Commander Spain, Dominion Wreck Commissioner, completed hearing the evidence at Montreal, July 10, in the investigation into the sinking of the barge Havana by the steamboat Prescott, July 2. Judgment was reserved.

The Department of Public Works expects to have a new dredge, now nearing completion at Sorel, Que., at work on the St. Lawrence channel, early in August. She will be put at work on the mud flats between Crane Island and Grosse Isle.

The light on the lightship Valois in Lake St. Louis was dark on July 7, and an investigation showed that J. Crevier, the keeper, had fallen from the platform of the light into shoal water and fractured his skull. Death had apparently been instantaneous.

F. W. Cowie, Superintending Engineer of the St. Lawrence ship channel improvements, and V. W. Forneret, Resident Engineer in charge, returned to Montreal July 15, after having made an inspection of the work in progress. It was reported that eight dredges and 400 men were employed at different points.

The Dominion Government steamboat Rouville, built as a N.W. Police patrol boat for Hudson Bay, which was held in the ice at Les Eboulements, Que., during the winter, has been given a general overhaul at Sorel prior to being sent to her station. The hull was found to be uninjured, but the machinery required some repairs.

An investigation has been held by Commander Spain, Wreck Commissioner, at Montreal, into the circumstances surrounding an alleged violation of the navigation laws by the U.S. steamboat John Lambert, of Chicago. This vessel, the evidence of the officers of the Cassandra showed, steamed right across the bows of the liner as she was leaving port for Glasgow. The investigation was adjourned in order that officers of the John Lambert may testify.

The Richelieu and Ontario Navigation Co.'s steamboat Prescott carried away the gate of lock 1, Lachine Canal, July 2, and in backing collided with the Pittsburg and Erie Coal Co.'s barge Havana. The barge subsequently sank, and her cargo of pulp was transferred to the Montreal barge Bismarck. The Prescott had her bows damaged and there was also a leak near the stern. The damage is not serious, and as the Prescott had completed her trips for the season—the Rapids King having arrived to take up the run through the rapids—the company's schedule will not suffer. The Prescott will be repaired and held as a spare vessel.

Ontario and the Great Lakes.

J. M. Allan has been appointed Deputy Harbormaster of Toronto, succeeding the late Capt. J. M. Hall.

The Knapp roller boat is again afloat, and is being converted into a coal barge at the Polson Iron works, Toronto.

The Northern Navigation Co. is reported to be negotiating for the purchase of an additional steamer to add to its fleet.

It is reported that a contract has been let for the raising of the barge Resolute, which was wrecked off Toronto Island last fall.

A tug for the Great Lakes Dredging Co., and a steel hopper scow for the Dominion Government, have been launched at Collingwood, Ont.

The steam barge Ionia of Picton, Ont., tore two gates out of lock 17, Cornwall Canal, July 5. New gates were put in and navigation was resumed July 8.

The steamboat City of New York, owned by Richardson Bros., Kingston, Ont., ran aground at Sparrowhawk Point, near Cardinal, Ont., July 13.

Capt. T. Leduc, Kingston, of the steamboat Selkirk, dropped dead on deck as the steamer was entering the lock at Galops rapids on the St. Lawrence, July 7.

The tug Salvor and a number of pontoons have reached Newcastle, Ont., from Sarnia, Ont., for the purpose of making an effort to raise the sunken dredge Sir Wilfrid Laurier.

The captains of steamships entering Toronto are complaining of the large number of small yachts sailing about the bay at nights which persist in ignoring the regulations for displaying lights.

The Canadian Lake and Ocean Navigation Co.'s S.S. Corunna, from Port Arthur, Ont., to Montreal, was detained at Port Colborne, Ont., for 24 hours, July 15, owing to a breakdown of her machinery.

The tug boat Southwood ran into the Muskoka Lakes Navigation and Hotel Co.'s steamboat Saganio at Muskoka Wharf, Ont., June 26, and had her bow badly damaged. The Sagamo was uninjured.

The steamboat Victoria, in making the run from Ottawa to Thurso, Que., July 6, struck a log, losing some of the blades of her propeller and bending the tail shaft. She was towed back to Ottawa by a passing tug.

The Richelieu and Ontario Navigation Co. commenced its midsummer service by running the Kingston from Toronto for Prescott on July 7, and proposes to continue giving a Sunday trip until the end of Angust.

The schooner Annie Minnes, lying for some months on the bottom at Louisa Cove, Ont., has been raised and repaired. She is to be used as a tow barge for one of the steamers owned by Hepburn Bros., of Picton, Ont.

The steamboat Flora, shortly after leaving Windsor, Ont., collided with a dredger, July 21, and returned to port with her stem badly damaged. She had recently been refitted, and was on her first trip on the Lake Huron route.

The Turbine Steamship Co.'s S.S. Turbinia abandoned the Toronto-Hamilton portion of her combined Toronto-Lewiston-Hamilton run July 15, and is confining her schedule to two trips each way daily between Toronto and Lewiston.

The steamship Neepawah, which ran aground and sank at Dickenson's Landing, Ont., was raised by the Donnelly Salvage and Wrecking Co., Kingston, Ont., and towed into that port July 8, where she was repaired in the dry dock.

Capt. F. Castagnes, for 23 years in the Richelieu and Ontario Navigation Co.'s service, and from 1895 to 1905 in the Montreal and Cornwall Navigation Co.'s service, died at Cornwall, Ont., July 3, and was buried at St. Anicet, Que., July 5.

F. S. Spence, chairman; T. L. Church and J. T. Matthews have been appointed to represent the Toronto Harbor Board in a conference with the Toronto Board of Control regarding a number of questions in which both bodies are interested.

The Toronto civic sub-committee on improvements has asked the Harbor Commissioners for information as to the effect the reduction of harbor dues had on the business of the port, with the object of considering the question of their abolition altogether.

Eleven New York barges which brought coal to Ottawa at the opening of navigation are lying in the basin there awaiting cargoes. It has been usual for these barges to obtain cargoes of lumber, but this year there is very little lumber being shipped by boat to New York.

The Atlanta, Ga., Constitution published in a recent issue an account of the early history of the Niagara Navigation Co.'s str. Chicora, which, as the Let-Her B, made several successful blockade running trips into Charlestown, S.C., during the U.S. Civil War.

The Medal of the Royal Humane Society was presented to J. D. McCallum, at Fort William, Ont., July 5, for his services in connection with the rescue of the passengers and crew of the Northern Navigation Co.'s steamboat Monarch, wrecked at Isle Royal, in Dec., 1906.

Capt. Perry, of the steamboat Wissahickon, was fined $80 and costs at Fort William, Ont., July 5, for violating the new marine regulations, the first and second engineers not having signed articles. The men, who refused to sign, have been reported to the Department of Marine.

The British Government has stated that there can be no objection to the U.S. Government sending the gunboat Don Juan de Austria from the Atlantic Ocean to the Great Lakes, for use by the naval militia as a training cruiser. The gunboat was captured from the Spaniards in the late war, and it is said is to be unarmed.

T. H. Wood, of Orillia, Ont., is operating the steamboat Champion, connecting with all G.T.R. trains at Severn and Canadian Northern Ontario Ry. trains at Hamlet for all

"PAGE FENCES WEAR BEST"

PAGE WIRE FENCES stretch tighter—posts can be set farther apart. That saves money—fewer posts, less labor digging post-holes, quicker erecting. PAGE FENCES last longer—made of No. 9 wire. PAGE FENCES are heavily galvanized, and for a small extra charge are supplied coated WITH PERMANENT PAINT. PAGE FENCES stand wear better, give longer service, keep your maintenance account down. The PAGE KNOT LOCK cannot slip and positively does not injure the wire. PAGE FENCES do not sag.

50 THOUSAND MILES OF RAILWAYS USE PAGE FENCES

There must be a dollars-and-cents reason for the standing PAGE FENCES have with railway men the world over. It will pay your road to hear that reason before you spend another cent on fences.

points on Severn River and Sparrow Lake. The Champion is 76 ft. long, 12½ ft. beam, fitted with fore and aft compound engines and lighted by electricity.

The Canada Construction and Dredging Co. has been incorporated under the Dominion Companies' Act, with a capital of $60,000 and offices at Toronto, for the purpose of carrying on a general business of dredging, construction work, building, general contracting work, towing, and other businesses germane thereto. The provisional directors are: J. B. Bartram, F. Dunlevie, C. McD. Bartram, Jas. Osborne, Miss L. A. Neil, Toronto.

Engineer J. McKenzie, of the fishing tug James Storey, of Port Coldwell, Ont., fell into the water between Jackfish and Home Point on Lake Superior, June 28. Capt. J. McGinnis jumped in to save him, and both were drowned. The two men who were left on board the tug did not know how to manage the engine and so were unable to render any assistance. They succeeded in taking the vessel into Port Arthur, where they reported the accident.

The U. S. steamboat City of Grand Rapids has been purchased by Georgian Bay owners, from Capt. Reid, Sarnia, Ont., to trade between Wiarton and Manitoulin Island points. The City of Grand Rapids was built at Grand Haven, Mich., 1879, her dimensions being: length, 122½ ft.; breadth, 24½ ft.; depth, 9 ft.; and she measures 327 tons gross. She is equipped with engines of the low pressure type, cylinders 30 by 3 in., steam being supplied by a firebox boiler 16 by 7¾ ft.

The J. K. McLauchlan Supply Co., Ltd., has been incorporated under the Ontario Companies' Act, with a capital of $40,000 and offices at Owen Sound, Ont., to acquire the business now carried on there by J. K. McLauchlan, and to extend the same. The company is also authorized to carry on a general cartage, warehousing, storage, forwarding and shipping business. The provisional directors are: Jas. K., Jas., and Mrs. M. L. McLauchlan; J. M. and Miss M. A. R. Drake, all of Owen Sound.

The Upper Ontario Steamboat Co. is operating on Larder Lake, Lake Temiskaming and White River and Long Lake. Following is a list of its steamboats, with the names of the captains and chief engineers:

Geisha	L. King	T. Arbin
Blanche	J. Morin	J. Donaldson
Gipsy	A. Hicks	C. Welsh
Wenona	H. S. Brickenden	Geo. Willis
St. Antoine	F. Lawrence	Geo. Mongrain
Britannia	F. Vincent	J. Purcell
Adrelexa	W. McKenney	W. McKay
Aileen	L. Whalen	T. Bonsell
S and Y.	F. W. Hendry	A. Kent
Lena May	W. Hamilton	A. Menard

The O'Connor Steamboat and Hotel Co. operates steamboats on Lake Temagami and adjacent waters between Temagami station, on the Temiskaming and Northern Ontario Ry., and Matawabika Falls, the junction of the lake navigation with the Montreal River. The company's steamboats are running on the following routes: Belle, from Temagami station to Lady Evelyn Hotel; Wanda, from Temagami station to Temagami Inn; Chance, from Lady Evelyn Hotel to Sharp Rock portage; Beaver, on Diamond Lake, and Marie, on Lady Evelyn Lake.

The Empress Transportation Co., Ltd., of Midland, Ont., has been incorporated under the Ontario Companies' Act, with a capital of $200,000 and offices at Midland, Ont., to carry on in all its branches the business of a navigation and transportation company, and in connection therewith to buy, sell, lease and charter vessels, to construct or acquire wharves, docks, etc., to operate grain elevators and to acquire stock in similar companies. The provisional directors are: Jas. Playfair, D. L. White, D. S. Pratt, D. Clark, J. W. Benson, Midland. The company is a close corporation and no particulars as to its officers or operations are at present being made public.

The Ganley Line steamboat Batchawana, engaged in carrying ore for the Algoma Steel Co., was burned to the water's edge off Copper Mine Point, Lake Superior, June 28. The crew escaped in the small boats. The fire is supposed to have originated in the explosion of a lamp. The vessel was formerly known as the Robert A. Packer, and was built at Bay City, Mich., in 1881, being transferred to the Canadian register in 1906, when she was purchased by J. Ganley, Sault Ste. Marie, Ont. Her dimensions are: length, 220 ft.; breadth, 34 ft.; depth, 18 ft. 4 in.; tonnage—gross, 1,027; register, 674. She was fitted with engines of 67 n.h.p. The vessel is reported to have had an insurance value of $28,000.

The additional aids to navigation which the Department of Marine is installing at points on Lake Superior, include the following: Jackfish Bay—a 31-day Wigham lamp standing at the extreme western point of the large island in the mouth of the bay, about half a mile from the coal wharf. It will be so located that vessels can run for it as soon as they see it in approaching from either east or west, and they will leave it on the starboard side in passing, giving a berth of 300 or 400 ft., making direct for the coal wharf. It will be a small light arranged to burn for a month without any attention, but being only a harbor light, ought to answer all requisite purposes Point Porphyry—a first-class diaphone will be established in a building immediately south-east of the lighthouse. Welcome Islands—A small fog alarm will be established in a building to be erected east of the lighthouse on the summit of the most easterly island.

The first of the two new Upper Lake steamers under construction at Glasgow, Scotland, for the C.P.R., was launched June 25, and was christened Assiniboia. Her dimensions are as follows: length, 348 feet; breadth, 43½ ft.; and depth 26¾ ft. She is built of steel, constructed to be classed at Lloyds as A1 for Canadian lake service, and will have accommodation for over 250 first-class passengers. She will have a speed of over 16 miles an hour, with all the modern devices for the safety and comfort of her passengers. The interior fittings and furnishings will be of the latest and most improved pattern, remarkable more for their solidity, simplicity, good taste and quality, than for mere display. The Assiniboia will cross the Atlantic Ocean under her own steam in Sept., and will be cut in two at Quebec, and rejoined at some point on Lake Erie above the Welland Canal. The second vessel, which is expected to be ready for launching at an early date, will be named Keewatin.

Manitoba, Saskatchewan, Alberta, Etc.

The Dominion Government steamboat Sir Hector struck a sand-bar at the mouth of the Red River near Selkirk, Man., July 4, and sank almost immediately. The crew escaped in row-boats to Selkirk. The steamer nearly turned over in sinking.

R. Hoerschegen and G. W. Sparkes recently started from Edmonton, Alta., purposing to make a canoe trip to the Gulf of Mexico. They will proceed by the North Saskatchewan River to Lake Winnipeg, thence by the Red River to North Dakota, where they will have to make a 10-mile portage to the waters of the Mississippi, which river they will follow to the Gulf.

Contractors engaged in ditching on the Minnesota State experimental farm at Crookston, have turned up a ship's anchor of antique pattern, buried at a depth of 6 ft., in solid clay under sod never before broken. The anchor is similar to those used by the roving Norsemen 900 years ago, and it is surmised that it is a relic of a Norse expedition, during the period when the Red River Valley was a portion of Lake Winnipeg, and could be reached by sail from the Atlantic Ocean by Hudson Bay.

The Bird's Hill Land Co., of Winnipeg, has been incorporated under the Manitoba Companies' Act, with a capital of $150,000, and offices at Winnipeg, to carry on a number of businesses, including that of a general navigation company, in connection with which it may build, charter or otherwise acquire steam or other vessels. In connection with the development of its holdings of land it may construct tramways to be operated by steam or electricity, and may purchase locomotives and cars for the operation of the same. The provisional directors are: W. A. Ducker, W. R. Lee, W. Brydon, D. D. Wood, R. Wilson, W. J. Young, Winnipeg.

B.C. and Pacific Coast Marine.

Negotiations are reported to be in progress for the establishment of a shipbuilding yard at New Westminster, B.C.

The str. Constance, owned by the British Columbia Packers' Co., sank at River's Inlet, June 22, Capt. Neilson and five of the crew being drowned.

Capt. Eddie, Vancouver, B.C., has been appointed examiner of masters and mates at that port. He will conduct examinations for deep sea and coastal navigation, and it is also likely he will have charge of a naval school for the Dominion Government.

The str. Northwestern, running on the Skeena River, put into Bella Coola, July 10, badly injured. She ran on the rock upon which the Mount Royal was wrecked, but slid off and was run ashore. Temporary repairs were made to her bow and deck, and the run was continued.

The contract for the repairing of the steamboat Northwestern, recently ashore at La Touche, Alaska, has been let to the B.C. Marine Ry. Co. The work involves the placing of 40 new plates, 60 ft. of keel, 38 frames as well as other work, and the contract price is $47,000. The B.C. Salvage Co. received $55,000 for the salvage of the steamer.

The C.P.R. has arranged to construct a large jetty wharf at Vancouver, B.C. The first of the contracts for the extension of the C.P.R. piers at Vancouver, B.C., has been let to Capt. Bisset and E. Coleman. Work is to be started at once, and the pier is expected to be completed by the spring of 1908. It will be used entirely for the accommodation of the company's trans-Pacific steamers.

The second of the four new steamboats under construction for the Pacific Steam Navigation Co., completed her trials at Liverpool, Eng., and is on her way to the Pacific Coast. The vessels which are being built on the Clyde have the following dimensions: length between perpendiculars, 360 ft.; breadth, 46 ft.; depth, moulded to main deck, 46 ft.; depth to spar deck, 32 ft. 9 in. The deadweight capacity is about 3,400 tons on the summer free board. The propelling machinery consists of two sets of triple-expansion engines of 3,300 i.h.p.

The Hudson's Bay Co.'s paddle-wheel steamboat Mount Royal, operating on the Skeena River between Port Essington and Hazleton, B.C., was wrecked in Kitselas Canyon, July 6, six of the crew being drowned. She struck a rock while descending the rapids in the canyon, and sank within five minutes. The fifty passengers and several of the crew

were enabled to land on Ringbolt Island. Capt. Johnson was washed ashore on another island in the wreckage of the pilot house. Two of the engineers were carried through the canyon in the main part of the hull and landed at Kitselas village. The six men drowned include the chief officer, purser and steward. The steamboat was valued at $30,000, was built at Victoria, B.C., 1902, her dimensions being: length, 132 ft.; breadth, 28.4 ft.; depth, 4.8 ft. She was equipped with engines of 13 n.h.p., and she measured 471 tons gross, 296 tons register.

The Department of Marine is making a number of additions to the light stations and life-saving equipment on the Pacific Coast. A station at Ucluelet and another at Clo-oose are to be equipped with light surf boats, to be manned by crews from the locality under the command of experienced coxwains. A gasolene motor lifeboat, 36 ft. long, and of 40 h.p., is being built for Banfield Creek, where a fully equipped station with permanent crew will be established. A self-righting lifeboat of large size has been put in service at Victoria, B.C., and is available to be carried by steamboat to any point where she may be required. A horse trail is being constructed from Carmanah light station to Banfield Creek. Arrangements are being completed for the erection of wireless telegraph stations at several points on the Pacific Coast, and the department has completed arrangements by which the whaling steamboat Orion, located on the west coast of Vancouver Island, will proceed to the assistance of any vessel in distress, on being notified. The Government is also under a permanent arrangement with the wrecking vessel Salvor, stationed at Esquimalt, to proceed at once to the assistance of any vessel reported to be in distress.

THE S.S. PRINCESS ROYAL, C.P.R. BRITISH COLUMBIA COAST SERVICE.

The New Steamship Princess Royal.

The last addition to the C.P.R. British Columbia coast service is the S.S. Princess Royal, which left Victoria July 18 on her first trip to Skagway, Alaska. The hull has been built of Douglas fir so far as frames, planking, decks and the general structure is concerned. Her length is 227 ft.; beam, 40 ft.; depth, 17 ft.; her gross tonnage is 1,996, and net tonnage 981. She is built to Lloyd's special survey for an awning deck ship, and her scantlings are practically up to the requirements for a spar deck vessel. She has a superstructure two stories high, and is fitted with 72 staterooms for passengers. She has a fine observation room and first-class smoking-room on the upper saloon deck similar to the Princess Victoria. She is provided with bathrooms and otherwise fitted up in modern style. Her staterooms are large and airy. She has electric lights and steam heat throughout. Her carpets and furniture are of the best, her dining-room seats about 90 people, and is furnished throughout with linen, crockery, silverware, etc., up to the C.P.R. standard. Her motive power consists of 3 boilers, two of which are 13½ ft. in diameter by 12 ft. long, and one 12 ft. in diameter by 12 ft. long. She is provided with a triple expansion engine, cylinders 22, 40 and 60 ins. in diameter by 36 ins. stroke. Her propeller is 12 ft. in diameter, and her speed will be 14 knots an hour. The vessel is fitted with steam steering gear, and provided with the latest and best in navigating instruments. She has cargo capacity for about 800 tons of freight, and has room for a large number of second-class and deck passengers. A second-class smoking-room is provided, and arrangements made for a complete division between first and second-class passengers. She is supplied with particularly large and able life-boats for a vessel of this class, and is otherwise equipped with life-saving appliances and fire-fighting apparatus as required by law. Her anchors are handled by a steam windlass. For handling cargo double derricks are provided at both forward and after hatches. Double winches are used forward and arrangements made for lifting cargo up through the saloons and clear of the upper deck of all. Large side ports are provided for handling freight or live stock in and out of the 'tween decks. She has been constructed to meet the requirements on the B.C. coast. She will be licensed for about 800 passengers. She was built by the B.C. Marine Railways Co., Ltd., the contract having been awarded in June, 1905.

Notices to Mariners.

The Department of Marine has issued the following notices:

No. 43. June 4.—New Brunswick—115. South coast, Bay of Fundy, off Point Lepreau, whistling buoy replaced by gas and whistling buoy. Nova Scotia—116. West coast, Cape Fourchu, whistling buoy replaced by gas and whistling buoy. 117. South coast, north entrance to Lunenburg Bay, gas and bell buoy established. 118. South coast, off entrance to Pope harbor, Horse rock, buoy established.

No. 44. June 5.—Nova Scotia—119. South coast, Barrington bay, off White Knoll ledge, buoy established. 120. South coast, off east entrance to Negro harbor, whistling buoy established. 121. South coast, Lunenburg bay, Sculpin shoal, bell buoy established. 122. South coast, Lunenburg Bay, off Battery point, change in character of buoy. 123. South coast, Gut of Canso, southern entrance, Argos shoal, whistling buoy established.

No. 45. June 6.—Ontario—124. Lake Ontario, Bay of Quinte, Northport shoal, gas buoy established. 125. Lake Ontario, gas buoy placed to mark wreck of dredge sunk south-west of Port Hope. 126. Lake Ontario, off Toronto, Gibraltar point, light to be discontinued. 127. Detroit River, Limekiln crossing, additional buoy. 128. Detroit River, Belle Isle, wreck of tug W. B. Castle removed.

No. 46. June 8.—British Columbia—129. Vancouver Island, east coast, Stuart channel, Danger reef, Wigham lights replaced by gas-lighted beacon. 130. Vancouver Island, east coast, Dodd Narrows, Joan point, gas-lighted beacon established. 131. Vancouver Island, east coast, Horsewell channel, West rocks, gas-lighted beacon established. 132. Chatham Sound, Greentop Island, gas-lighted beacon established.

No. 47. June 10.—Quebec—133. River St. Lawrence, chart, Champlain to Pointe Citrouille issued. 134. River St. Lawrence, chart Batiscan to Cap Levrard issued.

No. 48. June 10.—British Columbia—135. Queen Charlotte Sound, Pine Island, fog alarm established. 136. Chatham Sound, Prince Rupert harbor, Ellinor rock, gas buoy established. 189. Chatham Sound, Prince Rupert harbor, change in color of Coast Island range gas beacons. 138. Chatham Sound, Prince Rupert harbor, Barrett (Bird) rock, change in color of gas buoy light.

No. 49. June 13.—British Columbia—139. Vancouver Island, west coast, Clayoquot Sound, Tofins Island, uncharted rock. 140. Port Simpson approach, Dixon entrance, McCullough rock, position of White and Zayas Islands.

No. 50. July 14.—North Atlantic Ocean—141. Bay of Fundy, current survey str. Gulnare to be avoided. Newfoundland—142. North coast, Strait of Belle Isle, Cape Norman, new lighthouse, change in character of light.

No. 51. June 15.—British Columbia—143. Chatham Sound, chart of Prince Rupert harbor issued.

No. 52. June 15.—Atlantic Coast—144. New edition of Gulf telegraph chart.

No. 53. June 21.—Nova Scotia.—145. South-west coast, Cape Sable Island, Clarke harbor, change in character of buoy. 146. Gut of Canso, southern entrance, Peninsula shoals, bell buoy established. 147. Cape Breton Island, east coast, Sydney harbor, west arm, change in range lights. New Brunswick—148. East coast, Shippigan Is-

land, Shippigan gully, new iron lantern, change in character of light.

No. 54. June 22.—Ontario Lighthouses Division—149. Quebec, Ottawa River, Caron point, change in character of light. Ontario—150. Lake Ontario, Toronto harbor, eastern entrance, front range light improved. 151. Lake Huron, Manitoulin Island, Michael point, light discontinued.

No. 55. June 25.—British Columbia—152. Queen Charlotte Islands, Graham Island, north coast, Masset harbor, hydrographic information. 153. Queen Charlotte Island, Graham Island, north coast, Virago sound, directions for entering Naden harbor. 154. Chatham Sound, Dodd and Cunningham passages, buoyage.

No. 56. June 28.—Ontario, minor waters—155. Rideau canal, Merrickville to Edmund's Lock, stake lights.

No. 58. June 29.—Ontario—161. River St. Lawrence, Lake St. Francis, Island bank, buoy established. 162. St. Lawrence River, Chrysler Island, change in character of buoy. 163. Detroit River, Ballard reef channel, gas buoys established and changed. 164. Georgian Bay, Parry Sound, buoy established.

The following have been issued by the U.S. Hydrographic Department:

No. 25. June 22.—St. Mary's River—1124. Mud Lake, Pointe aux Frenes, gas buoy discontinued. Detroit River—1127. Ballard reef, channel gas buoys established and changed.

No. 26. June 29.—St. Mary's River—1165. Mud Lake, Winter point range light station, change in lights. Detroit River—1169. Ballard reef channel, gas buoys established and changed. 1170. Limekiln crossing, east channel, range lights established. 1171. Limekiln crossing, east channel, gas buoys established.

THE NORTHERN NAVIGATION COMPANY

FULL SUMMER SERVICE
Now in Effect

For Parry Sound and Way Ports
Through 30,000 Islands. Steamer leaves Penetang daily 2.45 p.m.

For Point au Baril, French River and Killarney
Steamer leaves Collingwood Monday and Friday 10.30 a.m.

For North Channel, Sault Ste. Marie and Mackinac
Steamers leave Collingwood 1.30 p.m., Owen Sound 11.30 p.m., Tuesday, Thursday and Saturday (Thursday steamer going far as Soo only).

For Soo, Port Arthur, Fort William and Duluth
Steamers leave Sarnia 3.30 p.m. Monday, Wednesday and Friday (Friday steamer going through to Duluth).

Sinking of S.S. Mary at Montreal.

Commander Spain, R.N., Dominion Wreck Commissioner, and Capt J Riley, Superintendent of Pilots, as assessor, held an investigation in Montreal on June 12 and 13 into the causes which led to the sinking of the S.S. Mary at her moorings on the north side of the Tarte pier, Montreal harbor, where she had been placed for the winter. The Court, after reviewing the evidence adduced, finds as follows:

"That the S.S. Mary was managed by Revillon Bros., and that in the fall of 1906 the vessel being out of commission and without master or ship's company, Revillon Bros. gave instructions to Mr. Fournier, who had been formerly master of the Mary for a short period, and who holds a certificate as master of a fore and aft rigged sailing vessel, to place her in winter quarters, and that this officer not having great experience of the movements of the water and ice during the winter season in Montreal harbor, took counsel with a Mr. Rochon as to the desirability of placing the vessel alongside the Tarte pier for the winter; this man, considering that the Tarte pier was a safe place, advised Mr. Fournier to place the Mary there. From all the evidence which it has been possible to gather, Mr. Rochon's knowledge of river conditions during the early spring were more general than particular. He had never before taken care of a steamer in the ice, nor had he at any time seen a steamer wintering in the ice in that locality.

"The Mary was placed alongside the Tarte pier and was frozen in there; she remained in that condition until the night of Mar. 28, or the morning of Mar. 29, when the ice began to go down the channel and fill up the narrow parts, causing the water to back up over the ice. The Mary being frozen in securely, and the ice by which she was held holding firmly and failing to rise with the rising water, the water overflowed the vessel, filling her and causing her to sink; the ice surrounding her slackening at the same time sufficiently to allow her to break through it. The backing up of the water over the ice, caused by the loose ice filling up the narrow parts of the channel, is a common happening and is a well-known fact to persons of experience on the river; the effect of this backing up of the water is much more noticeable below St. Mary's current, therefore it is invariably customary to place vessels in winter quarters in Montreal harbor inside of the guard or MacKay pier; the valuable plant belonging to Mr. Poupore, the contractor, was removed from the Tarte pier to a place inside the MacKay pier for winter quarters for the reason that the latter mentioned place was considered by the Manager far safer in every way.

"The Court is of the opinion that the man whom Revillon Bros. left in charge of their vessel during the winter was not competent to fulfil the task, and the authorities of the port of Montreal were not consulted in reference to the berthing of the vessel. The regulations respecting berthing of vessels in the port of Montreal were not complied with in the case of the Mary. In the opinion of the Court a far safer place in Montreal harbor might easily have been found to winter her. Rochon being the only man employed was unable to take the customary precautions to prevent the vessel being damaged at the time of the well-known spring conditions. For the above mentioned reasons, the Court is of the opinion that Revillon Bros showed a want of interest in the safeguarding of their vessel during the winter; there were many experienced men in Montreal from whom they could have taken advice, and who no doubt would have informed them that the Tarte pier was not a safe place to winter the vessel, but they apparently were thoroughly satisfied with leaving the matter in the hands of Fournier and Rochon, who, in the opinion of the Court, were not competent men for this particular work. There also apparently was no endeavor on the part of Rochon to cut away the ice round the vessel so as to give her a chance of rising with the water, a custom which is generally followed.

"The Court is therefore of the opinion, that Revillon Bros. are responsible for the damage caused to their vessel."

Capt. Slengenberg, a U.S. whaling captain, has been captured by the U. S. authorities, after a chase of three years, and taken to San Francisco, Cal., to answer a charge of murdering the chief officer of his vessel. The murder took place while the vessel was in Canadian waters at the mouth of Mackenzie River, but the Canadian Government has waived its right to try the accused captain.

The Department of Marine has issued a new edition of the telegraph chart of the Gulf, Lower St. Lawrence, and Maritime provinces, revised to May 1, 1907. The chart shows all existing telegraph lines and cables, tracks of vessels, telegraph stations operated by the Government of Canada, lighthouses, storm signal stations and other information of use to mariners.

The Kirkfield Lift Lock.

The official opening of the steel lift lock on the Trent Valley Canal at Kirkfield, Ont., took place July 6. The opening of this lock renders navigable a stretch of water extending from Barrie and Orillia on Lake Simcoe in the west, to Healey's Falls on the east, a distance of 160 miles. Unlike the lift lock at Peterborough, which is of concrete, that at Kirkfield is of steel. A few facts and figures relating to the lock are: Height of lift, 48 ft. 6 ins.; dimensions of presses: external diameter of cylinders, 8 ft.; diameter of ram, 7 ft. 6 ins.; working stroke, 48 ft. 6 ins.; depth of water in chambers, 8 ft.; height of guide tower (steel), 94 ft.; dimensions of chambers, two each, 140 ft. long by 33 ft. wide; depth of chambers, 9 ft. 10 ins.; approximate weight of water in each chamber, 1,385 tons; cost of structure, exclusive of concrete walls and breast walls, $298,000.

Postmaster-General Lemieux, who represented the Dominion Government at the opening, after referring to the development of canal navigation said: In our greatest chain of waterways, including our most costly and famous canals, those of Welland and Sault Ste. Marie, the minimum depth of water in the canals is 14 ft., and the breadth of the canals at the water surfaces averages 150 ft.; this throughout a system that extends for 1,225 miles from Montreal to the head of Lake Superior. In that great waterway there are no less than eight canals, those of Lachine, Soulanges, Cornwall, Farren's Point, Rapide Plet, Galops, Welland and Sault Ste. Marie, but their total length is only 73 miles, the Welland, 26 miles, being the longest, and the Sault, 1¼ miles, being the shortest. The magnificent locks at the several canals enable us to climb the 600 ft. that separate the level of the St. Lawrence at Three Rivers from that of Lake Superior. The climbing is actually done in 551 ft. of lockage, and the number of locks through which a vessel passes on its long journey is 48. The great Trent Canal system would give a continuous waterway of 200 miles, and would furnish a second great channel of trade between the east and west. The work already done had opened about 160 miles of direct and lateral navigation. The system included 14 locks, of which the average dimensions were 134 by 33 ft. The expenditure had been immense, but great results were looked for. The canals of Canada had cost the country $114,395,281, of which $94,000,000 had been spent in the 40 years since Confederation. During the last fiscal year the expenditure had been $2,758,022. With our policy of progress and development, I am able to say to you to-day that you may look forward to the completion of the Trent Canal system at an early date, but, in fact, even to-day, before the canal scheme is complete, all the cities and towns along its route are feeling the substantial benefit that comes from cheap transportation. Not only had the Government extended the canal system of the country, but it had abolished all tolls on the Government canals. The great canal system which had been built up would enable the older provinces to share in the prosperity of the newer. Do not believe that this achievement, considerable though it is, will be the last in this direction. We are only at the beginning of our expansion. We shall make history faster and faster as the century proceeds, and in no direction are more likely to move faster and with more advantage than in that of improved waterways. The Georgian Bay Canal scheme, of which we have been dreaming for the last two generations, is coming nearer and nearer. Canada is rapidly reaching a moment when, in the strength and pride

of its youth it will be in a position to undertake even this gigantic work, and I do not doubt that those who are now middle-aged may live to see the day when the steamers of Liverpool and Glasgow will take their cargoes straight from Fort William and Port Arthur. That will be a development little dreamed of by our ancestors who planned the waterways we now use, yet the expansion of the West will, I am satisfied, be such that every new avenue of transportation will be needed before even with the utmost energy we can provide them. Canada's supremacy on the Great Lakes is as her very life-blood, and is surely an ambition worthy of our best energies.

Among the Express Companies.

The Canadian Ex. Co. is building a stable to accommodate 120 horses, in Chaboillez St., Montreal. The estimated cost is $120,000.

F. Smith, manager for Hamilton & Long, London, Ont., who was killed by the collapse of the adjacent store there, July 16, was formerly in the Canadian Ex. Co.'s service.

W. C. Muir, Auditor Canadian Northern Ex. Co., is making Toronto his headquarters at present while he is organizing the company's service on Mackenzie, Mann & Co.'s eastern lines.

The Canadian Northern Ex. Co. on July 15 started a service on the Quebec and Lake St. John Ry. with offices at Quebec, Indian Lorette, Valcartier, St. Catherines, Lake St. Joseph, St. Raymond, Allen's Mills, La Tuque Jct., La Tuque, Lake Edward, Chambord Jct., Roberval, St. Jerome, St. Gideon, Hebertville, Jonquiere, Chicoutimi. The Canadian Ex. Co is continuing to operate also on the Q. and L. St. J.R. for the present.

A circular has been sent by the Board of Railway Commissioners to the express and railway companies asking that a conference be arranged with the object of defining the division which should be made between express traffic and railway traffic. Under the Railway Act the Board is empowered to prescribe what is carriage or transportation of goods by express and the commissioners before undertaking to revise and approve the various express companies' tariffs are anxious to have a clear understanding of the term "express traffic."

The Canadian Northern Ex. Co. commenced July 15 operating on the Canadian Northern Quebec Ry's main line between Montreal and Riviere a Pierre Jct., and on the Joliette and St. Jerome branches, the Canadian Ex. Co. withdrawing. A city office has been opened at 22 Victoria Square, Montreal, with H. E. Baker as agent, M. Donelly has been appointed agent at Quebec. Offices have also been opened at Charlemagne, L'Assomption, L'Epiphanie, St. George, St. Jacques, Joliette, Ste. Elizabeth, St. Justin, St. Paulin, Charette Mills, St. Boniface, Shawinigan Falls, Grand Mere, Garneau Jct., St. Tite, St. Thecle, Hervey Jct., Lac aux Sables, Notre Dame des Anges, Riviere a Pierre Jct, Montcalm, Ste. Julienne, New Glasgow, Que. The Montford and Gatineau branch of the C.N.Q. R. is still served by the Dominion Ex. Co.

The following circular has been addressed to the express companies doing business in Canada by the Secretary of the Board of Railway Commissioners: "Under the Railway Act, Sec. 352, the Board is empowered to prescribe what is carriage or transportation of goods by express within the meaning of the act. I am directed to state that the Board thinks it would be advisable that 'Express Traffic' should be defined before the express companies' tariffs are approved by the Board, and that the Board desires to receive the views of the various companies interested as to the division which should be made between express traffic and ordinary railway traffic, and between the kinds of traffic to which express tariffs are to apply, and those to which railway tariffs are to apply. The Board desires that the companies give the Board the benefit of their views upon these matters on or before Sept. 1 next, and suggests that for the purpose, a conference might be had between the various interests and some attempt made to arrive at a harmonious settlement of these questions for submission to the Board."

Telegraph and Cable Matters.

The G.N.W. Telegraph Co. has closed its offices at Cornell, Finch, Springtown, Ont., and Lanoraie, Que.

W. J. Camp, Electrical Engineer C.P.R. Telegraph Department, is making his regular half-yearly inspection of the lines and offices of the system.

The accounts for the past financial year of the trans-Pacific cable have been adopted by the Board in London, Eng., but they have not yet been published.

The C.P.R. Telegraph Department is constructing a telegraph line to connect its system with the Marconi Wireless telegraph station at Chapel Hill, North Sydney, N.S.

J. H. Smart, who has retired from the position of Superintendent of the Commercial Cable Co., at New York, was for some time engaged as an operator in the Western Union Cable office at Canso, N.S.

The Marconi Wireless Telegraph Co. of Canada has issued a writ claiming $5,000 damages against C. Doutre, Superintendent Wireless Telegraphy for the Dominion Government, for alleged libel.

The Union Steamship Co.'s S.S. Camosun is the first vessel on the Pacific coast to be fitted with wireless telegraphy. The Dominion Government S.S. Quadra, and some of the other Dominion Government vessels, will also be similarly equipped.

The C.P.R. Telegraph Department is overhauling its line along the old Credit Valley Ry. in Ontario. The poles are being shortened, new poles being put in where necessary, and wider crossarms are being put up. This will provide for the stringing of additional wires in the future.

The Amalgamated Radio-Telegraphic Co., of London, Eng., expects to be in a position to have a station at Knockroe, Ireland, completed at an early date, and is negotiating for a site for a station in Canada. This, it is stated, may be erected this year, and if the tests are successful a regular business will be done. If sufficient business offers, the report states, a rate of 2c. a word can be made.

The Dominion Government steamship Montcalm sailed from Pictou, N.S., July 8, with the operators for the five Marconi wireless telegraph stations on the north shore of the St. Lawrence, in preparation for the opening of navigation by the Straits of Belle Isle. A site of 1½ acres has been secured at Comox, Vancouver Island, B.C., with an elevation of 120 ft. above sea level. It commands an unobstructed sweep of waters to the north and south. Stations are also to be established at Vancouver and Victoria.

J. D. Oppe, General Manager of the Marconi Wireless Telegraph Co., Montreal, has written a letter to the acting Minister of Marine, in which he claims that the Department since the beginning of the year has been violating the terms of the contract with the company, preventing it giving an efficient service, and from fulfilling contracts for the equipment of vessels with the company's wireless telegraph apparatus. Hon. W. Templeman denies that the Government is violating its contract, and further asserts that the Marconi Co. does not hold a monopoly of the wireless telegraph business in Canada to the exclusion of all other companies and all other wireless systems which it claims.

C. MacKay, President of the Postal Telegraph Cable Co., stated July 9, that all talk about that company and the Western Union Telegraph Co. working in harmony was nonsense. "If two companies," he added, "ever competed in the U.S., these two telegraph companies are competing, and always have been. At times the competition is even fierce and bitter. Every merchant and manufacturer in the U.S. wherever we reach, will bear witness of this statement. We are litigating with the W.U.T. Co. all over the country in regard to railroad rights of way. In fact, the tremendous fight between the Pennsylvania Rd. and the W.U.T. Co. was due solely to the fact that we got that business away from the W.U."

G. Marconi arrived at Sydney, N.S., July 10, and has been conducting experiments at the new wireless telegraph station at Glace Bay. An official statement as to the operation of the system across the ocean is expected to be made at an early date. Marconi said at Sydney, July 11: "We have had communications between Cape Cod and Poldhu, a distance of some 3,000 miles, and I have no doubt that we could reach Vancouver from Cape Breton, which is a greater distance. In this case the waves of communication would extend around the Arctic circle, making the actual distance shorter by at least 500 miles. I find to-day, that we can do all we did before, only we can do it better. There are now about 25 wireless stations in British North America. Not the least important is the service between Prince Edward Island and the mainland, which handled 10,000 messages last winter while the cable was out of order. Cape Sable is handling about 800 ships' messages a week."

Railway Telegraph Superintendents.

The 26th annual convention of the Association of Railway Telegraph Superintendents was held at Atlantic City, N.J., June 19, and two following days. W. J. Camp, Electrical Engineer C.P.R. Telegraphs, Montreal, was the only Canadian official present. After the transaction of routine business H. C. Hope, of St. Paul, read a paper on the "Education of Telegraphers in Railway Work," the discussion following being taken part in by W. J. Camp, who described the methods pursued by the C.P.R. in the instruction and training of telegraph operators. At the afternoon session papers were read by F. Bentley, on the "Superintendent of Telegraph, What He Is, and What He Is Not," and by J. D. Taylor, on "Inductive Disturbances to Telegraph Wires caused by High-Tension Lines Paralleling Railway Rights of Way." A paper on "Inductive and other Foreign Disturbances to Telegraph Lines," prepared by W. C. Stowell, Chicago, was read by E. Parsons. These were followed by interesting discussions. "Wireless Telegraphy" was the subject of a paper submitted by W. Maver, Jr., New York. On the second day a paper by L. Van Aiken, Jr., New York Central Lines, on "Maintenance and Operation of Telephone Service on Railway Lines," was read, and in the course of the discussion W. J. Camp referred at length to the telephone system in use on the C.P.R., which was giving general satisfaction.

"Experiments with Concrete Poles" was the subject of a paper contributed by G. A. Cellar, of the Pennsylvania Lines west of Pittsburg. W. J. Camp, in the course of the discussion, stated that so far as Canada was concerned there was still an ample supply of cedar poles obtainable at extremely reasonable prices, and he did not think that concrete poles would find a market in Canada for some years to come, except, perhaps, in some of the thickly settled districts in the eastern portion of the Dominion. He gave some interesting particulars regarding the building of telegraph lines by the C.P.R. On the 11,000 miles of railroad owned by this company, all of which was equipped with telegraph lines, every pole being cedar. Prices of poles were, however, advancing because of the great demand from the U.S. On the western prairies the C.P.R. had to haul poles in some cases 550 miles. Thirty-foot poles now cost $1.30 on the cars at points on the Atlantic Division of the road; $1.50 on the Lake Superior Division; $1.85 on the Central Division, and $1.20 on the Pacific Division. Experiments with preservatives have proved too costly to be continued. The life of cedar poles was extremely variable. On lines erected in 1877 about half of the poles were still good for a few years' more service.

Other papers read at the second day's session were "Dry Batteries," by N. J. Fry, Milwaukee, Wis., and "Opportunities in the Telegraph Service," by G. W. Dailey, Chicago. On the third day a paper was read by Q. M. Jones, Topeka, Kan., on "Wire Testing," and it was decided to print in the proceedings a number of other papers for the reading of which there was no time. These included one on "Standard Time," by W. J. Camp, and one on "Visible Supply of Telegraph Poles," by W. W. Ashald, G.T.R., Montreal. The committees on wire crossing, uniform pole construction and uniform transfer blanks reported.

The convention decided in favor of holding quarterly meetings and committees were appointed to have charge of the meetings east and west. Montreal was selected as the place for holding the annual convention of 1908, and W. J. Camp was elected Vice-President.

Dominion Telegraph Company.

The following financial statement for the year ended June 30, 1907, was presented at the annual meeting in Toronto, July 10:

ASSETS.

Capital expenditure	$1,281,819.47
Toronto, Grey and Bruce Ry. Co. 1983 bonds, and interest thereon	1,596.24
Cash in bank and on hand	28,630.39
	$1,312,046.10

LIABILITIES.

Capital stock paid up	$1,000,000.00
Dividends unclaimed	1,538.45
Dividend 124, payable July 15, 1907	15,000.00
Suspense	47.13
	$1,016,585.58
Balance at credit of profit and loss	295,460.52
	$1,312,046.10

The directors reported the regular payment, quarterly in advance, for the past 28 years, of the guaranteed interest of 6% per annum on the capital stock of the company, by the lessees, the Western Union Telegraph Co., up to and including June 30, 1907, which interest has been duly distributed quarterly to the shareholders of the Dominion Co.; said lease being for 99 years, from July 1, 1879.

Following are the officers and directors for the current year: President, T. Swinyard; Vice-President, Sir Henry M. Pellatt; other directors, B. Brooks, F. F. Clark, Col. R. C. Clowry, Æ. Jarvis, C. O'Reilly, H Pellatt, A. G. Ramsay; Secretary and Treasurer, F. Roper.

General Telephone Matters

The construction of a telephone line between East Dover, Terrance Bay and Lower Prospect, N.S., has been decided upon.

The B. C. Telephone Co.'s office in New Westminster, B.C., has been remodelled. A new switchboard to add 420 new instruments to the present board is being installed.

The Fort William, Ont., City Council has passed a by-law providing for the raising of $94,000 by debentures, for various purposes, including the expenditure of $36,000 upon the civic telephone system.

The Winnipeg City Council has passed a resolution asking the Board of Railway Commissioners to order the Bell Telephone Co. to put its wires underground in the districts in which the city proposes to lay conduits.

The Eastview Telephone Co., with office at the residence of R. M. Johnston, S. W. ¼ of 28-17-24w2, has been incorporated at Regina, Sask., under the North-West Territories ordinance respecting joint stock companies.

F. Dagger, who has been acting as telephone expert for the Government of Manitoba, in connection with the establishment of a provincial telephone system, has resigned to take a similar appointment for the Saskatchewan Government.

The Board of Railway Commissioners having completed its investigation at Montreal into the Bell Telephone Co.'s rates there, opened its sittings at Winnipeg, July 10, to investigate matters affecting the company's operations in the west.

The building which the Manitoba Government proposes to erect as an exchange for the local and long distance telephone lines at Brandon, will be of brick, 40 by 60 ft., three stories high, and will be equipped for an exchange of 500 phones.

The British Columbia Telephone Co. has purchased a 50 ft. lot on Clarkson st., New Westminster, B.C., upon which it will erect a two-storey brick building for its exclusive use. W. Farrell is President and G. H. Halse, Secretary of the company.

The head office of the New Brunswick Telephone Co. has hitherto been at Fredericton, where all the company's corporate business was transacted. Since the amalgamation with the Central Telephone Co. it has been decided, while retaining the head office nominally at Fredericton, to transact the business of the company at St. John.

The Brougham and Grattan Telephone Co. has been incorporated under the Ontario Companies' Act, with a capital of $5,000 and offices at Dacre, Ont., to carry on a general telephone business within the townships of Brougham and Grattan, Ont. The provisional directors are: J. Legree, P. Bradley, of Brougham tp.; R. Steele, J. Livingstone, W. A. Hurd, of Grattan tp.

The King Telephone Co. has been incorporated under the Ontario Companies' Act, with a capital of $10,000 and offices at Temperanceville, Ont., for the purpose of carrying on a general telephone business within the county of York. The provisional directors are: T. H. Legge, W. H. Glass, A. Wells, G. D. Lockhart, of King tp., Ont.; and W. H. Legge, of Vaughan tp., Ont.

The Alberta Department of Public Works has under construction five long distance telephone lines: Edmonton to Lloydminster, Wetaskiwin to Daysland, Lacombe to Stettler, Blairmore to Calgary, and Calgary to Banff. As soon as the lines are completed to any town an office is being opened, equipment installed, and business started. Seventy-five men are engaged on construction.

A. T. Presson, Superintendent and Engineer of the National Telephone Co., has been in Quebec, since May, making plans for a new telephone system. The new exchange will have underground wires and will connect with the 115 exchanges of the Bellechasse Telephone Co. The switchboard will be fitted for 4,000 instruments, and the system will cost $400,000. Tenders have been invited and bids are required to be in by Sept 1.

The Farmers' Telephone Co. has been established on a co-operative basis in Delta, B.C. The company is completing a line with 25 miles of poles and 90 subscribers, and was in operation early in July. Each subscriber is taking $30 in shares, and is to pay 75 cents a month for the service. The central office is at Ladner, and the officers are: President, W. McKenzie, Woodwards; Vice-President, H. M. Vasey; Secretary, Dr. Traynor, Steveston, B.C.

The Dominion Coal Co. is asking the Nova Scotia Courts for an injunction to prevent the Eastern Telephone Co. cutting off the coal company's service. The coal company maintains a private telephone exchange. It had a contract with the telephone company for a connection which expired in June, 1906. Some correspondence took place which the coal company contends resulted in the renewal of the contract, while the telephone company contends that there was no renewal.

The Telephone Co. of Prince Edward Island is completing a new line from Souris to East Point, adding several miles of wire in Souris East and Souris West. Tenders have been called for a new brick exchange, 30 by 38 ft., in Charlottetown, where a central energy switchboard will be installed. It is also contemplated to construct a new line from Cardigan to Woodville Mills; reconstruct the Cardigan-Montague line, and complete the metallic circuit between Charlottetown and Summerside.

A recent article in the Toronto Globe says there are now rural telephone lines six miles south, and 12 miles north of Barrie, Ont. In some cases the lines are owned by the farmers themselves, who pay $5 a year for connection with the Bell Telephone Co.'s switchboard in Barrie; while in other instances a flat rate of $25 a year is being paid. One man has secured telephone rights in three townships. If the proposition of construction in these townships turns out as at present planned, Simcoe will be ahead of most other counties in this respect.

Wireless telephony, reports from London, Eng., state, has been making steady progress of late, although its achievements are still far behind those of wireless telegraphy. The range of practicable wireless telephony is as yet only 10 miles or so. Telephonic conversation has never yet been successfully carried to a distance of 100 miles of submarine cable under the ocean; the limiting telephonic range over such cables has been about 60 miles. Wire telephony is commercially practised up to distances of 1,500 miles, and is capable of being extended by sufficient expenditure on the wires to 2,500 miles or even more.

The New Brunswick Telephone Co. and the Central Telephone Co. amalgamation was completed at the annual meeting of the former company at Fredericton, N.B., June 26. The capital stock of the amalgamated companies is $830,000, of which $370,000 is held by shareholders of the old Central Telephone Co. Of the $460,000 of stock representing the capital of the old N.B.T. Co., about one-third is held by the Bell Telephone Co. The amalgamated company has power to increase its capital to $2,000,000. Following are the officers and managing committee: President, S. H. White; First Vice-President, Senator Thompson; Second Vice-President, F. B. Black; Secretary-Treasurer, A. Seeley; managing committee: Senator Thompson, H. P. Robinson, H. C. Read, and F. B. Black, with the President, ex-officio.

JAMES THOMSON, Pres. and Mang. Director. J. G. ALLAN, Vice-President. JAMES A. THOMSON, Secretary. ALEX. L. GARTSHORE, Treasurer.

Type "K" Freight Triple Valve

Each One of the 90,000 Type "K" Triples placed in service since their introduction a year and a half ago has been a leading factor towards increased economy, efficiency, reliability and safety in handling modern, heavy freight traffic.

Because with the Type "K" service applications can be made on long trains in half the time formerly required.

Because with the Type "K" all the brakes on a train are released simultaneously, and the reservoirs uniformly recharged.

Because with the Type "K" owing to the quick service and uniform release features, break-in-twos and shocks or strains are practically eliminated.

Because with the Type "K" air consumption in brake-pipe reductions is greatly decreased for given results.

PENNY FARES ON THE G.T.R.

The Chief Railway Commissioner, A. C. Killam, has delivered the following judgment in the case of Robertson vs. the Grand Trunk Ry. Co.:

This is an application for an order directing the G.T.R. Co. of Canada to issue third-class tickets at the rate of one penny per mile for each mile travelled, and directing the company to provide at least one train having in it third-class carriages which shall run every day throughout the length of its line. The application is based upon a clause in the original Act of Incorporation of the G.T.R. Co. of Canada, 16 V., c. 37, passed by the Parliament of the Province of Canada in 1852. Section 3 of that Act was as follows:

"3. And be it enacted, that the gauge of the said railway shall be 5 ft. 6 ins., and the fare of charge for each first-class passenger by any train on the said railway, shall not exceed two pence currency for each mile travelled, the fare or charge for each second-class passenger by any train on the said railway shall not exceed one penny and one halfpenny currency for each mile travelled, and the fare or charge for each third-class passenger by any train on the said railway, shall not exceed one penny currency for each mile travelled, and that, at least, one train having in it third-class carriages shall run every day throughout the length of the line."

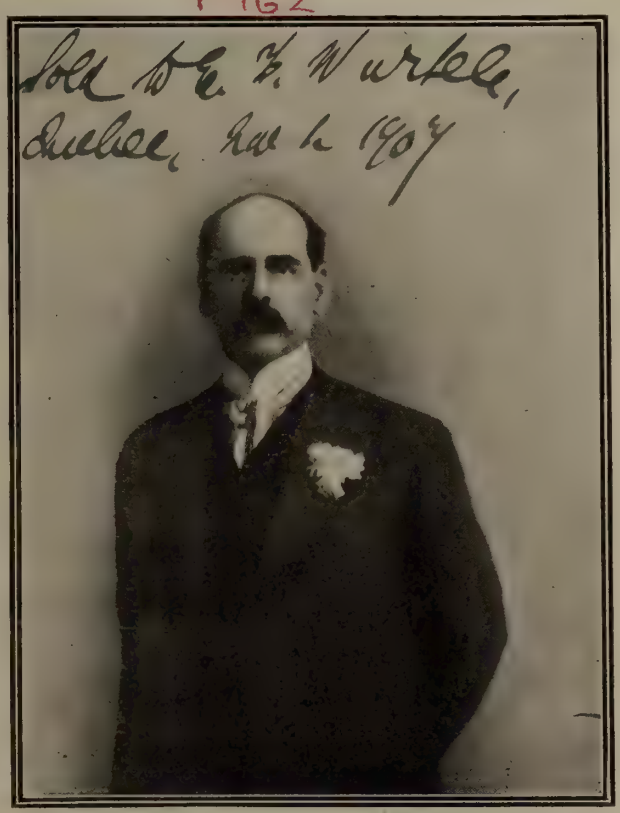
The portion dealing with the gauge of the railway was repealed by Act of the Parliament of Canada, 36 V., c. 18, s. 23. None of the remainder of the section has ever been expressly repealed; and, if it still remains in force, the Board is bound, under the general jurisdiction given by section 26 of the Railway Act, to order and require a railway company to do any act, matter or thing which such company is or may be required to do under its special Act, to make the order applied for.

The contention on the part of the company is that the provisions in question have been impliedly repealed by subsequent legislation. Section 2 of the special Act was as follows:

"2. And be it enacted, That the several clauses of The Railway Clauses Consolidation Act, with respect to the 1st, 2nd, 3rd and 4th clauses thereof, and also the several clauses of the said Act with respect to 'Interpretation,' 'Incorporation,' 'Powers,' 'Plans and Surveys,' 'Lands and their Valuation,' 'Highways and Bridges,' 'Fences,' 'Tolls,' 'General Meetings,' 'Directors, their election and duties,' 'Shares, and their Transfer,' 'Municipalities,' 'Shareholders,' 'Actions for indemnity, and fines and penalties and their prosecutions,' 'Working of the Railway,' and 'General Provisions,' shall be incorporated in this Act with the following modification for the ninth provision in the clause of the said Act, with respect to 'Plans and Surveys' . . . . . and with the further exception of any enactments in the said clauses which may be inconsistent with the express provisions and enactments of this Act, in like matters; and the expression "this Act" when used herein shall be understood to include all the clauses of The Railway Clauses Consolidation Act which are incorporated with this Act."

The clauses with respect to "Tolls" in the Railway Clauses Consolidation Act, 14 and 15 V., c. 51, were contained in section 14 of that Act, and were, so far as of present importance, as follows:

"Tolls shall be from time to time fixed and regulated by the by-laws of the company or by the directors if thereunto authorized by the by-laws or by the shareholders at any general meeting, and shall and may be demanded and received for all passengers and goods transported upon the railway or in the steam vessels to the undertaking belonging . . . . . 'And all or any of the said tolls may by any by-law be lowered and reduced and again raised as often as it shall be deemed necessary for the interests of the undertaking:



A. E. DOUCET, M. CAN. SOC. C.E.

Chief Engineer Quebec and Lake St. John Railway, and District Engineer National Transcontinental Railway.

Provided that the same tolls shall be payable at the same time and under the same circumstances upon all goods and persons, so that no undue advantage, privilege or monopoly may be afforded to any person or class of persons by any by-laws relating to the tolls.' . . . . . 'No tolls shall be levied or taken until approved of by the Governor-in-Council, nor till after two weekly publications in The Canada Gazette of the by-laws establishing such tolls, and of the order-in-council approving thereof.' . . . . . 'Every by-law fixing and regulating tolls shall be subject to revision by the Governor-in-Council from time to time after approval thereof as aforesaid.'"

The same provisions respecting tolls appeared in the Consolidated Statutes of Canada, c. 66; and by section 2 of that Act, "when not otherwise expressed, this and the following sections to the 125th section shall apply to every railway authorized to be constructed by any act passed since the 30th day of August, 1851;.....and this Act shall be incorporated with every such act, and all the clauses and provisions in this Act, unless they are expressly varied or excepted by any such act, shall apply to the undertaking authorized thereby, so far as applicable to the undertaking, and shall, as well as the clauses and provisions of every other act incorporated with such act, form part of such act and be construed together therewith as forming one act."

This legislation of the Province of Canada remained in force until the formation of the Dominion of Canada.

In 1868, in the first session of the first Parliament of the Dominion, was passed "The Railway Act, 1868," in sec. 12 of which were embodied the provisions just mentioned respecting tolls, with the following addition:

"12. No by-law of any railway company by which any tolls are to be imposed or altered, or by which any party other than the members, officers and servants of the company are intended to be bound, shall have any force or effect until the same has been approved and sanctioned by the Governor-in-Council."

The last mentioned Act did not in terms repeal the previous railway legislation of the Province of Canada, and it does not appear to have had any application to the G.T.R., as the clauses dealing with its application made it apply to railways thereafter to be constructed under the authority of any act passed by the Parliament of Canada.

The Act of 1868 remained in force until 1879, when it was replaced by the Consolidated Railway Act, 1879. That Act provided that the provisions of the Act from sec. 5 to sec. 34, both inclusive, should "apply to every railway constructed or to be constructed under the authority of any act passed by the Parliament of Canada, and shall, so far as they are applicable to the undertaking, and, unless they are expressly varied or excepted by the special act, be incorporated with the special act, form part thereof, and be construed therewith as forming one act."

By section 102 of the Act of 1879, the Railway Act, 1868, and various acts amending it, were expressly repealed; but, again, no mention was made of the Act contained in the Consolidated Statutes of Canada.

In sec. 17 of the Act of 1879 were again embodied the before-mentioned provisions respecting tolls, including the addition made in 1868. By sub-section 6, "All or any of the tolls may, by any by-law, be reduced and again raised as often as deemed necessary for the interests of the undertaking; but the same tolls shall be payable at the same time and under the same circumstances upon all goods and by all persons, so that no undue advantage, privilege or monopoly may be afforded to any person or class of persons by any by-law relating to the tolls."

Galena-Signal Oil Company,

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY.

GALENA RAILWAY SAFETY OIL

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT.

By the Act of 1883, 46 Vict., c. 24, s. 12, sub-section 6 of sec. 17 of the Consolidated Railway Act, 1879, was repealed and the following substituted therefor:

"And whereas, it is expedient that a railway company should be enabled to vary the tolls upon the railway so as to accommodate them to the circumstances of the traffic, but that such power of varying should not be used for the purpose of prejudicing or favoring particular persons, or for the purpose of collusively and unfairly creating a monopoly, either in the hands of the company or of particular persons, therefore it shall be lawful for the company, subject to the provisions and limitations herein and in their special act contained, from time to time to alter or vary the tolls by the special act authorized to be taken, either upon the whole or upon any particular portions of the railway as they shall think fit; Provided that all such tolls be, at all times and under the same circumstances, charged equally to all persons, and after the same rate, whether per ton, per mile or otherwise, in respect of all passengers and of all goods or carriages of the same description, and conveyed or propelled by a like carriage or engine, passing only over the same portion of the line of railway; and no reduction or advance in any such tolls shall be made, either directly or indirectly, in favor of or against any particular company or person travelling upon or using the railway."

While sec. 6 of the Act of 1883 declared certain lines of railway, among others the G.T.R., to be works for the general advantage of Canada, and provided that, "3. Railway companies by this Act brought within the legislative authority of Parliament shall have one year from the passing hereof within which to comply with the provisions of sub-sec. five, sec. 15, of the Consolidated Railway Act, 1879, and sec. 1 of the Act of 1883, made secs. 48 and 49 of the Consolidated Railway Act, 1879, applicable to every railway (except Government railways) and railway company subject to the legislative authority of the Parliament of Canada." The Act of 1879 was not otherwise made generally applicable to the G.T.R. or to railways constructed under authority of the Parliament of Canada.

In 1886, upon the coming into force of the Revised Statutes of Canada, another act, cap. 109, known as The Railway Act, was substituted for the previous general railway acts of the Dominion. By sec. 3 of that Act, part 1, containing the sections numbered from 4 to 39 inclusive, was made applicable "to every railway constructed or to be constructed under the authority of any act passed by the Parliament of Canada." Part 2 was made applicable "to all railway companies and railways within the legislative authority of the Parliament of Canada, except Government railways"; and part 3, "to all railway companies operating a line or lines of railway in Canada, whether otherwise within the legislative authority of the Parliament of Canada or not." In sec. 16 (included in part 1) of that Act were embodied the previous provisions respecting tolls, with the amendment made by the Act of 1883. The General Railway Act of the Province of Canada, C.S.C., c. 66, was not among the acts repealed upon the coming into force of the Revised Statutes

In 1888 another act, known as The Railway Act, 51 Vic., cap. 29, was substituted for the R.S.C., cap. 109, which was then repealed. By sec. 2, sub-sec. t, the expression "special act" means any act under which the company has authority to construct or operate a railway, or which is enacted with special reference to such railway, and includes all such acts. By sec. 3, "This Act, subject to any express provisions of the special act, and to the exception hereinafter mentioned, applies to all persons, companies and railways within the legislative authority of the Parliament of Canada, except Government railways." By sec. 6, "If in any special act it is provided that any provisions of any general railway act in force at the time of the passing of the special act is execpted from incorporation therewith, or if the application of any such provision is extended, limited or qualified, the corresponding provision of this Act shall be excepted, extended, limited or qualified in like manner." By sec. 223, "Subject to the provisions and restrictions in this and in the special act contained, the company may, by by-laws, or the directors, if thereunto authorized by the by-laws, may from time to time, fix and regulate the tolls to be demanded and taken for all passengers and goods transported upon the railways, or in steam vessels belonging to the company." By sec. 227, "No tolls shall be levied or taken until the by-law fixing such tolls has been approved of by the Governor-in-Council, not until after two weekly publications in The Canada Gazette of such by-law and of the order-in-council approving thereof; nor shall any company levy or collect any money for services as a common carrier except subject to the provisions of this Act." By sec. 228, "Every by-law fixing and regulating tolls shall be subject to revision by the Governor-in-Council, from time to time, after approval thereof; and after an order-in-council altering the tolls fixed and regulated by any by-law, has been twice published in The Canada Gazette, the tolls mentioned in such order-in-council shall be substituted for those mentioned in the by-law, so long as the order-in-council remains unrevoked."

The Act of 1888 was repealed upon the coming into force of the Railway Act, 1903, which substituted the Board of Railway Commissioners for the Governor-General-in-Council as the authority having jurisdiction to approve and revise the tolls of railway companies, and which made important changes in regard to railway tariffs. The following provisions of that Act are important:

"3. This Act shall apply to all persons, companies and railways (other than Government railways) within the legislative authority of the Parliament of Canada, and shall be incorporated and construed as one Act, with the special act subject as herein provided."

"4. Any section of this Act may, by any special act passed by the Parliament of Canada, be excepted from incorporation therewith, or may thereby be extended, limited or qualified. It shall be sufficient, for the purposes of this section, to refer to any section of this Act by its number merely."

"5. If in any special act heretofore passed by the Parliament of Canada it is enacted that any provision of the General Railway Act in force at the time of the passing of such special act, is excepted from incorporation therewith, or if the application of any such provision is, by such special act, extended, limited or qualified, the corresponding provision of this Act shall be taken to be excepted, extended, limited or qualified in like manner; and, unless otherwise expressly provided in this Act, where the provisions of this Act and of any special act passed by the Parliament of Canada relate to the same subject-matter, the provisions of the special act shall be taken to override the provisions of this Act in so far as is necessary to give effect to such special act."

"6. Where any railway, the construction or operation of which is authorized by a special act passed by the Legislature of any Province, is declared, by any special act of the Parliament of Canada, to be a work for the general advantage of Canada, this Act shall apply to such railway, and to the company constructing or operating the same, to the exclusion of such of the provisions of the special act of the Provincial Legislature as are inconsistent with this Act, and in lieu of any general railway act of the Province."

"251. The company or the directors of the company, by by-law, or any such officer or officers of the company as are thereunto authorized by by-law of the company or directors, may from time to time prepare and issue tariffs of the tolls to be charged, as hereinafter provided, for all traffic carried by the company upon the railway, or in vessels, and may specify the persons to whom, the place where, and the manner in which, such tolls shall be paid.

"(2) All such by-laws shall be submitted to and approved by the Board.

"(3) The Board may approve such by-laws in whole or in part, or may change, alter or vary any of the provisions therein.

"(4) No tolls shall be charged by the company until a by-law authorizing the preparation and issue of tariffs of such tolls has been approved by the Board, nor shall the company charge, levy or collect any money for any services as a common carrier, except under the provisions of this Act."

"256. All tariff by-laws and tariffs of tolls shall be in such form, size and style, and give such information, particulars and details, as the Board may, by regulation, or in any case, prescribe."

"257. The Board may disallow any tariff or any portion thereof which it considers to be unjust or unreasonable, or contrary to any of the provisions of this Act, and may require the company, within a prescribed time, to substitute a tariff satisfactory to the Board in lieu thereof, or may prescribe other tolls in lieu of the tolls so disallowed, and may designate the date at which any tariff shall come into force.

"(2) Any tariff in force (except standard tariffs, hereinafter mentioned) may, subject to disallowance or change by the Board, be amended or supplemented by the company, by tariffs, in accordance with the provisions of this Act."

"263. The tariffs of tolls which the company shall be authorized to issue under this Act for the carriage of passengers between points on the railway shall be divided into two classes, namely: The maximum mileage tariff, herein referred to as the standard passenger tariff; and reduced passenger tariffs, herein referred to as special passenger tariffs.

"(2) The standard passenger tariff shall specify the maximum mileage tolls to be charged for passengers for all distances covered by the company's railway; such distances may be expressed in like manner as provided herein in respect of standard freight tariffs.

"(3) Special passenger tariffs shall specify the toll or tolls to be charged by the company for passengers in every case where such tolls are lower than the tolls specified in the company's standard passenger tariff."

"264. A standard passenger tariff shall be filed, approved and published in the same manner as required by this Act in the case of a freight standard tariff.

"(2) Until the company files its standard passenger tariff and such tariff is so approved and published in The Canada Gazette, no tolls shall be charged by the company.

"(3) When the provisions of this section have been complied with, and except in the case of special passenger tariffs, the tolls in the standard passenger tariff shall be the only tolls which the company is authorized to charge for the carriage of passengers."

"265. All special passenger tariffs shall be filed by the company with the Board, and published as required by sec. 274, three days before any such tariff is intended to take effect, or within such time, or in such manner, as the Board, owing to the exigencies of competition or otherwise, may require. The date of the issue and the date on which, and the period, if any, during which, any such tariff is intended to take effect, shall be specified thereon.

(2) Upon any such tariff being so duly filed the company shall, until such tariff is superseded or is disallowed by the Board, charge the toll or tolls as specified therein, and such tariff shall supersede any preceding tariff or tariffs, or any portion or portions thereof, in so far as it reduces or advances the tolls therein, but until such tariff is so duly filed, no such toll or tolls shall be charged by the company."

Sec. 214 required every railway company to furnish adequate and suitable accommodation for receiving, loading, carrying, unloading and delivering traffic, and to furnish and use all proper appliances, accommodation and means necessary therefor; and sec. 253 required it to afford to all persons all reasonable and proper facilities for the receiving, forwarding and delivering of traffic. Sec. 14 also gave to the Board power, where the required accommodation was not furnished, to order the company to furnish the same; and an amending act, passed in 1906, 6 Ed. 7, c. 42, s. 23, gave the Board power to order that specific works be constructed or carried on, or specified steps, systems, or methods taken. Sec. 212, s.-s. 2, of the Act of 1903, empowered the Board to make regulations "providing for the protection and safety of the public, of property, and of the employes of the company with respect to the running and operation of trains by the company," which provision was amended by the Act of 1906, s. 18, so as to authorize the Board to make regulations "generally for the protection of property and the protection, safety, accommodation and comfort of the public and the employes of the company in the running and operation of trains by the company." All of the before-mentioned provisions of the Act of 1903, with the amendments, are embodied in the present Railway Act, R.S.C., c. 37.

It appears to me that neither the Act of 1868, nor that of 1879, nor part 1 of the Act in the Revised Statutes, nor the amendments of either (except in some particulars not material to the present application), applied to the G.T.R. Co. By the terms of the principal acts, they were to apply only to railways constructed under the authority of an act passed by the Parliament of Canada; and I agree with Mr. Nesbitt's contention that the Parliament of the former Province of Canada was not included. amendments extended the application of particular provisions. See 38 V., c. 24, s. 4 (1875), and 46 V., c. 24, s. 12 (1883). This view appears to be supported by the decisions in Scott v. G.W.R. Co., 23 U.C.C.P. 182; Allan v. G.W.R. Co., 33 U.C.R. 483; re St. Catharines and Niagara C.R. Co. and Barbeau, 15 O.R., 583; Toronto Belt Line R. Co. v. Lander, 19 O.R. 607, and by the language of Burton, J., in Bowen v. C.S.R. Co., 14 A.R. 1.

The Act of 1888 was, by its terms, applicable to all persons, companies, and railways within the legislative authority of the Parliament of Canada, except government railways. These terms clearly included the G.T.R. Co. and its lines of railway; but this was "subject to any express provisions of the special act," and sec. 6 further indicated that the special act was to govern. Further, sec. 223, which authorized the company or the directors to fix and regulate the tolls, did so subject to the provisions and restrictions in this and in the special act contained." What I have said is sufficient to dispose of the contention that the amending Act of 1883 affected the limitation imposed by the company's special act; but it is to be noticed that the powers of the company were, under that Act, to be exercised "subject to the provisions and limitations hereinafter and in their special Act contained." While not material to the construction of the amendment, it is interesting to note that, as shown by the Hansard report of the discussion in Parliament, the amendment of 1883 was introduced by Mr. McCarthy, M.P., for the purpose of making the provision against discrimination more clear.

In my opinion, therefore, the clause requiring the running of third-class carriages and limiting third-class fares was not affected by any legislation prior to the Act of 1903. As has been said, the provisions of the special Act have not been expressly repealed. None of the enactments in the Railway Act, 1903, or in the present Railway Act, are explicitly inconsistent with those provisions. The contention on the part of the railway company is that, in effect, those enactments, and particularly the portions relating to tolls and those giving the Board jurisdiction respecting the accommodation, etc., to be furnished by the company, are so inconsistent as impliedly to repeal the provisions of the special Act.

"If two inconsistent acts be passed at different times, the last is to be obeyed; and if obedience cannot be observed without derogating from the first, it is the first which must give way." Per Lord Langdale, M.R., in Dean of Ely v. Bliss, 5 Beav. at p. 582. But a "repeal by implication is never to be favored." Per Field, J., in Dobbs v. Grand Junction W. W. Co., 9 Q.B.D. at p. 158.

"We ought not to hold a sufficient act repealed, not expressly as it might have been, but by implication, without some strong reason." Per Lord Bramwell, in G.W.R. Co. v. Swindon and Cheltenham R. Co., 9 A.C. at p. 809.

"A later act of Parliament hath never been construed to repeal a prior act, without words of repeal, unless there be a contrariety and repugnancy between them, or at least some notice taken of the former law in the subsequent one, so as to indicate an intention in the law-makers to repeal it." Per Lord Hardwicke, L.C., in Middleton v. Crofts, 2 Atk. 650.

"The court must be satisfied that the two enactments are inconsistent before they can from the language of the later imply a repeal of an express prior enactment." Per Byles, J., in Conservators of the Thames v. Hall, L.R., 3 C.D., at p. 419; and in the same case Keating, J., said (p. 420): "I entirely agree with my Brother Byles, that, before we come to that conclusion, we are bound to satisfy ourselves that it is a necessary implication."

"When the repeal is not express, the burden is on those who assert that there is an implied repeal to show that the two statutes cannot stand consistently the one with the other." Per Chitty, J., in Lybbe v. Hart, 29 Ch.D. 8.

"The intention to repeal must appear even more strongly where the first provision is contained in a statute of a private or special nature, in which case the maxim generalia specialibus non derogant usually prevails. "A later statute in the affirmative shall not take away a former Act, and eo potior if the former be particular and the latter be general." Gregory's Case, 6 Rep. 19 b.

"The law will not allow the exposition to revoke or alter by construction of general words, any particular statute where the words may have their proper operation without it." Lyn v. Wyn, 2 Bridg., C.P. 127.

"The general principle is that a general act is not to be construed to repeal a previous particular act unless there is some express reference to the previous legislation on the subject, or unless there is a necessary inconsistency in the two acts standing together." Per Bovill, C.J., in Thorpe v. Adams, L.R., 6 C.P., at p. 135.

"Unless two acts are so plainly repugnant to each other that effect cannot be given to both at the same time, a repeal will not be implied, and special acts are not repealed by general acts unless there is some express reference to the previous legislation or unless there is a necessary inconsistency to the two acts standing together." Per A. L. Smith, J., in Kutner v. Phillips, 1891, 2 Q.B. 267.

"It is a fundamental rule in the construction of statutes that a subsequent statute in general terms is not to repeal a previous particular statute unless there are express words to indicate that such is the intention, or unless such an intention appears by necessary implication." Per Bovill, C.J., in Reg. v. Champneys, L.R., 6 C.P., at p. 394

"In order to show that a particular act is repealed by a general act by implication, it is not enough to show that the particular act may have become useless or futile, that is to say, that the subject-matter of the particular act comes within the terms of the general act; it must be shown, as it seems to me, that there are enactments in the general act, when rightly construed, inconsistent with the maintenance of the particular act." Per Brett, J., in Reg. v. Champneys, supra, at p. 404.

"Now if anything be certain it is this, that where there are general words in a later act capable of reasonable and sensible application without extending them to subjects specially dealt with by earlier legislation, you are not to hold that earlier and special legislation indirectly repealed, altered or derogated from merely by force or such general words, without any indication of a particular intention to do so." Per Lord Selborne, L.C., in Seward v. Vera Cruz, 10 A.C. at p. 68.

See also the enunciation of similar principles by Sir W. Page Wood, V.C., in Fitzgerald v. Champneys, 2 J. and H., at pp. 53-61.

But all of these statements admit that, if the intention of Parliament to that effect sufficiently appears, the later act should be construed as repealing or varying the former act, whether special or general, and several cases have been cited in which the courts have adopted such construction. In most of these the circumstances and the nature of the enactments vary so much from those with which we have now to deal, that they do not appear to afford us any material assistance. In these cases the principles before stated are not contravened; in some, they are expressly acceded to. Usually, the decisions turned upon the view taken by the court of particular language or of the scope and intention of the legislation as understood by the court. I will cite from but two of them. In Daw v. Metropolitan Board of Works, 12 C.B.N.S. 161, Willes, J., said: "The rule of construction of acts of Parliament as laid down by Vice-Chancellor Wood in The London and Brighton Ry. Co. v. Board of Works, 26 L.J., Ch. 164, is no doubt a very wholesome one. A subsequent general enactment will not derogate from a prior special enactment. When, as the learned Judge says, the legislature has had a special case in view, and has specially legislated upon it, the inference necessary is that it does not intend by a subsequent general enactment not referring to the former, to deal with those matters which have already been specially provided for. The rule generalia specialibus non derogant is properly applicable to such a case....In the present case, however, the rule cannot apply. The powers conferred by the two are substantially, if not strictly, the same. So soon as you find that the legislature is dealing with the same subject-matter in both acts, so far as the later statute derogates from and is inconsistent with the earlier one, you are under the necessity of saying that the legislature did intend in the later statute to deal with the very case to which the former statute applied"; and in Great Central Gas Consumers' Co. v. Clarke, 11 C.B.N.S., 814, Keating, J., said: "I agree that, where we find in an Act of Parliament a prohibition against a public company exacting more than a prescribed rate, we should require a very clear enactment in a subsequent act to remove the restriction. But it is equally clear that, if we find in a later act of Parliament provisions which are utterly inconsistent with those of an earlier act, we are bound to give effect to the later provisions." And in the same case, 13 C.B., N.S. 838, Pollock, C.B., said: "Although that section is not in terms repealed, yet it becomes a clause in a private act of Parliament quite inconsistent with a clause in a subsequent public act of Parliament. That is sufficient to get rid of the clause in the private act. Looking at the 19th sec. of the general act, we think it is impossible to read it otherwise than as repealing the 24th section of the private act. We are bound as well by the plain words of the act as by the general scope and object of it, and also by the justice of the case."

By sec. 3 of the Act of 1903, that Act was to be incorporated with and construed as one act with the special act, subject as in the general Act provided; and by sec. 5, in the event of inconsistency between the general Act and any special act passed by the Parliament of Canada relating to the same subject-matter, the provisions of the special act were to be taken to over-ride the provisions of the general Act in so far as should be necessary to give effect to the special act. These provisions are combined in sec. 3 of the present Railway Act. This would settle the matter if the special act had been one passed by the Parliament of Canada, in which case, although earlier than the general acts, the provisions of the special act would prevail. But the portion of the G.T.R. to which the present application refers was constructed under a special act of the late Province of Canada. I have some doubt whether sec. 6 of the Act of 1903, and the similar section of the present Railway Act, under which the general Act is to apply to the exclusion of such of the pro-

visions of a special act of a Provincial Legislature as are inconsistent with the general Act, were intended to cover the case of a special act passed by the Parliament of a Province before the Union. The definition of the terms "Legislature of any Province," and "Provincial Legislature," in sec. 2, sub-sec. (r) of the Act of 1903, and section 2, sub-sec. 20, of the present Act, is probably wide enough to include such parliaments; and the G.T.R. was declared by an Act of the Parliament of Canada to be a work for the general advantage of Canada. That declaration was included in an Act amending the General Railway Act, which, though referring specifically to the G.T.R. and other named railways, may not come within the definition of a "Special Act." The G.T.R. was a railway connecting one Province with another, and thus became ipso facto, upon the formation of the Dominion, subject to the legislative authority of the Parliament of Canada without a declaration that it was a work for the general advantage of Canada. Sec. 6 was probably intended to apply to railways constructed under special acts of Provincial Legislatures passed after Confederation.

Possibly, however, this may not be important, since sec. 6 embodies the most important of the before-mentioned principles, that the prior special act is repealed or affected by the general Act only where there is inconsistency between them; and I take it that, under either view, the burden is upon the party asserting it to point out the inconsistency, and that this should be made clear.

The clause in the special act is two-fold; it limits the fares for different classes of passengers, and it requires the running of third-class carriages. Necessarily, under the latter portion, there was some obligation upon the company to furnish reasonable accommodation; some obligation to give some attention to the comfort and convenience of third-class passengers, even though this accommodation and attention should not be of the same character as required for the other classes. The legislation requiring the furnishing of adequate and suitable accommodation, and the affording of reasonable and proper facilities, could certainly not effect a repeal of the provision for running third-class carriages, nor, in my opinion, can the legislation empowering the Board of Railway Commissioners to make regulations providing for the protection, safety, accommodation and comfort of the public. Whatever the obligations under the present Act or the former acts, these could not satisfactorily be enforced by the ordinary methods in the ordinary tribunals. The Board of Railway Commissioners was created to be the tribunal for the settling of these and other matters affecting railways and railway companies. It does not appear to me that the creation of such a tribunal was in any way inconsistent with the continuance of the obligation imposed by the special act, or could effect its repeal or evidence and intention of Parliament that the obligation should be no longer effective.

Under the Railway Clauses Consolidation Act, and all the succeeding legislation, down to the Act of 1903, railway tolls were subject to the approval of, and to be altered by, the Governor-in-Council. This limitation upon the company's powers was embodied in the special act by reference to the general Act. The jurisdiction of the Governor-in-Council could exist, therefore, consistently with the limitation as to fares imposed by the special act, and it does not appear to me that the substitution of the Board of Railway Commissioners as the body which is to approve, and which has the jurisdiction to alter, railway tolls, makes any change in this respect. Under the former legislation, all the railway tolls required the approval of the Governor-in-Council; under the present, it is only the standard or maximum tariffs which must be approved by the Board; and railway companies are authorized to make special tariffs imposing tolls lower than those in the standard tariffs. The practice has been for the companies to obtain approval of standard passenger tariffs, not distinguishing between classes, and to provide for second-class fares by special tariffs. Third-class fares could be provided for in the same way. I do not think that the provisions requiring special tariffs are necessarily inconsistent with the limitations imposed by the special act, or that they are sufficient to indicate the intention of Parliament that the company, in framing special tariffs, was to be free from such limitations.

I am not informed whether the third-class carriages were at any time used upon the company's railway. To my mind it is clear that the obligation to use them, and to carry at fares limited as in the special act, continued up to the coming into force of the Act of 1903. I am unable to find in the subsequent legislation any sufficient indication of the intention of Parliament to abolish the system originally imposed upon the company, as having become obsolete or unnecessary. The imposition of this system was one of the terms and conditions upon which the company was granted its franchise, and it should not readily be presumed that Parliament intended to relieve the company from such terms and conditions. The application is limited to the portion of the G.T.R. between Toronto and Montreal, and it is unnecessary to consider whether the obligation ever extended to any other portion of the company's lines.

In my opinion there should be an order requiring the company to run every day throughout the length of its line between Montreal and Toronto at least one train having in it third-class carriages, and forbidding it to charge third-class passenger fares at more than two cents per mile, and directing it to amend its special tariffs accordingly. The operation of this order, however, should be stayed a sufficient time to enable the company to appeal.

ORDER BY THE COMMISSIONERS

The following order, 3346, was issued under date of July 3: In the matter of the application of W. N. Robertson, of Toronto, to the Board under sec. 26 of the Railway Act and sec. 3 of the Act passed by the Parliament of the late Province of Canada in the 16th year of the reign of Her Late Majesty Queen Victoria, chap. 37, intituled An Act to incorporate the Grand Trunk Railway Co. of Canada, for an order directing the G.T.R. Co. to issue third-class tickets at the rate of one penny per mile for each mile travelled, and to run third-class passenger carriages attached to one train per day each way throughout the length of its line; upon hearing counsel for the applicant and for the G.T.R. Co., the Board orders:

That the G.T.R. Co. run every day throughout the length of its line of railway between Toronto and Montreal, at least one passenger train having in it third-class carriages for passenger traffic; and that the fare or charge for each third-class passenger by any train on the said portion of its railway do not exceed two cents for each mile travelled; and that the said company, forthwith after the coming into effect of this order, file with the Board passenger tariffs for the aforesaid portion of its railway embodying the said rate of two cents per mile for third-class passengers.

That the G.T.R. Co. is hereby granted leave to appeal from this order to the Supreme Court of Canada upon the question whether that portion of sec. 3 of the aforesaid Act of the Parliament of the Province of Canada, which required that the fare or charge for each third-class passenger by any train on the railway of the said company should not exceed one penny currency for each mile travelled and that at least one train having in it third-class carriages should run every day throughout the length of the line of the said railway, is now in force.

That, in the event of an appeal from this order being entered for hearing at the next ensuing sitting of the Supreme Court of Canada, this order do not take effect until after the final disposition of the said appeal; but in the event of no such appeal being entered on or before the commencement of the said sitting, this order shall then immediately take effect.

The G.T.R. Co., has entered an appeal to the Supreme Court of Canada against the Commission's judgment.

F. H. McGuigan's Resignation.

Considerable surprise was expressed in Canadian railway circles when it was announced on Aug. 9, that F. H. McGuigan had resigned his position as First Vice-President of the Great Northern Ry. (U.S.A.). Of course there were some who, as usual, looked wise and said, "I told you so," but the resignation was certainly most unexpected, notwithstanding the fact that the tenure of important positions on the G.N.R. has always been very uncertain, and that probably no other company has had so many and so frequent changes. It was generally understood that Mr. McGuigan had left the G.T.R. under a contract with the G.N.R. for a term of years, and it was thought that before accepting the position his jurisdiction and powers would have been clearly understood and defined. The daily press has given prominence to various reports about disagreements between President L. W. Hill and Mr. McGuigan, but no definite statement has been made on either side. The fact appears to be that Mr. McGuigan's plans in regard to operation, etc., were opposed by L. W. Hill.

Mr. McGuigan left St. Paul, Minn., on Aug. 10, and went over the G.T.R. on his way to Portland, Me., where he is staying with his family in a cottage taken for the season. His son-in-law, J. H. Vernon, who was on his staff in St. Paul, left there with him.

Press reports dated Aug. 24, stated that Mr. McGuigan was lying seriously ill and in a critical condition at Portland, Me., and that Dr. J. A. Hutchison, Chief Medical Officer of the G.T.R., had been sent for. Later reports, however, are to the effect that the condition of the patient was not so alarming as at first indicated, and that Mr. McGuigan was considerably better.

Mr. McGuigan's resignation from the G.T.R. was followed by those of G.R. McLeod, Division Engineer, Toronto; H. H. Brewer, Superintendent of Toronto terminals; C. L. Mayne, Superintendent of Montreal terminals; S. H. Ennis, Assistant Superintendent at Ottawa; D. McCool, General Roadmaster Montreal, and P. H. McFadden, General Roadmaster Allandale, all of whom left for the U.S. to join the G.N.R. service. Mr. McLeod was appointed Private Secretary to Mr. McGuigan, and Mr. Mayne was appointed Division Superintendent at Spokane, Wash. The appointments, if any given the others, were not announced. It is said that Mr. Brewer was the General Superintendent of Terminals, and that he has been inspecting all the terminals on the system.

The Quebec Transportation Club is said to be arranging for a trip to New York, Philadelphia and Atlantic City in October.

It is reported that Hanson Bros., Montreal, have obtained an option on the stock of the Quebec Ry., Light and Power Co., on behalf of Mackenzie, Mann & Co., Ltd.

C.P.R. Tunnel Near Palliser, B.C.

In a previous issue we stated that the C.P.R. had built a new tunnel in the Kicking Horse Pass, near Palliser, B.C., eliminating the very heavy curve at that point. At the same time this part of the road was constructed, during 1884 and 1885, a tunnel was excavated on a location shown in fig. 1, and lined with timber, but it caved in while work was still in progress. The character of the material was such that a detour line had to be built around the tunnel, following the bank of the Kicking Horse River, in order to keep the road open. Efforts to reopen the closed tunnel were unsuccessful, and, notwithstanding that it has not been used during all these years, it has commonly been known as "Mud Tunnel." Until Sept., 1906, the road was operated around the 22-deg. 15-min. curve, which has become a proverbial instance of sharp curvature in main-line operation of a standard-gauge road. The location of the alignment of the new tunnel is shown on the map. This tunnel is 693.5 ft. long, partly on an 8-deg. curve. It saves 1,192 ft. in distance, eliminates two curves and economizes in other particulars, as shown by the comparative statement in fig. 1.

The construction of this tunnel was through very difficult material, mostly wet blue clay, with small quantities of sand, gravel, hard pan and other materials, as indicated in fig. 2. The method of excavation, illustrated by successive stages, is shown in fig. 3. First two parallel headings were driven on the grade of the wall plates, and next a crown drift for the placing of the crown bars. After this the material between the side and crown drifts was removed, and the remaining crown bars placed in position. After placing the arch timbers the core between the side drifts was excavated, and then post trenches were excavated to grade and the posts placed in position under the wall plates. The removal of the bench completed the work of excavation. Logs 30 to 40 ft. long were used as crown bars and 8 by 10 in. timbers for wall plates. Ordinary cordwood was used for lagging. Other details regarding the timbering are made clear in fig. 3. This work had to be done under heavy pressure of the superincumbent material, making it necessary to follow the timbering closely with the lining, which consists of concrete reinforced with bars, as illustrated in fig. 4. Generally it is 3 ft. thick at the springing line and 2 ft. thick at the crown. At the base of the side walls the thickness is 4 ft. 4 ins., and the bottom of the tunnel is an invert.

The proportion of the concrete mixture was varied to suit conditions at different points. At the east portal the wing walls are built of 1:3:6 plain concrete, faced with 4 ins. of cement mortar. For a short distance from this end the tunnel arch and walls are not reinforced, the lining being 3 ft. thick and side walls 2 ft. thick. In other parts of the tunnel the arch was made of 1:2:4 and 1:2½:5 concrete, as conditions varied. The work of construction was begun in Oct., 1905, and the tunnel was completed July 31, 1906.—Railway and Engineering Review.

Request for Railway Statistics.

The Secretary of the Board of Railway Commissioners has issued the following circular to railway companies: "I am directed by the Board to inform you that under the powers conferred by the Railway Act, sec. 375, and all other powers possessed by the Board in that behalf, the Board has made an order requiring the various railway companies subject to the legislative authority of Parliament to furnish to the Board on or before Oct. 1 next written statements showing the various particulars set out in paragraph (a) to (l) in section 375, viz.: the assets and liabilities of the company; the amount of its stock issued and outstanding, and the date at which any such stock was so issued; the amount and nature of the consideration received by the company for such issue, and, in case the whole of such consideration was not paid to the company in cash, the nature of the services rendered to or properly received by the company for which any stock was issued; the gross earnings or receipts or expenditure by the company during any periods specified by the Board, and the purposes for which such expenditure was made; the amount and nature of any bonus, gift, or subsidy received by the company from any source whatsoever, and the source from which, and the time when, and the circumstances under which, the same was so received or given; the bonds issued at any time by the company, or what portion of the same are outstanding and what portion, if any, have been redeemed; the amount and nature of the consideration received by the company for the issue of such bonds; the character and extent of any liabilities outstanding, chargeable upon the property or undertaking of the company, or any part thereof, and the consideration received by the company for any such liabilities, and the circumstances under which the same were created; the cost of construction of the company's railway or of any part thereof; the amount and nature of the consideration paid or given by the company for any property required by it; the particulars of any lease, contract or arrangement entered into between the company and any other company or person; and, generally, the extent, nature, value and particulars of the property, earnings and business of the company. And further, to furnish to the Board the following details and particulars, namely:

MILEAGE UNDER OPERATION—Length of main line, naming termini; total length of branch lines; total mileage.

TRAFFIC—Passenger—Paying passengers carried; paying passengers carried one mile; paying passengers carried one mile per mile of road; average journey per passenger; revenue from passenger tickets; revenue from excess baggage; revenue from baggage storage; revenue from mails; revenue from express; revenue from milk traffic; total as above; average amount received from each paying passenger; average amount received per passenger per mile; average number of passengers per train mile; average number of passengers per car mile; revenue from passengers per passenger car mile; total passenger train earnings (all sources) per train mile; total passenger train earnings (all sources) per mile of road; proportion of return tickets to ordinary one way tickets.

TRAFFIC FREIGHT—Number of tons revenue freight carried; number revenue tons carried one mile; number revenue tons carried one mile per mile of road; average distance haul of one ton; revenue from freight haulage; revenue from switching-balance; revenue from elevation; revenue from car service (demurrage); revenue from warehouse storage; revenue from vessels under Railway Act, sec. 7; revenue from other items; total as above; average amount received per ton of revenue freight; average

receipts per revenue ton per mile; average number of tons revenue freight per train mile; average number of tons revenue freight per loaded car mile; freight train earnings per loaded car mile; freight train earnings per train mile; freight train earnings per mile of road.

TOTAL TRAFFIC—Gross earnings from operation; gross earnings from operation per mile of road; gross earnings from operation per train mile; gross operating expenses; gross operating expenses per mile of road; gross operating expenses per train mile; income from operation; income from operation per mile of road.

TRAIN MILEAGE—Mileage of revenue passenger trains; mileage of revenue mixed trains; mileage of revenue freight trains; mileage of non-revenue trains."

Railway Mileage and Three Cent Fares.

The Chief Traffic Officer of the Board of Railway Commissioners has prepared the following memorandum, the figures being "about" in each case:

Total mileage of steam railways in Canada, 21,819.

Total mileage of steam railways subject as to tolls to the Railway Act, 18,400.

Total mileage of steam railways not subject as to tolls to the Railway Act, 3,419.

Mileage of steam railways east of Rockies subject as to tolls to the Railway Act, 16,714.

Mileage of steam railways east of Rockies not subject as to tolls to the Railway Act, 3,248.

Mileage of steam railways west of the Calgary & Edmonton Ry., 1,857.

Mileage of steam railways east of Rockies subject as to tolls to the Railway Act, whose maximum passenger rate is over 3 cents, 2,065.

Mileage of steam railways east of Rockies subject as to tolls to the Railway Act, whose maximum passenger rate is not over 3 cents, 14,649.

About 87% of the steam railway mileage east of the Rockies, subject as to tolls to the Railway Act, has a maximum passenger rate of 3 cents.

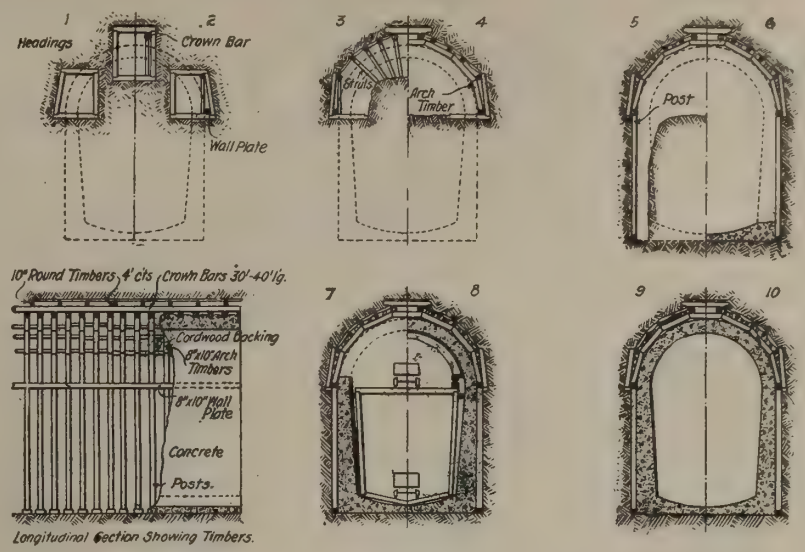

FIG. 3. TUNNEL ON C.P.R. IN KICKING HORSE PASS B.C. CROSS SECTIONS SHOWING SUCCESSIVE STAGES IN CONSTRUCTION.

Through Routes and Through Rates.

The U.S. Interstate Commerce Commission held a hearing in Chicago in May upon the matter of through rates which should govern shipments over more than one railway where no joint rate had been made. The Commission's decision, which has recently been given, is summarized as follows:

Where a through route has been formed the rate charged is a through rate, and the shipment will move upon the rate existing at the time it is billed by the initial carrier.

A through route is a continuous line of railway formed by an arrangement, expressed or implied, between connecting carriers. It must have a rate for every service it offers; and as the route is a new unit—one line formed of two or more connecting lines—so its rate for every service is a unit, even though it be divided between the several carriers arranging themselves into the through route.

Existence of a through route is to be determined by the incidents and circumstances of the shipment, such as the billing, the transfer from one carrier to another, the collection and division of transportation charges, or the use of a proportional rate to or from junction points or basing points. These incidents named are not to be regarded as exclusive of others which may tend to establish a carrier's course of business with respect to through shipments.

Where through billing is given by the originating carrier and is recognized by all connecting carriers to destination, there is in existence a through route over which a through rate applies, which through rate is ascertainable from the tariffs of the participating carriers at the date of shipment; and when such rate is made up of the sum of the locals, the locals apply as of the date of shipment. Any increase in the through rate so made after the date of the shipment or any decrease therein, is not applicable to such through shipments.

Tariffs cannot be given a retroactive effect; they cannot be made to apply to conditions other than those existing upon the date when such tariffs became effective. A combination through rate is as binding, definite, and absolute as a joint through rate; and all of the conditions, regulations, and privileges obtaining as to any factor in such combination rate for through shipment at the time of the initial shipment upon such combination through rate must be adhered to, and cannot be varied as to that shipment during the period of such shipment to its final destination. A local or proportional rate "in" can not be absorbed, diminished, or affected by any "out" rate not in effect at the time when the traffic moved upon such local or proportional rate.

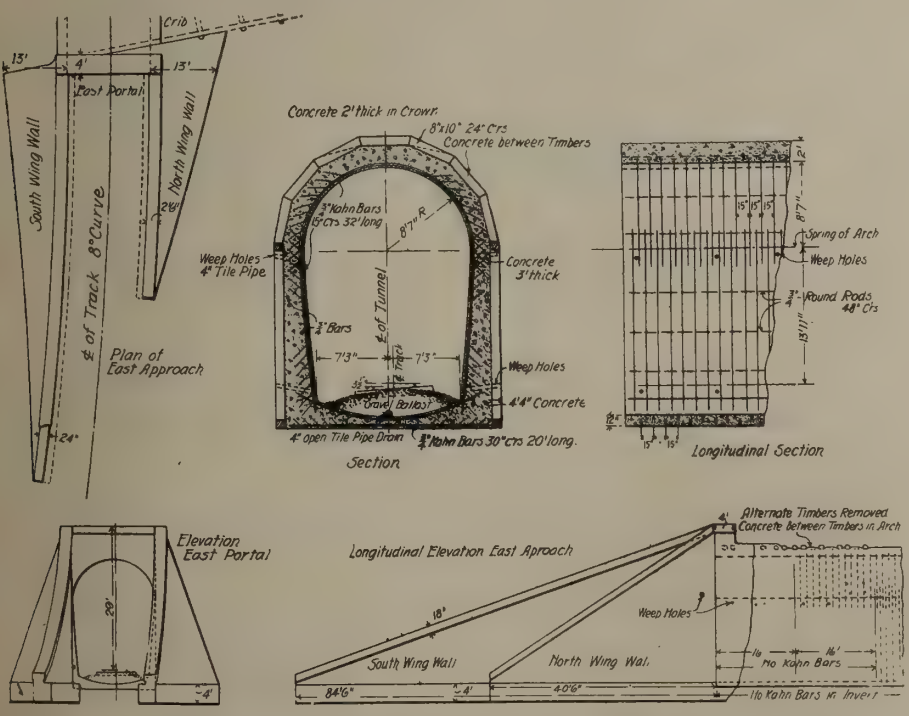

FIG. 4. TUNNEL ON C.P.R. IN KICKING HORSE PASS B.C. METHOD OF REINFORCING CONCRETE LINING.

The appeal of the C.P.R. against the conviction for an alleged violation of the Lord's Day Act, at Claresholm, Alta., in March last, was heard recently, and the conviction quashed.

The annual meetings of the Old Time Telegraphers and Historical Association, and the Society of the United States Military Telegraph Corps, will be held at Niagara Falls, Sept. 16, 17, and 18.

The dispute between the G.T.R. and its locomotive engineers was settled, Aug. 13, by an agreement arrived at by the Board of Conciliation, and accepted by both parties, covering a period of three years from Aug. 1.

E. C. Lalonde, Chief Inspector of Accidents to the Railway Commission, is conducting an enquiry into the cause of the explosion of dynamite which occurred on the Michigan Central Rd. at Essex Centre, Ont., recently.

Vancouver Eastbound vs. Winnipeg Westbound Freight Rates.

The Chief Railway Commissioner, A. C. Killam, has delivered the following judgment: The boards of trade of British Columbia Pacific Coast cities complained to the Board that the railway rates, levied on all classes of goods from Vancouver to points located in British Columbia and the Northwest Territories as far east as Calgary, on the main line, and MacLeod, on the Crow's Nest Line, were discriminatory as against them as compared with the rates on westbound traffic from Winnipeg to the same territory. The rates attacked were those in force on the C.P.R. The complaint was not based on the ground that the rates were, in themselves, so excessive as to be unreasonable or unjust, but merely on the ground that undue preference was given to traffic from Winnipeg westward, as compared with that from the coast cities eastward.

It appears that most of the traffic carried westward from Winnipeg is carried under what are know as "traders' tariffs" marked as "To be used on re-shipment by Winnipeg wholesale houses only to traders doing business at or tributary to stations specified" in the tariffs. Some contest has arisen as to the extent to which those tariffs are used; and the railway company contends that comparison should not be made with them, as the rates are only the balances of through rates from points east of Winnipeg to the western points in question, after deducting the regular tariff rates to Winnipeg. It appears to me, however, that these questions are quite immaterial. If, by so basing the rates, an unjust preference is given to Winnipeg as against the Pacific points, it is equally as objectionable as if the rates were computed on any other basis, and the comparison should be made with traffic carried for similar parties and under similar conditions, and on other traffic the tariffs applicable thereto are those between which comparison should be made.

The complainants rely mainly on a comparison of the respective distances from Winnipeg and Vancouver, claiming that the levying of higher rates for shorter distances raises a presumption of unjust discrimination. They rely also upon a comparison of the practice upon lines in the United States, claiming that the westbound rates from St. Paul are equalized with the eastbound rates from Seattle and Portland at points much farther east than are the rates from Winnipeg with those from Vancouver on the C.P.R. It appears to me that no inference can be drawn from a mere comparison of distances upon different portions of railways, and that it does not constitute discrimination—much less unjust discrimination—for a railway company to charge higher rates for shorter distances over a line having small business or expensive in construction, maintenance, or operation, than over a line having large business or comparatively inexpensive in construction, maintenance and operation. In my opinion a party raising such a complaint upon a mere comparison of distances should show the nature of the particular lines referred to and that there is a material disproportion of rates as against the the shorter line after due allowance is made for the circumstances just mentioned. At the hearing, the complainants offered no evidence upon these points; but the railway company gave some evidence showing that the cost of maintenance and operation were much greater, and the traffic lighter, upon the western portion of the line than upon the portion from Winnipeg westward. While this showed that some difference in rates, as compared with distances, was reasonable, the information given was not sufficient to form an accurate judgment as to whether, after making due allowance for difference of traffic and expense, the western rates were unduly high as compared with the others.

As the matter was one of considerable public importance, the Board did not feel warranted in dismissing the complaint on the mere ground that no sufficient proof of discrimination had been given, but directed its Chief Traffic Officer to make further inquiries, and afford it all the information possible for the purpose of enabling it to arrive at a correct conclusion. This inquiry has been made, with the result that the figures given by the railway officials have been found to have been, in the main, correct, and that some further information has been procured. Members of the Board are aware, from personal investigation of the route, that grades are much heavier, and the line much more difficult of operation, in British Columbia than in the prairie provinces, and this view has been clearly established by the evidence. The original report of the Chief Traffic Officer showed that, by computations based upon the evidence as to the cost of operation and maintenance upon different sections of the main line of the railway, the rates from Vancouver to Calgary were really lower, as compared with those from Winnipeg to Calgary, than if they were based upon the proportionate expense. No accurate data were furnished by the evidence, or by the subsequent reports of the Chief Traffic Officer, for a comparison of the expense of operation and maintenance on what is known as the Crow's Nest route with that for the prairie lines, though the Chief Traffic Officer reported that the Crow's Nest line was much the more expensive to operate. He, however, made some further calculations based on a comparison of grades and the assignment, as a result thereof, to portions of the lines in British Columbia of a constructive mileage at the rate of one and a half miles from Yale to Revelstoke, and two miles from Revelstoke to Canmore, for each actual mile of railway. This estimate was taken from a statement in a letter of W. R. MacInnes, Freight Traffic Manager of the C.P.R. Co., that a certain tariff of the company was based upon such constructive mileages. This calculation showed that, using the constructive mileage thus estimated, the rates from Winnipeg westward were less per mile than those from Vancouver eastward. It appears to me that the results of such estimates afford no reliable basis for concluding that the Vancouver eastbound rates are discriminatory as compared with the Winnipeg westbound rates. The estimates are very loose, and are not based upon any definite calculations. Those based upon actual figures, as to comparative expense of operation and maintenance, are much more reliable, even though, in some respects, details are not fully given. Although the company may in the past, for some purposes, have made use of such estimates, this should not be taken as establishing that the estimates were sufficiently accurate for the purposes of the complaint now in question. It is clear that an absolutely accurate comparison cannot be made, and the evidence does not appear to me sufficiently strong to warrant the conclusion that the eastbound rates are unduly high as compared with the westbound ones. The report of the Chief Traffic Officer further shows that the rates from Vancouver eastward are lower than those on the U.S. lines, and this, although the portions of the U.S. served by these lines are much more productive and thickly settled, and afford greater local traffic, than British Columbia; and, also, that the points at which the eastbound and westbound rates meet in the U.S. are considerably nearer Seattle than is claimed by the complainants; and that, comparing the proportionate distances from Winnipeg and Vancouver respectively with those from St. Paul and Seattle respectively, the average points of meeting of the rates on the C.P.R. are as fairly situated as the points on the lines in the U.S.

So far as the traffic over the Crow's Nest line is concerned, it would be much more satisfactory if more definite information as to the cost of operation had been procured; but, taking into consideration the respective rates over that line and over the main line via Calgary to MacLeod, and the results of the other inquiries, it does not seem to me sufficiently probable that further inquiry would establish the unfairness of the rates to warrant us in making such inquiry. It must also be remembered that the traffic on the prairie sections of the C.P.R. is very much greater than that upon the lines in British Columbia; that the earnings per mile of the company for the prairie lines are very much greater than in British Columbia, and that the company may reasonably be expected to carry the traffic on the prairie lines at lower rates than upon the other lines. At any rate, if it sees fit to do so to a reasonable extent, it cannot well be claimed that this course involves unjust discrimination as against the traffic in and through British Columbia.

There are two minor points which require consideration. One arises under special commodity tariffs for westbound traffic from Winnipeg upon the classes of articles named in the statute 60-61 V., c. 5, s. 1 (d), intituled An Act to authorize a subsidy for a railway through the Crow's Nest Pass. That Act authorized the granting to the C.P.R. Co. of a subsidy towards the construction of a railway from Lethbridge, through the Crow's Nest Pass, to Nelson, upon certain conditions, one of which was that an agreement should be made between the Government and the company by which, among other things, a reduction was to be made in the general rates and tolls of the company upon the classes of merchandise therein mentioned westbound from and including Fort William and all points east of Fort William on the company's railway to all points west of Fort William on the company's main line, or on any line of railway throughout Canada owned or leased by or operated on account of the company. As a result of this Act and the agreement made under it, the company made tariffs of reduced rates upon the classes of merchandise referred to, not only from Fort William and points east thereof westward, but also from Winnipeg westward, without similarly reducing rates on the same classes of merchandise from Pacific points eastward. These reductions cannot be considered as having been forced upon the company, but were the result of an agreement which it chose to enter into for the purpose of obtaining a subsidy in aid of the construction of a line of railway. The agreement and the statute did not even deal with rates from Winnipeg at all. When the statute was passed, and when the agreement was made, the law prohibited unjust discrimination between localities; and while Parliament did not stipulate for similar reductions over western portions of the company's railway, it should not, in my opinion, be considered as having authorized what would, if done otherwise, have produced unjust, discrimination. I think that we are justified in inferring that, in respect of the classes of merchandise to which these tariffs relate, the reductions did result in such discrimination, and that the rates from

Salary-Raising Training For Railroad Men

There is no profession in which promotion depends in any higher degree upon a man's real ability and technical knowledge than in railroading. Quick promotion then for the railroader is the result of quick and also thorough acquirement of that technical training which will qualify him to hold a higher position. In no way can the ambitious railroad employe secure this technical knowledge so quickly and yet so simply as through the I. C. S. Courses of home training. These Courses have been written by the best railroad experts on this Continent and are taught after a manner that 15 years' experience in training hundreds of thousands of ambitious men for promotion and better earnings has proved to be the most practical and efficient. These Courses include instruction in LOCOMOTIVE MANAGEMENT, LOCOMOTIVE BOILERS, STEAM CYLINDERS, and VALVE GEARS, BREAKDOWNS, COMPOUND LOCOMOTIVES, TRAIN RULES, WESTINGHOUSE and NEW YORK AIR BRAKES, CAR LIGHTING and HEATING, and ELECTRIC HEADLIGHTS.

If **YOU** wish to secure the training in your own home, in your spare time, and at an insignificant cost, that will qualify you for promotion to the highest positions in your profession, simply mark and mail this coupon and we will tell you how you can do so. The fact that we have enabled hundreds of other railroad men to secure promotion in itself warrants your careful investigation of our plan if you really wish to better yourself. Don't let a postage stamp stand between you and a better position. **Mark and mail this coupon NOW.**

Vancouver eastward, upon similar traffic carried under similar circumstances, should be proportionately reduced.

The remaining point arises out of the facts that, in order to meet water competition on the Pacific coast, the railway company carries goods from eastern points to the Pacific coast at lower rates than to interior western points, and that the same practice prevails with reference to the rates from Winnipeg westward; and that, at many interior points, the rates from Winnipeg to points on the coast, and from the latter points to the interior ones. The low rates to the coast are made necessary in order to enable the railway companies to obtain traffic in competition with ocean carriers. Such a practice is distinctly authorized by the Railway Act, and, unless the higher rates from eastern points to interior western points are, in themselves, unjust or unreasonable, this practice does not involve unjust discrimination. Necessarily the situation must have a modifying effect upon the rates to the interior points, which must vary with the distances from the Pacific ports. Prima facie the railway company should be entitled to charge reasonable rates from the Pacific ports eastward, and it should not be obliged to charge, and would not even be warranted in charging, excessive rates to the interior points for the purpose of equalizing the position of the Pacific coast points. It does not appear to me that the mere fact that the westbound rates from Winnipeg or any other point to such interior western point are less than the rates which would be made up by a combination of the rates from such eastern points to Pacific points, and from the latter to the interior point, in itself, constitutes unjust discrimination or undue preference. The railway company is allowed to meet competition at the coast points, and I think it should equally be allowed to meet the effect of that competition upon interior points to a reasonable extent.

I am of opinion that the complaint should be dismissed, except in so far as relates to the classes of traffic for which reduced rates were given under the Act relating to the Crow's Nest line.

The Deputy Chief Commissioner, Hon. M. E. Bernier, concurred in the Chief Commissioner's judgment. Commissioner Mills dissented as follows: I regret my inability to concur in the Chief Commissioner's judgment in this case. I do not attach so much importance as he seems to attach to certain portions of the evidence—evidence into which the element of interest enters largely, and there is clear ground for difference of opinion as to its value; and I differ wholly from the opinion expressed as to the bearing of what is called the "constructive mileage" evidence; it has, I would venture to say, a manifestly direct bearing, and is in my opinion the best possible evidence as to the relative cost of the operation and maintenance of the two sections of the railway, the mountain section and the prairie section—because it is an expression of the deliberate opinion of the railway company, with the facts in its possession, at a time when there was no dispute and no issue to be settled; according to which opinion, each mile of the road between Yale and Revelstoke cost as much to operate and maintain as one and one-half miles of the prairie section, and each mile between Revelstoke and Canmore as much as two miles of the prairie section. The rates were adjusted on this basis, and no complaint was made by any section of the country. At a later date, the rates on the prairie section were reduced, without any corresponding reduction on the British Columbia (including the mountain) section; the balance was thus disturbed, and has remained so, although no evidence was given at the hearing or since to prove that the traffic on the British Columbia section had then become or now is relatively any less than it was when the "constructive mileage" basis was established; and for this reason, as I understand it, the Chief Traffic Officer of the Board used the "constructive mileage" of the company in one of his calculations. Further, the Chief Traffic Officer, whose technical knowledge and experience specially fit him for dealing with such questions, investigated the points at issue in all their bearings, at great length, and with the utmost care; he read and weighed the evidence pro and con; he considered the objections urged by the representatives of the railway company against the statements and recommendations made in his report of Dec. 7, 1906; and he came to the conclusion that there has been and is discrimination against the Pacific coast cities as compared with Winnipeg. Therefore, without stating my reasons at greater length or further enumerating the portions of the Chief Commissioner's argument and conclusions from which I have to dissent, I would say that I approve of the recommendations of the Chief Traffic Officer, as follows:

a. That the rates between Vancouver and Calgary should be reduced so as to preserve the same relative proportion between these and those between Winnipeg and Calgary as existed before the latter were reduced some years ago; in other words, that the prairie rates should apply between main line points in British Columbia, counting one mile between Yale and Revelstoke as equivalent to one and a half prairie miles, and one mile between Revelstoke and Canmore as equivalent to two prairie miles—equalizing the Vancouver eastbound and the Winnipeg westbound rates at a point 67 miles west of Calgary.

b. That the rates between Revelstoke and MacLeod via Nelson should be similarly reduced, counting each mile between Yale and Crow's Nest as one and a half prairie miles, instead of two miles, as at present.

c. That from Vancouver to Calgary and MacLeod and intermediate points, commodity rates should be given on the same articles as have commodity rates from Winnipeg under the so-called "Crow's Nest Pass Agreement," these rates to be calculated in the same manner as the class rates, as in sections a and b—equalizing the Crow's Nest reduced rates from Vancouver eastbound and the rates from Winnipeg westbound at Wardner, 146 miles west of MacLeod.

The Steel Rail Question.

A suggestion for profitable use by the mills of the larger crop-ends of ingots from which rails are rolled in accordance with the proposed modified specifications comes from R. W. Hunt, a good authority on rails. The reason for cutting off only 10 to 12 per cent. of the top of the ingot, instead of twice as much, is because this added discard means waste and reduced output. Perhaps these crop-ends can be converted into a profitable by-product. Captain Hunt's idea is to make angle-bars of them. Most of the angle-bars used at present are the same composition as ordinary soft wire rods, being made by the mills from the same ingots and rolled at the same time that the billets for the rods are produced. They are punched and sheared cold. Angle-bars made from rail ingot crop-ends would have nearly the same constituents as the rail steel; and at first thought high-carbon steel for angle-bars seems objectionable. But their use would not be a new departure, for the C.P.R.'s angle-bar specifications are substantially those of its rail steel, with a carbon content of from 0.50 to 0.65. The Canadian Northern Ry. is also using high-carbon bars. The late A. Torrey was perhaps the first to recognize the economy of high-carbon steel in angle-bars and used them on the Michigan Central Rd., of which he was Chief Engineer. He noted the rapid wear of soft bars, due to the motion of the rails, and the fact that they would take a permanent set and thus hold down the rail joint. He found that sometimes when the soft angle-bars were removed from a low joint the rails would spring back to a level surface. The high-carbon bars, especially those made from crop-ends, will break more readily than the others, of course, but a broken angle-bar is not a serious matter and with ordinary watchfulness no harm should result.

Still another suggestion for a profitable use of nearly all of the proposed 25% discard from the ingot comes from the chief engineer of one of the most important railroads of the U.S. It is that the ingot be not cropped, but all of it made into the bloom and rolled to a finished rail section. Then cut from the rail 8 ft. lengths until strictly homogeneous steel, without piping, is reached. These 8 ft. lengths can be rolled into almost any imaginable section and shape for steel ties by the York cross-rolling process. It is believed that the amount of work put into the metal tie by this cross-rolling process will be quite enough to make a sufficiently strong tie, and especially for the reason that the larger rail sections rolled into steel ties have great excess strength, so that there would be a large co-efficient of safety even if defective metal were used. There is one difficulty about this: No shape of steel tie has yet been devised to entirely fill the office of the wooden tie. It is necessary to secure a resiliency which will somewhat correspond to that afforded by the material of the wooden tie, the slight lateral movement of the spike in the wood and the slight canting of the rail due to the fact that it is not held with absolute rigidity to the tie. The steel tie must be made of such a form as to prevent its lateral movement in the ballast. It must also be capable of insulation, for apparently the electric track circuit for signalling purposes has come to stay. The steel tie also needs protection from rust. We have, therefore, clean-cut problems for the designing engineer. If he can devise a form of steel tie that will satisfy the requirements, the cross-rolling process, either applied to old rail or to piped rail, is apparently cheap and effective.—Railroad Gazette.

Canadian Transportation Loans.—The Imperial Chancellor of the Exchequer has issued a statement with regard to colonial loans which have been guaranteed by the Imperial Government. Among these are the following, raised definitely for railway and canal construction: 1867, £3,000,000 at 4%, for the construction of a railway connecting Quebec and Halifax; net amount outstanding Mar. 31, 1907, £328,940 11s. 5d. 1873, £3,600,000 at 4%, for the construction of the Pacific Ry. and improvement of canals; net amount outstanding Mar. 31, 1907, £1,905,558 9s. 2d. The net amount outstanding is in each case taken to be the gross sum outstanding, less the nominal amount of the securities held on account of sinking fund.

The New Brunswick Government has issued a year book for the Province in which a review is given of the winter trade of the port of St. John, and a statement regarding the route of the projected St. John Valley Ry. The statistics show that there are 1,518 miles of railway in the province.

HOTEL TRAYMORE

ATLANTIC CITY, NEW JERSEY

OPEN ALL THE YEAR

With its magnificent 10 story fire-proof addition, presents the finest equipped and most modern of Atlantic City's leading hotels. Superlative in construction, appointment and service. Guests' rooms averaging 19 ft. square, and each with full ocean view. Private baths, fresh and sea water attached to each room. Spacious solarium and conservatories on roof. High-class orchestral concerts daily. Golf privileges to guests. Capacity 600. Illustrated booklet upon request.

Orders by the Railway Commissioners.

3275. July 16.—Extending time provided in order 2867 to Oct. 17, 1907, for the installation of interlocking plant by G.T.P. Ry. where its tracks cross the C.N.R. (Carberry Branch), sec. 1, tp. 12, r. 15, w. 1st m., Manitoba.

3276. July 16.—Authorizing Bell Telephone Co. to place underground wires across G.T.R. tracks at King St. South, Waterloo, Ont.

3277. July 11.—Authorizing J. L. Benn to erect telephone wires across C.P.R. tracks at Mountain Grove, Ont.

3278. July 11. — Authorizing Western Counties Electric Co. to place wires across G.T.R. tracks in Brantford, Ont.

3279. July 12.—Authorizing Clarenceville & St. Thomas Telephone Co. to place wires across the Q.M. & S.R. tracks at Noyan crossing, Missisquoi County, Que.

3280. July 17.—Authorizing C.P.R. Co. to construct and operate a spur line across Emerson Ave., Toronto, to the Dominion Radiator Co.'s premises.

3281. July 16.—Authorizing the Ontario Power Co. to place transmission wires over the M.C.R. tracks near Welland station, Ont.

3282. July 12.—Authorizing P. E. Chauvin and E. Desmarais to place wires across G.T.R. tracks at Stony Point, Ont.

3283. June 28.—Approving location of Kingston, Smith's Falls and Ottawa Ry. from its junction with the G.T.R. at Rideau, Ont., to boundary line between lots 40 and 41, con. 4, tp. Pittsburg, Ont.

3284. July 12.—Approving proposed location of the C.N. Ont. Ry. through townships of Murray, Brighton and Cramahe, and of its revised location through tp. of Haldimand, Northumberland County, mileage 146 to 164.5 west from Ottawa.

3285. July 15.—Approving by-law authorizing W. N. Warburton, General Manager Windsor, Essex and Lake Shore Rapid Ry., to prepare and issue tariffs of tolls to be charged between Windsor and Leamington.

3286, 3287, 3288. July 16.—Approving by-laws authorizing W. P. Kenny, Assistant Traffic Manager Bedlington and Nelson Ry., the Nelson and Fort Sheppard Ry., and the Red Mountain Ry., to prepare and issue tariffs of tolls to be charged on their line for the carriage of traffic.

3289. July 12.—Authorizing Bell Telephone Co. to erect wires across M.C.R. tracks just east of Ridgetown station, Ont.

3290 to 3296. July 12.—Authorizing Bell Telephone Co. to erect wires across various railway tracks.

3297. July 11.—Authorizing G.T. Pacific Ry. to correct its location plans from east line of sec. 31, tp. 35, r. 14, west 3rd m., to west line of sec. 16, tp. 36, r. 15, west 3rd m., Saskatchewan, mileage 59.842 to 64.706.

3298. July 11.—Authorizing G.T. Pacific Ry. to correct its location plans from the n.w. ¼ sec. 27, tp. 37, r. 18, west 3rd m., to n.e. ¼ sec. 15, tp. 39, r. 20, west 3rd m., Saskatchewan, mileage 84.146 to 100.658.

3299. July 11.—Authorizing Canadian Northern Extension Ry. to place its wires across C.P.R. tracks at crossing of the C.P.R. and C.N.R. at Saskatchewan Ave., Winnipeg.

3300, 3301. July 12.—Authorizing Bell Telephone Co. to place its wires across M.C.R. tracks at different points.

3302. July 19.—Authorizing G.T.R. to construct its railway across certain highways between the west end of Belœil Bridge and mileage 21.20 to 25, east of St. Hilaire station, Que.

3303. July 19.—Authorizing Guelph and Goderich Ry. to open for traffic its line between Milverton and Blyth, Ont.

3304. July 19.—Authorizing C.P.R. to open for traffic its Sudbury-Kleinburg branch from Craighurst to Bala, Ont.

3305 to 3307. July 5.—Authorizing Bell Telephone Co. to place its wires across certain railway tracks.

3308. July 6.—Requiring railway companies, subject to the Parliament of Canada, to furnish to the Board on or before Oct. 1 next, certain written statements for the year ended June 30, 1907. See pg. 655.

3309. July 4.—See page 655.

3310. July 5.—Authorizing St. Mary's and Western Ont. Ry. Co. to cross under the G.T.R. Sarnia line about 540 ft. west of St. Mary's Jct. station, Ont.

3311. July 17.—See page 655.

3312. July 24.—Approving revised location of G.T. Pacific Ry. from the east line of sec. 4, tp. 12, r. 7, w. 1st m. to the east line of sec. 12, tp. 11, r. 3, w. 1st m., district of Portage la Prairie, Man.

3313, 3314. July 24.—Authorizing Bell Telephone Co. to place its wires across certain railway tracks.

3315. July 24.—Authorizing Ellis Lime and Stone Co. to place wires under G.T.R. tracks between Guelph and Preston, Ont.

3316. July 17.—Granting extension of 60 days from July 19, to the Windsor, Essex and Lake Shore Rapid Ry. Co. to operate its trains for construction purposes only on its railway where it crosses the M.C.R. track at Talbot St., Essex, Ont.

3317. July 25.—Authorizing Bell Telephone Co. to place its wires across G.T.R. tracks near Penetang station, Ont.

3318. July 25.—Approving located line of Grand Valley Ry. from lot 18, near Blue Lake, to St. George, Ont.

3319. July 25.—Approving location of Canadian Northern Quebec Ry., St. Jacques branch, from St. Jacques to Rawdon, Montcalm, Que., mileage 0 to 10.

3320. July 24.—Extending to Oct. 1, 1907, time provided in order 2733 for installing interlocking appliances where the G.T. Pacific Ry. tracks cross the C.P.R. at sec. 1, tp. 12, r. 11, w. 1st m., Man.

3321. July 24.—Extending to Nov. 1, 1907, time provided in order 3044 for installation of interlocking plant where G.T. Pacific Ry. tracks cross C.P.R. tracks in sec. 12, tp. 12, r. 19, west of 1st m., Man.

3322. July 24.—Authorizing City of Hamilton to lay a water main under the G.T.R. tracks at Lottridge St.

3323. July 23.—Authorizing Town of Milltown, N.B., to lay a sewer under the St. Stephen and Milltown Ry., where it crosses the town property.

3324. July 23.—Authorizing Bell Telephone Co. to erect its wires across G.T.R. tracks near Belleville station, Ont.

3325. July 23.—Authorizing C.P.R. to construct and operate a spur line at Crombies from its main line into the Superior Portland Cement Co.'s premises, together with another spur branch on the east half of lot 20.

3326. July 23.—Authorizing C.P.R. to construct and operate certain branch lines at The Gap, s.e. ¼ sec. 24, tp. 24, r. 9, west of 5th m., owned by Alberta Portland Cement Co.

3327. July 23.—Extending to Oct. 23, 1907, time provided in order of April 30, for the installation of interlocking plant at crossing of Canadian Northern Ontario Ry. by C.P.R., lot 12, con. 2, tp. Cleland, Nipissing, Ont.

3328. July 23.—Amending order of April 24, authorizing Vancouver, Westminster and Yukon Ry. to cross B.C. Electric Ry. tracks on Powell St., Vancouver, B.C.

3329. July 23.—Authorizing E. R. Machum, St. John, N.B., to lay a pipe under the C.P.R. track near Woolastook station, N.B.

3330. July 23.—Authorizing Provincial Light, Heat and Power Co. to cross C.P.R. track near Rockfield, Que., with a 44,000 volt power transmission line.

3331. July 25. — Authorizing Hastings Telephone Co. to place its wires across G.T.R. tracks at public road, 4th con., tp. Thurlow, Ont.

3332. July 25.—Authorizing the Morris and Kemp Telephone Co. to place its wires across C P.R. tracks 6 miles south of Ottawa, Ont.

3333. July 25.—Approving plans of proposed work on bridge at Prospere road, C.P.R. Quebec section.

3334. July 23.—Authorizing the Board of Water, Light and Telephone Commissioners of Fort William, Ont., to place a temporary pole across the C.P.R. track in Ft. William for the purpose of carrying power to the applicants' works at Loch Lomond.

3335 to 3340. July 20.—Authorizing Bell Telephone Co. to place its wires across certain railway tracks.

3341, 3342. July 23.—Authorizing Clarenceville and St. Thomas Local Telephone Co. to place its wires across G.T.R. tracks, St. Thomas parish, Missisquoi, Que.

3343. July 25.—Approving revised location of Qu'Appelle, Long Lake and Saskatchewan Ry. between Lumsden and Disley, Sask., through tp. 19, rgs. 21 and 22, west of 2nd m., mileage 20.0 to 28.3.

3344. July 4.—Authorizing Central Vermont Ry. to erect and maintain a level farm crossing on Campbell's land, Bedford district, Que.

3345. July 4.—Authorizing C.P.R. to maintain protection on certain streets in Almonte, Ont., and to construct a subway there.

3346. July 5.—See page 639.

3347. July 4.—Authorizing C.P.R. to make changes in its railway from Pembroke station to about 3,200 ft. west thereof.

3348. July 18.—Authorizing C.P.R. and Calgary and Edmonton Ry. to construct and maintain a highway crossing over the C. & E.R., on Main St., Leduc, Alta.

3349. July 26.—Authorizing Town of Preston, Ont., to lay a water pipe under G.T.R. tracks.

3350. July 29.—Authorizing the City of Hamilton to construct Trolley St. across G.T.R. tracks.

3351. July 26.—Approving plans of new work on bridge 38.3 on C.P.R. MacLeod section, Alberta.

3352. July 26.—Approving plans of new work on bridge on C.P.R. Edmundston branch, Grand Falls, N.B.

3353. July 26.—Approving plans of new work on bridge on C.P.R. Schreiber section, Ont.

3354. July 26.—Approving plans of new work on bridge on C.P.R. MacLeod branch, Alberta.

3355. July 26.—Approving revised location of Canadian Northern Quebec Ry. at Jacques Cartier River, Portneuf tp., Que.

3356. July 26.—Approving proposed deviation of Canadian Northern Ry. from Kakabeka easterly to Slate River, Rainy River district, Ont., 9.76 miles.

3357. July 26.—Approving plans of new work on bridge on C.P.R. Nepigon section, Ont.

3358. July 29.—Authorizing the Monarch Brass Mfg. Co. to lay a gas main under G.T.R. tracks at Alma St., Port Colborne, Ont.

3359. July 29.—Authorizing C. E. Steele to lay gas mains under G.T.R. tracks in Port Colborne and Humberstone tp., Ont.

3360. July 29.—Authorizing Port Dover Gas Supply Co. to lay gas pipe under G.T.R. tracks in Port Dover, Ont.

3361. July 29.—Amending order 1334 by granting City of Hamilton leave to apply for an order permitting it to construct a subway under the G.T.R. tracks at Ferguson Avenue,

3362. July 29.—Authorizing the City of Hamilton to construct sewers under G.T.R. tracks at different points.

3363, 3364. July 26.—Authorizing the Bell Telephone Co. to erect wires across different railway tracks.

3365. July 30.—Authorizing Windsor, Essex and Lake Shore Rapid Ry. to cross Pere Marquette Rd. near Kingsville station, Ont., for construction purposes only, for three months from date of order, pending installation of interlocking plant provided in order of May 4, 1906.

3366. July 30.—Authorizing Windsor, Essex and Lake Shore Rapid Ry. to cross Pere Marquette Ry. near Pelton station, Ont., for construction purposes only, for three months from date of order, pending installation of interlocking plant provided for in order of May 4, 1906.

3367. July 30.—Approving location of St. Mary's and Western Ont. Ry. from the boundary line between Perth and Oxford counties, to the s.w. side of Queen St., St. Mary's, Ont., 3.67 miles.

3368. July 30.—Authorizing C.P.R. to construct a spur line from its main line near Nelson, B.C., to the Canada Zinc Co.'s premises, Nelson, B.C.

3369. July 30.—Authorizing C.P.R. to construct a spur line to the Barron Brick Co.'s premises, Weston, Ont.

3370. July 29.—Authorizing G.T.R. to construct two additional tracks in Hamilton, Ont., west of Victoria Ave., to Gage's spur, near the eastern limit of the city; and from a street midway between Wentworth St. and Sherman Ave., to Gage's spur.

3371. July 30.—Authorizing C.P.R. to construct spur line to the North Star Lumber Co.'s premises, Cranbrook, B.C

3372. July 30.—Authorizing the C.P.R. to construct a spur line to R. A. Jelly & Co.'s premises, Shelburne, Ont.

3373. July 30.—Authorizing C.P.R. to construct spur line to A. E. Watts's premises, Proctor, B.C.

3374. July 26.—Ordering Alberta Railway and Irrigation Co. to reduce its rates to 4c. per mile, and to furnish return tickets at the rate of 1 2-3 times the rate for the single journey; effective Aug. 1, 1907.

3375. July 31.—Authorizing Bell Telephone Co. to place its wires across G.T.R. tracks near Weston, Ont.

3376. July 31.—Authorizing Town of Moosomin, Sask., to lay a pipe under C.P.R.

3377. July 30.—Authorizing the C.P.R. to construct spur lines to Modern Stone Co.'s premises, Winnipeg.

3378. July 31.—Authorizing G.T.R. to construct a spur line to Ramapo Iron Works Co.'s premises, Niagara Falls, Ont.

3379. July 31.—Authorizing Burgessville Telephone Co. to place its wires across G.T.R. tracks in North Norwich, Ont.

3380. July 31.—Authorizing Kneister Telephone Co. to place its wires across G.T.R. tracks in Tilbury North, Ont.

3381. July 31.—Authorizing G.T.R. to construct an extension of its branch line on Mill St., Toronto, as authorized by order of Aug. 11, 1903.

3382, 3383. July 31.—Authorizing the Bell Telephone Co. to place its wires across certain railway tracks.

3384. July 31.—Authorizing Morris and Kemp Telephone Co. to place its wires across C.P.R. tracks near Ottawa, Ont.

3385. July 31.—Authorizing Armstrong Light and Power Co. to place its wires across Shuswap and Okanagan Ry. tracks.

3386. Aug. 1.—Authorizing C.P.R. to open for carriage of traffic its Lachine Canal South Bank branch from Highlands to station 3.14, near Quebec.

3387. July 31.—Authorizing the Morris and Kemp Telephone Co. to place its wires across C.P.R. tracks south of Ottawa, Ont.

3388 to 3394. Aug. 1.—Authorizing the Central Ontario Ry. to cross certain public highways in Monteagle, Herschel, Wicklow and McClure townships, Ontario.

3395. July 29.—Authorizing Consumers Gas Co. Toronto, to lay a gas main pipe under G.T.R. tracks at Eastern Avenue, Toronto.

3396. Aug. 6.—Authorizing Kneister Telephone Co. to cross C.P.R. tracks in Tilbury North, Ont.

3397. Aug. 6.—Rescinding order 2370 granting leave to Montreal St. Ry. to cross C.P.R. tracks where they intersect Papineau Ave., Montreal.

3398. Aug. 7.—Authorizing Bell Telephone Co. to place its wires across C.P.R. tracks at Lindsay, Ont.

3399. Aug. 7.—Authorizing C.P.R., exercising franchises of Toronto, Grey and Bruce Ry., to construct a spur line to Weston Sanitary Packing Co.'s premises, Weston, Ont.

3400, 3401. Aug. 7.—Approving plans of permanent work on bridges on C.P.R. at Pembroke, Ont.

3402 to 3408. Aug. 7.—Authorizing Central Ontario Ry. to cross certain public highways in Monteagle, Herschell, Wicklow and McClure townships.

3409. Aug. 7.—Authorizing G.T.R. to construct an additional track across Ottawa Ave., South River village, Ont.

3410. Aug. 7.—Approving site of Central Ontario Ry. station at Maynooth, Ont.

3411. Aug. 7.—Authorizing the C.P.R., exercising franchises of Guelph Jct. Ry. Co., to construct and operate spur line to the Standard Fitting and Valve Co.'s premises, Guelph, Ont.

3412 Aug. 7.—Authorizing C.P.R. to construct spur lines in St. Louis, Que., from its main line between Mile End station and St. Martin's Jct. to the premises of Brandrum, Henderson Co.'s premises.

3413. Aug. 7.—Authorizing G.T.R. to construct a spur line from its station yard at Belle River, Ont., to the Canadian Camera Co.'s premises.

3414 and 3415. Aug. 9.—Authorizing Bell Telephone Co. to place its wires across C.P.R. tracks.

3416. Aug. 9.—Approving location of Walkerton and Lucknow Ry. mileage 26.78 to 30.51, passing through Hanover, Ont.

3416. Aug. 9.—Approving deviation of Walkerton and Lucknow Ry. from mileage 26.78 from Proton to mileage 29.98 of the portion already approved, passing through Hanover, Ont.

3417. Aug. 13.—Authorizing Town of Victoriaville, Que., to lay sewer and water pipes under the G.T.R.

3418 to 3424. Aug. 13.—Authorizing Bell Telephone Co. to place wires across various railway tracks.

3425. Aug. 13.—Authorizing C.P.R. to construct bridge 85.5, Mountain section.

3426. Aug. 13.—Authorizing C.P.R. to construct bridge 119.7, Smith's Falls section.

3427. Aug. 13.—Authorizing G.T.R. to construct and operate a spur line from west of its Campbellford, Ont., station, to the Northumberland Paper and Electric Co.'s premises.

3428. Aug. 13.—Approving portion of C.P.R., Regina branch, from mileage 0 to 95.8.

3429. Aug. 9.—Authorizing Canadian Northern Quebec Ry. to construct its line across the St. Foye and St. Louis roads near Cap Rouge, at mileage 2.85 west from Quebec bridge, by diverting the St. Foye road and carrying the St Louis road underneath the railway.

3430. Aug. 14.—Authorizing the Vancouver, Victoria and Eastern Ry. to construct a branch line from the n.e. quarter of sec. 15, tp. 16, New Westminster district, to the International boundary at Huntingdon, B.C.

3431. Aug. 14.—Amending order of July 2, on the complaint of Watson Jack & Co., by striking out the word "Montreal" in the 1st line of the operative part, and striking out the words "steamship to the carter" in the 5th line of the operative part, and substituting therefor the words "carter to the car."

3432. Aug. 13.—Authorizing the G.T.R. to construct and operate a spur line from northwest of Tecumseh St., Woodstock, Ont., southerly along east side of Tecumseh St. to First St., and along the south side of First St.

3433. Aug. 16.—Authorizing Canadian Northern Quebec Ry. to build second track over Montreal Street Ry. at Notre Dame St., Viauville, Que.

3434. Aug. 6.—Authorizing Dominion Department of Public Works to lay and maintain a drain pipe under G.T.R. tracks in Belleville, Ont.

3435. Aug. 14.—Authorizing Bell Telephone Co. to place its wires across G.T.R. tracks over Dundas St. bridges, Toronto.

British Columbia Towage Rates.

Following are the lumber towage rates in British Columbia:

FROM	Bellingham and Anacortes	Blaine	Vancouver
Squamish per m.	$ .20	$ .80	$ .90
Vancouver	. . .	.60	.75
Wilson Creek	.35	.75	.90
Harris Camp	.40	.75	.90
Jervis Inlet	.85	1.25	1.25
Vancouver Bay	.60	1.00	1.10
Captain Island	.50	.90	1.00
Sechelt Inlet	.60	1.00	1.10
Thunder Bay	.50	.90	1.00
Porpoise Bay	.75	1.10	1.10
Bute and Toba Inlets	.00	1.25	1.25
This side Yucaltaw Rap's	.75	1.00	1.25
Discovery Passage	1.00	1.25	1.25
Hole-in-the-Wall	1.00	1.25	1.25
Between Yucaltaw Rapids and Johnston Str'ts.	1.00	1.25	1.25
Johnston Straits to Entrance Knight Inlet	1.25	1.50	1.50
Knight Inlet	1.50	1.75	1.75
Drury, Kingdom Inlets and Greenway Sound	1.50	1.75	1.75
Comox	1.00	1.25	1.25

Towage from any of the above places to Chemainus or Nanaimo same rate as to Vancouver.

Towage to New Westminster and Victoria, 25c. per m. more than to Vancouver.

PROPOSED REVISION OF C.P.R. MAIN LINE BETWEEN HECTOR AND FIELD, B.C.

C.P.R. Grade Revision in the Rockies.

Plans have been approved for the grade revision on the C.P.R. main line between Hector and Field in the Rocky Mountains. Between these two points the controlling gradient has been 4.5 or 4½ ft. of rise in every 100. This has been a great drawback in the handling of traffic, for in order to take a passenger train over this hill it has been necessary to attach two or three heavy locomotives. With freight trains, too, it has been impossible to handle more than half a dozen loaded cars with a single locomotive, adding great delays and a heavy cost to the shipping of goods. During the past few years traffic over this line has grown tremendously, and for the last year the company's engineers have been looking over the ground in an endeavor to find some means of making the grade lighter at this point. A number of surveys have been made, all with this object in view.

The only way in which the gradient can be lessened is by lengthening the line between Hector and Field, and this is a most difficult and expensive proposition. With Mount Selkirk on one side and the Kicking Horse river on the other, there is little room for operations of this sort, for the pass is narrow and crooked up to the summit. In order to get the requisite length of line, two loops will be built, the railway doubling back on itself. There is no room to make the loops in the open and to get the turn they will be cut in the solid rock of the mountains. The two tunnels will be 5,880 and 3,400 ft. long respectively, giving a total tunnel of 9,280 ft. in length. The additional distance gained will permit the company to reduce the gradient to 2.2 or 2 1-5 ft. in every 100. The work on this section will be begun at once, though it will probably take a couple of years to complete.

The accompanying plans show the location which has been approved. Several other lines were laid out, but were abandoned in favor of the present one. The rock through which the tunnels will have to be driven is limestone, and the work will be carried on from either end where possible.

The International Maritime Exposition will be opened at Bordeaux, France, May 1, 1908. Among the exhibits will be working models of the Clermont in which Robert Fulton sailed up the Hudson to Albany, N.Y., April 16, 1807, and of his Nantalis, the first submarine boat constructed.

The British Columbia Legislature recently granted a life pension to Miss Harriet Fraser, daughter of Simon Fraser, who discovered the Fraser River and traced it to its source. Miss Fraser, who was 80 years of age, was critically ill in Toronto, where she has resided for some years, when the news of the pension was received and died a few days later.

The Northern Quebec Mining and Development Co., Ltd., has been incorporated under the Quebec Companies' Act, with a capital of $100,000 and offices at Quebec, to carry on prospecting, mining, smelting and kindred industries and in connection therewith to construct tramways, wharves and docks, and to operate steam and other vessels. The provisional directors are: E. F. Wurtele, J. D. Cameron, J. C. McLimont, J. T. Ross and J. G. Scott, General Manager Quebec and Lake St. John Ry.

September Birthdays.

Many happy returns of the day to—

G. W. Alexander, Local Treasurer G.T.R., Western Lines, Detroit, Mich., born at Lightcliff, Yorkshire, Eng., Sept. 10, 1859.

W. B. Bamford, District Freight Agent C.P.R., London, Ont., born at Belleville, Ont., Sept. 10, 1863.

W. D. Barclay, ex-Manager Alberta Ry. and Coal Co. and Great Falls and Canada Ry, now of Foley Bros., Larsen & Co., contractors, St. Paul, Minn., born at Campbellton, N.B., Sept. 23, 1852.

G. T. Bell, General Passenger and Ticket Agent, G.T.R., Montreal, born there Sept. 7, 1861.

W. H. Biggar, K.C., General Solicitor G.T.R., Montreal, born at the Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. R. Bremner, Division Freight Agent, Ottawa Division, G.T.R., Ottawa, born in Toronto, Sept. 9, 1875.

M. H. Brown, General Freight Agent, Ontario Division, C.P.R., Toronto, born at Victoria Square, Ont., Sept. 2, 1866.

F. R. F. Brown, ex-Mechanical Superintendent Intercolonial Ry., now at Montreal, born at Helensburg, Dumbartonshire, Scotland, Sept. 29, 1845.

W. G. Brownlee, General Transportation Manager G.T.R., Montreal, born at Lawrenceville, Ill., Sept. 9, 1858.

J. R. Bruce, Traffic Auditor Intercolonial Ry., Moncton, N.B., born at Portsoy, Banffshire, Scotland, Sept. 23, 1848.

W. B. Bulling, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Toronto, born in Montreal, Sept. 16, 1858.

R. L. Burnap, General Freight Agent Central Vermont Ry., St. Albans, Vt., born Sept. 20, 1872.

C. F. Burns, Acting Auditor of Disbursements Intercolonial Ry., Moncton, N.B., born at Clements Port, N.S., Sept. 10, 1854.

A. D. Cartwright, Secretary Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 20, 1864.

W. F. Egg, ex-City Passenger Agent C.P.R., Montreal, born at Plymouth, Eng., Sept. 7, 1859.

A. W. Ecclestone, Southern Passenger Agent, Central Vermont Ry., New York, born at Hamilton, Ont., Sept. 25, 1858.

F. A. Folger, jr., Trainmaster Canadian Northern Ry., North Battleford, Sask., born at Kingston, Ont., Sept. 17, 1865.

C. B. Foster, District Passenger Agent, C.P.R., Toronto, born at Kingston, N.B., Sept. 30, 1871.

L. A. Hamilton, ex-Land Commissioner, C.P.R., born at Penetanguishene, Ont., Sept. 30, 1852.

L. B. Howland, President and General Manager, Irondale, Bancroft and Ottawa Ry., Irondale, Ont., born at Lambton Mills, Ont., Sept. 2, 1869.

G. R. Huntingdon, General Superintendent Minneapolis, St. Paul and Sault Ste. Marie Ry., Minneapolis, Minn., born Sept., 1867.

J. E. Hutcheson, Superintendent Ottawa Electric Ry., Ottawa, born at Brockville, Ont., Sept. 15, 1858.

A. C. Killam, Chairman Board of Railway Commissioners for Canada, Ottawa, born at Yarmouth, N.S., Sept. 18, 1849.

W. H. Kelson, ex-General Storekeeper C.P.R., now of the W. H. Kelson Co., Montreal, born at Bath, Eng., Sept. 5, 1850.

R. E. Larmour, freight agent C.P.R., Fort William, Ont., born at Brantford, Ont., Sept. 26, 1868.

H. D. Lumsden, C.E., Chief Engineer National Transcontinental Ry., Ottawa, born at Belhaire, Scotland, Sept. 7, 1844.

J. Bruce Macdonald, Director Niagara Navigation Co., born at Glengarry, Ont., Sept. 19, 1850.

J. F. Mundle, city freight agent C.P.R., Montreal, born at Prescott, Ont., Sept. 20, 1857.

W. Whyte, 2nd Vice-President C.P.R., Winnipeg, born at Charleston, Scotland, Sept. 15, 1843.

H. A. Young, Traffic Manager, Canadian Lake Line, Toronto, born at Brooklyn, N.Y., Sept. 1, 1864.

Railway Commissioners' Traffic Orders.

3309. July 4.—In pursuance of the powers conferred upon it by secs. 8, 333, and 334 of the Railway Act, and of all other powers possessed by the Board in that behalf, the Board orders that every railway company subject to the legislative authority of the Parliament of Canada furnish to the Board within three months from the date of this order the following information, viz.:

The railway company or companies with which it has direct connection in Canada, and the point or points with which such connection is made, the said information to be set forth in column order from east to west and from south to north, showing the junction point or points opposite the railway with which such connection is made.

The railway company or companies with which every such company has joint freight tariffs filed with the Board, giving the C.R.C. numbers of the said tariffs and the junction points through which they apply.

Whether every such company is willing to extend the scope of such joint tariffs by routing also through the junctions (if any) not already utilized, or to arrange joint tariffs through such other points. If not, to state fully its reasons therefor.

Any and all railway company or companies with which every such company has no joint tariffs, and whether such company is prepared to negotiate with such connecting company or companies for joint tariffs; if not, to state fully the reasons for objecting.

GRAIN AND MILL STUFFS FOR ASIA.

3311. July 17.—In the matter of the application of the C.P.R. Co. to the Board under secs. 339 and 342 of the Railway Act for permission to issue special rate notices prescribing freight rates lower than the rates published in the company's freight tariffs to Vancouver, New Westminster, or Victoria, British Columbia, applicable on traffic in grain and mill stuffs to either of the said points for export by water to Asia whenever, in consequence of competition in such traffic prevailing from any point or points in the United States to any port or ports in the U.S. on the Pacific Coast, the company finds it necessary to reduce its rail rates to either of the said ports in B.C. in order to encourage such traffic between Canada and Asia: Upon the report and recommendation of the Chief Traffic Officer of the Board, it is ordered that the C.P.R. Co. is hereby authorized to issue special rate notices under the circumstances and conditions recited above, the said notices to bear the designating letter Z, and, in addition to the rail rate to Vancouver, Victoria or New Westminster, the ocean rate therefrom. It is further ordered that a copy of each and every special rate notice issued under this order shall be filed with the Board without delay, and shall show, for the information of the Board, the ocean rate or rates from the port or ports in the U.S., or other circumstances which has or have made the special rate notice necessary, and the rail rate to the port in question in B.C. which should be charged in the absence of such notice.

ALBERTA RAILWAY AND IRRIGATION CO.

3374. July 26.—It is ordered that the tolls in the standard passenger tariffs of the Alberta Railway and Irrigation Co. be reduced to the rate of 4c. per mile travelled. That the company furnish return tickets for transportation of passengers from any point on its line to any other point and back to the place of starting at the rate of 1 2-3 times the rate for the single journey between those points. That this order come into effect on Aug. 1, 1907, on and after which date the company shall not charge higher rates for passenger traffic than 4c. per mile. That the necessary tariffs be forthwith prepared by the company and filed with the Board.

Rebating by the C.P.R. Denied.

At a sitting of the Beef Commission in Winnipeg recently, J. B. Lauzon, a local butcher, stated that in shipping big dealers got a rebate of $10 a car, and that smaller dealers were not allowed this. He added that he knew this because he had a brother in Montreal who handled 64,000 cattle last year. The witness shipped to Montreal last year, but after the expenses and the freight were reckoned he lost $360.

In reference to this evidence F. W. Peters, Assistant Freight Traffic Manager C.P.R., says: "Statements of this character are made by irresponsible people, who are unable to substantiate what they assert. To the statement itself I give an unqualified denial. When I learned that the assertion had been made before the Commission, I requested W. B. Lanigan, who is in direct charge of our freight shipments, to attend the session of the Beef Commission and to deny the allegation under oath. The opportunity was not afforded us to appear before the Commission, owing to the fact that the session had closed, but we made application to be permitted to appear when the Commission again sits in the city, when one of the officials will appear and give evidence in rebuttal of this assertion. I wish to repeat what I have said that the C.P.R., in dealing with shippers, has granted no rate to the largest patron of the company which was not granted to the smallest shipper. Such statements as that made before the Commission do much harm to the entire country."

Railway Rolling Stock Notes.

The New Brunswick Coal and Ry. Co. has received 10 hopper cars.

The Temiskaming and Northern Ontario Ry. has ordered six locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Toronto, Hamilton and Buffalo Ry. has received six first-class passenger coaches, and two combination smoking and baggage coaches from the U.S.

The Temiskaming and Northern Ontario Ry. Commission is asking bids for four vans, two baggage and express cars, and two baggage and mail cars.

The three switching locomotives which the C.P.R. is constructing at its Angus, Montreal, shops are duplicates of the U-3e class, which are 6-wheel coupled, with cylinders 18 in. diameter by 26 in. stroke; working pressure, 200 lbs.; driving wheels, 52 in.

The Dominion Dump Car Co., Ltd., Montreal, has sold to Macdonnell & O'Brien, 15 improved Hart convertible cars, 34 ft. long and of 40 ton capacity. These cars are duplicates of those supplied to the G.T. Pacific Ry., which have already been described in our columns.

There has been deposited with the Secretary of State at Ottawa an agreement made between the Imperial Rolling Stock Co. and the Canadian Northern Ry., and a copy of a mortgage made between the Imperial Rolling Stock Co., the National Trust Co., and the Canadian Northern Ry. Both documents are dated July 26.

The Canadian Northern Ry.'s orders for locomotives for 1908 delivery include 40 consolidation locomotives to be built by the Canadian Locomotive Co., Kingston, Ont., for delivery commencing in March, and 45 to be built by the Locomotive and Machine Co. of Montreal, the deliveries of which commence in Dec. of this year for the 20 consolidations, and in Jan. for the 25 ten-wheel locomotives.

The Canadian Northern Ry. has received the following additions to rolling stock, 23 stock cars and 4 coaches from Crossen Car Mfg. Co., Cobourg, Ont.; 332 box cars, 4 coaches and 1 mail and express car from Rhodes, Curry & Co., Amherst, N.S.; 3 ten-wheel locomotives from Canada Foundry Co., Toronto, 2 consolidation locomotives from Canadian Locomotive Co., Kingston, Ont., and 2 parlor and 3 palace cars from the U.S.

The C.P.R. is having built at its Farnham, Que., shops an official car for one of its General Superintendents. It will be 35 ft. by 8 ft. 11 in. over all, with body and underframe of wood; axles, M.C.B., 4¼ by 8 in.; bolsters, 6 in. plate; brake beams, Simplex; brake shoes, steel back diamond S.; brakes, Westinghouse air; brasses, 4¼ by 8 in., M.C.B.; couplers, Tower; heating system, Wm. C. Baker; journal boxes, McCord malleable; platforms, van type; roof canvas.

The specifications for the 74 flat cars, 60,000 lbs. capacity, which the C.P.R. is having built at its Angus, Montreal, shops, provide for: Length, 36 ft. 8 in.; width, 8 ft. 10 in.; body and underframe, wood; bolsters, Simplex with Susemihl side bearings; brake beams, Simplex; brake shoes, steel back diamond S.; brakes, Westinghouse air; brasses, 4¼ by 8 in., M.C.B.; couplers, Tower malleable with solid steel knuckles; journal boxes, McCord; trucks, all steel diamond pattern with Barber rollers; wheels, 33 in. cast iron.

A recent statement given out at Montreal says that very nearly the whole of the $7,000,000 of rolling stock ordered by the G.T.R. had been delivered. Of the 60 new passenger cars, costing $12,000 each, 30

have already been delivered, and the remaining 30 will be delivered shortly. There were 100 locomotives ordered to cost $15,000 each, and 60 of them have been delivered. There were 5,200 freight cars of all kinds ordered at an average cost of $850 each, and of these 4,500 have been delivered.

The specifications of the rolling stock under construction at the C.P.R. Angus, Montreal, shops, on orders mentioned in our Aug. issue as similar to those for cars previously described as follows: The three 72 ft. 1st class cars without smoking rooms, similar to the 25 described on pg. 165, Mar.; the mail and express car similar to the 15 described on the same page; the 21 stock cars similar to those described on the same page; the 27 colonist cars similar to those described on pg. 17, Jan.; the 60 vans similar to the 13 described on pg. 413, June.

The specifications for the 400 box cars and the 25 refrigerator cars which the Intercolonial Ry. is having built by Rhodes, Curry & Co., Amherst, N.S., provide as follows:

Box Cars.—Weight, 41,800 lbs.; length, inside, 36 ft.; height, inside, 8 ft.; height, over all, 13 ft. 5 in.; width, inside, 8 ft. 6 in.; body and underframe, wood.

Refrigerator Cars.—Weight, 44,000 lbs.; length, inside, 28 ft. 9½ in.; height, inside, 7 ft. 6⅜ in.; height, over all, 13 ft. 3 in.; width, inside, 8 ft. 1¼ in.; body and underframe, wood.

Special Equipment.—M. C. B. axles, automatic couplers, and springs; railway standard trucks; Simplex body and truck bolsters, center bearings; Susemihl side bearings; Canadian Bronze Co.'s journal bearings; McCord journal boxes.

The C.P.R. is having built at its Angus, Montreal, shops two 30-ton refrigerator cars, the specifications for which provide: Length, over sills, 41 ft.; width, over sills, 9 ft. 1⅝ in.; length in clear between ice boxes, 34 ft. 6 in.; width inside, 8 ft. 3⅝ in.; height from top of slats to ceiling, 7 ft. 6½ in.; height from top of slats to meat rack, 6 ft. 11 in.; body, wood; axles, 5 by 9 in., M.C.B.; bolsters and brake beams, Simplex; brake shoes, steel back diamond S.; brakes, Westinghouse air; brasses, 5 by 9 in., M.C.B.; couplers, Tower malleable with solid steel knuckles; trucks, 5 by 9, Barber roller, Simplex, of steel, diamond pattern; wheels, 33 in. cast iron.

The 22 steel hopper bottom ore cars, 100,000 lbs., for which the C.P.R. recently placed an order, will have the following general dimensions, etc.: Length, inside body, 26 ft. 7⅛ in.; width, inside body, 9 ft. 6 in.; length, over buffers, 28 ft. 8 in.; width, over side stakes, 10 ft. 0⅝ in.; height from rail to top of body, 9 ft. 0⅝ in.; body and underframe, steel; axles, 5½ by 10 in., M.C.B., steel; bolsters, Simplex; brake beams, Simplex; brakes, Westinghouse air, 10 in. equipment; brasses, 5½ by 10 in., M.C.B.; couplers, Tower of steel; journal boxes, McCord malleable; trucks, Barber roller, Simplex, diamond pattern, steel; wheels, 33 in. cast iron.

Two parlor cars—the Humber and the Michipicoten—which the C.P.R. has added to its rolling stock for the Montreal-Ottawa run, have a new arrangement of the platform, which is a distinct improvement upon the prevailing type. In the older cars the outside vestibule doors can only be opened from the inside by lifting up the platform section and pulling back the door. Upon these two cars there is provided on the outside a pedal which, when pressed down causes the platform to break in the center, releasing the door, which flies open. By this arrangement the outside door can be opened from the outside as well as the inside of the car, and will prevent the occurrence of such an accident as that by which Homer Taylor, a Montreal railway supply man, was killed near Alexandria, Ont., Oct. 21, 1906.

The C.P.R. has placed an order in the U.S. for 1,000 box cars of similar dimensions, etc., to the 143 recently ordered at its Angus, Montreal, shops. The specifications provide: Length, 36 ft. 8 in., over sills; length, inside, 36 ft.; width, over frame, 9 ft. 0⅝ in.; width, inside, 8 ft. 6 in.; height, inside, 8 ft.; bodies and underframes, wood; axles, 4¼ by 8 in., M.C.B.; bolsters, body and truck, Simplex; brake beams, Simplex; brake shoes, steel back diamond S.; brakes, Westinghouse, air; center bearings, one of malleable iron and one of steel; couplers, Tower malleable with solid steel knuckle; journal bearings, 4½ by 8 in., M.C.B.; side bearings, Susemihl; springs, C.P.R. standard; journal boxes, McCord malleable; trucks, all steel diamond pattern, Barber roller, Simplex; wheels, 33 in. cast steel.

The specifications of the three Roger-Hart convertible ballast cars which the C.P.R. is having built at its Angus, Montreal, shops, provide as follows: Capacity, 40 tons; length inside as gondola car, 34 ft. 10 in.; length inside as hopper car, 24 ft. 6 in.; width, inside, 8 ft. 8 in.; height of sides, 3 ft. 0¼ in.; length over frame, 36 ft. 8 in.; width, over frame, 8 ft. 10 in.; body and underframe, wood; axles, 5 by 9 in., M.C.B.; body and truck bolsters, Simplex; brake beams, Simplex; brake shoes, steel back diamond S.; brakes, Westinghouse air; center bearings, one of malleable and one of steel; couplers, Tower malleable with solid steel knuckles; journal bearings, 5 by 9 in., M.C.B.; side bearings, Susemihl roller; springs, C.P.R. standard; journal boxes, McCord malleable; trucks, all steel, diamond pattern, Barber roller, Simplex, wheels, 33 in. cast iron.

The specifications of the consolidation locomotives which the Canadian Locomotive Co., of Kingston, Ont., is delivering to the Canadian Northern Ry., are as follows: Weight in working order, drivers, 151,000 lbs.; total, 170,000 lbs.; wheel base, rigid, 15 ft. 6 ins.; total, 23 ft. 6 ins.; with tender, 56 ft.; heating surface, fire-box, 176 sq. ft.; tubes, 2,259 sq. ft.; total, 2,435 sq. ft.; driving wheels, 57 ins. diameter; centers, main, cast steel, others, cast iron; diameter and length of driving journals, 9 and 12 ins.; diameter of cylinders, 21 ins.; stroke, 26 ins.; type of boiler, extended wagon top; working pressure, 200 lbs.; number of tubes, 310; diameter, 2 ins.; length, 14 ft.; brakes, Westinghouse; tender, loaded, 140,000 lbs.; hopper tank; capacity, 6,000 gals.; coal capacity, 12 tons; truck, 4-wheel; diameter of wheel, 33 ins.; wheel, cast iron chilled tread; diameter and length of journal, 5½ and 10 ins.; brake beams, Simplex.

The Temiskaming and Northern Ontario Ry. has ordered from the Canadian Locomotive Co., Kingston, Ont., six 10-wheel locomotives with the following general specifications: Gauge, 4 ft. 10½ ins.; weight in working order on drivers, 112,000 lbs.; total weight, 144,000 lbs.; wheel base of engine, rigid, 13 ft. 6 ins.; total, 23 ft. 8 ins.; diameter of driving wheels, 56 ins.; driving wheel centers, cast steel; diameter and length of driving journals, 8½ and 10 ins.; diameter of cylinders, 19 ins.; stroke, 24 ins.; type of boiler, radial stay; working pressure, 200 lbs.; number of tubes, 239; diameter of tubes, 2 ins.; injectors, locomotive type; brakes, Westinghouse; weight of tender, loaded, 120,000 lbs.; tank capacity, 500 gals.; hopper tank; coal capacity, 10 tons; truck, 4-wheel; wheels steel tired, cast iron centers; diameter of wheels, 33 ins.; diameter and length of journal, 5 and 9 ins.; brake beams, Simplex.

In an interview at Montreal, Aug. 4, upon his return from the Pacific coast, D. McNicoll, Vice-President C.P.R., said: "With business growing as it is in this country cars are always short; but I do not think there will be any particular difficulty in handling the western harvest, as we have very greatly increased our rolling stock since last year. At the Angus shops we are turning out 28 freight cars a day. This year there will be 6,000 new cars available for use when the season for movement of crops arrives. The company has spent something like $10,000,000 in rolling stock for the movement of passengers and freight. By the fall we should have 200 new locomotives in use. That includes 70 which will have been built at our own shops, where we are building a new locomotive every five days, in addition to repairs that are always in progress. Two hundred locomotives per year we are now adding to the system. I do not think that record is bad."

The C.P.R. is having built at its Angus, Montreal, shops, a single track snowplough for its eastern lines, and a double track snowplough, the specifications for which provide as follows: Length, inside, 23 ft. 7¾ in.; length over frame, 35 ft. 1 in.; length over all, 38 ft. 8¼ in.; width, inside, 6 ft. 8 in.; body and underframe, wood; axles, M.C.B., 4¼ by 8 in.; body and truck bolsters, wood; center bearings, cast iron; brake shoes, cast iron; doors, side; draft rigging, push bar at front, draw casting at rear; brakes, Westinghouse air with hand arrangement applied to rear truck only; journal bearings and boxes, M.C.B., 4¼ by 8 in.; roof, double board; side bearings, flat; trucks, rear, swing motion with helical swings; trucks, front, rigid with no springs; wheels, rear truck, cast iron, 33 in. diameter; wheels, front, truck steel tired, 33½ in. diameter; wings on single track plough, one on each side 6 ft. wide operated by hand or air, and on double track plough, one wing 6 ft. wide, and one 10 ft. wide, operated by hand or air; points, drops, operated by hand or air; cupola, C.P.R. standard; centers of trucks, 22 ft. 2 in.; headlight, C.P.R. standard locomotive.

Following are the general specifications for the 20 consolidation locomotives which the Canadian Northern Ry. has ordered from the Locomotive and Machine Co. of Montreal, for delivery commencing in Dec.:

Cylinder.—Type, simple piston; diameter, 21 in.; stroke, 26 in.

Tractive Power.—34,200 lbs.

Wheel Base.—Driving and rigid, 15 ft. 6 in.; total, engine, 23 ft. 9 in.,; total, engine and tender, 53 ft. 4 in.

Weight.—In working order, 173,000 lbs.; on drivers, 154,000 lbs.; total engine and tender, in working order, 313,000 lbs.

Heating Surface.—Tubes, 2,259 sq. ft.; firebox, 176 sq. ft.; total, 2,435 sq. ft.; grate area, 32.7 ft.

Axles.—Main and other driving journals, 9 by 12 in.; engine truck journals, 5½ by 10 in.; tender truck journals, 5½ by 10 in.

Boiler.—Type, extension wagon top; outside diameter first ring, 66⅜ in.; working pressure, 200 lbs.

Firebox.—Type, narrow; length, 114⅛ in.; width, 41¼ in.; thickness of crown, ⅜ in.; tube, ½ in.; sides, ⅜ in.; back, ⅜ in.; waterspace, front, 4 in.; sides, 3½ in.; back, 3½ in.; crown staying, radial.

Tubes.—Number, 310; diameter, 2 in.; length, 14 ft.; gauge, 11.

Brakes.—Driver, Westinghouse American; tender, Westinghouse; air signal, Westinghouse.

Engine Truck.—Two wheel with swing center bearing.

Grate.—Style, rocking.

Tender.—Frame, 10 in. channels and 18 in. I beams.

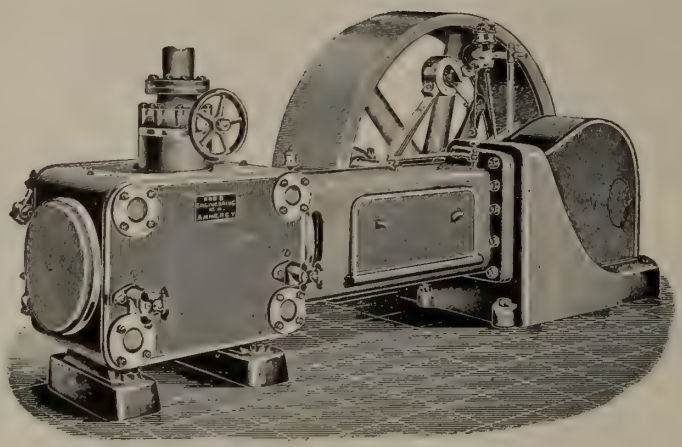
Tank.—Style U-shape with gravity slides; capacity, 6,000 imperial gallons, water and 12 tons coal.

Valves.—Type, piston, 12 in. diameter; travel, 6 in.; steam lap, 1 in.; setting, ⅛ in. lead in full gear.

Wheels.—Driving, 57 in. outside tire; 50 in. centers; material, cast steel; engine truck, 30 in., cast steel centers, steel tired; tender, 33 in., cast iron chilled tread.

Five associations of commercial travellers in Canada have inaugurated a movement to secure from railway companies the same travelling privileges for their wives as they receive themselves.

ROBB POWER PLANTS



We design and contract for steam power plants and maintain an experienced and thoroughly practical engineering staff that is at the service of our customers.

TRADE AND SUPPLY NOTES.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Golden-Anderson Valve Specialty Co., Pittsburg Pa., has issued catalogue 9 of its steam and water specialties.

The Dominion Car and Foundry Co. proposes to add a cast steel plant, and a malleable iron plant, as well as to extend its steel car shops at Blue Bonnets, near Montreal. The total cost of the additions to the plant is estimated at $1,000,000.

The Falls Hollow Staybolt Co., Cuyahoga Falls, Ohio, is erecting a mill three times the capacity of its present plant, to take care of its increasing trade for Falls hollow and solid staybolt iron, from the railways in the U.S., Canada, Mexico and other countries.

Hayes Track Appliance Co., Geneva, N.Y., has issued its catalogue 46 describing a number of new styles of derails, including models C and CX. The company advises us that there are now more than 17,000 of its derails in use on more than 260 railways.

E. H. Keating, of Toronto, and W. H. Breithaupt, of Berlin, Ont., civil engineers, have formed a partnership and opened offices at Aberdeen Chambers, Victoria Street, Toronto, to take up all questions of railway and municipal work, power developments, bridges, foundations, builders, etc.

Eugene Dietzgen Co. of Ontario, has been incorporated under the Ontario Companies' Act, with a capital of $30,000 and offices at Toronto, to manufacture, import, export, sell and deal in drawing instruments, supplies and scientific instruments. The provisional directors are: R. C. Brandt, W. K. Hoyer, J. S. Brewes, A. Anderson, and A. Ferguson, Toronto.

The Canadian General Electric Co. is erecting an office building at the corner of King and Simcoe Streets, Toronto, at an approximate cost of $100,000. It will be 186 by 65 ft., having 6 floors and basement. It is intended to provide a private road at the rear, thus giving abundance of air and light. Stone, brick, steel, and reinforced concrete will be used in the construction.

The American Locomotive Co. has just issued the ninth of its series of pamphlets covering the standard types of locomotives. This number is devoted to 6-wheel switching locomotives and contains half-tone illustrations and the principal dimensions of 26 different designs of this type. The designs illustrated range in weights from 102,000 to 176,500 lbs., and are adapted to a variety of service conditions.

J. J. Gartshore, Toronto, reports the following recent sales: About 1,100 tons relaying rails to Chatham, Wallaceburg & Lake Erie Ry., for extension of line to Lake Erie. 200 tons to the City of Winnipeg for power development work, 180 tons to Ste. Anne Power Co., Beaupre, Que.; 125 tons to Southwestern Traction Co., St. Thomas, Ont.; one standard gauge locomotive and dump cars to Colonial Portland Cement Co., Wiarton, Ont.; one standard gauge locomotive to Mickle, Dyment & Son, Gravenhurst, Ont.; one narrow gauge locomotive to Canada Paper Co., Windsor Mills, Que.

The Chicago Pneumatic Tool Co. has issued two new catalogues, nos. 23 and 24. No. 23 is devoted exclusively to Franklin air compressors. It contains descriptive matter and information relating to air compressors, and is embellished with half-tone engravings of the machines and parts. No. 24 covers elaborately the company's line of pneumatic tools and appliances, including Boyer and Keller hammers, Little Giant drills, sand rammers and hoists. Both books are printed in colors, conveniently indexed and strongly bound, thus making them books of reference as well as catalogues. Copies will be forwarded upon request by Chicago Pneumatic Tool Co., Fisher Building, Chicago, or 95 Liberty St., New York.

C.P.R. Betterments, Construction, Etc.

Sir T. G. Shaughnessy, President, has just completed an inspection of the company's lines in Ontario, with special reference to the new lines now nearing completion. On returning to Montreal Aug. 2, he said the lines were in excellent condition, and he was well satisfied with the new additions which were under construction. The Guelph and Goderich Ry. was nearly completed; the Toronto-Sudbury line had been completed as far as the center of Muskoka, and substantial progress had been made on the Georgian Bay and Seaboard Ry. from Victoria Harbor, on the Georgian Bay, to Peterboro, Ont. This line involves a good deal of difficult engineering and structural work, and is not expected to be completed in 1908, but it will be in operation in 1909. The question of a new port for the company's trans-Atlantic steamship was being dealt with by D. McNicoll, Vice-President, and had not yet come before him officially.

D. McNicoll, who has recently made a trip of inspection over the company's lines in Western Canada, said on his return to Montreal, the west was growing at a rate far in excess of all expectations. To meet this the C.P.R. had laid down a programme of extensions a good deal beyond the possibility of conclusion this year, so that at present little was being done in the way of starting new branches, although, naturally, plans were under way for lines to meet the demands of the growth of the country. The new line to the Nicola Valley was already nearly completed, while engineers were on the ground with a view to a rapid extension beyond Midway to the coast. With regard to the proposed line into the Kootenay country, which was so much desired by the people there, it was a matter largely in the hands of W. Whyte, Second Vice-President, and arrangements had not yet reached a definite enough stage to warrant any announcement which might be construed into a promise. As an example of the effect of even the promise of the construction of a railway had, he might state that since the line to Alberni, B.C., had assumed definite future proportions, a new town was being built at Alberni, and holders were asking as high at $1,100 for 100 ft. lots with a 30 ft. frontage on the main street.

Guelph and Goderich Ry.—Track has been laid on this line to the bank of the Maitland River, Goderich, Ont., and the line was opened for traffic Aug. 26. At Goderich the Maitland River is crossed by a bridge, and a big cement wall has been built on the bank which separates the high level G. and G. Ry. tracks from the low level line of the G.T.R. entering the town.

The C.P.R. and Sarnia.—The C.P.R. Manager of Construction, Toronto, was in Sarnia, Ont., looking over the property of the Sarnia Bay Mill Co. Local reports state that the object in view is the purchase of the property as the site of terminals for a new line which the C.P.R. intends to construct in the near future. The new line, it is stated, will start from London, and another line will ultimately be constructed from Stratford.

Central Division Stations.—The alterations at Fort William station are reported to be well under way, and new station buildings are reported to be nearly completed at Winkworth, Molson and Beausejours.

Moreau St. Freight Shed.—A permit has been granted for the erection of a new brick freight shed, 224 ft. in length, by 320 ft. in depth, on Moreau st., near Ontario st., Montreal. Shearer, Brown and Wills are the contractors.

Molson Cut-off.—The new line from Winnipeg easterly to Molson, Man., 36 miles, has been completed, and will be opened for traffic as soon as it has been passed by the Government inspectors. This line will enable trains to be run into Winnipeg from the east without going round by East Selkirk as at present.

Winnipeg-Brandon Second Track.—We have been officially advised that while a second track will undoubtedly be constructed ultimately between Winnipeg and Brandon, Man., nothing has as yet been done.

Manitoba and Northwestern Ry.—Rapid progress is reported to have been made with the construction of this line from the present terminal at Sheho, to Saskatoon, Sask. The company's tracklaying outfit was reported to have reached Lanigan, the junction with the Pheasant Hills branch, Aug. 2, and it was expected that track will be laid into Saskatoon by Sept. 1.

Lethbridge to Strathmore.—Press reports state that the construction of a branch line is under consideration from Lethbridge, northerly to the main line near Strathmore, Alta., about 100 miles. Such a branch would feed a large area of the 3,000,000 acre tract east of Calgary, which is being opened up for settlement by the company's irrigation works on the Bow River.

Moose Jaw Northerly.—A contract has been let to J. D. McArthur for the grading of this line from mileage 50 to mileage 123. At present trains are being operated from Moose Jaw for 14 miles, to Tuxford, and the grading is practically completed from mileage 14 to mileage 50. The additional 73 miles now contracted for will carry the branch 15 miles beyond the South Saskatchewan River. The company will let a separate contract for the erection of the bridge across the river. The river will be crossed in tp. 29, r. 8, w. 3, about 25 miles from the center of the Goose Lake district, the people of which district have been asking both the C.P.R. and the Canadian Northern Ry. to extend lines to that point. This line will ultimately effect a junction with the Lacombe branch of the Calgary and Edmonton Ry.

Crow's Nest Pass Line.—In connection with the reported reconstruction of the Crow's Nest Pass line between Pincher Creek and Crow's Nest Pass, we are advised that the work contemplated is in the nature of grade revision. The surveys have not yet been completed, and it has not yet been decided when the construction work will be gone on with

Saskatoon Westerly.—F. J. George, of the C.P.R. Western Construction Staff, recently completed a trip of inspection over the line under construction westerly from Saskatoon, to meet the Wetaskiwin branch of the Calgary and Edmonton Ry. He states that: "From Asquith, to which point from Saskatoon the line is open, there are 110 miles of what is practically completed grade stretching westward. Contractor McArthur has gangs finishing up at points along this grade and within three weeks

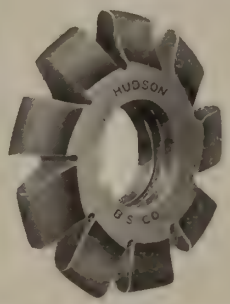
HUDSON HIGH POWER STEEL

Best for Locomotive and General Shop Work

Unequalled for all kinds of cutting tools. The best steel makes the best tools, that is the reason that Hudson Tools will run faster and wear longer than any other high speed tools.

PROFITS GROUND AWAY

The time your men will save in grinding alone is the practical economy of Hudson High Power Steel. Complete line of Twist Drills, Milling Cutters, End Mills, Taper Bridge Reamers, Shell Reamers, carried in stock. All steel and tools guaranteed.



BALDWIN STEEL COMPANY

Makers of highest grades Crucible Steels

GENERAL OFFICE: 133 READE ST., New York City.

THE LEEDS COMPANY

Solicits your patronage and invites you to write for Illustrated Folder and Rates.

CHALFONTE IS ALWAYS OPEN

the long strip will be entirely ready for steel. As it is the grades are so far advanced that the steel men could not overtake them. West of 110 mile ridge being finished, there remains 109 to be done before Battle River is reached. Scattered along this big gap are many gangs of men and teams, and the grade at the rate of a mile a day is being built. The work is much easier than through the Eagle Hills. There is but one reason to prevent proceeding with the 110 miles of steel laying, and that is that they have not the steel. There is scarcely enough for a mile at present at Asquith, but the supplies of ties on hand is almost enough to land them at the other end of the grade. As soon as it is possible to get the steel in he believes that the work of laying it will be resumed from Asquith. In the meantime the big steam shovel brought in by the construction foreman, McTaggart, will be put to work building the approach to the C.P.R. bridge at Saskatoon."

Belly River Bridge.—A contract has been let to John Gunn & Sons, Winnipeg, Man., for the construction of the abutments and the concrete substructure of the new bridge over the Belly River at Lethbridge, Alta. The concrete piling to be used in the foundation work will be supplied under a separate contract.

Revelstoke Bridge.—The new bridge which is being constructed over the Columbia River at Revelstoke, B.C., replaces a wooden structure approximately 1,070 ft. long, consisting of three 150 ft. deck, one 150 ft. through, one 100 ft. and one 120 ft. deck Howe truss spans resting on rock-filled cribs, and 250 ft. of trestle approaches. The new structure will be of steel on concrete piers and abutments. There will be four 150 ft. deck and one 150 through truss spans, two 100 ft. deck plate girder spans, and two 40 ft. deck plate girder spans. The main piers are being built on the present sites of the crib piers, and are being constructed by the C.P.R. staff. The steel truss spans are being supplied by the Canada Foundry Co., Toronto, and the plate girder spans are also being manufactured in Canada. The company's staff will erect the superstructure.

Pheasant Hills Branch.—The extension of the Pheasant Hills branch from Strassburg, westerly for 40 miles, we are advised is nearly completed. The British Columbia General Contract Co. had the contract. Their line effects a junction with the Manitoba and Northwestern Ry. at Lanigan, Sask. A survey party is in the field working between Regina and Saskatoon, with a view of laying out a line from Regina to some points on the Pheasant Hills branch.

Vancouver Island Betterments.—A Vancouver, B.C., dispatch states that R. Marpole, Executive Assistant, has made an announcement that a start will be immediately made on the construction of the projected extension of the Esquimalt and Nanaimo Ry. from Nanaimo to Alberni.

The Canadian Northern Townsite Co. has been incorporated under the Dominion Companies' Act, with a capital of $250,000 and offices at Toronto, for the purpose of acquiring lands, wharves, docks, dockyards, slip, warehouses, sheds, elevators, etc.; to acquire lands for townsites, and to lay out and improve the same; to charter or otherwise acquire steam and other vessels, and to operate the same in and beyond Canada; and for other purposes incidental thereto. The provisional directors are: G. G. Ruel, G. F. Macdonnell, A. J. Mitchell, F. C. Annesley, R. T. Ormsby, all connected with the offices of Mackenzie, Mann & Co., Limited, Toronto.

Quebec and Lake St. John Railway.

The Gosford branch, extending from Lorette to Clark Settlement in the Riviere aux Pins Valley, 5.75 miles, was opened for traffic Aug. 1. The locomotive drawing the train which carried the official party over the branch was the E. Beaudette engine no. 1, which was the first to run on the old Gosford wooden railway in 1872. In the course of his speech at the public dinner, with which the event was celebrated, J. G. Scott, General Manager, said: "We are met to-day for the purpose of inaugurating a work which is the completion of a work begun in 1870. I refer to the Gosford wooden railway, built by Quebec capital raised with much difficulty by Sir Henri de Lotbiniere and M. W. Baby, with the aid of J. B. Renaud, J. Ross, Hon. P. Garneau, H. Fry and others who have since gone to their rest. As happened since with regard to the main line, the promoters of 1870 had to rely upon the energy and the financial pluck of a U.S. citizen to build the road as contractor and they secured the services of J. B. Hulbert in the same way as we 13 years later secured the services of another U.S. citizen, H. J. Beemer, to build the main line. Mr. Hulbert was ably seconded by local engineers—the late C. A. Scott, J. Sullivan, H. O'Sullivan, and the late Mr. Stocking, and the wooden railway was built. It was not a success, but it caused the construction of a much larger public work, namely, the Lake St. John Ry., which has been of untold benefit to the city of Quebec. When the Lake St. John road was undertaken it was found that the Gosford end of the road was unsuitable for a through line, and the Gosford reverted to its primeval solitude. But the wealth of timber contained in the township of Gosford, and the large population isolated in the valley of the Riviere aux Pins settlements known as St. Gabriel West, commanded attention, and the result is the construction of a branch line from Valcartier station to Gosford, the first section of which we are inaugurating to-day. Not only will this branch be valuable in exploiting the splendid hardwood lands of the township of Gosford, which will furnish an abundant supply of square birch and other timber for export at Quebec, and the best quality of fuel for the city of Quebec and for the rich parishes of Lorette, Charlesbourg and Beauport which are running short of fuel, but it will also remove from their isolation the hardy farmers of St. Gabriel West, several hundred families in number, who now cultivate the fertile lands of the Riviere aux Pins Valley, separated from civilization by a high range of mountains. For the farmers living on the north side of the Jacques Cartier River there is no bridge to cross that river for a distance of 20 miles from Valcartier to Pont Rouge. This is a terrible inconvenience, but it is going to be remedied by means of the very work we are inaugurating to-day, because one of the conditions upon which the Provincial Government has subsidized this branch is that the railway company shall construct a carriageway alongside of its bridge over the Jacques Cartier, and I have no doubt the Dominion Government will make the same stipulation when it grants its subsidy. But this section of this Gosfard branch which we are inaugurating to-day is not all that has to be done. This branch must eventually be extended in one direction to the end of the settlements in the Riviere aux Pins Valley, and in the other to the first or second range of the township of Gosford in the direction of Lake Sept Isles, through lands capable of supplying enormous quantities of hardwood timber. "A capital of $100,000 raised by Sir Henri de Lotbiniere and his associates for the Gosford Ry. has resulted in an expenditure of $10,000,000, and in the commercial salvation of Quebec through the control of a great back country and of the lumber trade of the two greatest rivers in the Province—the Saguenay and the St. Maurice. If Quebec people will combine again even in a small way, as before, it will not be long before we will be calling out 'all aboard for James Bay,' and Quebec will then have secured another back country larger and richer than what we have already secured." (May, pg. 327).

Canadian Northern Ry. Earnings, etc.

Gross earnings, working expenses, net profits, increases or decreases over 1905-06, from July 1, 1906:

Approximate earnings for July $6,900,000 against $5,882,000 for July, 1906.

Duluth, South Shore and Atlantic Ry.—Gross earnings for June $314,463.49; net earnings, $88,271.38, against $276,257.35 gross and $89,201.08 net for June, 1906. Net earnings for twelve months ended June 30, $991,020.17 against $1,000,315.64 for same period, 1905-06. Approximate earnings for July, $329,995, against $279,213 for July, 1906.

Mineral Range Ry.—Gross earnings for June $67,470.02, net earnings $14,290.15, against $57,721.90 gross and $9,577.63 net for June, 1906. Net earnings for twelve months ended June 30, $169,796.35 against $163,260.71 for the same period 1905-06. Approximate earnings for July $72,259 against $56,796 for July 1906.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Gross earnings for June, $1,159,790.34; net earnings $440,774.69, against $1,015,698.30 gross and $425,532.27 net for June, 1906. Net earnings for twelve months ended June 30, $5,458,530.24 against $5,789,902.21 for the same period 1905-06. Approximate earnings for July, $1,102,152 against $998,339 for July, 1906.

Grand Trunk Ry. Earnings, Expenses, etc.

Subject to audit, the accounts for the half-year ended June 30, 1907, show the following results:

Gross receipts		£3,381,200
Working expenses		2,446,500
Net receipts		£ 934,700
Net revenue charges for the half-year, less credits		480.600
Balance		£ 454,100
Deduct Canada Atlantic Ry. deficiency for half-year	£87,800	
Detroit, Grand Haven & Milwaukee Ry. deficiency for the half-year	11,000	98,800
Surplus		£355,300

The above surplus of £355,300 added to the balance of £13,200 from Dec., 1906, makes a total of £368,500, out of which it is proposed to set aside £40,000 to form the nucleus of the pension fund referred to by the President at the last general meeting. The balance of £328,500 will admit of the payment of the dividends for the half-year on the 4% guaranteed stock and 1st and 2nd preference stocks, leaving about £14,600 to be carried forward. It is estimated that the future contributions to the pension fund will amount to about £15,000 a year. The accounts of the G.T. Western Ry. for the year ended June 30, show a surplus sufficient to provide for the interest on the first mortgage bonds and leave a balance of about £18,200.

Approximate earnings for July, $4,001,238, against $3,606,234 for July, 1906.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Central Rd.—Reports from Seward, Alaska, state that during the current year construction has been extended from mileage 48 to 55 north of Seward, and that work is in progress at various points up to mileage 75. J. B. Cameron, Seward, is engineer of construction. (Aug., p. 561).

Algoma Central and Hudson's Bay Ry.—C. D. Warren, President Lake Superior Corporation; N. W. Rowell, K.C.; T. Gibson, of Toronto, and W. H. Hearst, of Sault Ste. Marie, Ont., waited on the Ontario Minister of Public Works, Aug. 9, in connection with the company's plans for the extension of its lines. Hon. F. Cochrane promised to give full consideration to the proposals. (July, p. 479).

American Midland Ry., Colorado, Texas and Mexico Ry.—The promoters of a north and south trunk railway from the International boundary to the Gulf of Mexico and beyond are again to the fore. Two new charters have been filed in Oklahoma for the construction of such a line, the northern terminal of one being at Winnipeg, Man., and of the other at Langdon, N.D., on the Great Northern Ry. branch line from Larimore to Hannah at the International boundary. The Railway Age says: The largest recent project is that of the American Midland Ry. Co., capital stock started at $60,000,000, which desires to build 2,100 miles of railways, consisting of a main line from Langdon, in the north-eastern corner of North Dakota, southward to the Gulf at Galveston, with two long branches. The headquarters are located in that financial center, Guthrie, Okla. This enterprise is nearly as ambitious as that of the U.S. Central Ry. Co., recently incorporated in South Dakota, capital $50,000,000, which is to construct a railway from Portland, Me., to San Francisco, Cal., at an estimated outlay of $500,000,000. Another company proposes to build a railway to the Gulf or farther, the new Oklahoma-chartered Colorado, Texas and Mexico, which contemplates 2,500 miles of road from Winnipeg, Man., to Arkansas Pass and Corpus Christi, Tex., with branches to Galveston and Eagle Pass and into old Mexico. This claims more mileage than the American Midland, chartered recently in Oklahoma also, to build from Langdon, N.D., to Galveston, an asserted distance of 2,100 miles, and still further surpasses the Yankton Southern, which aims only at present to build from the South Dakota border to Galveston, a distance conservatively stated as 1,000 miles. The first-named company avoids any attempt to verify its mileage by leaving its main line projected indefinitely into old Mexico, but the American Midland confuses the investigator by declaring that its line, for which the needed $60,000,000 is said to be in hand, 'will be 2,100 miles long, straight as the crow flies, from Langdon to Galveston.'" But a straight line between these termini scales less than 1,400 miles, so that if the route is 2,100 miles long we must choose between the crow flying in a curiously meandering course, which adds 50% to the direct mileage, or that the enthusiastic bird sails on 700 miles beyond Galveston, nearly across the Gulf, before it alights. Either the American Midland proposes an uncommonly crooked line or a combined midland and midwater line, or it has watered its mileage, as well as its stock, for public consumption. There is a mistake somewhere and investors should wait for more light."

Central Ontario Ry.—Tenders are under consideration for the construction of a concrete station building and platforms at Maynooth on the Whitney extension of this line. (Aug., p. 561.)

Duluth, Rainy River and Winnipeg Ry.—Track was laid on this line to the southern shore of the Rainy River, opposite Fort Frances, Ont., Aug. 11, and ballasting was immediately gone on with. It was expected to have a freight and passenger train service in operation by Aug. 31. The line starts at Rainy Jct., the terminal of the Duluth, Missabie and Northern Ry., and has been in operation for some time to Pelican, 44 miles, and was projected by the Virginia and Rainy Lake Co., for the development of its lumber business. At Rainy River a bridge is being constructed jointly with the Canadian Northern Ry., for the purpose of enabling through trains to be run between Duluth on the one hand, and Winnipeg and Port Arthur on the other. Reports from Fort Frances state that it was expected to have the pile and pier work for the bridge completed by Aug. 15. Much of the steel for the superstructure had been delivered. The Canadian Northern Ry. erected the piers and pile work, and the steel work is being erected by the D.R.R. and W. Ry. The bridge will be maintained by the two companies. It is expected to have the bridge completed early in Oct.

As soon as the line from Virginia to Rainy River is fully completed and in operation, the company proposes to start the construction of a line from Virginia southerly to Duluth, so as to give it a line to that city independent of the Duluth, Missabie and Northern Ry. (Aug., pg. 561).

Edmonton and Slave Lake Ry.—There has been deposited with the Secretary of State at Ottawa, a mortgage dated July 1, from the E. and S.L. Ry. to the National Trust Co., Toronto, securing an issue of the first mortgage bonds to the extent of $20,000 a mile on that portion of the company's projected railway between Edmonton and Athabasca Landing, Alta., about 100 miles.

Halifax and South-Western Ry.—C. W. Spencer, General Manager Mackenzie, Mann & Co.'s Eastern Lines, recently completed a trip of inspection over the H. and S.W. Ry., and says that with the exception of the steel bridge over the Mersey River, near Liverpool, which is under construction, the whole line is solid and permanent. All the temporary trestles and bridges have been done away with, and the whole line brought up to the standard for running fast trains. (Aug., pg. 561).

Intercolonial Ry.—Rapid progress is reported to have been made to date with the construction of the second track between Moncton and Painsec Jct., N.B. Local labor is being almost exclusively employed by the contractors, the McManus Co.

Tenders are under consideration for the construction of a flour shed at St. John, N.B. (Aug., pg. 561).

International Ry. of New Brunswick.—T. Malcolm, the contractor for the construction of this railway from Campbellton to the St. John River, at St. Leonard's, N.B., is quoted as saying that it was expected to have the last rails laid by Aug. or Sept., 1908. At present about 700 men are at work upon the line, and grading is in progress from both sides. The grading from the St. Leonard's end has reached a point about twelve miles out. (Aug., pg. 561).

Kingston, Smith's Falls and Ottawa Ry.—Although the project to construct a line of railway between Kingston and Ottawa is being carried out by an independent company with the above title, it is really a G.T.R. work.

Klondike Mines Ry.—R. Lowther, of Lowther & Latta, London, Eng., which firm has charge of the financial affairs of the company in England, is in Dawson, Yukon, looking into the question of the extension of the line. At a recent meeting of the Dawson Board of Trade, he stated that his firm would be willing to undertake the task of constructing a line southerly to existing railway lines, provided sufficient local and Government support and encouragement was given. A committee of the Board was appointed to gather all possible information as to probable trade, etc. (Jan., pg. 3).

Macleod, Cardston and Montana Ry.—Application will be made next session of the Dominion Parliament for an act extending the time, authorized by the Act of 1903, and amending acts, for the commencement and completion of this projected railway. (Feb., pg. 89).

Magdalen River Ry.—Dr. Lemieux, M.L.A. for Gaspe, is quoted as saying at Quebec recently that the construction had been commenced and was progressing favorably upon this line, which is to connect Cap a la Ours with the main line of the Atlantic, Quebec and Western Ry. (Aug., pg. 563).

Maritime Coal, Ry. and Power Co.—The branch line from Fundy Mine on the main line down to the new slope which has been opened by the company, a distance of 1.25 miles, is under construction, and considerable progress has been made. The contractors are Wheaton Bros.

The company has completed the installation of a power plant at Chignecto, N.S., which started delivering electric energy at Amherst, July 31. The power house is situated near the mouth of the colliery, and the fuel used for the generation of the power is the screenings and waste coal formerly of practically no value. The plant consists of a Robb cross-compound, vertical, enclosed, self-oiling engine of 800 h.p., and four return tubular high pressure boilers supplied by the Robb Engineering Works, Amherst. The engine is directly connected to a Canadian Westinghouse alternating generator of 100 k.w. capacity. The power line is 6½ miles long to the transforming station at Amherst, and is carried across the Nappan River and the Intercolonial Ry. by a cable. The company has installed a telephone line along its power line. One of the principal users of the power in Amherst is Rhodes, Curry & Co. Ltd. (Aug., pg. 563).

Matane and Gaspe Ry.—At the annual meeting of shareholders at Riviere du Loup, Que., Aug. 1, it was decided to make a call of 10% upon the capital stock, and to authorize the directors to call for tenders for the construction of the first section of the line. Following are the officers and directors for the current year: President, Hon. P. A. Choquette; Vice-President, A. Fortin; Secretary, R. T. Dubord; other directors: C. A. Gauvreau, J. G. Scott, D. Caron, J. F. Begin, Dr. Ross, M.P., and Rev. A. Soucy. (Jan., pg. 3.)

Minnesota and International Ry.—The section of the line from Big Falls to Little Forks, Minn., 35 miles, has been opened for traffic, and a regular service of trains is being operated under the supervision of the Northern Pacific Ry. Construction Department. Tracklaying and grading is in progress between Little Forks and the Rainy River, opposite Fort Frances, Ont., and it is expected to have the steel laid to that point early in Sept. The line is being constructed under the charter of the Big Falls and International Ry. (Aug., pg. 563).

New Brunswick Coal and Ry. Co.—The repairs to the roadbed and bridges upon the old Central Ry., which has been absorbed by the N.B.C. and Ry. Co., have been practically completed by the Provincial Commission which has the work in hand. As soon as the

HEAD OFFICE AND WORKS: **SYDNEY, CAPE BRETON, CANADA**

fill at Cumberland Bay is completed the work of ballasting the reconstructed line will be gone on with.

By an act passed last session of the New Brunswick Legislature, the Government (operating the line through a commission) is authorized to grant unrequired portions of the right of way for the purpose of the erection thereon of houses for the occupation of miners engaged in the collieries along the line. (May, pg. 325).

New Brunswick Southern Ry.—We are advised that new ties are being put in and the line is being reballasted, the work being in charge of J. Beckwith, heretofore of the C.P.R. engineering staff. (Aug., pg. 565).

Ottawa Union Station.—On his return to Ottawa, after his recent trip to Europe, Sir W. Laurier stated that one of the first things to engage his attention would be the pushing forward of the project of the new station and hotel which he was disappointed to find had been delayed during his absence. Subsequently the Premier had consultations with W. Wainwright, Fourth Vice-President G.T.R., and D'Arcy Scott, Mayor of Ottawa, in reference to the position of the plans. On Aug. 9, the G.T.R., which company has the duty imposed upon it of the erection of the new station, submitted plans for the same to the Department of Railways for approval. The plans which had been previously submitted have been withdrawn. The site of the new station is to be adjoining Sapper's Bridge; and the plans provide for a terminal station with accommodation not only for the G.T.R., but for the C.P.R., and any other system desiring to utilize it. The central portion of the building will be ten storeys in height, and will be laid out as an office building for the various railway lines, and for general use. The question of the erection of an hotel is in abeyance, but it is expected that some steps will be taken by the G.T.R. towards building one at an early date. (Aug., pg. 577).

Quebec and New Brunswick Ry.—Application will be made next session of the Dominion Parliament for an act reviving and continuing the act of incorporation of this company, and amending acts. It is also desired to have the company's powers amended by giving power to connect with the G. T. Pacific Ry. in the St. Francis River Valley, Quebec; and to have declared legal all proceedings purporting to have been taken in virtue of the provisions of the act of incorporation. The company has power to construct a railway from Quebec to Edmundston, N.B., and some years ago did a little grading at Edmundston.

Sydney and Louisburg Ry.—Surveys are being made for the construction of a line from near Glace Bay to Lingan, N.S. (April, pg. 245).

Temiskaming and Northern Ontario Ry.—The Chairman of the Commission, who has recently made a trip over the line, reports that good progress is being made with the work. Some delay is being occasioned by delay in getting in the steel for the bridge superstructures. Track was reported laid to mileage 208 north of North Bay, Ont. (July, pg. 481).

The Atlantic, Quebec and Western Ry. has been completed from New Carlisle, the terminus of the Atlantic and Lake Superior Ry. which has lately been acquired by this company, to Port Daniel, Que., 23 miles. Active construction operations are in progress between Port Daniel and Gaspe Basin, 83 miles. At L'Anse au Gascon 100 men and a number of teams are at work, and active preparations are being made for starting grading at Grand River, Cape Cove and Gaspe Basin. At the Port Daniel end a tunnel about 400 ft. long will be cut through Hell's Cape. It is expected that by the spring of 1908 construction on the whole of the 83 miles from Port Daniel to Gaspe Basin will be well advanced. (Aug., pg. 561).

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Track has been laid this season from Chapaka, B.C., on the International boundary, to the Similkameen River, and from the river to Keremeos, 12 miles, and grading operations are in progress from Keremeos to Princeton, 45 miles. It is expected to have this part of the work completed this season. The company is also constructing come short branches to mines at Phœnix, B.C. (April, pg. 245).

Winnipeg City Power Line.—The Winnipeg Board of Control has recommended the acceptance of the tender of E. F. Kendal, Kenora, Ont., for 4,000 ties for the Point Du Bois-Lac Du Bonnet Tramway, at 30c. each; and that of J. J. Gartshore, Toronto, for 200 tons of 56-lb. rails, at $39.25 a ton f.o.b. at Lac Du Bonnet.

The city council is considering tenders for the construction of a wooden Howe truss bridge, of 10 spans of 80 ft. each and one draw span of 160 ft., including piers and cribs, crossing the Winnipeg River at Lac du Bonnet narrows. (Aug., pg. 565).

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—Tracklaying is reported to have commenced on the cut-off from near Garneau Junction, into Quebec. The work is being carried on from Garneau Junction, and is expected to be completed this year. The cut-off is about 80 miles long, the contractors being O'Brien and Mullarkey. The new line from St. Jerome, to connect the old Great Northern Ry. of Canada with the old Montreal and Gatineau Colonization Ry., at St. Sauveur, Que., about 15 miles, has been completed and it was expected that it would be opened for traffic Aug. 19. The proposed line from Montreal to St. Jerome is expected to be constructed during 1908.

Canadian Northern Ontario Ry.—C. W. Spencer, General Manager, is quoted as saying that trains will be running on the line between Hawkesbury and Ottawa, Ont., this fall. Several miles of track have already been made. This line is an extension easterly of the old Great Northern Ry. of Canada, now part of the Canadian Northern Quebec Ry.

J. G. G. Kerry, C.E., Montreal, has been appointed by the Dominion Government to make a report as to the best route for the Ottawa-Toronto line, for which the company has filed plans. These plans have been objected to by certain interests, and the Department of Railways decided, before finally passing them, to have an independent survey made. The section of country through which the location is objected to, lies between Smith's Falls and Lanark. The G.T.R. is interested in the Kingston, Smith's Falls and Ottawa Ry., which passes through the same section of country, and the location of this line will also be decided upon the report of this special survey.

A deputation from Parry Sound, Ont., waited on Mackenzie, Mann & Co., and the Ontario Government recently to urge the construction of a line from the Canadian Northern Ontario Ry. at Parry Sound, to North Bay, making a connection there with the Temiskaming and Northern Ontario Ry., owned by the Ontario Government.

Canadian Northern Ry. — Considerable progress has been made with the erection of the new buildings at Fort Rouge, Winnipeg. The roundhouse has been almost completed, and the erecting shop has been begun. The building is of brick upon concrete foundations. The main shop will be 163 by 572 ft., with three additions each 31 by 44 ft.

Several conferences have been held between representatives of the C.N.R. and of the G.T. Pacific Ry. respecting the plans for the projected joint terminals at Winnipeg. D. D. Mann stated in Winnipeg, Aug. 8, that as the result of the conferences, several changes had been decided upon in the plans. As soon as these had been made and approved by the companies the C.N.R. would go ahead with the work of construction. The plans include, in addition to the station proper, double-track bridges across the Red and Assiniboine rivers.

As a result of a number of deputations from the Goose Lake district of Saskatchewan, it has been decided to make a start with the line projected from Saskatoon to Calgary, Alta. W. Mackenzie, President, said that 75 miles would be the limit that could be undertaken this year. A right-of-way out of Saskatoon is being arranged for, and the farmers for 52 miles of the route have agreed to grant a free right-of-way for the line. A. K. Mann, it is reported, will have charge of the construction of the branch.

M. H. McLeod, General Manager, recently informed the city of Brandon that the company contemplated putting up a 10-stall roundhouse, to cost about $50,000, a depot costing about $35,000, as well as extensive yards and yard buildings. A site near the present station has been purchased from the Salvation Army. An effort will be made to get as much as possible done this year.

The Saskatchewan Government received a telegram, Aug. 3, from W. Mackenzie, President, C.N.R., stating that the Government's proposition respecting the construction of a joint traffic and railway bridge over the Saskatchewan River at Prince Albert would be accepted, and that the C.N.R. would proceed with its erection at once. It is said that the arrangement provides for the construction of a joint railway and traffic bridge on cement piers with roadway on each side of the railway track to accommodate traffic. The company is to commence construction of the bridge at once, and have it completed by Nov. 1, 1908. It is also said that the arrangements include an immediate extension of the railway from Prince Albert westward through Shelbrook to Battleford.

A Vancouver press report states that the C.N.R. has asked the British Columbia Government to guarantee interest upon an issue of bonds for the construction of a line from the eastern boundary of the province to the Pacific Coast. The company has had surveys made for a line through the Yellowhead Pass, and it is stated that if the B.C. Government views the proposition with favor, survey parties will be put in the field to complete the surveys to the coast.

J. Ogilvie, Inspector of Rolling Stock, and General Equipment for the Railway Commissioners, has returned to Ottawa, after completing a trip of inspection over the railways in the Maritime Provinces.

Press reports state that the G.T.R. is to adopt a scheme whereby conductors will be relieved of the work of collecting tickets and fares in their trains. It is stated that auditors will travel on the trains to do this work.

In response to a request by the Morinville mine owners, the Dominion Government is to hold an inquiry at Edmonton, Alta., when the mine owners will be heard against the recent order by the Railway Commissioners forbidding the use of lignite coal on railways.

MAINLY ABOUT PEOPLE.

F. J. McCallum, G.T.R. agent at Midland, Ont., died there July 27.

D. M. Fraser, travelling passenger agent C.P.R., died at his home, Windsor, Ont., July 29, aged 33.

J. B. McDonald, night foreman G.T.R. yards, Allandale, Ont., was run over and killed there, July 29.

Mrs. Graham, wife of Harvey Graham, director of the Nova Scotia Steel Co., died at New Glasgow, N.S., Aug. 5.

C. Whiteway, who died at St. John's, Nfld., recently, was at one time manager of the tramway service at Sydney, N.S.

Donald A. Smith, of the C.P.R. foreign freight office, Montreal, was married in Montreal, Aug. 7, to Miss F. D. Schofield.

Professor E. Brydon Jack, Dalhousie College, N.B., has been appointed Professor of Engineering at the University of Manitoba.

G. A. Mitchell, Assistant General Passenger Agent Northern Pacific Ry., St. Paul, Minn., was visiting his mother at Sackville, N.B., recently.

P. J. Gallagher, formerly roadmaster C.P.R. at Nelson, B.C., is now carrying on a lumber business at Summit Lake, near Nakusp, B.C.

M. Newland, formerly roadmaster C.P.R. at Cranbrook, B.C., is now in charge of steam shovel work as general foreman on the Southern Pacific Lines in Oregon.

J. T. Arundel, who has been appointed Superintendent C.P.R. at Vancouver, B.C., was entertained at dinner by the C.P.R. officials at Winnipeg, Man., July 25, prior to his leaving that city.

J. T. Webster, foreman of bridges and buildings, Michigan Central Rd., St. Thomas, Ont., was injured as the result of a collision between his gasolene "jigger" and a handcar at Victoria, Ont., Aug. 15.

G. N. McIntosh, air brake instructor G.T.R., Montreal, was presented with a travelling bag by the officials and employes of the roundhouse at Stratford, Ont., Aug. 12, where he was formerly engaged.

J. P. Ferguson, Galena-Signal Oil Co.'s expert, who has heretofore had his headquarters in Montreal, was married recently to Miss I. F. Beamish, of Pembroke, and is now residing at 22 Rosebury ave., Ottawa, Ont.

The official car of W. K. Thompson, C.P.R. Superintendent, White River, Ont., was damaged by a collision at Port Arthur, Ont., Aug. 16. The occupants, Mr. and Mrs. Thompson and four children, were uninjured.

E. Tiffin, General Traffic Manager Intercolonial Ry., returned to Moncton, N.B., from Great Britain, Aug. 16. It is said that he went for the purpose of arranging for an office and representative for the I.C.R. in London.

Mrs. Olds, wife of George Olds, who for a number of years was General Traffic Manager of the C.P.R., died in Montreal recently. Mr. Olds subsequently left Montreal for England, and is expected to return in September.

T. Williams, Superintendent C.P.R., Farnham, Quebec, had one leg broken and the other badly bruised April 12, as the result of the derailment of his motor car, caused by striking a dog near Foster, while on an inspection trip.

D. McQueen, President of the Imperial Packing Co., Woodstock, N.B., died there Aug. 11, aged 57. In early life he was a conductor on the old New Brunswick Ry., and subsequently engaged in business as a railway contractor.

The British Government has authorized the construction of about 400 miles of railway in Northern Nigeria, and has entrusted the general supervision of the work to Lieut.-Col. Sir E. P. Girouard, Governor of the Colony, who was at one time on the C.P.R. engineering staff.

The scholarships at McGill University offered by the G.T.R. to its junior employes, or sons of employes, have been won this year by E. Kingsley, son of the Chief Train Dispatcher at Lindsay, Ont., and P. L. Bolton, an employe at the Point St. Charles shops.

J. J. Wallace, General Freight Agent Intercolonial Ry., who has been granted three months' vacation, commencing Sept. 1, is going to Summerland, B. C., and may possibly decide to remain there. He entered the service of the old European and American Ry. in 1865, and remained with the Intercolonial Ry. when the Government took over the E. and A. Ry., becoming General Freight Agent in 1892.

The Imperial Service Medal has been awarded to the following retired employes of the Intercolonial Ry., for long and meritorious services: T. Amos, trackman; P. Blais, trackman; J. B. Couture, trackman; J. Dumas, track foreman; W. Gillen, porter; A. Henderson, track carpenter; J. Lindsay, track foreman; J. McFasden, conductor; W. Neville, trackman; J. Stewart, engineman; E. White, cleaner.

C. E. Dewey, formerly Division Freight Agent G.T.R., Toronto, who was recently promoted to be Assistant General Freight Agent at Montreal, was presented with a handsome tea set by Toronto and other transportation officials in Toronto, Aug. 19. D. O. Wood, General Western Freight Agent, Allan Steamship Line, presided and W. A. Wilson, General Canadian Freight Agent, New York Central Lines, made the presentation.

Among those who attended the recent Old Boys' celebration at Ottawa, was Robert Whitehead, 78 years of age, of Smith's Falls, Ont., who saw service as a locomotive driver in England and France before coming to Portland, Me., in 1853. He was driver of the first G.T.R. locomotive out of Richmond, Que., and remained with that company until 1876, when he went to one of the lines subsequently amalgamated with the C.P.R.

R. W. Long, who has been appointed Division Freight Agent, G.T.R., Hamilton, Ont., was born at Appin, Ont., Mar. 20, 1873, and entered railway service 1889, his record being: Mar., 1889, to Oct., 1896, operator and clerk in Commercial Agent's and local freight agent's offices, G.T.R., Buffalo, N.Y.; Oct., 1896, to Sept., 1901, contracting freight agent, G.T.R., Buffalo; Sept., 1901, to May, 1904, commercial agent, G.T.R., Buffalo; June, 1904, to July, 1907, Division Freight Agent, G.T.R., Stratford, Ont.

F. H. Sproule, who has been appointed contracting freight agent, C.P.R., at Saskatoon, Sask., was born at Napanee, Ont., June 2, 1868. He entered C.P.R. service as telegraph operator at Selkirk, Man., Aug., 1886, and filled the position of freight and ticket agent at various points on the Western Division since that date. During the grain season of 1905 and 1906 he was employed as travelling grain agent on district 3, Central Division, and was appointed contracting freight agent at Saskatoon, June, 1907.

D. G. Ross, who died in the General Hospital, Vernon, B.C., July 24, was for a number of years in the C.P.R. service, which he left to become Superintendent of the Manitoba and Northwestern Ry. On this line being absorbed by the C.P.R., he was appointed Superintendent at Fort William, Ont., and subsequently was Superintendent on the company's Crow's Nest Pass line at Nelson, B.C., returning to Fort William for a short time in 1902. In the fall of that year his health gave way and he was given leave of absence, but was never able to return to the company's service. After spending some time in California, he went to British Columbia in 1906, and became manager of the Summerland Development Co.

G. Grant, who has been appointed Inspecting Engineer of the Transcontinental Railway Commission, was born at Dufftown, Banffshire, Scotland, Jan. 2, 1865, and is a son of the late Peter Grant, a member of Sir Sandford Fleming's staff on the Intercolonial Ry. and the C.P.R. He was educated at Ottawa, and went to the Argentine Republic in 1881 with his uncle, W. B. Grant, Chief Engineer Buenos Ayres Southern Ry., remaining there for six years. Returning to Canada in 1887 he was engaged until 1890 upon the construction of the Intercolonial Ry. in Cape Breton; from 1890 to 1893 he was engaged on survey work east of Montreal for the C.P.R.; from 1893 to 1897 he was on construction work on what are known as the Flagler Roads in the U.S., since which time his record has been: 1897 to 1900, on construction Crow's Nest Pass Line, and Kootenay and Arrowhead Ry., for C.P.R.; 1900 to 1903, chief draughtsman construction department C.P.R., Montreal; May, 1904, to Feb., 1905, on location work for the C.P.R. in British Columbia; Feb., 1905, to Sept., 1906, on location work for the National Transcontinental Ry., Northwest of Quebec; Sept., 1906, to May, 1907, assistant District Engineer National Transcontinental Ry., Quebec.

A. E. Doucet, whose portrait appears on the first page of this issue, was born in Montreal, June 9, 1860. He graduated at the Royal Military College, Kingston, and began his profession as civil engineer in 1880. Was assistant engineer on the C.P.R. until 1887, during which time he was on location and construction of the Algoma branch and the main line around Lake Superior. Was assistant engineer on the C.P.R. Lachine bridge from April, 1885, to Dec., 1885, then Division Engineer on the C.P.R. between St. Philip and Iberville, P.Q., from Dec., 1885, to April, 1887. Went with R. G. Reid in 1887 as his engineer, and remained with him till 1898, being employed on the construction of the Sault Ste. Marie Ry., including bridge over the St. Mary's River, from April, 1887, to Dec., 1887; on the Cape Breton extension of the I.C.R. from Dec., 1887, to Mar., 1890, and on the Newfoundland Ry. from Mar., 1890, to July, 1898. In 1898 he went to British Columbia as chief engineer of the Arrowhead and Kootenay Ry., remaining there till April, 1900. Then was engaged in revising the location of the C.P.R. main line in Assiniboia, and from Farnham, Que., to Newport, Vermont. On Nov. 15, 1900, was appointed Chief Engineer of the Great Northern Ry. of Canada, and of the Quebec and Lake St. John Railway. He continued as Chief Engineer of the G.N.R. until it was taken over by Mackenzie, Mann & Co., and is still Chief Engineer of the Q. and L. St. J. Ry. In 1904 he was also appointed District Engineer for the Quebec district National Transcontinental Ry., a position he now holds. He is a militia officer, and saw active service during the North-West Rebellion, being wounded and mentioned in dispatches.

The Board of Conciliation has issued its award in the matter of the freight handlers' dispute on the I.C.R., by which substantial increases of pay are granted. The new rates take effect from April 1 last, and payments of the accumulated amounts have, it is stated, been made.

Steam Motor Cars for the I.C.R.

Three motor cars have been built for the Intercolonial Ry. The cars are very similar in design, at the passenger end, to the first-class day cars. At the motor end the roof is of wrought iron, and curved from plate to plate to which it is bolted—thus permitting it to be removed when it is desired to take out the boiler. As it is intended to run these cars in either direction, with or without a trailer as may be desired, they are equipped with a pilot, and M.C.B. coupler at both ends, also through piping and standard hose connections for steam heating and Westinghouse air brakes. The cars carry a standard I.C.R. locomotive bell on the roof at the motor end, and are equipped with a headlight which can be carried at either end. The cars are fitted with steel platforms at each end, built by the Standard Coupler Co., New York. The window sashes and fixtures are of metal. Water tanks having a total capacity of about 1,000 imperial gallons and the vapor and gas tanks, with the necessary pipes and fittings, are slung from the underframing with wrought iron straps. The cars are boiler. Buffing springs are arranged in this casting to prevent any jarring when the car is in motion.

The locomotive has bar frames. The boiler is of vertical type and carries a pressure of 180 lbs. per sq. in. The locomotive has outside cylinders, with balanced slide valve operated by valve gear. The cylinders are 12 in. diameter by 16 in. stroke. The capacity of the engine is about 200 h.p. The journal bearings are 7 x 16 ins. long.

The interior arrangement and fittings are made up as follows, starting from the motor end of the car: The boiler room is 13½ ft. long inside. This section contains the boiler and boiler mountings, throttle lever, reversing shaft and gear, Westinghouse air brake pump, coal bunkers, etc. This section is fitted with sliding doors on each side, and an end door. Sliding doors leading to the baggage room are placed on each side of the partition. The baggage room is 8 ft. 4½ ins. long. In this section are placed the gauges in connection with the lighting system, also the battery for the electric bells and the tool case. It is fitted with a large sliding door on each side. The smoking compartment has seating capacity for 12 persons. The seats and other furnishings are similar to those in the passenger compartment. The passenger compartment is 30¼ ft. long, and has seating capacity for 40 persons. The furnishings of this compartment are similar to those of a first-class day car. The woodwork is ash. The upper and lower ceilings are three-ply white wood painted olive green, striped in gold leaf ornamentation and varnished. The window curtains are the I.C.R. standard design. The material is pantasote. The seats are upholstered in rattan. The women's and men's lavatories are 3 ft. 11 in. long. They are each fitted with a closet and wash basin, the former being manufactured by Rhodes, Curry & Co., Amherst, N.S. A nickeline water cooler and tray is placed at this end of the car. The vestibule is 7 ft. longer than the standard, in order to give more room for the engineer's brake valve, throttle closing device, hand brake shaft, whistle and bell cords, all of which are arranged in this end, thus permitting the car to be operated at each end. This vestibule is equipped with hinged side doors, sliding end doors, and vestibule trap doors. Electric bells are placed in the vestibule and boiler room for communicating between these sections. The cars are heated throughout with the Safety Car Heating and Lighting Co.'s steam heat system. The lighting of these cars is a new feature, being the vapor system, in conjunction with the incandescent mantle lamps, and is made by the Safety Car Heating and Lighting Co., New York. These are the first cars of this kind using the vapor system of lighting.

The entire motor car was designed in the I.C.R. mechanical drawing office at Moncton, under the supervision of G. R. Joughins, Superintendent of Motive Power. The locomotive was built in the I.C.R. shops, and the car body by Rhodes, Curry & Co., Amherst, N.S. The two parts were assembled and the trial tests made in the I.C.R. shops, Moncton. The first of the three cars built has gone into service—running between St. John and Hampton, N.B. Following are the principal items in the specifications:

Seating capacity	52 persons.
Gauge of track	4 ft. 8½ ins.
Length over end sills	66 ft. 0 ins.
Width over side sills	9 ft. 10 ins.
Height, top of sills to under side of plate	6 ft. 7¼ ins.
Length, inside sheathing	65 ft. 1⅜ ins.
Width, inside sheathing	8 ft. 11⅜ ins.
Width, between deck rails	4 ft. 10 ins.
Height, inside, top of floor to under side of lower deck rail	7 ft. 7¾ ins.
Outside of end sill to center of body bolster, at motor end	10 ft. 0 ins.
Outside of end sill to center of body bolster, at passenger end	7 ft. 0 ins.
Center to center of body bolsters	49 ft. 0 ins.

INTERCOLONIAL RAILWAY STEAM MOTOR CAR.

equipped with Westinghouse air brake apparatus of the latest and most approved design for cars of this class. This was specially designed for these cars by the Westinghouse Co. The passenger end of the car is carried on a standard four-wheel passenger car truck.

The method of carrying the motor end of the car is unique, having been designed first for these cars. On account of the boiler passing through the center of the car it was not possible to put a center bearing immediately under the car sills and over the center of the engine truck. This had to be carried below the ash pan and was done in the following manner: A large cast steel body bolster weighing about 4,430 lbs. was made to fit the underframing of the car body, having an opening in the center through which the boiler passes. This casting is securely bolted to the sills of the car. Four heavy steel struts carry the weight of the car body to a cast steel bolster below the engine frame having a male center bearing. This rests on a second casting, which is hung from the engine frame by means of four wrought iron hangers fitted with equalizing springs. The spring rests in cup-shaped caps and seats, which allow the car body and engine to take the different positions necessary when rounding curves. The hole in the casting under the car body is made large enough to allow plenty of side and backward and forward motion of the

Center to center of needle beams	10 ft. 6 ins.
Center to center of transoms	29 ft. 9 ins.
Height, top of rail to center of coupler	2 ft. 10½ ins.
Wheel base of truck	8 ft. 0 ins.
End door opening	2 ft. 3 ins.
Width of end door	2 ft. 4 ins.
Side door openings in baggage compartment	3 ft. 8 ins.
Side door openings in boiler room	2 ft. 3 ins.
Width of side doors in baggage compartment	4 ft. 0 ins.
Width of side doors in boiler room	2 ft. 4 ins.
Total wheel base	57 ft. 2 ins.
Body and underframe of car	Wood
Bolsters (at passenger end)	Wrought iron
Brake beams	Simplex
Brakes	Westinghouse
Couplers	M.C.B. automatic.
Journal bearings	M.C.B. 4½ ins. x 8 ins.
Truck	I.C.R. standard 4-wheel passenger.
Wheels	36 ins. W. I. disc Krupp steel tires.

Following are the specifications of the locomotive:

Cylinders	12 ins. x 16 ins. stroke.
Gauge	4 ft. 8½ ins.
Driving wheels	42 ins. dia.
Wheel base of engine	8 ft. 0 ins.
Boiler type	Circular upright with steam drum.
Heating surface in tubes	684.672 sq. ft.
Heating surface in firebox	44.04 sq. ft.
Total	728.712 sq. ft.
Grate area	11.54 sq. ft.
Working pressure	180 lbs. per sq. in.
Test	250 lbs. per sq. in.
Water tank capacity	about 1,000 gals.
Two coal bunkers (½ ton each)	1 ton.
Weight of motor (without car)	51,000 lbs.
Weight of motor (with car)	92,000 lbs.
Total weight of motor and car loaded, about	142,000 lbs.
Tractive power	8,500 lbs.
Horse-power of engine, about	200
Speed on 1% grade	25 miles.
Drivers	Coupled
Motor to haul a trailer of	40 tons.

The engine truck is carried on four wheels coupled. Bar frame of mild steel. The boiler is carried on a cast steel saddle, and properly braced. The car body, supported on a cast steel body bolster, is attached to the equalizing spring gear of the locomotive with four steel struts; this is carried on the locomotive frame by means of cross bars and coil springs. Buffer gear and springs are arranged in the cast steel body bolster to take the forward and backward motion. Rubbing plates are secured on the sides of the boiler and to the car body bolster with ¼ in. clearance on each side. Exhaust is carried on the stack. The boiler is attached to the saddle so that it can be easily taken out and replaced. The boiler is lagged with asbestos and covered with Russian iron. Steam and exhaust pipes are lagged with asbestos, and neatly bound with heavy duck. The locomotive can be easily detached from car body.

MATERIALS IN MOTOR.

Boiler and firebox shell	Sheet steel.
Internal firebox	Firebox steel.
Frames and stays	Mild steel.
Cylinders	Hard close-grained iron.
Axles	Open hearth steel.
Axle boxes	Cast steel.
Shoes and wedges	Cast iron.
Wheel centers	Cast steel.
Wheel tires	Krupp.
Piston rod and slide bars	Steel.
Valve motion	Steel.
Stay bolts	Double refined iron.
Boiler tubes	Solid drawn copper.
Springs	Crucible steel.
Spring and brake gear	Best selected scrap.
Boiler mountings	Brass.

The boiler shell is 9 ft. 9 ins. long over all. Barrel 4 ft. 8 in. o.d., outside plates ⅝ in. thick. Longitudinal seams butt jointed, plated on both sides with ½ in. butt strap plates and double riveted. Circumferential seams single riveted. Edges of all plates machined bevel. Firebox of best firebox steel ⅜ in. thick. Tube sheet best firebox steel ½ in. thick. Stay bolts 1 in. in diameter. Boiler smoke box tube sheet ½ in. thick. Longitudinal stays 14 in number, 1¼ in. in diameter. 361 solid drawn copper tubes 1½ in. o.d. no. 12 w.g. thick. Manhole saddles fitted with patent manhead complete. Ash pan steel plates 3-16 in. thick, fitted with double doors front and back. Outside doors 3-16 in. plate. Inside doors wire netting on wrought iron frame, hinged separately and worked from cab. Grates and bearers, cast iron. Shaker and drop grates worked from cab. Boiler mountings I.C.R. standard as far as possible. Two locomotive pop safety valves muffled, size 2½ ins. Two inspirators. Steam pipe ¾ in. Suction pipe 1 in. delivery pipe, overflow 1 in., capacity 610 gals. per hour. Cylinders 12 ins. diameter by 16 in. stroke, of special tough, close-grained, cold blast iron, properly machined and bolted to frame with turned bolts. Pistons of cast iron solid type with plain rings sprung on. Piston rods of toughened steel ground and keyed to crossheads. Valves, balanced slide. Bar frames of mild steel or wrought iron 4 in. x 3 in. section of top bar. Properly machined where necessary. Truck fitted with Westinghouse air brake. In addition to the air brake apparatus the locomotive is fitted with a hand brake. A 9½ in. air pump is attached to the boiler or in some suitable place in the cab. An engineer's brake valve is supplied for both ends of the car. The saddle is of cast steel turned to fit boiler foundation ring and machined to fit the frames. Horn blocks are forged on the truck frame. Axle boxes of cast steel. Axles are of best open hearth steel, 7 ins. in diameter, turned all over. Journals 7 in. x 16 in. long. Wheel centers are of cast steel, forced on to the axle with hydraulic pressure. Tires of Krupp crucible steel, 3 in. tires flanged 5½ in. wide, secured by shrinkage and lip left off. Main and side rods of special mild steel. All made I section. Crank pins of toughened steel. Link motion arranged so as to give as nearly as possible equal cut-offs in both gears. Reverse lever in the cab. Throttle lever placed in a convenient position in the cab, and so arranged that it can be operated from the cab or rear end of the car. Driving springs open hearth spring steel, 8 in number, placed two over each box on each side of the frame, of sufficient strength and flexibility to ensure easiness in running. The main water tank is of steel plate, 3-16 in., tank 19 ft. 2½ ins. long by 30 in. wide, by 26 in. deep. Capacity about 600 imperial gallons. Two smaller circular tanks 24 in. in diameter by 9½ ft. long, each holding about 200 gals., making a total capacity of 1,000 imperial gals. Coal bunkers of steel plate, with capacity of about a ton. Two bunkers holding half a ton, each suitably arranged in the cab. Stack of sheet steel, straight type, fitted patent spark arrester.

National Transcontinental Railway.

H. D. Lumsden, Chief Engineer, arrived in Winnipeg Aug. 13 from Ottawa, for the purpose of making an inspection of the construction operations eastward, carried on during the summer. It is reported that satisfactory progress has been made during the year with the grading and tracklaying on the portion under contract from Winnipeg, easterly to the junction with the Lake Superior branch from Fort William, which is being constructed by the G.T. Pacific Ry.

The Commissioners of the Transcontinental Ry. will receive tenders to Sept. 5, for the construction and erection of the steel superstructures and floor systems, with ties and guard rails complete, required for bridges at the following points in District B., west of Quebec: Grand Bras d'Arme, mileage 38.9; Lachevrotiere River, mileage 39.93; Nigerette, mileage 46; Tawachiche River, mileage 83; Roberge Creek, mileage 85; River des Eaux Mortes, mileage 95; viaduct of River du Milieu, mileage 97; crossings of Brochet River at mileages 99, 101.5, 102, 108.5, and 109; Creek a Beauce, mileage 115; overhead crossing, Quebec & Lake St. John Ry., mileage 118.25; Little Bostonnais, mileage 119.5; Big Bostonnais, mileage 124; Croche River, mileage 127; River au Lait, mileage 128.9; St. Maurice River, mileage 129.

GRAND TRUNK PACIFIC RY.

F. W. Morse, Vice-President and General Manager, returned to Montreal Aug, 8, after having been absent since July 4 inspecting the work in progress on the line. He said in an interview that the connection between Fort William and Winnipeg would not be made in time to carry the present season's crop. The company's branch from Fort William to Peninsula Lake, or Lake Superior Junction, would be completed, but the main line of the National Transcontinental Ry. into Winnipeg, which the Government is constructing, would not be completed. Satisfactory progress was being made on the line west of Winnipeg. A good deal of the grading and tracklaying between Winnipeg and Portage la Prairie had been completed, while about 60 miles of track had been laid and ballasted beyond Portage la Prairie. By the time the cold weather set in it was expected to have about 235 miles west of Portage la Prairie completed. Further west the bridge construction was being proceeded with as rapidly as possible, and the other work was well forward. The steel bridge over the Battle River would be ready for the rails this autumn. The one over the south Saskatchewan, just south of Saskatoon, was just as far advanced, and the one at Clover Bar was approaching the finishing stage very fast. Preparations were being made to start construction west of Edmonton at once. It was impossible to say what mileage would be operated this year.

C. Schrieber, Consulting Engineer for the Dominion Government, stated, Aug. 16, that by the time construction for the year had been completed, track would be laid from Winnipeg to Saskatoon, 465 miles. Track had been laid at the last report he received for 120 miles from Portage la Prairie westerly, and the roadbed was practically ready for rail laying the rest of the way to Saskatoon. Three divisional points had been selected along the route, and roundhouses and terminal facilities were being established. Station buildings were also being erected this year every few miles along the line.

Reports from Rivers, Man., state that track had been laid to that point, 143 miles west of Winnipeg, July 30, and that an 18-stall roundhouse and other buildings were being erected there. The station at Portage la Prairie, which is being built to accommodate the G.T. Pacific Ry., and the Midland Ry. of Manitoba (Great Northern Ry., U.S.), is under construction, the contractors being the J. McDiarmid Co., of Winnipeg.

From Edmonton west the line has been surveyed through the Yellowhead Pass and well into British Columbia. The few miles still unsurveyed between this point and Prince Rupert will be taken care of during the summer. Since the route of the new line has been definitely surveyed through the Yellowhead Pass and the country beyond there has been a strong move to settle the big plateau between the Rocky and Cascade Mountains through which the line will pass. This is especially the case in the Bulkley and Temple Valleys, which are said to enclose vast tracts of particularly fertile land, not only adapted for agriculture, but suitable for fine fruit farming.

A contract is reported to have been let to Foley Bros. and Larson for the construction of 180 miles from Kitamaat on the Pacific Coast to Hazelton, B.C., and reports from the coast state that it is expected that a contract for a section of the main line from Prince Rupert to Kittesalas Canyon, 100 miles, will be let in the fall. In this section there is reported to be some very heavy rock work, and that even under the most favorable conditions it will take a couple of years to get the 100 miles finished.

C. M. Hays, and F. W. Morse, President and Vice-President, have been at Vancouver, B.C., and local reports state they are negotiating to purchase the Vancouver, Westminster and Yukon Ry., which has a charter to construct a line from Vancouver to Dawson, Yukon. The existing lines of the V.W. and Y. Ry. give a connection between the Great Northern Ry. (U.S.) line at New Westminster and Vancouver.

The proposal of the directors of the Canadian General Electric Co., Ltd., to increase the capital stock of the company by the issue of $2,000,000 7% preferred and $1,000,000 common stock, was ratified at a meeting of the shareholders, Aug. 15.

The Terminal Construction and Investment Co., Ltd., has been incorporated under the British Columbia Companies' Act, with a capital of $100,000, for the purchase of, development and sale of land, and in connection therewith to carry on business operations of all kinds. The company may construct wharves, docks, harbors, piers, warehouses, tramways, telephone and telegraph lines, and may own and operate steam and other vessels.

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

TRANSPORTATION APPOINTMENTS.

Boston and Maine Rd.—G. H. Folger, heretofore Superintendent of the Terminal Division, has been appointed Assistant General Superintendent. Office, Boston, Mass.

Buffalo, Rochester and Pittsburg Rd.—R. W. Davis, heretofore General Freight Agent, has been appointed Freight Traffic Manager.

Canadian Pacific Ry.—W. H. Sleep, heretofore foreman blacksmith G.T.R. at Point St. Charles, has been appointed foreman blacksmith in connection with the car department at the C.P.R. Angus shops, Montreal. The blacksmith shops of both the locomotive and car departments are under one roof, J. Fenwick being foreman blacksmith in charge of all matters pertaining to the locomotive department.

J. R. Spragge, heretofore road foreman of locomotives district 2, Ontario Division, has been transferred to a similar position in district 3. Headquarters, Toronto.

L. G. Roblin has been appointed road foreman of locomotives district 2, Ontario Division, succeeding J. R. Spragge, transferred to district 3, Ontario Division. Headquarters, London, Ont.

P. Coakley, heretofore assistant roadmaster London section and Guelph and Goderich branch, has been appointed Roadmaster, Guelph and Goderich Ry. Office, Guelph, Ont.

A.H. Eager, heretofore general foreman Calgary, Alta., has been appointed District Master Mechanic, Kenora, Ont.

The initials of the Travelling Passenger Agent for the C.P.R. Atlantic Steamship Lines at Winnipeg are H. M. and not W. H. MacCallum as stated in our August issue.

C. E. Mansfield was recently appointed Chief Train Dispatcher district 2, Western Division, not trainmaster, as stated in our July issue.

S. Newmarch, heretofore locomotive foreman, Winnipeg, has been appointed general foreman, Calgary, Alta.

J. C. Reed, heretofore leading hand at Cranbrook, B.C., has been appointed locomotive foreman at Medicine Hat, Alta., vice J. Archibald, transferred.

J. T. Arundel, heretofore Superintendent district 2, Central Division, Winnipeg, has been appointed Superintendent district 2, Pacific Division, Vancouver, B.C., succeeding H. E. Beasley, who has been granted six months' leave of absence.

F. A. Valentine, heretofore Travelling Passenger Agent, Los Angeles, Cal., has been appointed Travelling Passenger Agent, with office at Spokane, Wash.

A. A. Polhamus has been appointed Travelling Passenger Agent, with office at Los Angeles, Cal., succeeding F. A. Valentine, transferred.

G. Thompson, heretofore trainmaster district 2, Central Division, has been appointed acting Superintendent of that division, vice J. T. Arundel, transferred to Pacific Division. Office, Winnipeg.

Chicago and Alton Rd.—W. C. Mueller has been appointed Travelling Passenger Agent for the State of Michigan (except the northern peninsula) and the Province of Ontario, succeeding the late L. H. Peck. He will report to the General Agent of the Passenger Department at Chicago. Headquarters, 1302 Majestic building, Detroit, Mich.

Grand Trunk Ry.—The following agents have been appointed: Portland (freight), Me., J. M. Riddell; Lacolle Jct., Que., H. A. Dunn; Whites, Que., A. Boyer; St. Agnes, Que., R. Fortin; Montreal (freight), Que., R. W. Scott; Omemee Jct., Ont., C. L. Bowles; Midland, Ont., G. M. Morgan (Acting); Markham, Ont., W. T. Byam; Sutton, Ont., F. S. Cochrane; Newmarket, Ont., A. Donnelly (Relieving); Bracebridge, Ont., J. Willoughby; Huntsville, Ont., R. W. Groves; Toronto Jct., Ont., G. A. Fernley; Norval, Ont., G. H. Jackson; Paris (Passenger), Ont., W. J. Moore; Marshville, Ont., J. C. Cook; Cayuga, Ont., A. T. Krafft; Nelles Corners, Ont., H. C. Cotter; Elmwood, Ont., C.M. Sheppard; Caldwell, Ont., Jno. Joint.

Great Northern Ry. (U.S.).—F. H. McGuigan, First Vice-President, has resigned.

A St. Paul, Minn., press dispatch, dated Aug. 16, says Howard James, heretofore Director of Purchases, has been appointed Vice-President to succeed Mr. McGuigan, and that he will have charge of the operating department.

Intercolonial Ry.—J. J. Wallace, General Freight Agent, has been granted three months' leave of absence. He is going to Summerland, B.C., and may remain there and not return to the I.C.R. service.

Maritime Coal, Ry. and Power Co.—The officials of the company are: Manager, G. B. Burchell; Accountant and Cashier, N. T. Avard; Mechanical Engineer, M. Osbourne.

Minnesota and International Ry.—The office of W. H. Gemmell, General Manager, has been removed from St. Paul to Brainerd, Minn.

New Brunswick Southern Ry.—T. Steers, heretofore in the C.P.R. service, has been appointed roadmaster N.B.S.R. The position is stated to be only a temporary one, and that he will return to the C.P.R. in the fall.

New York Central and Hudson River Rd.—W. O. Thompson, heretofore Division Superintendent of Motive Power, Oswego, N.Y., has been appointed Master Car Builder, succeeding the late J. McBeth. Office, Buffalo, N.Y.

Reid Newfoundland Co.—J. J. Lacey, heretofore assistant agent at North Sydney, N.S., is reported to have been appointed freight agent at St. Johns, Nfld.

White Pass and Yukon Ry.—J. H. Rogers, heretofore Traffic Manager, is reported to have resigned to take up the duties of a similar position on the Tanana Valley Ry., Fairbanks, Alaska.

G.T.R. Betterments, Construction, Etc.

Toronto-Hamilton Line.—An unconfirmed press report states that it is the intention of the company to put four tracks on its line between Toronto and Hamilton, and in connection with the plans to replace the overhead bridge on the Waterdown road with a subway. This construction of the subway, the report states, will be started this fall.

Brantford Double-Track Work.—A press report says that the last 4½ miles of double-track work in the vicinity of Brantford, Ont., will be completed by Aug. 31. This short section lies from Brantford easterly to Alford, on the line to Hamilton.

London Improvements.—The chairman of the Railway Committee of the London City Council stated recently that the committee would shortly publish the draft agreement respecting the elevation of the G.T.R. tracks in London, Ont., submitted to the company in March. No reply had been received to this proposition therein made.

London Car Shops.—Tenders are under consideration for an addition to the car works at East London, Ont., at a cost of about $55,000. The new building will be of brick.

Sarnia Tunnel.—E. H. Fitzhugh, Third Vice-President; W. G. Brownlee, General Transportation Manager, and Superintendent Gillen, inspected the work in operation at the Sarnia Tunnel, Aug. 9. The electrical plant for hauling the trains through the tunnel is expected to be ready for operation during Sept.

Battle Creek and Durand.—Work has been commenced upon the construction of the new car and locomotive shops at Battle Creek, Mich., a description of which has already been published. A 40-stall roundhouse is under construction at Durand, Mich.

Misrepresentation of Freight Shipped.

T. Marshall, Secretary Canadian Freight Association, has issued the following circular to freight inspectors:

"Your attention is called to rule 17 of Canadian Classification 13, effective Sept. 1, reading as follows:

'a. All shipments are subject to examination and inspection as to correct description and weight, and will be charged at the gross weight, except that when an article is classified to be accepted at estimated weight, such estimated weight will apply.

'b. If upon inspection it is ascertained that the articles shipped are not those described in the bill of lading, the charges must be paid upon the articles actually shipped, and at the rates and under the rules provided for by this classification, and subject to the provisions of sub-section c of this rule.

'c. If any person or company shall knowingly or wilfully by false classification, false weight, false representation of the contents of any package, or false report of weight, or by any other device or means, whether with or without the consent or connivance of any agent or agents of the transportation company, with the intention of obtaining transportation for goods at less than the regular tolls then authorized and in force, such person or company shall, in addition to the regular tolls then authorized or in force, be liable to pay to the transportation company a further toll of 50% of the regular charge. (See section 400 of the Railway Act, Chap. 37, R.S.C., 1906, page 1 of Classification).'

"The purpose of this rule is to prevent the continuance of misrepresentation, a practice which places shippers who will not resort to fraudulent means in a most unfair and disadvantageous position as compared with shippers who commit such fraud. There is no desire upon the part of the railways to penalize any shipper who may, through a misinterpretation of the classification, inadvertently misclassify a shipment; but such misinterpretation is not necessary, because a shipper is not asked to classify his goods. All he is required to do is to correctly and fully describe them in his shipping bills and the railways will apply thereto the proper classification. The sole object of the railways is to stop deliberate fraud and to protect honest shippers. If after reasonable efforts have been made by you to ascertain and determine the true character of the property, there remains no doubt in your minds as to the wilful intent of the shipper to misrepresent, you will impose the extra toll of 50% and report particulars to me. If, however, there is any reasonable doubt in your minds, you will permit the shipment to go forward as consigned, without imposing the extra toll, and report the circumstances to this office."

We are advised that the various railway companies will issue a similar circular to agents.

The attention of shippers is directed to the new Classification and changed conditions, both with regard to some of the rules and ratings, and also the owner's risk conditions, with the object of having shippers compare the ratings in Classification 13 with those heretofore in force, so that they may ascertain for themselves whether any change has been made in the ratings of the goods they ship. Copies of the new Classification will be sent shippers free, on application to the Canadian Freight Association, Union Station, Toronto.

The statement published in the general press to the effect that the C.P.R. had placed contracts with two companies to supply the railway with 12,000 Japanese laborers, is denied by R. Marpole, General Executive Assistant of the company at Vancouver, B.C.

Railway Finance, Meetings, etc.

Atlantic and Lake Superior Ry.—Bondholders who shall on or before Sept. 3 next transfer and deliver their bonds to the Royal Trust Company, together with all coupons from Sept. 1, 1895, inclusive, shall be entitled to receive, and the Royal Trust Co. shall issue to them, in exchange for the bonds thus transferred and delivered, certificates of participation in the Atlantic and Lake Superior Ry. Trust Fund in the following proportions, namely: 20% in ordinary certificates and 10% in deferred certificates, calculated on the nominal capital value of such bonds; it being an express condition that such transfer and delivery shall operate as an absolute sale assignment and transfer by the bondholders to the Royal Trust Co. and their successors in trust for the benefit of the said trust fund, of all claims against the company under the bonds thus transferred and delivered. And in pursuance of clause 6 of the scheme of arrangement the bondholders are invited to transfer and deliver under the foregoing conditions to the Royal Trust Co., the bonds held by them not later than Sept. 3, after which day no bonds will be received for the purpose of participating in the trust fund.

A general meeting of the holders of certificates of participation was held Aug. 28, at the Royal Trust Co.'s office, Montreal, for the purpose of authorizing the acquisition of the claims now held by the trustees for the bondholders of the A. and L.S. Ry., against the A. and L.S. Ry. Co. and its bondholders, and of confirming the issues of certificates of participation heretofore made by the trustees of the fund.

Atlantic and St. Lawrence Rd.—The annual meeting of shareholders was called for Aug. 6, but the meeting was adjourned indefinitely, there not being a quorum present. The retiring board of directors will hold over. The company does not issue an annual report. The line is leased to the G.T.R.

Canadian Northern Ry.—Notice is given by G. Ruell, Chief Solicitor of the Edmonton and Slave Lake Ry. Co., a subsidiary of the C.N.R. Co., that there has been deposited in the office of the Secretary of State of Canada a mortgage dated July 1, from the E. and S.L.R. Co. to National Trust Co., Ltd., securing an issue of first mortgage bonds to the extent of $20,000 a mile on the portion of the railway between Edmonton and Athabasca Landing, Alta., a distance of about 100 miles.

W. Mackenzie, President, states that the recent report that the common stock of the company would shortly be put on the market was absolutely untrue. The total value of the common stock is about $40,000,000, and none of it has been issued to the public.

Canadian Pacific Ry.—There was a marked increase in the number of acres of land disposed of by the company in 1906, as compared with the two years previous, and a considerably larger price per acre received for same. In the past five years over $27,690,000 has been realized from this source. The following table shows the number of acres sold, price per acre received and amount received for land, from 1902 to 1906, both years inclusive:

	Acres.	Price.	Amount.
1906	1,115,743	$5.84	$ 6,513,452
1905	509,386	4.80	2,446,300
1904	928,854	4.10	3,807,248
1903	2,639,617	3.67	9,695,673
1902	1,589,008	3.29	5,227,762
Total	6,782,668	$4.34	$27,690,435

The original land grants amounted to 32,790,000 acres. Of this amount all but 13,473,350 acres had been disposed of on June 30, 1906; and over $36,000,000 of the proceeds were put into the property. The value of the lands remaining on June 30 last was, at the average price of $5.84 per acre, $78,684,364. Add to this the $16,382,823 due from deferred payments and there is a grand total of $95,067,187, an amount equal to $78 per share on the $121,680,000 common stock outstanding.—Montreal Star.

At a meeting of directors in Montreal, Aug. 12, dividends at the rate of 2% on preference stock, and 3% on common stock, for the year, ended June 30, were declared. An additional ½% will be paid on the common stock at the same time, out of the proceeds of land sales. The following figures show results under various heads for the financial year ended June 30:

Gross earnings	$72,217,528
Working expenses	46,914,219
Net earnings	25,303,309
Net earnings of steamships in excess of amount included in monthly reports	723,649
Income from other sources	1,640,832
Total net income	27,667,790
Deduct fixed charges	8,511,756
Surplus	19,156,034
Deduct amount transferred to steamship replacement fund	700,000
Deduct contribution to pension fund	80,000
Net revenue available for dividends	18,376,034
After payment of all dividends declared for the year the surplus for the year carried forward is	9,339,005

Esquimalt and Nanaimo Ry.—By the decision of the Imperial Privy Council the settlers' rights to coal and other minerals in the Nanaimo district of B.C., within the E. and N. Ry. belt is confirmed. In 1904 the B.C. Legislature passed an act under which all the settlers claimed mineral rights. A decision of the B.C. courts held that these lands were reserved to the railway company under the Dominion grant, and that the settlers could not have any pre-emption rights, nor that the legislature had any control over the lands, and that the act was unconstitutional. This decision is now reversed, and the act declared to be valid.

Grand Trunk Ry.—The directors have declared dividends for the half-year ended June 30, as follows: 5% on the 1st and 2nd preference stock and 4% on the guaranteed stock. No provision has been made for the payment of any dividend upon the third preference stock.

Mabou and Gulf Ry.—The sale of the property of the Mabou Coal Mining Co., apart from the lines, franchises, and charter of the M. and G. Ry., to the Eastern Trust Co., for $210,000, has been confirmed in the Nova Scotia courts.

New Brunswick Ry.—At the annual meeting at St. John, N.B., Aug. 1, W. T. Whitehead, Fredericton, N.B., was elected a director, succeeding the late J. Hardisty, Montreal. Following are the officers and directors for the current year: President, R. Meighan, Montreal; Vice-President, Lieut.-Col. H. H. McLean, St. John; Land Agent, W. T. Whitehead; other directors: Lord Strathcona, J. Turnbull, F. S. Meighan, Montreal; J. S. Kennedy, M. Willis, J. and S. Thorne, New York; Secretary-Treasurer, A. Seeley. The company does not issue an annual report. Its railway is operated by the C.P.R., but the company owns a large area of land in N.B. In connection with this land an act was passed by the N.B. Legislature in 1905 to facilitate the opening up of the same for settlement, under which the Province purchased a large area at 75c. an acre. Last session of the Legislature an act was passed adding an additional section to the act of 1905, providing that the conveyance by the said company to the King, of the said lands, or of the said company's right, title and interest therein, shall vest the said lands and the complete title thereto in His Majesty, his successors and assigns, in fee simple, and freed and discharged from all incumbrances of any nature or kind. The transfer of 50,000 acres in the Tobique River valley from the railway company to the Government, has just been completed under the provisions of these acts.

Reid Newfoundland Co.—The question of the appointment of a third arbitrator in the proceedings brought by the company against the Government to recover $650,000 for rolling stock supplied between 1901 and 1904, is before the Newfoundland Courts. The claim is one arising as a result of the amendment of the contract between the Government and R. G. Reid, subsequently transferred to the R.N. Co.

Temiskaming and Northern Ontario Ry.—Earnings for May, $77,041; expenses, $51,496; net earnings, $25,545. Mileage in operation, 138.9 miles, against 112 miles in May, 1905.

Toronto, Hamilton and Buffalo Ry.—Earnings for July $76,146.39, against $62,739.23 for July, 1906.

Victoria and Sidney Ry.—Press reports in Victoria, B.C., state that the Victoria and Sidney Ry., which forms a part of the Victoria Terminal Ry. and Ferry Co.'s undertaking, will shortly be sold to the C.P.R., and that it will be operated by electricity. It is at present controlled by the Great Northern Ry. Co. (U.S.A.).

Toronto Union Station, Tracks, etc.

The following report has been made to the Toronto City Council by W. Barclay Parsons, New York; C. B. Smith, Toronto; and C. H. Rust, City Engineer of Toronto: In compliance with the resolution of Council, dated Jan. 28, 1907, in which the City Engineer was authorized to retain the services of consulting engineers to act with him, to report upon the whole question of railway transportation facilities along the entire front of the City, extending from the Humber River on the west to the extreme limits of the City on the east, together with consideration of the plans submitted by the railway companies of the proposed new union station, the various schemes of trackage and other arrangements incidental thereto, he engaged the services of W. Barclay Parsons of New York, and C. B. Smith of Toronto, and the Commission thus appointed submits the following report:

As soon as the formation of the Commission was determined upon, we held meetings in Toronto and jointly made an examination of the railways from the Humber River east, of the various proposed sites for the new passenger station, of the water front and streets, and the other physical conditions of Toronto, in so far as they bore upon the problems contemplated by your resolution. Subsequently Mr. Parsons had conferences with Mr. Berrian, who had been appointed by the Board of Trade to report to them on the same matters; with Mr. Francis, the Chief Engineer of Westinghouse, Church, Kerr & Co., who had been retained by the G.T.R. Co. to prepare plans for the new union station, and on May 16 a meeting was held in Mr. Parsons' office, which was attended by the Mayor, Messrs. Berrian, Steele and Moyes, representing the Board of Trade; Messrs. Kerr and Francis, Mr. Carrere, architect for the railway, and the members of the Commission.

The questions submitted to the Commission by the Council cover several different problems, which are not related to the extent that a decision on one concludes a decision on the others. For your convenience and for the better understanding of the matters involved, it would seem well that these various questions should be set forth and considered separately. In general they can be stated to be as follows: 1. The Passenger Station; 2. The approaches thereto from the diamond crossing on the west to Parliament St. on the east; 3. The disposition of the tracks from the River Humber to the diamond crossing; 4. Disposition of the tracks from Parliament St. to and beyond Queen St.

1.—Passenger Station.

The railway companies and the City, on April 22, 1905, entered into a general agreement as to the location of a new passenger station. In accordance with the terms of this agreement the railway company has made voluminous studies through its engineers and architects. All such studies and plans have been submitted to the Commission and explained by their designers. In general, the station as proposed is of the through type, with 10 parallel tracks. Facing Front St., and extending from York St. to Bay St., is the station building of exceedingly handsome design, and with extensive accommodations for passengers, baggage and freight. To get access to the inter-track platforms from the station building, without crossing the tracks on the level, various plans have been prepared, some based on overhead bridges, others on subways. All the tracks and platforms are to be covered by a train shed. In some of the plans the train shed is shown as requiring the closing of York St., and the doing away with the existing bridge, substituting in place thereof a new bridge to be located between Bay and Yonge Sts.

The officers of the Board of Trade, actuated by the desire to secure for the City the best and most convenient station, have urged upon your Commission the consideration of a head-on station, in which all the tracks shall terminate, to be located on the Government House property and abutting on King St. At the request of the Board of Trade, Mr. Berrian, their engineer, has prepared full and elaborate plans for a station of the head-on type, as described above. These plans have been submitted to the Commission and have been discussed by the Commission and Mr. Berrian jointly. We have considered at great length the advantages and disadvantages of both plans, and we are of the unanimous opinion that it would be better to locate the station itself substantially in the position as proposed by the G.T.R. Co., and already accepted by the City, but with certain modifications of details. We believe that Mr. Berrian has made the best possible solution of the problem for a head-on station submitted by him, reflecting great credit on his ingenuity; but even in spite of this solution the head-on station is, in principle, open to such very serious objections as to warrant its rejection. While the bulk of travel to and from Toronto is travel that terminates or originates in Toronto, there is, notwithstanding, a large portion of travel that is through traffic. A head-on station involves the necessity of every through train reversing its direction at the station or being backed in one direction while loaded with passengers across a series of junction switches and frogs, involving not only danger but a very serious delay to every train. Toronto, while being the most important city in Canada west of Montreal, is, nevertheless, not located on the shortest line between the western and eastern limits of the Dominion. The natural tendency of traffic is to seek the shortest route and line of least resistance, which in this case, from geographical reasons, would be around Toronto. Any bar that is placed in the way of the running of trains through Toronto would naturally incline the railways to send their through trains by some other route. For the proper development of Toronto's railway facilities and the encouragement of through traffic, obstacles should be removed and not imposed, and it would seem to us to be a wise policy on the part of those charged with Toronto's welfare to encourage in every way possible the passing of traffic through the City, and in the most commodious and economical manner. We believe that a head-on station is not the best type of station for Toronto for the above and following reasons. 1. Delay in through traffic; 2. The passing of all trains, some of them loaded with passengers, across a complicated system of crossings and frogs, and at times passing such trains in reverse direction; 3. Placing an absolute limit upon any increase in the size of the station, as no additional tracks could be added to the station unless the abutting streets on the east and the west of the terminal grounds were acquired; 4. Great expense, both in the construction and the acquisition of land and the displacement or re-arrangement, with attending cost, of the existing freight delivery and other yards of the G.T. and C.P. Railways.

Reverting to the plans of the G.T.R. Co., as submitted to the Commission, we would recommend that, while approving the location and general type of the building as proposed, instead of having all the tracks connected through the station, the seven tracks next to Front St. should be cut in the center of the station and for a distance sufficient to give a wide and commodious passageway. There would then be seven head-on or terminal tracks from both the east and west, or 14 such tracks in all, with three through tracks on the southerly side. A passenger going from the station to the trains, or vice versa, would then pass on a level without the inconvenience either of ascending or descending steps to any of the local tracks or to the first of the through tracks, or without crossing any track. From the northerly side of the first of the through tracks there could then be constructed a short subway beneath such track leading to the platform between the second and third of the through tracks; such subway to be used only at the time when the first of the through tracks was occupied by a standing train, which condition would rarely occur. If this modification of the G.T.R.'s plans were adopted, Toronto would have all the advantages claimed for a head-on station, namely, a terminus for local trains, direct access to platforms, and simplicity of working. In fact there could really be two head-on stations separating east and west bound traffic, with a third or through train station in connection, and in which passengers would proceed directly from the station to their trains, and with practically no longer walk than would be had with the head-on station, as above described. In fact, at times the walk might be shorter, because with the more limited track accommodations in the King St. station there might be occasion when two trains might have to stand one in front of the other on a single track, whereas with the greater number of tracks with the other station this contingency would probably never occur. Another advantage of the station as proposed, especially with the modifications here recommended, would be that the station capacity would not be limited to the present construction. The station building itself is one of very large capacity, the waiting room being actually larger than the waiting room in the present Grand Central Station in New York, which has sufficed for the traffic of the New York Central, New York & Harlem and the New England Railroad systems. Should more track accommodation be needed, it is a simple matter to add on the southerly side as many new tracks as may be needed. If such new tracks are required for through traffic, the subway connecting them could be extended; if they were required for local traffic, then the existing through tracks would be cut in the middle and the level concourse extended to the south. The type of station that the Commission has in mind and which is here recommended is somewhat similar to the station at Providence, R.I., on the New York, New Haven & Hartford Rd. Providence is a city of about the size of Toronto; in the center, however, of a much more densely populated country, with about the same number of tracks as is proposed for the Toronto station, but already doing a business about double the existing traffic at Toronto, and with the full capacity of the station never reached. Whatever type of station is adopted, the Commission is of the firm belief that York St. should not be severed, but that traffic be carried from Front St. to the water front unobstructed, and that a similar connection be made at Yonge St., a compromise bridge between Bay St. and Yonge St., to take the place of a connection at Yonge St., and the present bridge at York St., being wholly insufficient. In fact, to supply additional facilities we believe that the arrangement already made between your Board and the G.T.R. Co. for a foot bridge at Bay St. should be carried into effect. We might suggest that this foot bridge be constructed of ample width to accommodate the large number of people that reach the ferries by this street.

2.—The Approaches to the Station.

In any consideration as to what should be done to the approaches to the station, it seems to the Commission that the water front of the City and its development is of paramount importance, and that the disposition and treatment of the tracks be considered primarily from that point of view. The limits of the water front of the City within the present harbor protection are none too

PATENTS PROTECTED BY THE PATENT TITLE AND GUARANTEE CO. NEW YORK

THE ANDERSON AUTOMATIC VALVES AND WATER COLUMNS FOR RAILROADS

Anderson Patent Altitude Valve
Connected to Tank Service
No Waste of Water
No Freezing of Floats

This valve maintains a uniform stage of water in tank or reservoir, doing away with the annoyance of floats or fixtures in the tanks.
Accessible and protected from frost. Adapted for Buildings regardless of height.

Anderson Patent Float Valve
"Simply Has No Equal."

Cushioned in opening and closing. Float swivels to any angle desired.

"Angle or St. Way."

The Valves with an Absolute Guarantee.

For high and low pressure. Absolutely controls the water level in tanks or reservoirs. Instantly adjusted to operate quick or slow, as desired. "No waste of water." The upper portion of body being lined with bronze, also the valve or piston being solid bronze, makes the valve indestructible. Railroad men that use them say, "Their equal is not made."

"Angle or St. Way"

The Anderson Cushioned Non-Return Valves

"Life and Property Insurance Valves"

Why! endanger your power plant by using the regular angle, globe or gate valves at the boilers when you can get the Anderson Cushioned Non-Return Valve, which is an AUTOMATIC STOP VALVE, also a HAND-STOP VALVE, all in one?

The Heaviest Line OF AUTOMATIC VALVES AND TRAPS

For High-Pressure Steam and Water Service ever Presented to Users.

GOLDEN-ANDERSON VALVE SPECIALTY CO.

large. The total distance along the Windmill line between the western channel and the western limit of Ashbridge's Bay immediately at the foot of Parliament St., is about two miles. Of this distance a large part is occupied by railway yards, and less than one-half of it is open for development for commercial purposes. The City has established on its map and has constructed in small part a marginal street called Lake St., and has also established a line southerly of Lake St., to which improvements by piers or wharves may be carried. What should be done with the approaches to the new station necessarily has great bearing upon the water front property. An inspection of the map, even after Lake St. is completed, shows that but a small part of Toronto water front will be capable of any extensive improvement. Between the water front and the railway tracks on the Esplanade there should be sufficient space to permit the construction of manufacturing industries, warehouses, store yards or other large terminal improvements which can be served by railway connections on the one side and water connections on the other. In this respect Toronto is exceedingly favorably situated, and the full use of such situation should, it seems to us, be secured. Without attempting to go into any details of design, we have considered and recommend to you the possibility of establishing along the water front a large marginal street that should have a width of at least 125 ft., extending from, say, Cherry St. westerly to Queen's Wharf channel, connecting at that point with a proposed boulevard, which we understand is proposed to be constructed, thence to the Humber, thus furnishing a great thoroughfare the full water front of the City. If this new street were located at a distance of at least 600 ft. from the Esplanade, which would place it just southerly of the proposed location of Lake St., between Scott and Parliament Sts., there would then be a sufficient area between such street and the Esplanade for a systematic and extensive development. The water front then could be divided so as to give in the neighborhood of the foot of Yonge, Bay and York Sts., passenger accommodations for ferries and for the passenger steamers running to Hamilton, the St. Lawrence, Niagara, or to local points along the lake shore, with accommodations for the purely commercial vessels on the east, for yacht and boat clubs on the west, and connection between the railways and lake beyond, but with freedom of connection between them all. If some such plan as is here indicated were taken up and studied in detail, we believe that there would result to Toronto not only new land of great value in itself, but also a great increase in its commercial facilities that would have a far-reaching effect on all values in and business of the City. With the water front thus developed, the traffic between it and the City, not only for water-borne freight, but for freight that would be brought to the industries and warehouses by the railways themselves, will become of great importance, and its care of more concern than even that of the present existing traffic. To permit this new traffic to pass the running tracks of two great railways on level crossings, no matter how well protected by gates and watchmen, is at great cost to the company and a great burden, both in danger and delay, to the citizens. We strongly recommend to you, therefore, that steps should be taken in connection with the proposed station to so arrange the track approaches thereto that these level crossings should each and all be permanently removed. This can be done in two ways: 1. By elevating the tracks, and 2, by elevating the streets.

Both plans have their advantages, but as both of them involve certain questions of legal rights and other questions of policy as to which we are not advised, we think it better to lay before you the relative advantages of the plans, so that you may see all phases of the question. From our standpoint, however, we are of the opinion that the preponderance of advantages is in favor of the elevation of the streets. It has been suggested that the station itself be placed at such elevation as to permit the tracks running to the east to pass over all streets from Bay St. easterly, such streets to be carried beneath the tracks at their existing levels. The additional cost of the construction of the station at the higher level can be taken as negligible in amount. If the main running tracks, at least four in number (which we consider sufficient) were thus elevated and Bay St. carried beneath, a total reconstruction of the existing yards of the railway companies would, however, become necessary. The local C.P.R. freight house would have to be moved and the classification and delivery tracks connected only at the west end, instead of at both ends as at present. Along Esplanade east of Yonge St. there are at present certain tracks on the surface for car delivery and other private tracks turning into industries and warehouses. It appears, after consideration, it will be impossible to do away with these tracks. Their presence is of great importance to the business of Toronto. It has been proposed, however, that no tracks of this nature be carried across Yonge St., but we consider it necessary for the accommodation of the traffic at this point that on the north the tracks should be carried as far west as Scott St., and on the south as far as the east side of Yonge St., this latter being especially necessary to provide for the shipment of fruit which now takes place at the Yonge St. wharf. These tracks would necessarily cross all the streets east of Yonge at grade. In order to diminish the danger, it has been proposed that shifting on these tracks be limited to the night hours, or that the shifting engines be preceded by a man on foot with a flag, as the danger of running a train close to, and therefore obscured by, the masonry of a viaduct, would be exceedingly dangerous. On the other hand, if the streets are carried over the railway there need be no reconstruction of the existing yards, and there will be no interference with the industries located on the Esplanade. Crossing of all tracks at level should be absolutely eliminated, and there should even be an extension of the facilities afforded by private track delivery if the development of the water front so required it, as in our judgment it will. It would not seem necessary, in order to furnish proper connections to the water front, that every street now on the map need be connected with the marginal street. If there were four, or at the utmost five, approaches east of Yonge St., the full requirements of the case, even with the developed water front, would be met. Should a marginal street be constructed, as suggested, a distance of at least 600 ft. from the Esplanade, the gradient on the approaches crossing the tracks would not exceed 4%, which is less than the existing gradient rise from the Esplanade to Front St., at least as far east as Princess St., and such approaches would reach the grade of the marginal street on the north line without requiring curved approaches, as in the present York St. approach.

Summarizing the advantages and disadvantages of the two plans, we have for track elevation—Advantages: Every street would be carried through to the water front at its existing elevation.

(To be continued in next issue.)

The Commission appointed to investigate and report on the needs of the Georgian Bay ports will consist of M. J. Butler, Deputy Minister of Railways and Canals, and Louis Coste, of the Department of Public Works.

Too Late for Classification.

General.

It was unofficially announced in Ottawa, Aug. 29, that Hon. W. Pugsley, ex-Premier of New Brunswick, had been appointed Minister of Railway and Canals, succeeding Hon. H. R. Emmerson, resigned.

Atlantic and Pacific Ocean Marine.

The steamship companies engaged in passenger traffic with the Orient, including the C.P.R. and the Canadian-Australian lines, have decided, on account of the rise in prices of coal and general stores, to increase their rates by 10%.

Maritime Provinces and Newfoundland Marine.

The steamboat Stord from Quebec to Hudson's Bay ports, struck Mingin Island in a dense fog, Aug. 8, and strained her bow. She put in at St. John's, Nfld., for the necessary repairs to be carried out.

Express.

The barn occupied by the Canadian Ex. Co. at Stratford, Ont., was destroyed by fire Aug. 14, and two horses, with a quantity of feed, were burned.

Telegraph and Cable Matters.

The C.P.R. Telegraph Department has opened an additional telegraph office at its city ticket office, King and Yonge Sts., Toronto.

Sir H. W. Primrose, K.C.B., C.S.I., has been elected Chairman of the Pacific Cable Co., in the place of the late Sir Spencer Walpole.

W. J. Camp, Electrical Engineer C.P.R. telegraphs, reports that recently the earth currents were so severe that all the duplexes at Fort William, Ont., had to be disconnected, and at times set fire to the switchboards.

The report of the Pacific Cable Board for the year ended Mar. 31, shows a gross message revenue of £116,401, against £94,456 in 1905-06, and the entire net revenue £113,516, with an expenditure of £90,895. After providing for interest and sinking fund there is a deficiency of £54,923, against £72,556. The traffic revenue for 1906-07 is £103,000, a deficit of £69,368.

General Telephone Matters.

An arrangement has been effected by which the Dominion Government telegraph cable between Gaspe and Ellis Bay, Que., will be utilized for telephonic communication.

The Canadian Machine Telephone Co. states that it is hoped to have an automatic telephone system in operation in Brantford, Ont., by the end of the year. The company has purchased a site in the city and will erect an office building at a cost of about $8,000.

The operators engaged on the civic telephones at Fort William, Ont., were out on strike last month. They alleged many grievances, but the culminating point was the appointment of a chief operator from the U.S. She was subsequently dismissed, and the operators resumed work.

The Harrietsville Telephone Association has been incorporated under the Ontario Companies' Act, with a capital of $25,000 and offices at Harrietsville, Ont., to carry on the business of a telephone company. The provisional directors are: W. Doan, S. E. Facey, J. C. McNiven, W. B. Lane, J. Smith, W. J. Coates, North Dorchester tp., and M McB. Black, Springfield, Ont.

The General Industries Construction Co. has been incorporated under the Ontario Companies' Act, with a capital of $100,000 and offices at Toronto, for the purpose of carrying on the business of a general construction and development company. The provisional directors are: J. A. Paterson, K.C.; A. McKenzie, W. H. Templeton, and A. T. Davidson, Toronto.

THE RUGGLES FLUE CLEANER

The best production for this purpose ever put on the market. Does the work cleaner, with greater ease and with better results, than any other flue cleaner. **Absolute guarantee.**

THE CELEBRATED PARMALEE WRENCH

Built on natural principles, can be used on greased shafting without slipping, on nickel-plated pipe without injury from scratching. No difficulty in getting into corners as each joint can be set in place separately. This is without doubt the greatest pipe wrench ever manufactured.

ELECTRIC RAILWAYS

Projects, Construction and Betterments.

British Columbia Electric Ry.—A contract has been let by the C.P.R. to J. B. Bright for the extension of the Vancouver and Lulu Island Ry. from Eburne to New Westminster. The V. and L.I.R. is operated by the B.C.E. Ry. as an electric line, and the extension will also be similarly operated. Grading operations were started about two miles south of Central Park, Aug. 1, and it is expected to have the extension completed and open for traffic by the end of the year.

The General Manager stated Aug. 5, that the company had completed all its agreements with the six municipalities for the construction of the projected line from New Westminster to Chilliwack, and that as soon as the directors of the company in London, Eng., gave their approval tenders would be asked for the grading. (Aug., pg. 603.)

Chatham, Wallaceburg and Lake Erie Ry.—The village municipality of Blenheim, Ont., is being asked to grant the company a franchise. (July, pg. 505).

Columbia River Tramway Co.—Notice has been given under the provisions of the British Columbia Tramway Company Incorporation Act and amendments, by T. Kilpatrick, A. E. Kincaid, F. McCarty, and G. S. McCarter, that they propose to incorporate a company with this title for the purpose of constructing a double or single track railway or tramway, with the necessary branch lines, side tracks, switches, turn-outs, poles, wires, conduits and appliances, in the West Kootenay district, within a radius of five miles from Death Rapid. The general route of the projected line is described as follows: Beginning on the bank of the Columbia River, near the foot of Priest Rapids, in West Kootenay district, thence northerly along the Columbia River valley, or near the mouth of Fissure Creek. The company proposes to carry passengers and freight over its line, and to use such motive power as may be deemed advisable.

Edmonton Street Ry.—The city council is building an electric railway to have a total length of about 6½ miles. Of this about 3½ miles of double-track line are now under construction on Jasper Ave., First St., and Namayo Ave., the streets that are now being paved. The power house will be located at the Exhibition grounds, and will be 150 by 80 ft. It will be equipped with a 600 k.w. generator, driven by gas. The lines at present constructed will be equipped with eight passenger cars, four motors, 50 h.p., and this will be added to as necessity arises. The construction work is being done by the city under the charge of W. J. Pace, Commissioner. About half the work on the Jasper Ave. line has been done, and a start has been made at grading on the other streets. It is not expected to have the lines completed until the fall of 1908. (Aug., pg. 603).

The Hamilton, Guelph and Lake Shore Ry. Co.'s charter authorizes the construction of a line from Hamilton to Guelph, Ont., via the lake shore. W. Hendrie, G. L. Staunton, of Hamilton, and M. Smith, of Burlington, Ont., are the principal promoters of the company. A local report states that it is understood that the charter will be transferred to the Toronto, Niagara and Western Ry. Co.

Hamilton, Waterloo and Guelph Ry.—The Hamilton Parks Board and Finance Committee passed a resolution Aug. 8, favoring the adoption of the route through Dundurn and Harvey parks recommended by A. F. Macallum. The route is under consideration by J. Patterson, and the other promoters of the line. (Aug., pg. 603).

Hull Electric Co.—A resolution has been passed by the city council of Hull, Que., granting permission to the company to construct a double track on Main St., and to effect other improvements; the company to pay $7,500 and $3,000 a year for 20 years for the privilege, with power to construct a loop line.

Levis County Ry.—A proposal for the extension of the line to St. David's toll house, has been discussed between the residents, Levis City Council and the company, and it is said that the work will be gone on with at an early date.

Moncton Street Ry.—The section of the bill authorizing the Moncton City Council to construct an electric railway within the city was not pressed last session of the New Brunswick Legislature. The question of the construction of an electric railway is still under consideration, but it is not likely that an early decision will be reached as to whether the city will construct the line itself or give a franchise to a company.

Mount McKay and Kakabeka Electric Ry.—The by-law passed by the taxpayers of Fort William, Ont., granting the company a right-of-way into the city, provides also that in case the city should acquire the Fort William portion of the Port Arthur Ry. at any time, the company shall have the right of lease or purchase; that the fare shall be 5c. or six tickets for 25c., with cheaper tickets for workmen and school children; that a half-hour service shall be maintained from each end, and that the company shall keep the tracks clear of snow. Plans showing the location of the lines in the city have been filed with the Ontario Railway and Municipal Board for approval.

Niagara, St. Catharines and Toronto Ry.—A right-of-way is being secured for the extension of the line from Welland to Port Colborne, Ont. The extension to Welland, it is expected, will be in operation early in Sept., and it is said that the new construction will be started immediately. (Aug., pg. 603).

Ottawa Electric Ry.—The work of relaying the track on Sussex St. with heavier rails is in progress. The city council has authorized the preparation of a by-law to permit the construction of a number of additional lines and extensions in the city. (July, pg. 505).

St. John Ry.—By an act passed last session of the New Brunswick Legislature, an extension of time is given for the construction of certain extensions; and authority is given to lay tracks in Queen Square, Carleton, such tracks to be removed by July, 1912; and to construct a railway between Watson and Lancaster streets by 1912.

Sydney and Glace Bay Ry.—The central power station and car barns are to be located at Glace Bay, N.S. The town council has agreed to grant the company exemption from taxation, and to give a fixed rate for water for a term of years. The buildings are to be located close to Dominion No. 4, and the erection of the same is to be gone on with at once.

Toronto Suburban Ry.—Surveys have been made for a line from Keele St. to the Lake Shore road, and it is said that construction will be started as soon as the councils of Toronto Junction and York Township have approved of the plans. The route proposed is along South Keele St. to Annette St., along that street to Elizabeth St., and along that street through Swansea, connecting with the Lake Shore road at the Bolt Works. An alternative route surveyed is from Dundas to Louisa, and along that street to Elizabeth St. The company favors the Keele St. route, as it would be an extension of its present line to Weston. (June, pg. 429).

Toronto Ry.—The Toronto Board of Control and the Toronto Ry. officials have been discussing routes for additional lines. The construction of lines on Bay St. and University Avenue have been agreed upon. The question of the construction of a line to the Island was considered, but no decision has been reached. (June, pg. 429).

Electric Ry. Finance Meetings, Etc.

British Columbia Electric Ry.—The Vancouver city percentage of receipts for June amounted to $1,355, against $650 for June, 1906.

Halifax Electric Tramway Co.—Railway receipts for July, $18,281, against $16,166 for July, 1906.

Huron and Ontario Ry.—There has been deposited with the Secretary of State at Ottawa duplicate of a mortgage dated July 30, between the H. and O.R. Co., and the Trusts and Guarantee Co., Toronto.

Montreal Street Ry.—At the recent session of the Quebec Legislature an act was passed amending the company's charter in several particulars. One of the sections gave the company power to increase the number of its directors from five to seven. G. Caverhill and P. Galibert have been elected by the directors to fill the two additional seats at the Board, which is now constituted as follows: President, Hon. L. J. Forget; Vice-President, K. W. Blackwell; Managing Director, W. G. Ross; other directors: Sir H. Montagu Allan, Lieut.-Col. F. C. Henshaw, G. Caverhill and P. Galibert.

Passenger earnings for July, $328,981.88; total earnings, $339,756.45; against $295,643.76 passenger, and $300,884.57 total earnings for July, 1906. Operating expenses, $175,946.86; rent leased lines, $339.96; city percentage on earnings, $32,070.40; interest on bonds and loans, $18,873.41; contingent for renewals, $16,449.09; surplus, $98,076.73; against, $161,160.75, operating expenses; $25,650.01, city percentage on earnings; $15,180.86, interest on bonds and loans; $14,971.03, contingent for renewals; and $83,921.92, surplus for July, 1906. Rental of leased lines is an extra charge in the current year's accounts. Gross earnings for ten months ended July 31, $2,834,644.35; operating expenses, $1,761,545.18; fixed charges, $457,347.08; surplus, $615,752.09; against $2,494,669.54 gross earnings; $1,528,353.81 operating expenses; $374,810.26 fixed charges; and $591,505.47 surplus for the same period, 1905-06.

St. John Ry.—The company was authorized by an act passed last session of the New Brunswick Legislature, to borrow $300,000 in addition to its present indebtedness and to issue bonds in respect of the same. It was also authorized to increase its capital stock by an amount not exceeding $200,000 with the approval of two-thirds of its shareholders.

Toronto Ry.—Car earnings for July, $300,591.66, against $265,891.73 for July, 1906.

Windsor, Essex and Lake Shore Rapid Ry.—The annual meeting was held Aug. 29, for the purpose of electing directors, making by-laws for various purposes, authorizing the issue of bonds, debentures and other securities, and ratifying and confirming an agreement made May 9, between the company and the Union Trust Co., Toronto, providing for a loan of $150,000 in addition to $450,000 already secured by the company and others to the Union Trust Co.

The Winnipeg Electric Street Ry. Co. has decided to issue an additional $1,500,000 of stock for the purpose of carrying out extensive improvements to its system. The issue will be made to present shareholders in the proportion of one share of new stock for every three of old

Electric Railway Notes.

The Halifax Electric Tramway Co. has purchased 600,000 paving blocks in Great Britain for its lines.

W. Phillips, Manager of the Winnipeg Electric Street Ry., returned to that city Aug. 8, after a two months' holiday trip to Honolulu.

H. W. Mills has been appointed examiner of motormen for the Sarnia Street Ry., with the approval of the Ontario Railway and Municipal Board.

F. W. Gitchell, Comptroller B.C. Electric Ry., will, it is announced, be married on Sept. 4, to Miss E. Jackson, the first child born in New Westminster, B.C.

The Winnipeg Board of Control has decided to abandon the city's electric lighting plant and to purchase the necessary current from the Winnipeg Electric Ry. Co., thereby saving 50%.

A commission of electrical experts and railway officials has arrived in New York from Germany to study the systems of electric traction on this continent. During their tour they will visit Niagara Falls and Montreal.

The Montreal Street Ry. Mutual Benefit Association proposes to apply next session of the Quebec Legislature for an act amending its powers, and authorizing the employes of the Montreal Terminal Ry. to form part of the Association.

K. L. Aiken, an electrical engineer who has been looking into the question of the electrolysis of water pipes in Hamilton, Ont., for the City Council, recommends that an endeavor be made to come to an arrangement with the company to remedy the matter, and advises that the two-trolley system or the alternating current system be used instead of the track return system.

The South-Western Traction Co.'s car barns at London, Ont., together with five cars and 20 motors, were destroyed by fire Aug. 10, caused by a crossed wire. The loss is placed at about $125,000, which is fully covered by insurance. The company had four other cars at St. Thomas, which, with one saved from the burning barns, are being utilized on the line. The barns will be rebuilt at once.

As a result of their inspection of the street railway lines at various places in the province the Ontario Railway and Municipal Board will make orders for a number of changes to be made to ensure the greater safety of the public. Expensive changes will not be ordered on the smaller lines, as some of them have financial troubles which, the Commissioners state, cannot be ignored, and it would not always be wise to order changes which the companies could not afford to make.

Judgment has been rendered by the Recorder in the case of the City of Montreal against the Montreal Street Ry., respecting taxes. He finds that the city is entitled to judgment and the company is ordered to pay $29,681.20 as per the City Treasurer's statement of assessments due. The company is also directed to pay interest at 6% per annum, so that the total sum due the city to date is $41,533.59. The action is based upon a valuation roll prepared annually by the city assessors and containing the civic appraisement of all immovable property in the city. The question was, what is immovable property in the city? The company claimed that certain parts of its possessions were not included under this head, and suit was taken by the city to obtain these taxes, which the company declined to pay.

Ex-Mayor Dyke read a paper on Municipal Ownership in the twin cities, at the recent convention of the Association of Canadian Municipalities, in the course of which he pointed out that Port Arthur had the first municipally owned street railway in Canada, when the joint population of the two cities was only 3,000. Ten years later, in 1903, the gross income had reached $156,347.66, and the expenditures, $139,947.17. The net profit to the city since the railway was built was $90,898.38. The debenture debt on the railway and power plant was $352,260. The net profit of the railway during the last four years equalled one-fifth of the entire cost of the road, and from its inception the entire profit of $90,000 equalled one-fourth of the entire cost. He said: "If you add to this profit the value of the franchise, which is estimated at $1,000,000, you have a system created and developed by municipal ownership which any private corporation would be proud of."

A New York technical paper of July 27 contained the following: "Yarmouth, N.S.—The Hood-Godfrey Electric Ry. Co. has secured a franchise from the city council to construct an electric double track railway from Cumberland st. to Cliff st. A terminal is to be constructed at Cumberland st., while shops, power house, etc., will be erected on the Swain property at the other end of the line. A. J. Haines, purchasing agent, is now in St. John, N.B., attending to the supply of ties. The chief engineer has completed surveys. T. W. Carten, President; Jesse C. Robbins, Secretary; S. C. Hood, jr., Treasurer. Work will be started about the middle of September, when contracts will be let." Yarmouth reports state that none of the alleged officers had ever heard anything of the matter until a copy of the paper was shown them. The distance between Cumberland and Cliff streets is stated to be about 300 ft.

A by-law has been prepared for consideration by the Road Committee of the Montreal City Council, authorizing the Montreal Street Ry. to carry freight by electric cars to various points within and beyond the city limits, the company to pay the city 50c. for each carload. The company may construct sidings for loading and discharging freight in the city. The company will also have to water, three times daily, all streets upon which both freight cars and passenger cars are run. The charge for hauling freight will be not more than 35c. a ton. The hours for hauling freight will be from 8 a.m. to 5 p.m., and from 7 p.m. to 6 a.m. The intervening hours will be reserved for passenger service only in view of the heavy pressure of passenger traffic mornings and evenings. The speed of freight cars will be limited to eight miles an hour. The proposition has been under consideration for some time and its favorable consideration was urged upon the city council by the Montreal Board of Trade, the Montreal Builders' Exchange, the Chamber of Commerce and other bodies of business men. The Montreal city press is unanimous in support of the proposal.

The Canadian Electrical Association will meet in Montreal Sept. 11, 12 and 13.

A press dispatch from Ottawa, dated Aug. 26, states that the Board of Railway Commissioners has decided to extend the times at which the following orders shall take effect. No. 3245 of July 4, relating to the use of lignite coal on the railways, from Sept. 1 to Oct. 1, and no. 3239 of July 3, as to the provision of a watchman on wooden trestle bridges during the months of May, June, July, Aug. and Sept. in each year, from Sept. 1 to next year. The dispatch also states that the Commissioners have decided to extend the time to which the Bell Telephone Co.'s present rates shall apply to Nov. 13.

Expansion of Electric Freight Traffic.

By A. S. Atkinson.

In no field of electric traction in cities and suburbs are there more questions deserving special study than those pertaining to the development and expansion of freight traffic. In the steady growth of passenger traffic, the freight side of the subject received but scant attention until a few years ago, and even to-day on many lines little effort has been made to develop freight. Even on those roads which made freight a specialty early in their operation, the business was confined chiefly to carrying the freight produced and consumed along the line of travel, and no thought was given to securing through freight traffic and developing industries which would prove large freight carriers. It was in those days considered somewhat out of the province of the electric to encourage and develop freight service. What might be called the second era of electric traction is now being studied with energy, and the development of the freight service may soon make great changes in the ordinary profits of many roads. There are many questions which are of a purely local nature which enter into the subject, and some of these must be studied in the light of experience with other roads. In regions where iron and coal are the chief freight articles, the trolley roads would have little or no chance unless other kinds of freight could be developed. In the heart of the coal and iron regions of Pennsylvania, however, a number of electrics have worked up a satisfactory freight service through encouraging farmers and small market gardeners to ship their produce.

The development of farming industries by the electrics is well illustrated in a number of roads. Before the Portland, Me., roads were extended to Biddeford and Saco on one side, and to Yarmouth on the opposite side of the city, all the milk was brought over the steam roads, but to-day nearly 50% of the milk within a radius of 10 miles is brought by the electric freight cars. Before the electrics were built practically no milk was produced in this territory, but immediately the farmers entered extensively into the dairy business. The same holds true of fruits and vegetables, and the farm produce shipped over the roads makes a large item in the industry. It is estimated that in the suburbs of large cities about 6,500 gallons of milk are produced per square mile of territory, and this could be greatly increased if proper facilities for marketing the milk could be obtained. The electrics are the best for handling milk on a low freight basis in competition with the steam roads. They pass through more rich farming country than the steam lines and enter more into the heart of the towns and cities. The possibilities of the freight business carried by the electric lines have been better appreciated in the Middle West of the U.S. than in the East. Four years ago the freight traffic of the Eastern Ohio Traction amounted to over $44,000 a year, and in the last few years this has more than doubled. The Cincinnati, Georgetown and Portsmouth road was also carrying nearly $50,000 worth of freight and express, and now carries 40% more. The Toledo and Western, the Lake Shore Electric and the Cleveland and Southwestern were also pioneer developers of freight traffic in this region. In Pennsylvania, the Altoona and Logan Valley, the Harrisburg traction, and the Lehigh Valley traction have been developing freight traffic systematically for the past half-dozen years, and to-day their receipts from this department stand high.

Statistics seem to indicate that the freight-earnings of small steam roads range from $600 to $2,500 a mile of track a year, and after the express matter and products of

mines are deducted the average earnings from carrying agricultural products amount to $500 to $750, according to the location of the road and its population. In New York and New England the average production per acre of land is placed at one and a half tons of hay, or half a ton of wheat, or one ton of barley, and one of buckwheat. The transportation of this produce from each acre of land to a market located from five to ten miles would make every square mile of farming land tapped by an electric more profitable than in transporting passengers alone in a sparsely settled region.

In half a dozen roads of the Middle West of the U.S., freight earnings have actually exceeded those from the passenger department. This included express matter and light parcel service. The latter two have been completely monopolized by the electrics, the steam companies having finally yielded to the inevitable and made arrangements with the electrics to distribute light freight and express matter to their destination. It is almost useless for a steam road to enter into competition with the electrics for light freight and express distribution in many sections, The electrics penetrate regions far removed from the steam lines and carry their express and freight to the very doors of the consumers.

On one eastern electric in New York State, which has been in the field of freight traffic for several years, the following figures show the relative value of different kinds of freight: Milk, $3,000; express, $6,000; freight, $33,000; total, $42,000. This road is less than 40 miles long, and runs through a farming region with scattered hamlets and towns. The future of the passenger traffic is good, for the towns are thriving, but the freight traffic at present pays nearly as much as the passenger. The freight has been steadily increased through enterprising efforts to induce manufacturing plants to locate along the route. Through generous freight-rate inducements a canning factory was located in the heart of the farming country, and later a factory for manufacturing light wooden articles. The freight receipts from these two concerns add materially to the profits of the road. There is prospect now of a bleachery locating along the line of the road to take advantage of natural waterpower of a stream, and there is also talk of establishing a shirt factory. If these should be realized the freight traffic would be increased by nearly 40%, and the passenger traffic would increase through the greater population induced to settle there to work in the factories. The two go together so well that the road has recently considered the question of buying cheap land along this route and offering it for sale at nominal prices to manufacturing concerns. Undoubtedly this would pay in time, for there is no steam road to offer competition, and the electric controls the whole business, passenger and freight traffic.

The electrics have led the way in opening up new suburban places by establishing good travelling facilities in advance of population, an enlightened policy which the steam roads formerly never attempted to adopt. Now in a similar manner many of the electrics are leading the way in encouraging the transportation of freight and express at reasonable rates through thinly settled districts, trusting in this way to build up a future of profit. The policy of encouraging the establishment of factories along the route must steadily increase both passenger and freight traffic of a road.
